Survey of the World

Pinchot on Power and Other Monopolies

It has been decided that the coming investigation of those branches of the Federal service which have charge of the public lands shall be an exhaustive one, and it is probable that the joint committee of Congress will be composed of twelve members. The investigation was demanded by Secretary Ballinger, owing to the continued publication of elaborate criticisms of his action, as Land Commissioner or as Secretary of the Interior, concerning coal claims in Alaska and water power sites elsewhere. As Chief Forester Pinchot is regarded by many as his leading opponent, the Secretary insisted, in his letter of the 21st ult. to Senator Flint, that the investigation should include the Forestry Service, because he had "reason to believe that the pernicious activity of certain of its officers" had been "the source of inspiration of these charges." On the 27th ult. Mr. Pinchot made an address before a number of prominent publishers in New York, his subject being the conservation of natural resources. There was no other question before us so important, he said, or so difficult to straddle as "the great one between special interest and equal opportunity, between government by men for human welfare and government by money for profit, between the men who stand for the Roosevelt policies and the men who stand against them." He then at some length pointed out why conservation was a moral issue:

"When a few men get possession of one of the necessaries of life, either thru ownership of a natural resource or thru unfair business methods, and use that control to extort undue profits, as in the recent cases of the Sugar Trust and the beef packers, they injure the average man without good reason, and they are guilty of a moral wrong. It does not matter whether the undue profit comes thru stifling competition by rebates or other crooked devices, thru corruption of public officials or thru seizing and monopolizing resources which belong to the people. The result is always the same—a toll levied on the cost of living thru special privilege."

Having shown how an unjust increase of the cost of living may cause the misery and degradation of the plain people, he asserted that "monopoly of the sources of production makes it impossible for vast numbers of men and women to earn a fair living." The cost of special privilege was heavy. It caused moral as well as physical degradation:

"The people of the United States have been the complacent victims of a system of grab, often perpetrated by men who would have been surprised beyond measure to be accused of wrongdoing, and many of whom in their private lives were model citizens. But they have suffered from a curious moral perversion by which it becomes praiseworthy to do for a corporation things which they would refuse with the loftiest scorn to do for themselves. Fortunately for us all that delusion is passing rapidly away."

Excessive profits from the control of natural resources monopolized by a few were not worth to the nation the tremendous price that has been paid. We had allowed the great corporations to occupy with their own men the strategic points in business, in social and in political life. The people should again take into their hands their full political power. There were many who believed and who always would believe in the divine right of money to rule. With such men argument or compromise was useless or worse. The only thing to do was to fight them and beat them. This had been done and it could be done again:

"It is the honorable distinction of the Forest Service that it has been more constantly, more violently, and more bitterly attacked by

the representatives of the special interests in recent years than any other Government bureau. These attacks have increased in violence and bitterness just in proportion as the service has offered effective opposition to predatory wealth. The more successful we have been in preventing land grabbing and the absorption of water power by the special interests, the more ingenious, the more devious, and the more dangerous these attacks have become."

The Service had had warrant of law for all it had done. Despite the most searching investigation and the bitterest attack, it had never been reproved by Congress or a Congressional committee, and never been defeated as to any underlying legal principle by a court of last resort. "We hold it to be," said he, "the first duty of a public officer to obey the law. But we hold it to be his second duty, and a close second, to do everything the law will let him do for the public good, and not merely what the law directs or compels him to do." He showed why the demand for the exclusion from the national forests of all land not now bearing trees should not be granted, and how the foes of the Service had almost been successful in preventing it from telling the people thru the press what it was accomplishing. In conclusion he said:

"Since the forest service called public attention to the rapid absorption of the water power sites and the threatened growth of a great water power monopoly, the attacks upon it have increased with marked rapidity. I anticipate that they will continue to do so. Still greater opposition is promised in the near future. There is but one protection—an awakened and determined public opinion."

It is expected that the President will soon send to Congress a message on conservation, recommending the enactment of accompanying bills which have been prepared by Secretary Ballinger.——On the 31st ult. the Secretary withdrew from entry 93,000 acres of water power sites in Colorado, Arizona and Washington, pending legislation concerning them.

A Judge's Remarks About "Graft"

Justice Wesley O. Howard, of the Supreme Court of New York, was required last week to fix the compensation of three commissioners who had been appraising damages caused to private property by the construction of the Ashokan reservoir, a part of the Catskill project for supplying water to New York City, a project the estimated cost of which is $161,000,000. Having reduced by about one-third the customary allowance of $50 a day, he remarked that the condemnation of land for this undertaking was characterized by waste, disorder and confusion. There should have been one commission to do all the work, at a cost of about $90,000, but already there were 129 commissioners, and their fees would exceed $1,000,000. He then spoke of "graft" as follows:

"While commissions furnish avenues for the reckless waste of many dollars, there are other channels of leakage and waste fully as appalling. It is greatly to be regretted that no public enterprise can be projected and consummated without this appalling loss called graft. Graft is not necessarily an illegal expenditure of money, but it is that unnecessary, wasteful use which characterizes the construction of every public venture. At least 40 per cent. of all the money appropriated for public use is lost in graft. All things could be possible if this frightful leak could be stopped—roads, canals, libraries, asylums, and hospitals—all these could be built out of graft could it only be saved.

"By what I say here I do not seek to charge any particular individual with responsibility, nor to direct public attention to any such source. Indeed, I do not believe that any particular individual or class of individuals is responsible. Graft is a product of our times and institutions. It is the people who are responsible, for by prescription, they seem to have lost, or believe that they have lost, their title to integrity. They expect graft, and even spoil and booty, to deplete their resources whenever any great undertaking is ventured by them, and they look with complacence and toleration and indifference at ravages upon their property. Graft is as much an element to be reckoned with in computing the cost of a public structure as is cement or lumber. It has come to be a matter of course—this rake-off—a loss recognized by all who make estimates of cost in such cases. Figure out what a private corporation, like a railroad, can construct a public undertaking for, then add 40 per cent. for graft, and you have the cost of the enterprise. A public structure built honestly would be a freak. The age of patriotism has yielded to the age of commercialism. Uppermost in the human mind today is not the Stars and Stripes, but the dollar mark."

Recent investigation shows that many of the condemnation commissioners appointed (by justices of the Supreme Court) were Tammany city employees when appointed or became city employees afterward. It has also been shown that many persons on the city's payroll have done little or nothing. Some have come to the public offices only to draw their pay. To one, who

was engaged in private business outside of the city, his check has been sent by mail.——John W. Potter, of the Oneida County (N. Y.) Board of Supervisors, was sentenced last week to be imprisoned five years for defrauding the county by means of false bills for furniture.——In Youngstown, Ohio, ten persons, either county officers or contractors, who, having been indicted for defrauding the county, admitted their guilt, have been required to pay fines amounting to $14,000. They are also disfranchised.——Steps have been taken toward the prosecution of the aldermen accused of robbing the city of Montreal. The report of Judge Cannon estimated that one-quarter of the city's income during the last six years had been misappropriated or feloniously used by them.

Trust Cases Reports from Washington say that the President intends to recommend the enactment of a Federal incorporation law, not as an amendment of the Sherman act, but as a separate statute. The proposition is that corporations or Trusts doing an interstate business shall have an opportunity to incorporate voluntarily under such a statute and to avail themselves of the wholesome publicity attending Federal supervision. This would protect harmless or beneficial combinations that are menaced by the Circuit Court's recent interpretation of the Sherman Anti-Trust law in the Standard Oil case. The President, it is asserted, expects that the Supreme Court will sustain the Circuit Court's decision.——Attorney-General Wickersham filed, last week, the Government's brief in the Tobacco Trust case, now pending in the Supreme Court on appeal from the decision of the Circuit Court in New York, which declared that a majority of the Trust's subsidiary companies were parties to an unlawful conspiracy and enjoined them from continuing in business. The brief, which is emphatic and severe in its denunciation of the Trust's methods, says that the Circuit Court's decision was not broad enough because it dismissed the complaint so far as it affected the foreign companies connected with the Trust. "The very existence of some of the defendant companies," it asserts, "is criminal," and they cannot rightfully complain when they are restrained from acting, since they are in a position where every act is a violation of the law.——The Federal authorities in Chicago have begun an investigation concerning the companies engaged in the milk business there. The price of milk to consumers was recently raised from 7 to 8 cents a quart. In New York, where the price was increased from 8 to 9 cents, the investigation ordered by the Attorney-General is still in progress. ——The American Newspaper Publishers' Association laid before the United States District Attorney at New York, last week, evidence which, it is alleged, proves that the manufacturers of news print paper are maintaining a combination in violation of the Sherman act.

The Revolution in Nicaragua Landing at Salina Cruz, Ex-president Zelaya proceeded to the Mexican capital. He had two valises containing American gold and another full of paper currencey. It was reported that Mexico had become responsible for him and that he was virtually a prisoner in that country, but he asserted that he was perfectly free. It appears that in a certain technical sense he is still President, as he was permitted by Congress to retain the title in order that he might enjoy the immunity or privileges attached to the office if the United States should demand his punishment. At Washington it is said that he cannot escape, if prosecution is demanded, because precedents will secure his extradition. At Salina Cruz he published a statement. Vice Consul Caldera, he said, had sent false reports about him to Secretary Knox. Caldera had been in conspiracy with those who brought Groce and Cannon from Guatemala to promote the revolution and procure intervention by the United States. He believed that Secretary Knox's purpose had been to compel him to resign. Later, in Mexico City, he denied that he had ordered the execution of Groce and Cannon, but said it was true that he had refused to modify the court martial's sentence. The two men, he added, were laying mines in the

river and were also acting as spies. The stories of torture were absurd. He had the two men's statements admitting guilt and offering to join his army if they should be released. He declared that 400 Americans fought with the revolutionists at Rama, and that after the earlier battle at Colorado Junction the dead bodies of twenty United States marines were found on the field. But there really were no marines in that battle, and among the fighters at Rama there were only six Americans. Another account of the execution of Groce and Cannon has been told to Rear Admiral Kimball by Captain Chaves, the officer who captured them. He says he turned them over to General Medina, who caused them to be flogged; that Zelaya telegraphed that they should be shot without delay; that at the brief trial they were not allowed to have counsel; that he (Chaves) when ordered to have them shot, refused, on the ground that their sentence was illegal; that for this disobedience he was sent to prison, and that the men were shot by a squad under Captain Constantino. More trustworthy reports show that his story was not accurate; that the men were not tortured; and that Zelaya ordered the shooting against the protests of General Toledo, General Medina and Minister General Irias. Zelaya remarks that he fears the attitude of Secretary Knox is ending all of Secretary Root's good work in Latin America. —— President Madriz proposed to General Estrada a peace conference. He suggested that the revolutionists should recognize his government and surrender their arms. Estrada replied that he would not suspend hostilities because he doubted Madriz's sincerity, knowing that he was constantly enlarging his army. Nor would he recognize Madriz as President, believing him to be an usurper and holding that Congress did not represent the people. It appears that Madriz sent 600 recruits eastward on the day (December 30) when he appointed his peace commissioners. Some propose that a new popular election be held under the supervision of United States officers. It is thought, however, that there must be more battles, and that one will soon take place not far from the capital. Madriz has raised money for the army by a war tax said to have been levied mainly upon persons enriched by Zelaya's grants of monopolies. ——Martinez, formerly Minister of Finance, who was arrested, has escaped from jail. Joaquin Navas, a millionaire who was favored by Zelaya, has been arrested for robbing the Government in connection with the monopoly in hides. Congress has authorized Madriz to abolish the tobacco and alcohol monopolies, from which Zelaya and his confederates obtained large profits. Madriz has appointed a committee to examine the accounts of Zelaya's administration.—— Conflicting reports as to the recognition of the Madriz Government by other powers are published. It is said that such action has been taken by Honduras, Costa Rica and Salvador, and even by Mexico. Recognition by Mexico, it is asserted would not be agreeably received at Washington, where there is already much comment upon the pleasant relations of Mexico with the United States. Special Ambassador Creel asserted, on the 30th ult., that his mission had been successful; that asylum had been granted to Zelaya in accordance with the law of nations; that the election of Madriz was a fortunate event, in that it had prevented anarchy, and that Mexico and the United States would continue to co-operate for the establishment of peace.

Our Islands in the Pacific

As 90 per cent. of the inhabitants of the southern part of the Philippine Archipelago are barbaric tribes of Moros or pagans, savages who fight for gain or revenge, with a fanatical disregard for death, Colonel Hoyt, Governor of the Moro Province, recommends, in a report to the War Department, that a separate government be established for them, and that the natives be placed on reservations. The islands mentioned are Mindanao, the Sulu group, Palawan, and other small ones. The reservation plan, he says, would permit the cultivation of a great part of the land, which could be made very productive.——It has been asserted that the 55,000 acres of friars' lands recently sold by the Government at a profit of about $70,000 were purchased in the interest of two stockholders of the Sugar Trust. The

President of the Trust says it has not directly or indirectly made such an investment.——In Hawaii Prince Kalanianole, Delegate to Washington, has been bitterly criticising Governor Freer, asserting that the latter has been guilty of bad faith concerning the public lands, and that the sugar planters have been favored at the expense of the people. This caused surprise, because he had recently aided the Governor in preparing amendments to the land laws. These amendments have been unanimously indorsed by the Legislature, and the Governor is on his way to Washington, intending there to ask for the approval of them by Congress. The Delegate's action has divided the Republican party, and his re-election is not expected.

The Military League Rules Greece

The Greek Government is having a hard time of it. It is completely subservient to the clique of army officers known as the Military League, and yet the measures dictated by that body are strongly resented by the people. The budget presented by the Minister of Finance, Mr. Eutaxias, makes provision for the unprecedented expenditure for the coming year of about thirty million dollars, not including the loan negotiated at the dictation of the Military League for the purpose of a greater army and navy. To meet this, extra taxes are placed upon alcohol for drinking and mechanical purposes, and upon acetylene, and upon gas and electricity generating plants. It is also proposed to give the Government a monopoly of sugar on condition that the Government provides the sugar of good quality, done up in sealed packages, at a cost of about three cents a pound below the present price in Greece. The taxes resting upon vineyards and animals used in agriculture are to be removed after 1911. The new Minister of War, Colonel Lapathiotis, introduced a bill for the reorganization of the army, a measure which is very much needed but hardly possible to carry out. In his opening address to the Chamber he made an impolitic reference to the fact that when he assumed office he found the army in a ruinous condition. This was resented by the military faction, who called for proof of the assertion. Colonel Lapathiotis replied that events—namely, the military revolt — furnished sufficient proof. This brought applause from the gallery, but incensed the army men, and when it was discovered a few days later that the Minister of War had arranged to promote a number of officers without the approval of the Military League, his resignation was demanded by the League. The Government complied, and a few days later the Military League also demanded the resignation of the Minister of the Interior, whom they had come to regard as unfriendly to their interests. The League also insisted upon the suppression of all the Greek foreign legations except the one at Constantinople. The Government gave way on both these points.

Changes in Turkish Cabinet

The Committee of Union and Progress, commonly known as the "Young Turk" party, has again demonstrated its power by forcing the resignation of Hilmi Pasha as Grand Vizier. The ostensible reason for their dissatisfaction was the action of the Government in granting a monopoly of the traffic on the Tigris and Euphrates rivers to the Anglo-Ottoman Steamship Company without consulting the Chamber. Hilmi Pasha in defending his policy stated that the Government had the right to act independently in such a matter, as was customary in other countries, particularly since it was not granting a new concession, but modifying, in accordance with the national interests, the terms of one already existing. The Government, he said, had refused to comply with the demands of the company to agree to grant an indemnity to the new company for losses which might eventually be caused by the use of the waters of these rivers for irrigation. He claimed the concession could not properly be called a monopoly, since there was nothing in the terms of the convention to prevent private owners from using their own steamers to carry their own cargoes, and sailing boats and rafts would continue to ply their trade undisturbed. The Chamber, however, was

not entirely satisfied with this explanation and gave only a reluctant and qualified vote of confidence in the Government. The Young Turk leaders made bitter sppeches against the Ministry, accusing it of playing into the hands of Great Britain. Accordingly, Hilmi Pasha resigned and Hakki Bey, Turkish Minister to Rome, was called to form a new cabinet.

A Question of Chinese Etiquet

The solemnity of the obsequies at the mausoleum of the late Empress Dowager was marred by a squabble for precedence among the leading ladies of the cortege, which seems likely to have as disastrous a political effect as the similar incident narrated in the *Nibelungenlied*. The death of the great Empress Dowager who ruled the court and the country with a powerful hand until recently left two candidates for her titular position, the widow of the Emperor Tung Chih, who died in 1875, and the widow of the Emperor Kuang Hsu, who died last year, for the present child Emperor, Hsuan Tung, may be regarded as the successor of both these emperors. The Lady Yu, widow of the older sovereign, would have been the first to have reached the tomb but for the interruption of the procession for the purpose of taking a photograph of it. This allowed the rival widow to get in ahead and Lady Yu and her faction were highly incensed at having to take the dust. Having reached the mausoleum she refused to leave it to return to Peking, until her claims for precedence were properly recognized and the affront duly avenged. Repeated embassies of princes of the highest rank were sent out from Peking to induce her to return, but she refused. Proof of the essential similarity of the feminine nature the world over may be found in the determination exprest by three of the ladies of her retinue to adopt the tactics of the suffragets and starve themselves at the tomb of the late Empress Dowager. The dispatches from China, inadequate and disappointing as usual, fail to inform us whether this threat was literally carried out or whether the Government was obliged to follow the policy of the English Cabinet and use forcible feeding. At any rate, Lady Yu, whom we must hereafter refer to as the Empress Dowager, seems to have carried her point, for the Prince Regent, at the instigation of the heir of Marquis Li Hung Chang, has dismissed from office Viceroy Tuan Fang, whose unfortunate predilection for modernism induced him to grant the permit to the photographer. The use of a camera on such an important occasion was in itself unprecedented and therefore to be construed as a violation of ancient Chinese etiquet, and as such, an offense to both the living and the dead. Seriously as such things are regarded in China, it is inferred that the Prince Regent may have had in mind other indications of the disposition of Viceroy Tuan to favor foreign nations. He is said to have been very frank in advising the Regent to dismiss from office men of the old regime and appoint those who by training and experience are better acquainted with the needs of the people and the methods of the constitutional era upon which China is now entering. The local assembly or advisory legislature held at Tientsin took its duties rather more seriously than the assemblies of the other provinces and made some recommendations on the foreign policy of the Government and needed reforms in the administration of the Empire which were regarded by the Regent as an unwarranted interference with matters which the imperial edict authorizing these assemblies did not permit them to discuss. Apparently the Peking Government holds that Viceroy Tuan of the Chili Province should have kept his provincial assembly under better control. Tuan Fang is a Manchu, but the viceroy who has been appointed as his successor, Chen Kueilun, is a Chinese and reputed to be very conservative in his views. He is opposed to foreign influence and would restore the old system of competitive examinations based upon the classics instead of the newer learning. Prince Chun, the Regent and father of the child emperor, was stabbed and slightly wounded while leaving his carriage near the Peking Palace by a Manchu, formerly employed as cook in the imperial household. It is not known whether the attempt at assassination has any political importance or not.

A Notable Gathering of Scholars

BY REUBEN G. THWAITES

[Dr. Thwaites is secretary and superintendent of the State Historical Society of Wisconsin. He was for ten years managing editor of the *Wisconsin State Journal* and is well known as an author and editor of historical works. He attended the recent convention in New York as a delegate from Wisconsin.—EDITOR.]

THE twenty-fifth anniversary celebration of the American Historical Association and the American Economic Association, held in New York City from December 27 to 31, brought together the largest and doubtless the most distinguished assemblage of students of the social sciences ever convened in this country. In addition to the meetings of the two principal societies, which thus rounded out the quarter-centenary of their existence, were conferences by seven closely-related organizations—the American Political Science Association, the American Statistical Association, the American Sociological Society, the American Association for Labor Legislation, the American Social Science Association, the Bibliographical Society of America, and the American Society of Church History. Eleven hundred persons, engaged either in teaching or studying these several specialties, were gathered here from nearly every State or important institution of learning in the Union, and meetings, either singly or jointly, occupied four busy days.

The attendance of several representative scholars from both Europe and Asia, who took part in many of the discussions, some of whom presented formal papers, and whose presence was recognized by numerous receptions and other social functions in their honor, gave to the gathering much of the significance of an international congress. Most prominent among the foreigners was the British Ambassador, Mr. Bryce, whose appearance at any of the meetings was invariably greeted with spontaneous applause, and whose many impromptu responses to calls by chairmen and toastmasters were never happier than on this anniversary occasion, into whose buoyant spirit he appeared keenly to enter.

Among other prominent foreign guests were: G. W. Prothero, of London, editor of the *Quarterly Review*, and former president of the Royal Historical Society; Prof. Herbert A. L. Fisher, fellow of New College, Oxford; Camille Enlart, director of comparative sculpture, of the Trocadero; Eduard Meyer, professor of ancient history, University of Berlin, exchange professor of Harvard; Dr. Cellenbrander, advisory secretary of the Dutch commission on governmental historical publications; Prof. Rafael Altamira y Crevea, professor-elect in the University of Madrid; Dr. Higgs, representing the Royal Economic Society of Great Britain, and Signor Maffeo Pantaleoni, of Rome, attending the Economic convention.

On occasions such as this presidential addresses are generally didactic, and by many of the older habitués are scrupulously avoided. But President Hart, of the Historical Association; President Lowell, of the Political Science, and President Dewey, of the Economic, always have something worth saying, and did not lack large and interested audiences. Dr. Hart's discussion of "Imagination in history" was keen in its penetration and aglow with humor; he dwelt on the practical importance of the imaginative faculty on the part of the historian, but pointed out its manifest dangers, arising from a disposition to overemphasize dramatic episodes that really are rare in the history of a nation, whereas the most vital factors in its development are generally slow moving and commonplace. Dr. Lowell discussed "The physiology of politics"; while not deprecating the importance of library collections in the study of political science, the most useful laboratory work is, he said, the observation of the practical workings of political institutions, about which we are still insufficiently informed. Dr. Dewey spoke of "Observation in economics"; his thought being much in line with that of President

Lowell, that field observation is of greater value than closet study, altho both are essential.

The programs of the nine associations were crowded with what the sporting gentry style "events," but popular interest appeared chiefly to be with the joint sessions, some of which would have been noteworthy occurrences had they not jostled one another in this remarkable conference week. Wednesday morning's joint session of the Historical and Economic associations called out a large and brilliant audience, with President Lowell in the chair. The general topic was "British constitutional and political development with special reference to the Gladstone centenary." Professor Wrong, of Toronto, was hopeful concerning "Canadian nationalism and the imperial tie"; Professor Fisher, of Oxford, gave an exceptionally clear and informing account of the South African union, and Ambassador Bryce spoke forcefully on recent English history in its constitutional aspects.

Another excellent joint session was that held by the political scientists and the association charging itself with scientific suggestion in the matter of labor legislation. The relation of the State to labor was interestingly and suggestively discussed by delegates from the Mississippi basin, where, perhaps, the best opportunities just now exist for trying out some of the theories of economic and sociological reformers.

The Historical Association, with its three thousand members, has of late years been doing its most effective work thru an admirable and impressive congerie of commissions and conferences. This year's meeting was chiefly noticeable for the variety and general success of these conferences, several of which were generally in session at one and the same time. One morning the topics were ancient, medieval, and American history, and the treatment of archives. Later in the day the historians were conferring upon modern, European and American history, and relative to the methods and aims of State and local historical, a fertile theme, now engaging much attention in all parts of the country. One of the most interesting of the conferences was

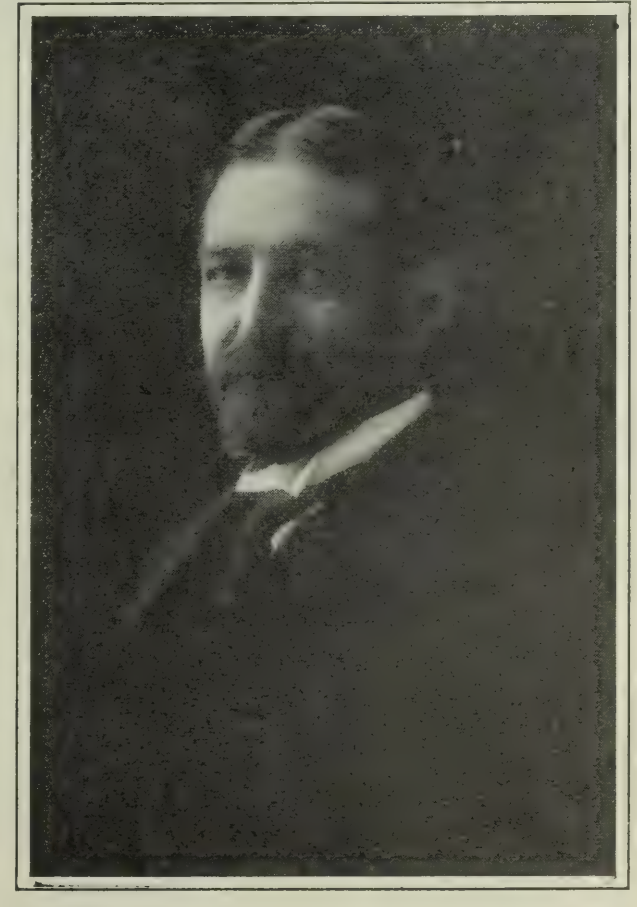
FRANKLIN H. GIDDINGS,
Columbia University, vice-president Sociological Society.

devoted to the consideration of "The contribution of the romance nations to the history of America," in which Spain, France, Portugal and the Latin-American republics were represented either by scholars from those nations or by American specialists in the topics treated. A general session on Southern history brought out an interesting group of papers; while another on the work of historical societies in Europe was noticeable for careful reports from representatives of Great Britain, Germany, France, Holland and Spain, by the delegates from those countries.

The Economic Association has less varied interests, altho it also held a round-table conference on "Rural economics in relation to conservation." At its first general session economic theory was treated both from the stand of "dynamic economics" and that of "theory of wages." It was plain from the vigor of the discussion that economic theory, as doubtless it always will be, is in a state of flux, few men agreeing as to any one cure for the existing ills of the body

politic. Another general session was held at the Chamber of Commerce, in connection with the financial magnates. Hereat was frankly considered "the causes and remedies for trusts," in which the several divergent points of view, practical and theoretical, were squarely presented, presumably with mutual enlightenment.

For a young society, the Political

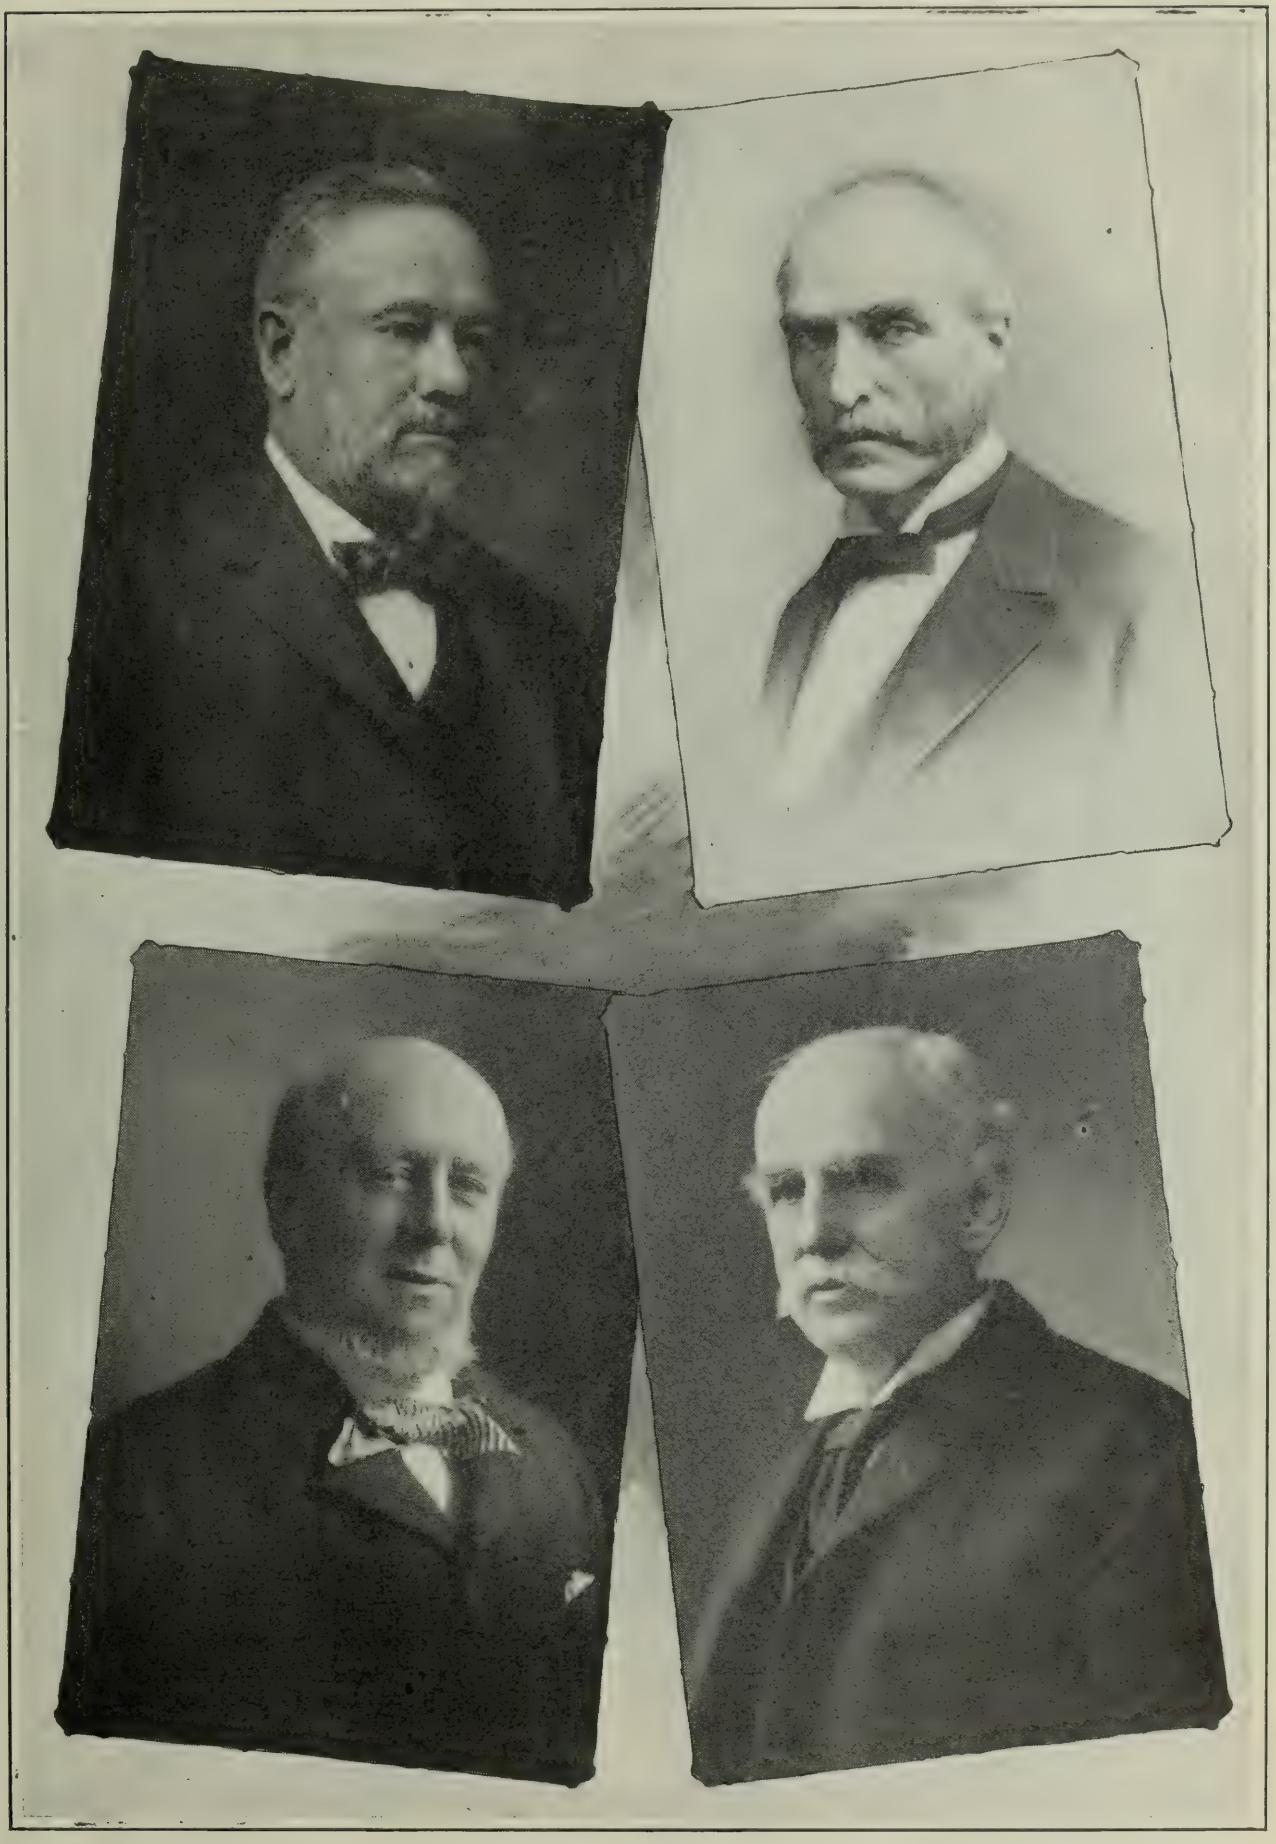


FRANK J. GOODNOW,
Columbia University, first president American Political Science Association.

Science people were exceptionally busy and vigorous. Ballot reform, the valuation of public service corporations (jointly with the economists), the relation of the State to labor (jointly with the labor legislation association), methods of instruction in municipal government and government of the Far East, were all duly considered, exhibiting a wide range of interest and possible future usefulness.

The sociologists were concerned (jointly with the Statistical Association) in such topics as the next census, the standardizing of units in studying public administration under democratic conditions, and the social marking system; and, individually, in the problems of methods in teaching psychological sociology, and in the religious factor in social revolution.

The labor legislation folk and the statisticians chiefly held their sessions in conjunction with other bodies. For the most part the remainder of the participating societies confined themselves to listening to the usual presidential addresses and the transaction of necessary routine business.



The social side of the great conference was in every way notable. The entertainments offered to the thousand and more delegates ranged from receptions and breakfasts to formal dinners. The two most striking features of the daily and remarkably diverse program of hospitality were the great welcome meeting at Carnegie Hall, on Monday night, and the very attractive "historical playlet" and tableaux given by the ladies' reception committee at the Waldorf-Astoria

HENRY W. FARNAM.

James Burrill Angell. James Schouler.

(the headquarters of the several associations) on Wednesday night.

At Carnegie Hall the delegates were given the freedom of the city and State by Mayor McClellan and Governor Hughes. President Butler extended the welcome of Columbia University, and Mr. Joseph H. Choate and Professor Sloane spoke for the Committee of Arrangements. All were excellent addresses, but the Governor in particular rose to the occasion and earnestly commended the work of his hearers, who in their several ways are striving to find the correct principles underlying human society and seeking practically to apply these to the manifold problems of the State.

In addition to the formal entertainments provided by the general committee were numerous unofficial attentions paid to various groups of visiting scholars. Among the most welcome of the unannounced gatherings of this character was the dinner given to fifty members of the American Antiquarian Society at the Metropolitan Club—the joyous forerunner, it was hoped, of annual banquets of these gentlemen at successive conferences of the American Historical Association. In all of these hospitalities practically every learned institution in the city, Columbia University properly leading, actively participated.

In every respect, professionally and socially, the great conference has been a marked success. The attendance was record-breaking, and the quality of the *personnelle* probably quite unexcelled in this country, even by the literary congresses at Chicago and St. Louis. The delegates, domestic and foreign, returned to their homes more than ever imprest by the hospitality, greatness and potentialities of America's much favored metropolis.

WALDO GIFFORD LELAND, A. M.,
Carnegie Institution of Washington, secretary American Historical Association.

THOMAS N. CARVER,
Harvard University, secretary and treasurer, American Economic Association.

Inventions of the Future

BY THOMAS ALVA EDISON

[This article is based on an interview granted by Mr. Edison to Mr. John R. McMahon, representing THE INDEPENDENT. The manuscript has been revised and corrected by Mr. Edison.—EDITOR.]

AMONG the many problems which await solution in the future, one of the most important is to get the full value out of fuel. The wastefulness of our present methods of combustion is tremendous. A pound of coal has enough energy in it to carry itself around the world. We are only able to extract a small fraction of its heat and power; the greater part goes to waste. Our best steam engines use about 15 per cent. of the energy of the coal they consume. With gas engines probably 20 to 25 per cent. of the energy is utilized.

There are various methods being tried out to convert coal directly into electricity without the use of a boiler—eliminating fire and steam. Some of these are oxidation methods. They are scientifically successful, tho not yet commercially successful. Oxidation is, of course, a form of combustion. It is a slow burning. The only difference between rusting, burning and exploding is the speed of the chemical reaction. Explosives burn very fast, and tho they are used to some extent as fuel in the propulsion of torpedoes, they are not economical. There is not as much power in a ton of 40 per cent. dynamite as there is in a ton of coal. Everything in nature would burn up if it were not for the fact that nearly everything except coal is already burned up. Iron would burn and make a good fuel—if in a very fine powder—but it has already been consumed in Nature's furnace. Coal is stored up sunlight; it is the storage battery of the sun, to which we owe about all our energy.

We may discover the germ of getting all the power from fuel tomorrow; and then again it may take a long time to find out.

Radium has great power. It has no appreciable limit or end. It is not combustible. It gives off intra-atomic energy. We don't know how its energy was stored up. A carload of radium would have as much energy as all the millions of tons of coal mined in the United States in a year. Radium is the cause of the earth's heat, according to the view of most scientists today. That explains why the earth, constantly radiating vast quantities of heat into space, doesn't cool down. The planet would be pretty chilly after all these millions of years if it had no radium in it. While only small quantities of radium have been isolated, it exists everywhere in water, rock and soil; it is universally distributed, and a little of it goes a long way. The possibility of harnessing this force for our use is somewhat of a speculation. A radium clock has been made, and it will go several hundred years without winding.

I have a spinthariscope, which is a tiny bit of radium, of a size that will go thru the eye of a needle, mounted over a piece of willemite. It has been shooting off millions of sparks for the six years that I have had it, and I expect it will be shooting sparks the same way for thousands of years. There will be enough sparks given out by that fragment of radium to cover and illuminate the State of Rhode Island. Some say they travel at the speed of light, others 12,000 miles a second. This speed is the source of radium's power. Infinite velocity makes up for lack of mass. Microscopic particles projected at high velocity are equal to heavy bodies going a slow gait. The illustration of a wax bullet being fired thru a wooden plank applies to radium's emanations. Rankin said that spider web running over two pulleys with the velocity of light would be capable of running all the machinery in England; they would prove as strong as rubber and leather belting.

It is hardly feasible to carry around radium as a pocket stove or to keep it in the house for domestic uses. Professor Curie had a tiny bit in his vest pocket that he was taking to London and it had

the effect of making a festering sore in his side. Radium is found along with uranium and thorium. Some day we might find immense deposits of it, and then it will be a problem how to handle it without dangerous consequences. A large quantity of the stuff would kill everybody around. A fellow shot up with seventeen thousand million atomic cannon balls poured into him with the velocity of light would feel uncomfortable.

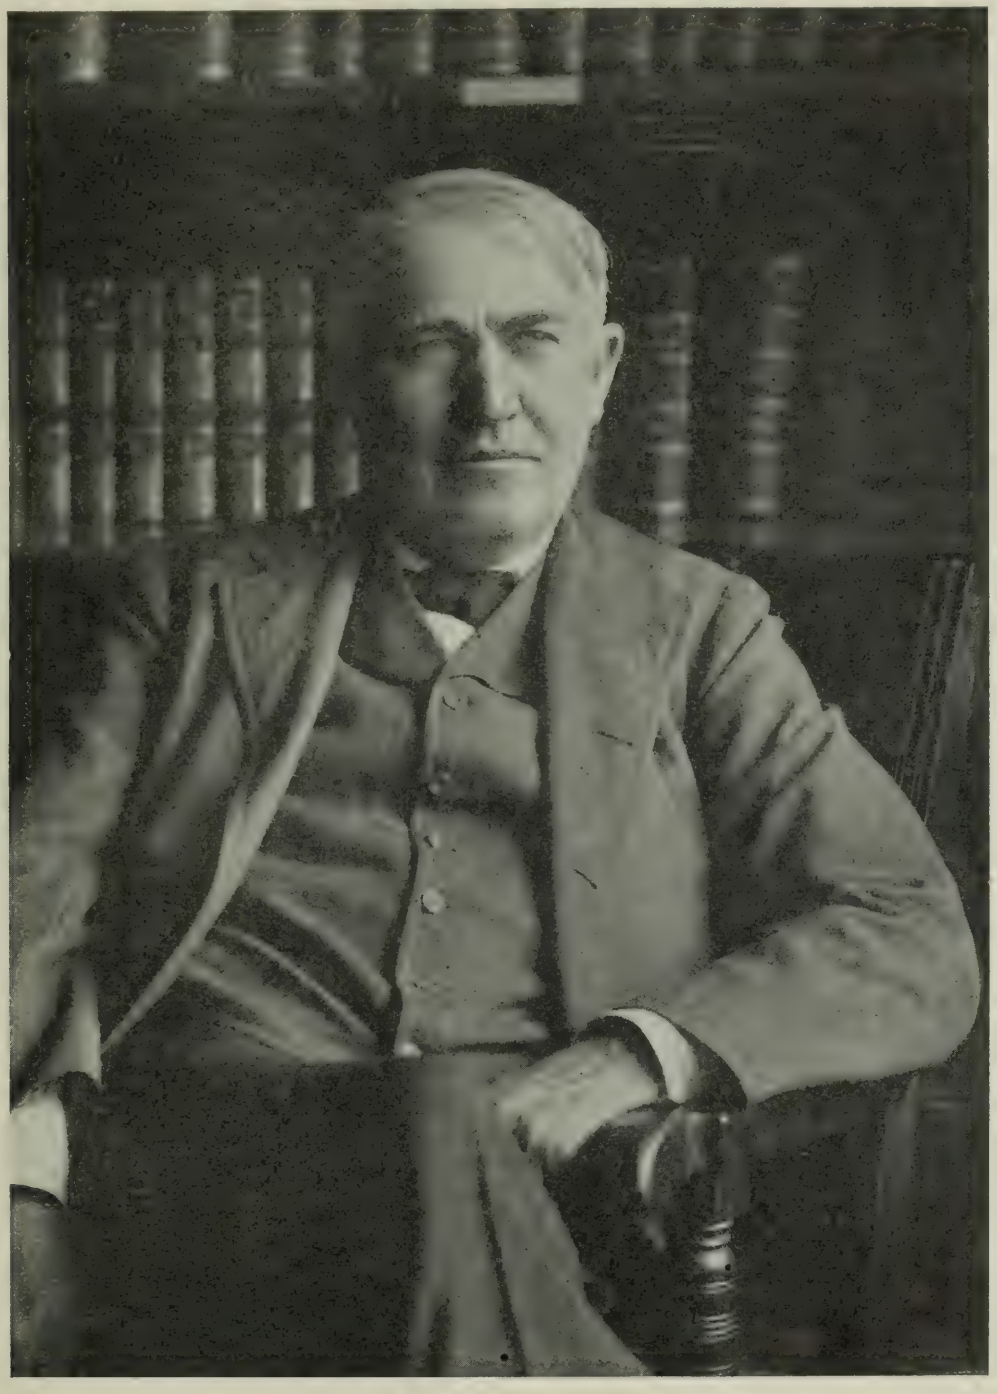
Besides its mechanical possibilities, radium is valuable, it is said, in the treatment of skin cancer and some other diseases. Cancer is a hard proposition, but when it bucks up against radium it meets its match. I guess it is a case of *similia similibus curantur.*

There are lots of things besides radium that we don't understand. These five senses of ours are pretty dull detectives. We only perceive a little that comes within the range of our senses. A thing drops below our level and we don't perceive it. Here and there, now and then, some one finds out a new thing we didn't dream the existence of. In this room and in your room at this moment there are fifty wireless messages going thru. Without instruments we cannot detect them.

The power of our waterfalls is being rapidly developed. Maybe the utilization of the tides will follow, but the machinery to accomplish this would require a vast investment. Tidal and wave power is, of course, immense. Consider the force that jogs up and down a steamship like the "Mauretania." More practicable, however, are windmills connected with storage batteries to lay up the energy of the winds in electrical form. Sun engines are very promising machines. They are built on the principle of absorbing the heat from the sun in water or other liquid, or concentrating the heat by focusing the sun's rays thru a burning glass on a copper boiler. In Arizona there is a thirty horse power sun engine which is run by focusing the rays on water and using a steam turbine. A number of good men are working on this problem of gaining power directly from the sun.

In steaming volcanoes there is a source of power, which might be obtained and sent out by electricity. At Yellowstone Park the geysers are wastefully spouting a large amount of energy. In the Comstock Lode and all thru that region nature has a power house which man could use. Steam under pressure to run engines and make electricity can be had there merely by sinking artesian wells.

The earth has quite a bulk, but it slips thru the ether with so little friction that your thumb, in the right place, could move it. There are a number of earthly motions and all are potential sources of energy. Throw something out of balance and you win power without end. Six feet off the orbit would be quite enough for all purposes. As for the possible dangers of interfering with the earth, like making it wabble so much that we would feel it, or changing the zones so that the Arctic regions would change places with the tropics, or making our days and nights of unsuitable length, I don't consider them serious. You can't hurt the earth, even if you do throw it a trifle out of kilter or disturb its ancient habits.



To get rid of friction in our machines is one of the future problems. The only machine without friction that we know is the world, and it moves in the resistless ether.

The monorail does not appeal to me. It was a fundamental mistake that our railroads were built on a 4 foot 9½ inch gauge instead of a 6 foot gauge, which we will probably have to come to yet.

The aeroplane of the future will, I think, have to be on the helicopter principle. A successful air machine must be able to defy the winds. If Wright's aeroplane had one-twentieth of its surface, the wind would not affect it. The helicopter principle is the only way to rise above atmospheric conditions. By increasing the velocity of propeller revolutions the size of the machine can be diminished and thereby we vanquish the hostility of the wind. A helicopter could have foot-size planes distributed on a 100 to 150 foot circle and controlled from the center by wires.

Chemical food has been worked out pretty well by Emil Fischer and his students, but it won't be a commercial proposition. There are lots of synthetic things made. Carbo-hydrates of the

same nature and bulk as the natural material are produced, but you can't beat the farm as a laboratory, commercially speaking. If we should dry up like Mars and couldn't raise vegetables on the earth, we might turn to a chemical diet.

Thomas A Edison.

There might be local famines which could be mitigated by the food productions of the chemists. The complaint today seems to be that here are too many chemicals in our food.

The clothes of the future will be so cheap that every young woman will be able to follow the fashions promptly, and there will be plenty of fashions. Artificial silk that is superior to natural silk is now made of wood pulp. It shines better than silk. I think that the silkworm barbarism will go in fifty years, just as the indigo of India went before the synthetic production of indigo in German laboratories. Silk is made arti-

ficially in two ways: cellulose dissolved in cupric ammonium and squirted thru small holes in a plate into a fluid that sets it, when it is ready for spinning and weaving; also by subjecting cotton to pressure with acetic anhydride, which changes the molecules but not the appearance of the material. The latter process yields beautiful silk, and at the same time, when flown on to glass plates, makes moving picture films.

There is much ahead of us. We don't know what gravity is; neither do we know the nature of heat, light and electricity, tho we handle them a little. We are only animals. We are coming out of the dog stage and getting a glimpse of our environment. We don't know, we just suspect a few things. It will take an enormous evolution of our brains to bring us anywhere. Our practice of shooting one another in war is proof that we are still animals. The make-up of our society is hideous.

Communication with other worlds has been suggested. I think we had better stick to this world and find out something about it before we call up our neighbors. They might make us ashamed of ourselves.

Art will be increased and distributed as we emerge more and more from the dog-stage. Society will have to stop this whisky business, which is like throwing sand in the bearings of a steam engine. In 200 years, by the cheapening of commodities, the ordinary laborer will live as well as a man does now with $200,000 annual income. Automatic machinery and scientific agriculture will bring about this result. Not individualism but social labor will dominate the future; you can't have individual machines and every man working by himself. Industry will constantly become more social and inter-dependent. There will be no manual labor in the factories of the future. The men in them will be merely superintendents watching the machinery to see that it works right.

The work day, I believe, will be eight hours. Every man needs that much work to keep him out of mischief and to keep him happy. But it will be work with the brain, something that men will be interested in, and done in wholesome, pleasant surroundings. Less and less man will be used as an engine, or as a horse, and his brain will be employed to benefit himself and his fellows.

ORANGE, NEW JERSEY.

The Abbots of Cluny

BY RICHARD SCHEIL

ALONG toward evening of the last day of June, there stepped down from the train at Cluny, France, a party of whom two, on sitting face to face in the hotel "bus," soon found that in language at least they were not strangers. The one was an elderly English Catholic priest, in charge of a London parish; the other a middle-aged American who might be taken as a nondescript as regards Church membership. The pair agreed to pass their time at Cluny together, for the American was able to get along in French, which the Englishman, altho conversant with that language, balked at speaking.

After dinner we started out to stroll about the town. Presently some old church towers loomed up before us. Meeting a fine specimen of the French peasantry, we asked him if that was a church. "No, sir; it is a school," he answered. The Englishman remarked, "Extraordinary!" When pressed, the peasant knew not that it had ever been a church. The great abbey church was unknown to a citizen of Cluny! We made a visit to the abbey itself. The entrance gates, noble specimens of Roman—or, as we would say, Norman—style, are now entirely separate from the abbey. At least, two streets traverse the ground between. We enter thru the palace of Pope Gelasius, probably so called because of a visit of a Pope of that name. Of the old church only the transept, with three towers, remains. Within the great hight is ennobling; one's thoughts seemed to mount upward as the eye ran its gaze along the lofty columns

up to the slightly pointed arches. Nearby is the chapel of a Duke of Bourbon, who built it in the hope of having within it the mausoleum of himself and his duchess. It was never erected, but two large silver statues of the pair escaped the throes of the revolution, and are now shown in the Hotel Dieu of the town.

Stepping out into the garden, a glorious view of the surrounding country was ours. The old monks loved a good landscape and the outlook here was superb. To our left an avenue of lofty trees, probably a hundred yards long, ends at a large spreading tree with a seat around and a stone table before it. It is named after Abelard, who, so the tradition runs, sat there dreaming less about *Sic et Non* than Heloise. For Peter the Venerable, the greatest of all the abbots of Cluny, sheltered the storm-tossed scholar who was born fully a century too soon. At a branch of Cluny, St. Marcel-sur-Saone, Abelard breathed his last.

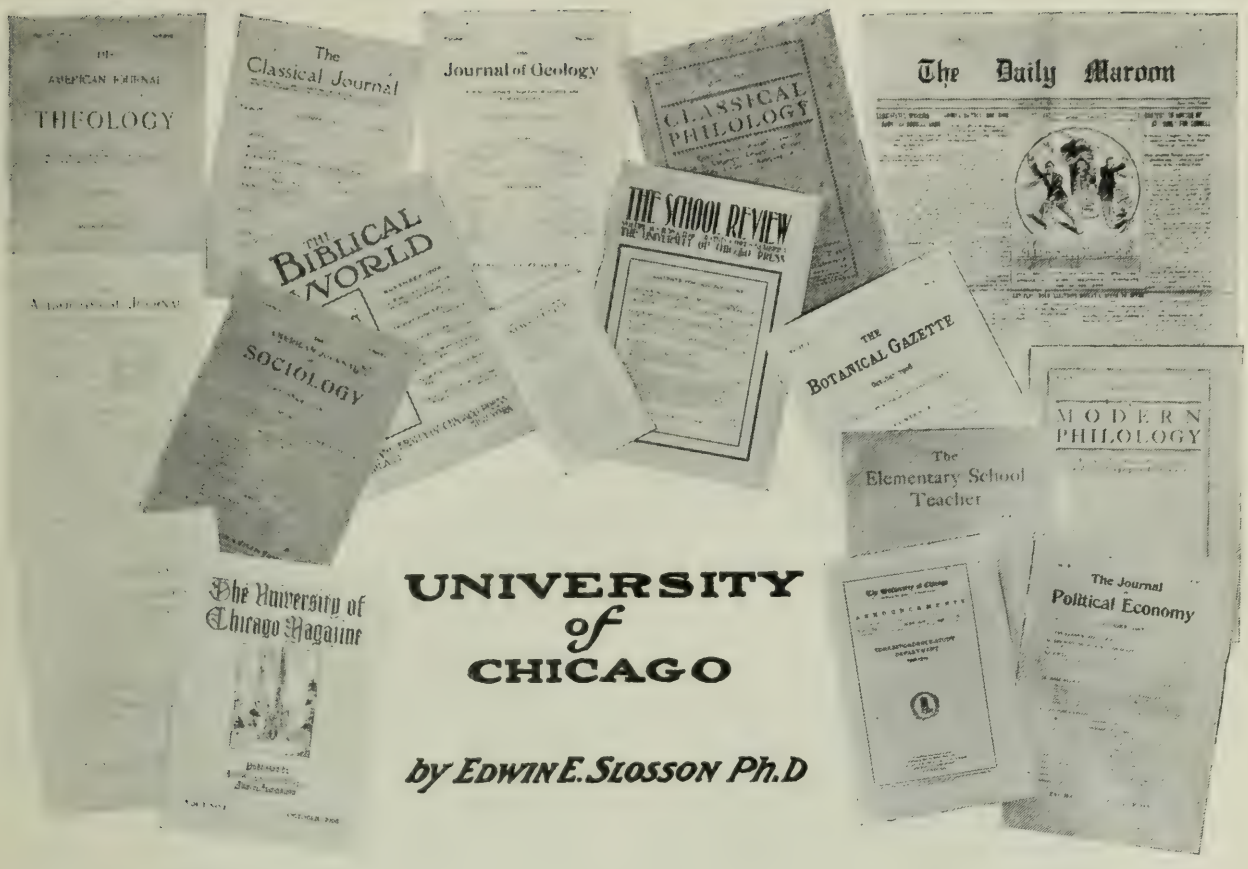
During the closing centuries of the old *régime,* the Abbot of Cluny was usually a cardinal or an ecclesiastic of noble birth. In the little museum, formerly a palace of the abbey, is a painting of the last abbot, Cardinal de Rochefoucault, but as he died in 1757, it would seem that Cluny was without a head when the dissolution came in 1790. This last abbot, it seems, was of a collateral branch of the family of Duke Francis VI, the author of the well-known "Maxims." As to the fighting, history affords many instances where the monks did their share.

Soon we faced the façade of the great abbey, which was built in the sixteenth and seventeenth centuries, badly injured during revolutionary days, but has since been restored. After all, the peasant was correct. The Abbey of Cluny is now a school—one of the fine trade schools of France. Eight hundred monks found room in the building, while now three hundred boys with their outfit fill it. The course takes three years, and on finishing, the graduate receives a certificate as *ingenieur.* Entrance is by competitive examinations and one hundred are received every year. The Government does everything for them—board, lodging and tuition. There are burses, half burses, quarter burses, in order to lighten the burden of the annual pension, 600 francs ($120). The boys are of poor families, hence the low fee and much divided burses. The building itself is of two stories, of which the upper seems to have a loftier ceiling than the lower. While wandering around the corridors and peeping into the various classrooms, with their hard, backless seats, we could not but contrast the former inmates and the present. The monks versus the boys. Was the abbey serving a better end of yore or is it doing so today? Today's at least is more tangible and more promising of a useful life—useful as men understand the word nowadays.

On leaving the building, a short walk led us to another structure, where the Government keeps a stud of thirty odd stallions in order to improve the blood of the farming horses around. Over every horse's head is his pedigree, while the halter rope which holds him is tied to a ball running freely up and down between two uprights, a device no doubt welcome to his horseship. We had made our visit.

Cluny was the great Benedictine monastery of France, and in its heyday boasted of over two thousand branches. Of course, it became enormously wealthy. Besides the abbatial palace, now the City Hall, abbots of great houses built special abodes, so that today the guide points out the palace of Lorraine, and that of Condé. Moreover, the abbot had a splendid palace in Paris—now the Museum of Cluny—facing the Sorbonne, the home of learning. But Cluny was never noted for scholarship. In fact, the greatest of all Cluniacs was rather a ruler of men. He was Hildebrand, afterward Pope Gregory VII. By birth an Italian, in name a German, by profession a French monk, he it was who put into shape the idea of the papal theocracy. Within fifteen years after his death Cluny gave two more Popes to the Church, Urban II and Paschal II, who followed the schemes of Gregory VII. And yet it was a French King, Philip the Fair, who gave this dream its first rebuff in sending Nogaret to beard Boniface VIII at Avagni. Thence onward, the meddling of the Church in civil affairs has been dwindling, slowly but surely, so that today she is not even represented in the Peace Congress of the nations at The Hague. Yet song and

story, as well as painting, have made Hildebrand's victory over Henry IV, his one-time pupil, at Canossa as his chief feat. The Pope was too astute, however, to misunderstand the penance of the Emperor of the Holy Roman Empire. He knew that it was a Pyrrhic victory, which would end in his own rout. Such was the case, for Hildebrand died an exile from Rome and his bones still lie at Salerno. "I have loved justice and hated iniquity, therefore I die in exile," were his last words. "To go to Canossa," that is, to submit to Rome, passed into a proverb, which Bismarck himself made use of during the kulturkampf of the early seventies.



Another measure of Hildebrand's was more successful—the celibacy of the clergy. Altho it had existed, married clergy were not unknown in the Latin Church. St. Hilary of Poitiers, father and doctor of the Church, was married, and later than Gregory's day, a curious visit recorded in the life of Thomas à-Becket, is that of Jocelyn, Bishop of Ely, and his wife. The Greek clergy were always and are today a married clergy, even when united to Rome. There are many such now in the United States. Gregory VII's decree gained so much ground in the Western Church that the Council of Trent defined and declared null and void the marriage of a priest. Theretofore priestly marriage was unlawful; thereafter unlawful and invalid.

Hildebrand was really the only great man Cluny produced. Peter the Venerable was its last great abbot, and he died in 1156. He was the living expression of gentleness and kindness. Hugh of Cluny, the contemporary abbot and friend of Hildebrand, with two previous abbots—the fourth Mayeul and the fifth Odilor—fill up the list of Cluniac greatness. Few, indeed, in the story of eight centuries. Cluny, however, stood high in France, but its supremacy was lost when the Abbey of St. Maur arose in the first decades of the seventeenth century. The labors of the Benedictine scholars of St. Maur are well known to and cordially recognized by the scholarly world. These two abbeys and the equally famous third of St. Vannes were judged by Rome as having passed on their glory and life to the Abbey of Solesmes, approved in 1835 by Pope Gregory XVI, the Pope who forbade the sale of "Uncle Tom's Cabin" in the States of the Church. During the closing years of the nineteenth century an enthusiastic dreamer tried to revive Cluny. He failed, and Dom Lamey, as he was named, entered Solesmes.

The two travelers, the Englishman and the American, were types of a world known to and of a world unknown to Cluny. Both as an Englishman and a Catholic, one companion would have been no stranger, whereas the American would have been in every way unknown, not only as to his native land, but also as to his Government, with a free Church in a sovereign State. True, Cluny was a sort of a republic, but without universal suffrage, and, moreover, a sheer appanage of the State. Only the choir monks voted, and, mayhap, not all of them. But their choice required the royal sanction. The Abbot of Cluny exercised the twofold authority of a mighty potentate of State and the first abbot of the Church of France. In him Church and State unified.

"After all, Cluny was a failure," we remarked to the Englishman. In a noncommittal way he replied: "It has left deep traces in history." Probably he referred to Hildebrand's papal theocracy and to sacerdotal celibacy. Such traces Cluny left. The former has been the occasion of countless wars and bloodshed; today even it is a stone of offense to those nations who accept its supremacy. The latter, celibacy, created that strange sex which Voltaire termed the neuter sex, whence the clergy became a caste. But these two data are all apart from the fundamental object of Cluny. It stood essentially for the victory of the spiritual man over the carnal, the higher over the lower nature, God over the Devil. In this feature, which gave it its sole reason for existing, Cluny failed. That one part of man is to be purified by absorbing or eliminating the other holds not; all experience is against it. Cluny, like all Benedictine retreats, taught that man's perfection was wrought rather by the infusion and spread of love and the Holy Spirit in the heart.

PARIS, FRANCE.

IN our time three universities have been raised from the seed: Johns Hopkins, Leland Stanford and Chicago. The youngest and greatest and most original of these is the University of Chicago. Scarcely had its cotyledons appeared above the surface of the Midway soil when it was seen to be a new species, a mutant. Tho now that it is full grown, it looks more like the rest of the genus than we thought it was going to, still there is enough that is novel about it to make it interesting.

One of my objects in visiting these universities was to point out what new things were being undertaken. In some instances I found this difficult, but in this case the difficulty is of the opposite sort, to find space to mention all the departures from traditionalism which we owe to the University of Chicago. That was because a man of creative and administrative genius found here an unparalleled chance to carry out his ideas. William Rainey Harper was a big man who did big things on a big scale and made big mistakes. And this is a point worth noting. His successes were where he struck out new paths for himself according to the needs of the situation; his mistakes, or what I should call such, were where he attempted to copy Eastern and English colleges. But all his mistakes were not failures nor all his failures mistakes.

Beginning in 1891 he issued a series of revolutionary manifestoes which burst like bombs in the educational world. The

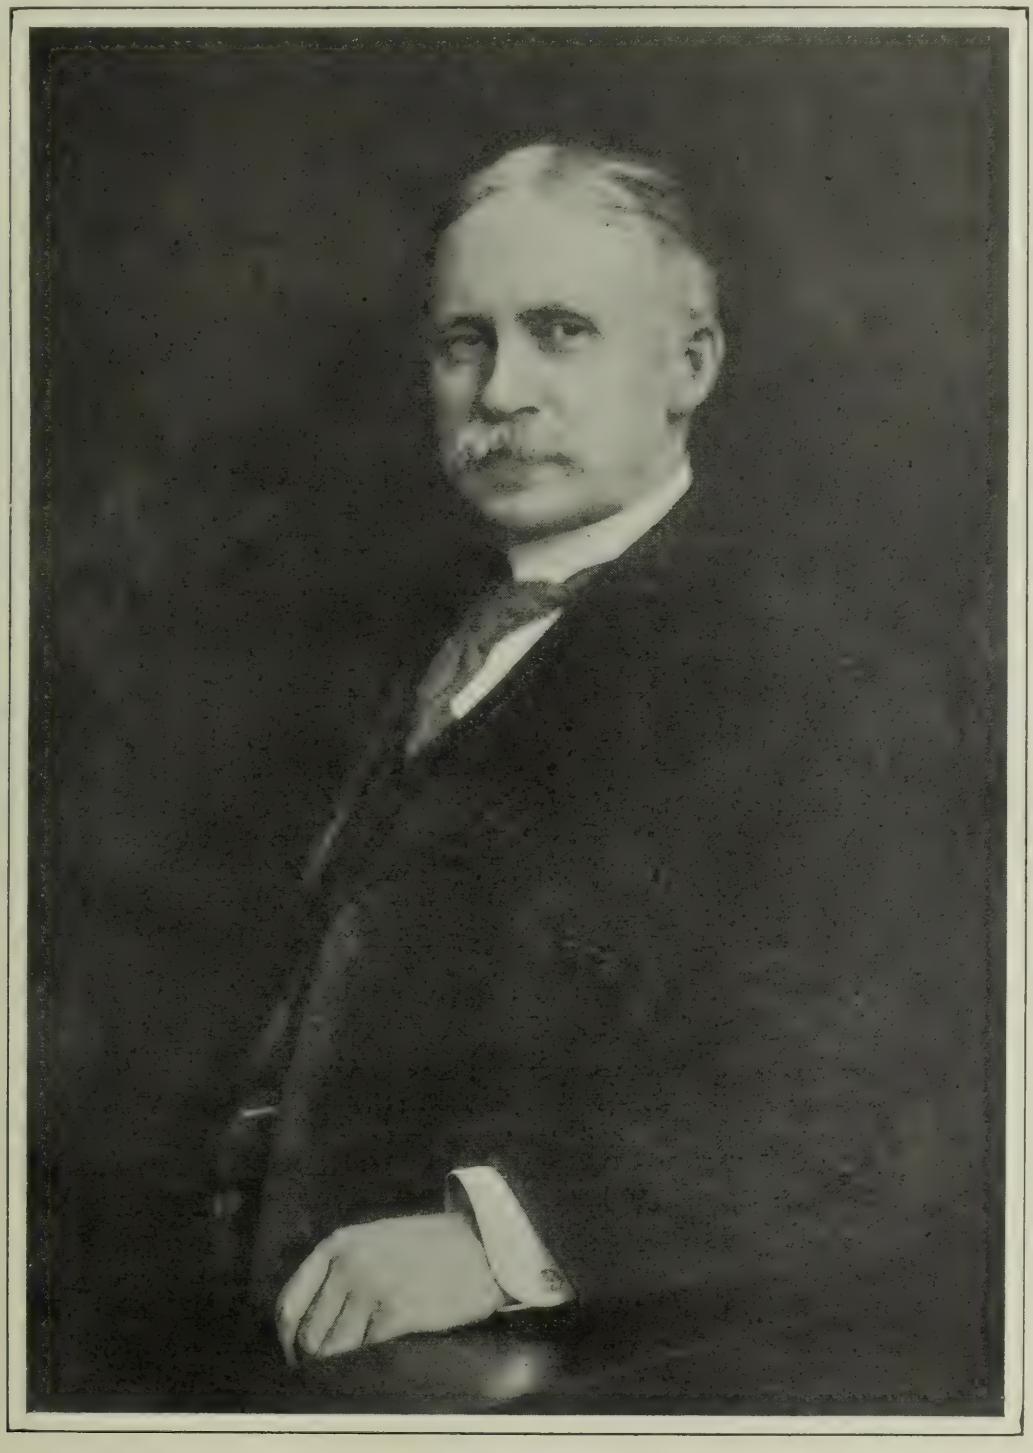
GREAT AMERICAN UNIVERSITIES.—This is the thirteenth of a series of articles on the present condition and future prospects of the larger universities of the United States by one of the editors of THE INDEPENDENT. The dates of publication of these articles are as follows:

1	Harvard University .....Jan. 7th, 1909	8	University of Minnesota....Aug. 5th, 1909
2	Yale University .....Feb. 4th, 1909	9	University of Illinois .....Sept. 2d, 1909
3	Princeton University .....March 4th, 1909	10	Cornell University .....Oct. 7th, 1909
4	Stanford University .....April 1st, 1909	11	University of Pennsylvania. Nov. 4th, 1909
5	University of California.....May 6th, 1909	12	Johns Hopkins University...Dec. 2d, 1909
6	University of Michigan.....May 27th, 1909	13	University of Chicago.....Jan. 6th, 1910
7	University of Wisconsin .....July 1st, 1909	14	Columbia University .....Feb. 3d, 1910

The first four issues are entirely out of print, but any of the remaining numbers will be mailed for ten cents a copy.

West received them with amazement; the East with amusement. But the amazement soon changed into admiration, the amusement into trepidation. For the new projects were not merely broad; they were iconoclastic. Tho varied in their character most of them had the same aim, the breaking down of the barriers between the life of the university and the life outside, barriers which six centuries of scholasticism had erected, buttressed and adorned. President Harper planted his bombs under the walls of the university so there was cause for alarm. "If the walls go down what will there be left of the university?" cried those who were sheltered within them. "And, moreover, what will become of the ivy? That particular species of ivy can only grow on decayed collegiate stone and it is worth while keeping up the walls for the support it gives to the ivy." They need not have worried. Some of the breaches that President Harper made in the scholastic walls have been repaired and others partially concealed by ivy, transplanted from Oxford for that purpose.



Most prominent among the innovations directed toward setting the university free from its confinement within four walls and four years were the summer quarter, the press, the extension work, the down-town classes, the correspondence courses and the affiliated colleges.

The summer quarter was the most radical and most successful of the innovations. It was not merely the extension of the session for the better utilization of the plant or the shortening of the college course. Its most marked effect was to loosen up the college system and give it a flexibility that enabled it to adapt itself to varying conditions as never before. There were many objections, valid and invalid, brought against the summer session, but it is not necessary to repeat them here as they are only of antiquarian interest now. If any one wants to know what they are he can hear them at New Haven or Baltimore, or in undertones at Ithaca and Cambridge.

President Harper divided the year into four quarters. It is true this had been done before but the colleges had not found it out. Each quarter of twelve weeks ended with a commencement or convocation for the conferring of degrees. Even this was not often enough and he used to run in extra convocations once in a while like extra dances at a ball.* That was a nice thing about President Harper; he was fond of regulations but he had no reluctance about making exceptions to them when desirable. This is unprofessional but handy. These intercalary convocations appeared most unexpectedly. Some morning the students going into Cobb Hall would see the announcement of one next week, posted on the bulletin board, near a laundry advertisement, the notice of a steamboat excursion, a fountain pen lost and a request for two stenographers ($40 a month each) and one experienced teacher of Latin ($20) to call at the appointment office. But no matter how impromptu the occasion it lacked none of its usual pomp and circumstance. There was a procession and a recession of such of the faculty as could be got out by a double hurry call. The long line of candidates was marshaled before the president who gave them their diplomas *ex cathedra* with as much solemnity as possible considering that the cathedra was much too big for him and the candidate was dazed by being addressed in Latin for the first time in his life, and by the efforts of a dean to lasso him with a maroon hood. Then there was always an address by somebody worth listening to and talking about afterward. But however distinguished the orator was, he could not compare with the president when he read his quarterly statement of the condition of the university, the record of its growth, the long list of its gifts and the longer list of its needs. I never heard any one who could read a table of figures with such eloquence as President Harper. Perhaps it was partly in the audience. I believe Western people are more easily aroused to an emotional interest in statistics, especially statistics of growth, than are Eastern people. I doubt if Yale and Harvard students, for all their traditions of loyalty, and devotion, feel so personal a delight in the prosperity of the university as did the Chicago students in the early

*In 1898 and again in 1910 there were six convocations instead of the regular four.

days. When the president announced that money had been given for a new biological laboratory or the biggest telescope in the world, the teacher who had come on from Georgia or Oregon for a six weeks' vacation and never expected given to him. And when the president stated that the trustees had decided to give J. D. to the lawyers, the five thousand people in the big circus tent felt that they were indeed fortunate to have been able to participate in such an epoch-

HARRY PRATT JUDSON,
President of the University of Chicago.

to come again, altho he generally did, felt almost as happy as tho the money had been given to him; in fact, he felt that in some sense the money had been making occasion. They felt like the signers of the Declaration of Independence, only not so scared. In some way he managed to make the summer stu-

dents feel that they were partners in a great enterprise, that they were being let in on the ground floor of a good proposition, and when they scattered to their homes they said to themselves: "Well, Rockefeller and I have a big undertaking on our hands, but I guess with the help of that man Harper we will put it thru." And they did. It is a remarkable thing that the munificent gifts of Mr. Rockefeller have always been given in such a way as neither to arouse the feeling of being patronized nor to deter others from giving large or small amounts to the institution.

Now all this is not so much of a digression as it seems. I started out to explain why the summer session at Chicago was more of a success than elsewhere, and that is what I have done. It is a mistake to assume that summer students are incapable of loyalty and enthusiasm because they have not had four solid years of football and class-rushes and dormitory life. Whether you feel at home in a house or not depends less on the length of your stay than on the geniality of the host and congeniality of the company.

In some universities the summer students were treated as intruders, as second-story men, taking an unfair advantage of the institution by slipping in when the house was empty and carrying away with them a lot of learning to which they had no legal right. In Chicago they were somehow made to feel at home from the start, and the second season they swaggered about the campus as tho they owned it and patted each new building on the back as if it were a new pig or calf. Like the habitués of a restaurant, if they did not see what they wanted on the curriculum they asked for it and generally they got it. They were ravenous for information. Any man talking on any subject at 4 p. m. in the Kent Theater could be sure of an audience, one audience. If he got a second audience, it was because he deserved it. For the estival student differs from the hibernal species in being more independent and intractable. He is inclined to be over-sensitive, argumentative and bumptious, for he finds it difficult to lay aside his schoolmaster's manner and assume a pupil's docility.

But the instructor who has the patience to bear with the whims and stubbornness of the summer student gets his reward. He may know that next winter his casual remarks will be quoted as oracles and his mannerisms imitated in the class-rooms of a dozen States. A man who comes a thousand miles to get an idea, goes off with it into a lonely place and thinks about it for nine months and then comes back for another one, is after all a man worth talking to, tho he may not seem so at the time. Even one of President Harper's glowing prospectuses could not excel the descriptions of the University of Chicago given by the summer student returning to his native village. His bewildered hearers would be quite excusable if they got the impression that the Art Institute, the Field Museum, Hull House, Sans Souci, the stockyards and the lake were all departments of the university. A summer on the Midway campus was a teacher's institute, a foreign tour and a picnic all in one.

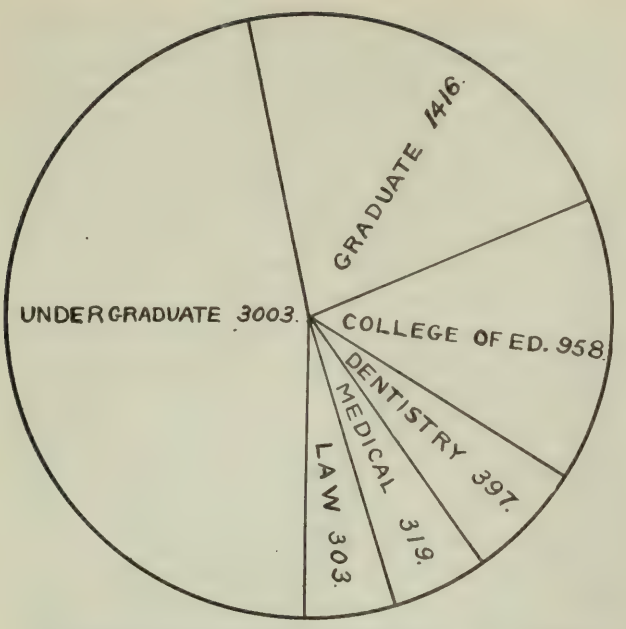
It was Dr. Harper's aim to make the summer quarter the full equivalent of the other quarters. He more than succeeded. It became the most important quarter in both numbers and quality of work. Last summer (1909) there were 3,253 students in the summer quarter, and 2,339 in the following autumn. The proportion of graduate students in summer is greater than in the rest of the year.

In the beginning the head professors showed a disposition to confine their attention to the "regular" students in the conventional nine-month session, and to throw the burden of the summer work on their subordinates, but by and by it was apparent that those who taught in the summer were getting the most of the research students for the rest of the year, because these usually came to the university in June and stayed on. After this was discovered it became easier to get professors to take their vacations in one of the other quarters.

Work in the summer quarter has a curious reflex influence on the instructors, an influence that will, I believe, prove to be far-reaching and, on the whole, beneficial. They find that the teaching of men and women is altogether different and

somewhat harder, but may be quite as interesting and important as the teaching of boys and girls. It is not a matter of age alone. The graduate student who has done nothing but go to school all his life retains a certain immaturity of mind and disposition. Tho he may be thirty, he seems younger than the man of twenty-three who has been making his own living for several years. The returned graduate brings into the classroom an independence of judgment, a skeptical spirit, and a realization of the practical requirements of life, that is sometimes disconcerting and sometimes stimulating to the instructor.

But a mixed class of hold-overs and recidivists is an amusing combination. One summer day, in Washington Park, I happened upon a youth studying under a tree. I began to talk of the advantages of the summer quarter, but found that he did not share my enthusiasm for it.. "A confounded imposition, I call it," he said. "You see, there were two of us fellows who failed in Latin, and they said we could make it up this quarter, but there are twelve in the class, and all the rest are gray-headed college professors or old maid schoolma'ams, who have been teaching the stuff for years and are back to get "methods," and the Prof is racing them thru like lightning and pretending that he does it like that all the year round."



Educators are fond of talking about the desirability of students who love learning for its own sake, but when they get them they do not know what to do with them. A large and increasing proportion of the summer students in the universities generally are of this type. They do not care to bother about credits and degrees, they want what these things stand for, but the various registrars, deans and advisers make their lives miserable by insisting on their being registered and "checked up" and classified and put thru the mill in the conventional order. There is, unfortunately, a prevailing opinion that a large proportion of graduate students "not candidates for a degree" is a disgrace to a university. It ought rather to be looked upon as a credit, as an indication that the institution is attracting students who are after essentials, not symbols.

The old theory of education was that a man should get his schooling once for all in his youth and be done with it, like the measles. It was at one time actually thought that a college course could be made broad and foresighted enough to give a man all he needed in the way of external assistance thruout his future career. If he came back—except to whoop it up on Alumni Day in a clown's costume—it was felt as a reflection on the university for not having done its work thoroly when it had him. They say that a man should be independent and prove his manhood by not running to his mother whenever he gets into trouble, but this assumes that Alma Mater like mortal mothers gets antiquated and enfeebled in intellect as she grows old, which is often but not necessarily the case.

Whether a man wants to come back to the university for help in after life depends on whether the university is a reservoir or a spring. If it is a storehouse of static information he can get along without it. If it is progressive and creative he will be drawn back to it repeatedly for inspiration and insight.

The greatest service that the University of Chicago has rendered to the country has been in breaking up the phalanx and giving the irregulars a chance. It has been less worried than some institutions over its unclassifiable graduate students. It has been hospitable to all sorts and conditions of men and as many varieties of women. It has met the earnest student half way. It has even welcomed returned Ph. D.'s It has been respectful to gray hairs. Last summer an instructor had in his class a student who had been graduated from Dartmouth the year before the instructor was born. That is the proper spirit. If men keep putting off taking their "final degree" long enough they may get over wanting it and come to realize, even to admit without blushing, that the degree was not what they were working for after all. The system of indeterminate sentence and release on probation may do as much for the reform of the universities as it has of penitentiaries.

I do not mean to say that all the men and women who have been brought into the university by the far-flung net of

DISTRIBUTION OF STUDENTS AT THE UNIVERSITY OF CHICAGO, 1907-8.

summer and extension courses are of this unworldly and unselfish type. Many of them are sordid and mercenary. They have to be. Every additional letter after their names means a few more dollars a month and a little more ease and comfort for those dependent on them. They compare with anxiety the growing pile of credit cards in the registrar's office and the dwindling bank deposit in the bursar's office, for if the one does not increase as fast as the other diminishes they have lost, perhaps forever, their chance of rising out of the sweat-shop level. This fear emboldens them to badger the dean for better grades and to rake up every scrap of credit from their kindergarten period to the present. We overhear bits of conversation like this:

"Why are you taking Head Professor A.'s course? Don't you know that Dr. B. is much more interesting and helpful?"

"Yes, I know. I don't care a bit for A.'s stuff, but his name will count for more on a recommendation than any other."

That is the other side of it. But it is the universities which are to blame for the exaggerated value that principals and presidents and boards put upon degrees, and it is the universities which should lead in the reform. Then the university professor would come to regard himself as different from an athletic coach training for an intercollegiate contest.

One of the novelties of the Columbian Exposition was a moving sidewalk. The University of Chicago was constructed on the same plan. You get on whenever you want to, and you go as far as you like. One of the students who registered at the beginning in 1892, received his degree in 1907. Each quarter is to a certain extent complete and independent. This has the disadvantage of requiring some repetition of common courses and of breaking the continuity of a study. The break, however, is usually only a formal one for a student in continuous residence, and there are some decided advantages in the plan besides the obvious one of convenience to irregular students. It tends to promote concentration of effort. Instructor and student get down to business quicker and waste less time at the end. Instead of giving the students a week or two for preparing for examination and for other purposes, the final recitation periods are utilized for examinations. Wherever there is a summer school it has produced a noticeable effect in this respect on the character of the teaching in the rest of the year. June seems a long way off to an instructor starting his lectures in October, but he can see the end of his six, eight or twelve weeks' course from the beginning. Consequently the professor of chemistry does not spend so much time talking about phlogiston at the start that he has to leave out radium at the end. Procrastination and dilatoriness are the common vices of the schol-

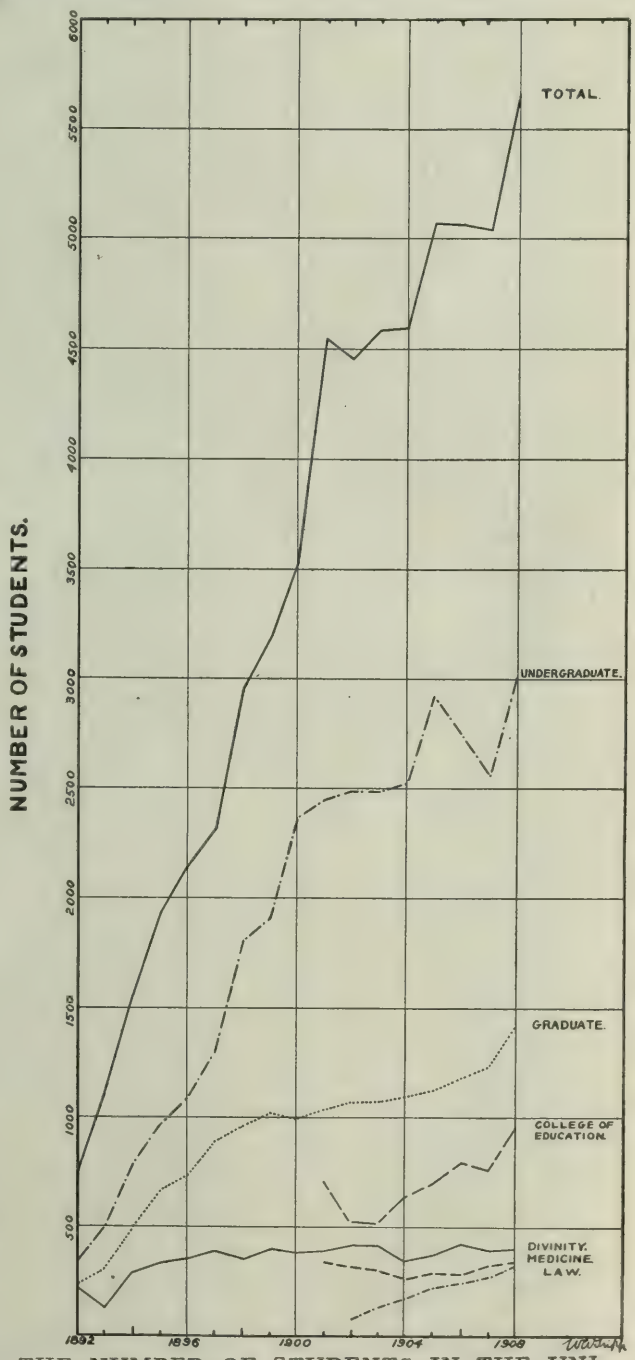
*Deductions made for double registration.



astic temperament. Much that passes in collegiate circles for leisureliness is what the outer barbarians call plain ordinary laziness. Any measure which tends to correct these evils should be viewed with favor.

President Harper would have gone much farther in the way of concentration of attention if he could. What his ideal was may be guessed from what he did when he had a free hand, as in the summer schools he started ten years before the university was founded. He gave his beginners in Hebrew four hours of recitation work a day, five days in the week, for ten weeks. His plan for the university was that a student should take but two studies at a time, a major and a minor, reciting ordinarily twice a day in the first and once in the second. Apparently the plan did not work well. At any rate, it was soon virtually abandoned.

Most of the students now take three courses at a time with a few other things thrown in, and many take four or more courses as in other universities. The practice of double daily work is still kept up in Dr. Harper's old class of elementary Hebrew and in some of the laboratory and research studies, but not in many other classes. Still, I think that, owing to the combined influences of the original plan, of the summer work and of the quarter and term divisions, work at Chicago is less likely to be unduly diffused and prolonged than in the other universities. I wish the two-course system had been longer tried, for it might have served as a corrective to the prevailing evil of scattered work. Almost all the universities are now trying to shorten the collegiate period or to get more work out of the students, but as our present courses are made to suit the leisurely student, taking more work means taking more kinds of work. That is, the better the student the worse his class schedule.

President Harper also wanted to have much smaller classes and higher salaries than was the custom, but these reforms could not be carried out on account of the expense. To give the University prestige from the start men of renown were called to the head professorships by the offer of salaries exceptionally high for that time. This initiated a movement for the raising of salaries all over the country, but it later caused embarrassment as the University grew, and the president found that he had not Fortunatus's purse to draw upon. The subordinate professors and instructors were inadequately and disproportionately paid, as they are everywhere, and promotions were felt to be an empty honor when the salaries of the new men had to be on a lower level than those of the charter members of the faculty. This was the cause of much discontent and some withdrawals.

No university had ever before received

such generous gifts from many different individuals in so short a time, but no amount of money would have been sufficient to keep up with the projects generated in that active brain. Dr. Harper's gigantic and far-reaching plans caught the fancy of business men of kindred imagination, but his chronic deficit of one or two hundred thousand dollars a year repelled them. His successor has done in three years what he could never have done. President Judson, by careful management and some curtailment, has succeeded in making both ends meet and has placed the institution on a sound financial basis. The total productive endowment of the University is now $14,870,903.01 to a cent, and it has besides $8,917,708.10 invested in buildings and grounds devoted entirely to university use, and $1,916,314.49 in equipment, scientific apparatus, etc.

The past year has seen the definite abandonment of the system of affiliated colleges established by President Harper. It was his theory that undergraduate work, particularly of the two lower years, should mostly be relegated to smaller institutions in various parts of the country under the supervision of the University. The students could migrate freely among them, passing north in the summer and south in the winter, like the wild fowl, and their instructors would enjoy so far as possible the laboratory and library facilities of the University. A considerable number of reputable colleges entered into the relationship and more seemed likely to follow their example, but the plan did not work. I do not understand exactly why. Of course the alumni of the small colleges opposed what seemed to them a loss of independence and a recognition of inferiority, but then alumni, as a rule, oppose every change, good or bad. They called it "applying trust methods to education." Perhaps it was, but I believe that some such arrangement between the small colleges and the great universities will inevitably come about before many years, and when it does the colleges may find that they cannot get as favorable terms as those offered them by President Harper.

I may as well confess, since the observant reader has already detected it, that I am one of the thousands on whom those first six bulletins outlining the policy of the new university made an indelible impression. No matter how many times they are tried and fail to work, I have to believe that they somehow ought to and somewhere will. One of the most revolutionary of these measures, one which for many years appeared to make little headway, is now coming into effect in almost every great university, in some of them more rapidly tho less formally than in Chicago. This is the division of the college into two sections of somewhat dissimilar methods of instruction and discipline, here called the Senior College and the Junior College. The traditional four-class system is obviously breaking down and cannot be maintained much longer anywhere. Its carefully cultivated enmities, its rigidly enforced barriers, and its lock-step progression have made it an acknowledged nuisance and an impediment to educational advance in desirable directions. The universities have become too large for the classes to form friendship groups, the elective system has broken the alignment, and the pressure of professional schools has started cleavage planes at right angles to those of the classes. The present movement for putting pass and honor students on differential gearing will be the end of it. Where a majority of the students finish the college course in three years or drop out of it at the end of two to take professional work the old class distinctions become meaningless.

But altho the University of Chicago was the first to recognize frankly the necessity of abandoning the old four-class system and the first to attempt the formation of new groupings, it has not succeeded in solving the problem. Conditions there are as chaotic as anywhere. The old regime has gone and the new has not come. Some ghosts of the past linger about the institution, the class presidents of non-existent classes, for example, and certain grotesquely disguised figures who are to be seen in the fall doing stunts on the campus at the dictation of those who in their own language are called "three-quarters men," but elsewhere are called Sophomores. Some prophecies of the future are to be seen in the Junior and Senior Colleges, but

these are more conspicuous in the catalog than in the life of the undergraduates. The Senior Colleges especially are a sort of legal fiction, for the students hasten thru or skip thru, in order to enter the professional schools and are reluctant to enter them. The title of "Associate," which is conferred on completion of the Junior College, is not esteemed sufficiently valuable to induce the students to clear up all their back work in the lower Colleges as promptly as they might.

It is upon the organization of the Junior Colleges, comprising the first half of the undergraduate course, that attention has been chiefly concentrated. For the last five years this question has been actively, even passionately, discussed. According to the present plan there is a double division of this part of the student body, by courses and by sexes. This gives eight groups known, specifically as Arts College (men), Arts College (women), Literature College (men), Literature College (women), Philosophy College (men), Philosophy College (women), Science College (men), and Science College (women). These groups are supposed to form social units and to compete with each other on the forum and the field. Various schemes have been tried to bring about the desired differentiation and integration, to make these clans "class-conscious" and to induce a proper degree of antagonism between them, but without much success. The students prefer their own groupings, formed according to the undiscoverable laws of congeniality and affinity, rather than to conform to the artificial system imposed upon them by the authorities. They follow their own system of crystallization, and the colleges are but pseudomorphs. A Scientific man, when off duty, sometimes prefers to associate with Literary men, or even with Literary women, rather than with those of his own totem.

In order to see how this sectional plan was working, I attended one of the college meetings on my recent visit to Chicago. The only thing done at the meeting was to listen to a lecture on the Philippines. It was an interesting lecture—Professor McClintock is always interesting—but why should students who had been attending lectures all day attend another for recreation? This, however, seems to be a natural instinct, such as leads farmer boys, who have been working hard all the week, to play baseball when they come to town on Saturday, and leads New Yorkers, who have been jolted in trolley cars all the week, to go to Coney Island in order to be worse jolted on a scenic railway. But I could not see how attendance on this particular lecture promoted social unification any more than any other, or why—since Professor McClintock uttered no words that would bring a blush to the cheek of the tenderest maiden—it was necessary to insist on the separation of the young men and women who a few hours before had been sitting side by side in that room listening to a chemistry lecture.

The inequality in the size of the colleges and the shifting about of students interfere with the clear definition of these subdivisions. In the autumn of 1907-8 the colleges varied in size from 34 in the College of Arts (women) to 182 in the College of Science (men), and five-sixths of the students originally registered in the College of Philosophy (commerce and administration) change their registration to the course in Literature.

In short, the horizontal division of the University into Junior and Senior Colleges has been practically accomplished, but the perpendicular subdivision of these into eight Colleges has not been successful, probably because the natural cleavage plans have not been hit upon. It is very fortunate for the University that President Harper was thwarted in his effort to make this system rigid and permanent by embodying it into the architectural plans for the new quadrangles. Buildings constructed and arranged for this purpose would now, only five years after the system was adopted, be quite inadequate and inconvenient. These plans are still held up, and it is to be hoped that they will be until their objectionable features, especially these segregated colleges, with their independent class-rooms and laboratories, are eliminated.

The influence of English ideals became increasingly dominant during the

later years of President Harper's administration, and this plan for independent college quadrangles was one of its manifestations. There is, of course, no valid objection to the introduction of any foreign customs which can be profitably acclimated, only we have to look out that we do not get gypsy moths and sparrows with them. Many of our best educational policies were made in Germany, and we imported with them nothing worse than beer. England gave us athletics, but could not give us their palliative, the true spirit of amateur sport. At present Princeton, Harvard, and to a lesser extent Chicago are taking the English universities for models, as Michigan and Johns Hopkins formerly took the German. There is, however, this difference. We borrowed from the German universities their educational ideals, which were those of freedom and equality and industry. We are borrowing from the English universities their social ideals, which are those of exclusiveness and aristocracy and leisureliness. The particular thing that we are most anxious to get from Oxford and Cambridge, their separate residential colleges, is what the reformers in these universities are most anxious to break up. They fear that if they do not succeed in getting it very materially modified before long, a parliamentary commission will do it by force. The younger English universities, like London, Manchester and Leeds, envy their venerable rivals many things, but they are glad to be free from the college system.

The undergraduate body in our great universities has become so large that some new form of social grouping is necessary, and this is likely to be based on the house-unit. The fraternities have so far been most successful in solving this question by their chapter houses containing a small but diversified group. In the University of Chicago fraternities are allowed, but not sororities, a curious discrimination since, as I have shown in previous articles, the sororities have been mostly free from the recognized evils of the fraternities.

The University at the start established residential halls or houses in spite of the prejudice against them at that time prevailing in the West, on the ground that they were medieval, British and aristocratic institutions. These houses have gone thru many vicissitudes, but on the whole have justified their existence and proved themselves valuable, even indispensable, factors in university life. The system might have been extended and many more of them have been now in successful operation if the proposal had not been made to apply to instruction as well as residence and to involve the segregation of the women on a separate quadrangle.

As originally presented the proposal read:

> "Will the Senate advise the trustees of the university to accept a gift of a million or a million and a half of dollars, to be used in erecting, on a separate block of land, dormitories, gymnasium, clubhouse, assembly hall, recitation halls and laboratories, to be used exclusively for women, and, as concerns recitation halls and laboratories, by women in the Junior Colleges?"

The financial part of the proposition was subsequently eliminated because the president and trustees came to the conclusion "that a mistake had been made in coupling the question of a gift with a question of so much educational importance, inasmuch as it was feared that some might actually believe that the University had permitted the decision of an educational question to be influenced by the probability of a gift for that purpose, which might not be secured for another purpose." It must be confessed that tho co-educationalists were rather illogical in resenting the form of the question. The women had to buy their way into Cornell and Johns Hopkins Medical, and there was no reason for them to be offended, even tho, as they too hastily assumed, this hypothetical proposition were an attempt to buy them out of Chicago. After a hot discussion and several reversals and reconsiderations, such as faculties everywhere are prone to indulge in, it was finally voted to have masculine, feminine and mixed sections in the Junior College courses.

The plan has been in operation now for five years, and probably both parties wonder why they got so excited over it. The ardent young misogynists from the East, who supported the movement in the hope of soon freeing the campus

from the taint of woman's presence, have been disappointed. So have the champions of woman's rights in education who feared that this was the entering wedge which would split the University in two. The segregation movement has made no progress. In fact, the proportion of segregated work has declined from year to year. Neither the young men nor the young women show any marked tendency to avoid or to seek the mixed classes. They take what studies they want without much regard to who

Copyright, 1908, by the University of Chicago.

COBB HALL.

are in the recitation rooms. Only about five per cent. of the Junior College students have all three of their courses segregated. About one-half of the first-year students and a very much smaller proportion of the second-year students are affected by the system. These take from one-third to all of their work in classes divided on sex lines. Above the second year there is no segregation, except such as results naturally from vocational election. As the matter stands now the student, who has usually been prepared for the University in co-educational schools from the kindergarten up, has for part of the first two years some classes from which the opposite sex is excluded, and then passes on to the Senior College, where no such distinction is drawn. It is questionable whether this brief break in training is worth the trouble and embarrassment it causes, and whether it does not create the evil it is supposed to relieve, that is, sex-consciousness and constraint. I was told by one of his close friends that Dr. Harper, shortly before his death exprest his deep regret at having been persuaded to take up the segregation policy, and said that it had caused him more trouble and annoyance than any other act of his official career.

The character of the work done in the segregated and mixed sections shows no important differences, tho there is the same difference between the sexes in the quality of work done as there is everywhere. In the Junior College, as a whole,

the proportion of men failing, wholly or partly, is twice as great as of women.* At the top of the class, as at the bottom, the women stand higher than the men, getting twice the honors to which their numbers entitle them.† This was formerly accounted for by saying that the few women who went to college were superior in ambition and ability, while the young men were the average run, but since President Harper, in his argument against co-education in the Junior College (1903, vii, 1, *c.*), said that conditions had changed in this respect, some other explanation should be sought. One often proffered by professors, that the grades do not really indicate the knowledge and proficiency of the students, is interesting as a confession, but hardly adequate as an explanation.

An ingenious system of marking has just been adopted at Chicago for the purpose of raising the standards of scholarship. Altho the students probably work harder here than at most Eastern universities it is felt that they were not doing what they should, especially in the College of Arts and Literature. Hereafter a student will have to do more than passable work in his studies in order to pass. He must accumulate "honor points" to double the number of his courses. That is, 36 Majors and 72 honor points are required for graduation. The scale is as follows:

Grade.	Significance.	Honor Points.
A.	Excellent	6
B.	Good	4
C.	Fair	2
D.	Barely passable	0
E.	Conditioned	—1
F.	Failed	—2

This is in accordance with the scriptural principle that "unto every one that hath shall be given, but from him that hath not shall be taken away, even that which he hath." If a student does not do fair work on the average he will find himself a minus quantity, being automatically graduated out of the university at the bottom. One effort in the same direction is the greater strictness in enforcing the requirement of making up all Junior College work before entering the Senior College, or "the rule against the forward pass" as it is called in student vernacular. There has been a continuous tendency from the beginning to curtail freedom of election until now a student who wishes to make a professional school in the shortest time has practically to follow a rigidly prescribed course.

The University of Chicago was fortunate in starting unencumbered with the student customs of our boyish grandfathers. There has been practically no hazing, class-fighting, face-painting, hair-cutting, kidnapping, stealing of chapel bell clapper, mobbing of professors, or similar student activities, and there are, I believe, no organized associations for the cultivation of hard drinking and the promotion of vice. Nevertheless the students seem to be as contented and happy as anywhere, so perhaps these things are not so essential to collegiate life as they are elsewhere supposed to be. Athletics have been kept on an unusually high plane by the redoubtable Mr. Stagg, without loss of efficiency, and yet do not absorb the attention of the student body so exclusively as at some other institutions. Music and dramatics are cultivated by the students in much the same way as they are everywhere. Public speaking and debating have been given unusual prominence in the curriculum, but are not, I think, so popular as voluntary exercises as they are in some of the State universities. Literary propensities do not seem to be so spontaneous and irresistible as one would expect in an institution of its size and character and location. There is no literary magazine published by the students. I asked one of the officials of the University why not and he said it was because the students wrote so well that their articles were accepted by the Eastern magazines. There is no comic weekly published by the students. I asked an official of another university why not and he said it was because the University of Chicago was funny enough without it. These two explanations may be, and I hope will be, taken for what they are worth. The faculty cannot be held

*From 1904 to 1908: failed, men, 13.6 per cent.; women, 5.8 per cent.; conditioned, men, 19.2 per cent.; women, 11.2 per cent.

†In 1906, 43 per cent. of all the women and 19 per cent. of all the men received honorable mention on graduation, and 20 per cent. of the women and 9 per cent. of the men received honors for special excellence in particular departments of the Senior College.

responsible for the comparative lack of literary ambition among the students. The English department has, it is true, been inclined to lay more stress on the linguistic than the literary side, but it also has had more men who could do original work in English—using the phrase in its true sense—than one commonly finds in universities; for example, Professor Herrick, who can write novels that sell, and Professor Moody, who can write plays that pay.

The architecture of the University of Chicago, considered as a whole, is superior to that of any other university. There are individual buildings at other places which are finer than anything at Chicago, but nowhere else so harmonious and satisfactory a group. The architectural plans for all future buildings so far as could be anticipated were drawn up before a foundation stone was laid, and altho the growth of the University has surpassed even the audacious imaginations of the founders, yet the general design and arrangement has proved flexible enough so that no discordant variations have been introduced. The University has gradually picked up property in the neighborhood until now it owns the land on both sides of the Midway Plaisance from Washington Park almost to Jackson Park, so that this mile stretch of greenery between two spacious playgrounds forms virtually the campus of the University, an unrivalled site for a city institution. Here when the University opened the American people were celebrating their discovery by Columbus in various fantastic ways. But the place has sobered up since then. The Ferris wheel has long since rolled away and the Haskell Oriental Museum has taken the place of the Streets of Cairo. But the Columbian Exposition aroused in the West a new enthusiasm for good architecture, so the Grey City owes much to the White City that preceded it altho its plans were made before the exposition. Most of its buildings have been gifts and memorials and as such could properly be made beautiful without stopping to consider, for example, whether a pinnacle could be afforded on Mitchell Tower when Professor Williston wanted the money for a pterodactyl, or to decide between the educational value of a gargoyle on the roof and a traveling library on the road. The buildings are on the whole convenient and well adapted to their respective purposes, and no serious sacrifices have been made for architectural effect. The later buildings have been imported from England tho not in such a way as to be dutiable under the art tariff. Hutchinson Commons, the men's dining room, is a copy of Christ Church Hall, Oxford. Mitchell Tower is taken from Magdalen. The Law Building follows closely the chapel of King's College, Cambridge. If our architects are incapable of originating, it is at least creditable that they can select such good models and imitate them so admirably. It gives the University two rooms hardly to be matched in America, the commons hall and the departmental library which occupies the upper floor of the Law Building, a hundred and sixty feet long, fifty wide and forty high. If any criticism is to be passed on the Chicago buildings it would be that they are too conventional and imitative. The new buildings of the College of the City of New York, for all their exasperating deckel edges, have in them, it seems to me, more of the genuine Gothic spirit, its freedom, its daring, its caprice, its joy of living.

The central edifice of the south façade facing the Midway will be the Harper Memorial Library, for which $800,000 has been raised by a general subscription. Of this $200,000 will be set aside as an endowment for keeping the building in repair, a wise precaution which university authorities generally overlook. This is very much needed, for no great university, not even Harvard, has had more inadequate library accommodations. The University of Chicago began its library by buying out a Berlin book-shop, the Calvary collection, supposed to contain 280,000 volumes and 120,000 pamphlets, but the stock had been pretty well picked over and proved somewhat disappointing both in numbers and quality. The University library is now approaching the half million mark, and students have also the advantages of three other big libraries in the city, the Newberry, the Crerar and the Public. On account of the somewhat inefficient management of the gen-

eral library and the lack of a central building, the departmental system has grown up in the University and has become so deeply rooted that it will be difficult to change it. Professors have become used to having all their books handy and students delight to browse around the open shelves, hitting on books they had never heard about and never would thru a catalog. The losses under this régime are not serious. As indicative of the attachment of the Chicago students for good literature it may be noted that more volumes are missed from the divinity library in the course of a year than from any other.

LAW SCHOOL. EAST VIEW.

The University of Chicago does not look its age. It looks much older. This is because it has been put thru an artificial aging process, reminding one of the way furniture is given an "antique oak finish" while you wait by simply rubbing a little grime into the grain of it. I never understood why this policy was adopted. It could hardly have been for popularity for your wild Westerner likes things brand new and shiny and smelling of varnish. And he has a prejudice, quite unjustifiable tho inherited legitimately enough from the Declaration of Independence, against all things British. But one thing leads on to another. The antique buildings had to have furnishings to match, such, for example, as the chandeliers in the law library with porcelain candles, and massive lanterns, not giving light but lit up very prettily on the outside by electric bulbs. With the buildings and the furnishings came the caps and gowns in colors and designs unrecognizable by Mr. M. A. Oxon, but nevertheless fine examples of the pseudo-antique, and serving to give visible emphasis to the already exaggerated distinction between men who have certain degrees and men who have them not. The gowns should, however, be made thicker, or the outside world may see thru the pretentiousness of the pretense. The University of Chicago carries, I think, its ritualism farther than any other American university. It has not as yet a golden

mace like Yale, but on the other hand it requires academic costume for both examiners and candidates on the occasion of doctor's examination which is not the custom elsewhere so far as I know. This devotion to ceremony is particularly curious in a Baptist institution when we consider what iconoclastic and radical folk the Baptists were in their early days. Baptist orthodoxy is unconventionality.

This raises the question of whether the University of Chicago is a Baptist institution. The Carnegie Foundation says it is, basing its decision on the stipulation that two-thirds of the trustees and the president must be of that denomination, the one clause of the charter stated to be forever unalterable. But on the contrary the hard-shell brethren say it is not a Baptist institution but decidedly heretical and dangerous. In short, the University is too orthodox to get the Carnegie pensions—I beg your pardon, retiring allowances—and too heterodox to get the unanimous support of the denomination. To pursue the middle course is most perilous, but usually the wisest. Certainly it has proved so in this case. Whether Baptist or not in the technical sense the University has been profoundly Christian in the best sense. No creedal restrictions have been imposed upon the professors and the faculty contains representatives of most of the Christian denominations as well as Jews, Neo-Pagans, Cynics and members of those solipsistic sects common nowadays when every man may be his own heresiarch. The University on its reincarnation in 1892 took over the theological seminary of the Baptist Theological Union and converted it into a Divinity School of true university grade and scope, supported by the strong Semitic, Greek, philosophical and sociological departments of the rest of the University. The proportion of non-Baptist students in the Divinity School has been of late over 50 per cent. and is increasing. It is, of course, inevitable that a theological department sharing the life of a great university should tend to become less narrowly denominational.

But the service of the University to Christian education as to education in general has not been confined to what is done within its walls. By means of its periodicals and extension courses it has cultivated in a large part of the country a spirit of more thoro and conscientious study of the Bible and introduced improved methods of teaching it. More than any other university, I think, it has recognized that the great religious need of the day is the reconstruction of theological conceptions and their re-expression in a form acceptable to the intelligent man of today. The frank recognition of this need and the courageous effort to meet it have brought much obloquy upon the University from those who did not see the necessity or the possibility of such constructive work. But the University has stood by its theological professors even where their utterances were too conservative or too radical to be approved by the faculty as a whole.

I believe the same can be said of the only other department of university work in which the public is enough interested to find fault, that is, the department of sociology and political economy, notwithstanding the widespread opinion to the contrary. I doubt if any other university in the country, State or endowed, has produced a body of literature containing franker criticism of existing industrial and social conditions or more radical suggestions for their reform than the publications of the University of Chicago. If any of the professors have failed to give adequate expression to their feelings in this respect I think it must have been because of the limitations of the English language rather than from an undue regard for the sensibilities of the wealthy patrons of the University. Indeed I am inclined to think the effect is the other way. There is a piquancy, a dramatic thrill, about circulating radical views of sociology in a periodical bearing the imprint "Founded by John D. Rockefeller," or about uttering heresies while standing in front of the portrait of the richest Baptist in the world, and it takes a strong character to resist the temptation. The real strongholds of conservatism, of dumb and stubborn reaction, theological and sociological, are not the great universities, but the small country colleges narrowly watched by the devoted alumni and everybody else for a hundred miles around. The general public is rightfully suspicious of any attempt at restriction

of freedom of speech, but like a jealous wife it is apt to be wrong about the object of its suspicion. There are anti-democratic tendencies observable in our universities, but they are, in my opinion, due to the growth of the spirit of luxury, caste, exclusiveness and arrogance, and not to any conspiracy of millionaires.

The University of Chicago, starting late in a territory where universities, or institutions bearing that name, were already excessively numerous in proportion to the population, acted in accordance with the maxim that there is always room at the top. Graduate work seventeen years ago was but feebly and surreptitiously cultivated in the State universities and scarcely at all in the denominational colleges of the West. The University of Chicago, by laying special stress upon research and advanced work and giving opportunity for it in the summer quarter, became virtually the graduate department of these institutions. It is not uncommon to find colleges in which half or two-thirds of the faculty have studied at Chicago. Texas alone sends 150 students. Every year the Texas students charter a special train for the University of Chicago. I should explain for the benefit of Eastern readers that this is the same geographically as if 150 Italian students came every year to Oxford. That would be alluded to by London leader-writers as "an epoch-making movement in education." So is this. It must also be remembered that the University of Chicago uses the post office and the printing press and keeps a corps of educational missionaries in the field. Last year (1908-9) the extension lecturers gave courses of six lectures each in 125 different cities and towns in fourteen different States. And this was a poor year compared with the preceding. The extension work was started by Prof. Richard Green Moulton, who was brought from Oxford for that purpose, and his courses in English and Biblical literature are still the most popular. The reason for it is that he recites poetry because he loves it, not because he wants to tear it to pieces. The number of students taking regular work

Copyright, 1908, by the University of Chicago.

HULL BOTANICAL LABORATORIES.

by correspondence was 3,200, about double what it was five years before. The most popular courses here are English, Mathematics, History and Latin.

In all these ways and many others too indirect to trace the University of Chicago has perceptibly raised the educational standards of the West and South. The effect is most noticeable in the South because until the University of Chicago was opened Southern teachers had not been going to the great universities in large numbers, and Southern colleges and secondary schools, thru an excessive local pride, had not drawn upon the Eastern universities for their instructors as freely as had the Northwestern institutions. I think it is safe to say that no other university has exerted such an uplifting influence over so large a part of the country in so short a time.

Its success appears the more remarkable when we realize that it was surrounded by the foremost State universities which had in their favor State pride, free tuition and close connection with the public school system. They were enterprising and accommodating, ready to provide the kinds of training most in demand. The University of Chicago achieved its success, first, by manifesting a still greater originality and adaptability as in summer work, extension courses and the use of print for example, and, second, by rising above the zone of competition in giving more advanced work in pure science and the humanities. Now some of the State universities are learning how to beat Chicago at its own game, and if Chicago would maintain its primacy it must be by the methods used in its early achievement, that is the University must show the same daring and initiative as in the beginning, and it must find a way to draw from any part of the world men who are recognized leaders in modern thought and investigation. It ought to be easier to get distinguished men now than it was at first when the University had no prestige and Chicago was regarded as beyond the habitable frontier. If rumor is to be relied upon the list of those who have declined calls to Chicago would be even more illustrious than its present faculty roll. Perhaps the same is true of other institutions. If so, it is greatly to the credit of their presidents.

The University of Chicago has now the largest number of graduate students of any American university except Columbia. It stands at the head of the list in the number of doctorates conferred in the last twelve years (448: Columbia, 436; Harvard, 418). The mere catalog of the books and papers published by members of the University during its first ten years occupies 180 quarto double-column pages, constituting the second of the twelve volumes of the "Decennial Publications of the University of Chicago." This contains a series of papers, representative of the researches of the different departments, which it would be difficult for any of the older universities to match in value and variety. The first volume of the set giving the history of the first decade could also be called the record of a piece of original investigation, a laboratory notebook of experiments in methods of university administration, set down with a frankness and clearness unusual in such official documents. The development of the various departments of the University of Chicago has been unequal but not one-sided. It was President Harper's policy to develop a few departments as schools at a time leaving the others comparatively neglected until he found the men and money to put them on a level with the best in the land. Consequently the appearance of the campus in the early days was symbolic of the faculty. The visitor would see there a venerable Gothic edifice flanked by another much newer and with one side unfinished, and beyond a low brick temporary structure and then a vacant lot of weeds and brambles. President Judson has made it his especial business to fill in the outlines of the great plan and to promote an even, steady and symmetrical growth of all departments. The machinery of administration has been simplified and the burden of faculty meetings, committee work and complicated reports has been alleviated. Life is more calm and peaceful than under the old régime and revolutions are not so common. In short, the two administrations stand in somewhat the same relation to each other as do the administrations of Presidents Roosevelt and Taft.

The growth and dominance of the graduate school at Chicago is due to the

fact that President Harper put the advancement of knowledge foremost among the functions of a university. He established the University Press as one of the equal and co-ordinate branches of the institution. He started or annexed a large number of scholarly journals and expected his faculty to fill them. He selected men who were inspired with the zeal for research and they in turn picked from the throng of mature students passing thru the summer quarter those who were capable of receiving this inspiration. If the proposal of Dean Small to abolish the tuition fees of graduate students after their first year is put into effect the influence of the School will be greatly extended, provided, of course, that men of originality and power are there to attract and hold the students.

The graduate school is divided into two parts, the School of Arts and Literature and the Ogden School of Science, and the number of doctorates conferred by the two schools has kept nearly equal. The mere enumeration of all the different lines of investigation now being carried on would be impossible here, but it may not be improper to mention a few merely as samples. Professor Breasted is excavating the ruins on the Nubian Nile. Professor Starr collects tongues and beads from the Philippines and the Kongo. Professor Chamberlain is dissatisfied with the way Laplace constructed the solar system so he has taken it apart and is putting it together in accordance with modern American methods of building, using planetesimals mixed in the cold, a kind of concrete construction, I take it. In the nine years since the Nobel Foundation was established thirty-three persons have received its prizes for scientific discovery but only one of them lives in America. This is Professor Michelson, whose echelon spectroscope and interferometer have carried the analysis and measurement of light waves to an unprecedented degree of refinement. Astronomy early received a magnificent equipment thru the generosity of a Chicago street-car man under the influence of Dr. Harper's hypnotic suggestion. The Yerkes Observatory is located on a high hill overlooking Lake Geneva, seventy-six miles from Chicago, and contains a refracting telescope of 40-inch aperture, which is four inches larger than the Lick telescope belonging to the University of California. The Kent Chemical Laboratory has from the start been one of the most productive departments of the University, both in papers and men. Professor Nef has got into the habit of astonishing the world once a year by promulgating an original theory of organic synthesis and then astonishing it still more by backing up the theory with a hundred pages of solid experimental work in *Liebig's Annalen*. Professor Stieglitz is one of those very rare individuals who have an equal mastery of the laboratory and of the lecture-room, and who are able to direct research and elementary students at the same time without neglecting either. When the Hull Biological Laboratories were going up people from "universities" where one man taught all the natural sciences without overworking himself, used to wonder what these four great buildings marked Zoölogy, Anatomy, Physiology and Botany, were needed for. Now they know if they are still about the campus for all the buildings are crowded, especially since the affiliation of Rush Medical College. The fundamental branches of the first two years of the medical course are given in the Hull and Kent Laboratories and the clinical work of the later years at the downtown buildings of Rush.

On account of the presence of the theological school such studies as comparative religion, Hebrew, Arabic, Assyriology and Biblical Greek have been prominent and productive from the beginning. The Germanic department has always been stronger than the Romance, as is proper in a State having such a large Teutonic element. The classics lost three good men last year, but they cannot be said to be weak when Professor Shorey is at the head of the Greek and Professor Hale at the head of the Latin department. The University of Chicago was one of the first to give the social and political sciences the attention which they deserve in modern education, and these courses have been among the most popular both with resident and non-resident students. It is sufficient to mention the names of Professors Laughlin, Judson, Small, Vincent and Thomas to indicate the

character of the work. Reference should be made here to the efforts now being made to give the undergraduates practical training in the new or rising vocations of political and business administration. Professor Hill has started an Agricultural Guild, to combine theory and practice and turn out men capable of managing large farms and making them pay, and he is engaged in promoting a plan of co-operative agricultural production adapted to a particular community. There is a College of Commerce and Administration for those who intend to engage in banking, journalism, transportation or trade and industry, or who seek a consular or commercial career in South America or the Far East. There is a College of Religious and Social Science for those who propose to devote themselves to what might be called the business of applied Christianity, such as the management of religious, charitable and philanthropic organizations. It is another instance of the paucity of the academic vocabulary, to which I have often referred, that no better title has been found for these future bankers and Y. M. C. A. secretaries than Bachelors of Philosophy, the same degree given with no more appropriateness to the students of literature.

The University of Chicago has few Latin-American students compared with Pennsylvania or Cornell, but has many Japanese and Chinese. The number of the last is likely to be greatly increased in the future because of the interest which the University is taking in Chinese education. Professor Chamberlain and Professor Burton—apparently representing science and religion — were sent last year to China with a competent corps of assistants to investigate the possibility of establishing in one of the provinces a great university, or, rather, an educational system leading up to and including a university. Their plans have not yet been made public and it would be unprofitable to discuss the newspaper rumors of the many millions which are to be given for its endowment, since

Copyright, 1909, by the University of Chicago.

THE UNIVERSITY PRESS.

newspaper information about the University of Chicago is notoriously unreliable. Here, however, is an opening for university extension on an unprecedented scale, and it should, therefore, be an especially enticing field to a university like Chicago.

The University would be more attractive to foreign students if it had schools of applied science, and this, indeed, is its most conspicuous deficiency. Of course, the State universities close by give excellent opportunities for such training, but technology is needed by the university itself, if for nothing more than to correct the tendency toward abstraction and aloofness which is inevitable where studies are pursued without regard to their application to the problems of actual life. At one time it was expected that the Armour Institute of Technology would be affiliated with the University of Chicago, but the negotiations were broken off at the last moment. The objections raised were, I believe, similar to those which prevented the annexation of the Massachusetts Institute of Technology to Harvard.

I have left the School of Education till the last for two reasons; first, because I felt that it was one of the most important branches of the University, and, second, I did not know exactly what to say about it. I could write for hours about the influence of that band of devoted disciples whom Professor Dewey collected about him and then dispersed thruout the West carrying a new educational gospel. I could say as much about those who acquired a similar inspiration, tho a different philosophy, by sitting at the feet of Colonel Parker. But Colonel Parker is dead and Professor Dewey has gone to Columbia, and it would require a Mendel to determine what characteristics are dominant and what recessive in the institution which resulted from the union of these two schools. Besides, it is now at a critical point in its career, and what would be true of it today would not hold good tomorrow. The School of Education might, in fact, bear a sign board such as we see on restaurants, "Under entirely new management. No connection with over the way." For Professor Judd has come from Yale to take charge of it, and the school has led a somewhat independent life and has developed a different mode of thought from the rest of the university. For example, manual training, handicraft and applied art are the prominent features of the training in the School of Education, from its kindergarten up, thru its high school, but when its pupils enter the University—if they do—they find themselves in a different atmosphere, where neither the fine arts nor the applied arts are cultivated. Then, too, the School of Education retains a readiness to experiment, to strike out on new paths, which the rest of the university has, it seems to me, partly lost. The University High School and Elementary School are regarded as educational laboratories, not as "model schools" of a fixed and perfected type.

There has been a disposition observable in the professors to look upon the training of the teachers as beneath the dignity of a university, and those in other departments took little interest as a rule in the work of the School of Education. Recently, however, there has been a change in this respect. The importance of the department to the University is more generally recognized and some of the leading members of the faculty are devoting especial attention to the problems of secondary education. Professors Mann in physics, Smith in chemistry, Slaught, Young and Myers in mathematics, for example, are advocating very radical reforms in the teaching of these subjects. It is generally conceded that a year or more could be saved in the period of college preparation by more efficient methods, but these have yet to be worked out. The custom of Eastern institutions, especially Harvard, has been to stand off and scold the secondary schools for not sending them better prepared students. Some of the Western universities, especially Chicago and Wisconsin, are looking at the question from the standpoint of the secondary schools and are trying to help them do better work, not only with the pupils being prepared for college but with the nine-tenths who do not go on to college. If this can be accomplished the University of Chicago will have made another important contribution to American education.

New York City.

Labor Leaders in Great Britain

BY CHARLES STELZLE

[The Rev. Charles Stelzle has been for six years in charge of the department of Church and Labor of the Presbyterian Church, and has made that Church the leader in the effort to bring organized labor into sympathetic relations with the Christian Church by teaching the Church its duty to the workingmen. It was from the shop that he graduated into the ministry, and his study of the questions involved and his books and other writings on the subject give his observations at home and abroad special authority.—EDITOR.]

TO one who has been in the labor movement in America for nearly twenty years, most of the time in the thick of the fight and with every opportunity of becoming familiar with practically all of the labor leaders in the United States, it was interesting to visit the leading industrial centers of Great Britain for the purpose of studying the conditions of the industrial classes and the methods thru which labor is seeking to realize its ideals. Perhaps it would not be unfair to say that, while the great mass of workers in Great Britain are beneath the level of the American workingman in their personality, in their physical condition and as producers, it is quite evident that the leaders of labor are more advanced than are those in America. In such matters as child labor, old age pensions, women's place in the state and in industry, in educational questions and in temperance, the British leaders have few superiors in any walk of life. There are specialists on these subjects among the men and women in Great Britain who represent labor in various capacities, and in many cases they are the authorities on these subjects. This situation is due, first, to the fact that the leaders on the other side continue in their service very much longer than do the men in the United States. A labor leader in Great Britain usually has a life job, and with the growing experience and larger acquaintance there comes an accumulated force which makes him a power in industrial matters. In the United States the labor official is elected for a shorter period, and if he does become unusually proficient he graduates either into the ranks of the employing class or else he becomes a superintendent or director of his fellows in the employ of the man whom he formerly opposed, but who recognized in the leader qualities which he himself might utilize.

Furthermore, the British labor men have for a longer time been confronted with the problems upon which they have become expert. We have not encountered these problems to the same degree in this country. It is quite natural, therefore, that, having been longer familiar with these questions, they have had greater opportunity for studying them.

Another marked difference is the interest in politics. Workingmen's political movements have never been very popular in America, and in the past such movements have often been complete failures, probably because so few workingmen in this country believe in class distinctions. While there is a provision in the constitution of the American Federation of Labor (which, however, has not always been adhered to), prohibiting the discussion of political questions, the Labor party in England is one of the most important factors in British politics. It is true that the American Federation of Labor, during the last Presidential election, engaged in a political campaign because of the decision of the courts with reference to injunction processes; but it is not at all likely that a Labor party will be organized in the near future in this country. The Labor party in Great Britain has, in the House of Commons, thirty-one members, but, in addition to these, there are twenty members of Parliament who were elected by the miners' organization, which has a membership of about 500,000, altho these labor members usually co-operate in all legislation which affects the interest of the masses of the people. While in a minority in the House of Commons, the labor members are often in a position to dictate favorable legislation to

such a degree that they have brought about many reforms which have been of value to workingmen. This was particularly true in the case of the Taff-Vale decision, which, for a time, seemed to threaten the very existence of organized labor and which was really the occasion of the British workingman's entrance into politics in a conspicuous way. The Government also recognized the labor wing in Parliament in its appointment of John Burns to the Cabinet.

As was quite natural, however, politics has made considerable trouble for the labor men in Great Britain. It has created jealousies and aroused antagonisms which did not exist while they were engaged in a purely trades union movement. A conspicuous illustration of this fact is found in the present attitude of the labor men toward John Burns. At one time he was almost worshiped by the trades unionists, but today it would be hard to find a Labor member of Parliament, at any rate, who would say a good word for Burns. They insist that in his position as a Cabinet Minister he has done practically nothing for workingmen, altho this is not quite fair to the "representative of the Government" who formerly attended the meetings of Parliament wearing a workingman's cap. On the whole, the workingman's entrance into the politics of Great Britain has resulted in great good to the people, and it is altogether likely that he is there to stay.

But probably more important and more far-reaching than any legislation which the Labor members of Parliament may effect is the temperance movement for which they have become responsible. John Burns and other labor leaders have said that drink is the greatest curse of the British workingman, and it may be added, of the British workingwoman. For, while it is true that the drink habit is on the decrease among the men, it seems to be on the increase among the women. The "Trades Union and Labor Officials' Temperance Fellowship" is a temperance society composed exclusively of so-called "walking delegates" and other trades union officials, which has for its object "the personal practice and promotion of total abstinence and the removal of trades society meetings from licensed premises." Arthur Henderson, M. P., who is chairman of the Labor party, is president of the fellowship. Among the members of the executive committee are the Right Hon. Thomas Burt, M. P., a member of the Privy Council; the Right Hon. John Burns, M. P., a member of the Cabinet; Will Steadman, M. P., secretary of the Labor party; D. J. Shackleton, M. P., chairman of the Trades Union Congress, and Harry Gosling, who is a member of the London County Council. Prominent among the vice-presidents are J. Keir Hardie, M. P.; Will Crooks, M. P., L. L. C.; Philip Snowden, M. P.—indeed, there are twenty-six vice-presidents, every one of whom is a member of Parliament and every one a trades unionist. Fully two-thirds of the men in Parliament are total abstainers and probably none could be said to be reckless drinkers. One such, who was discovered to have imbibed too freely and making a spectacle of himself, publicly apologized to his constituents and then signed the pledge.

The advisability of organizing the fellowship was discussed in Leeds in 1904 during a session of the British Trades Union Congress. During the following year many officials in the trades union movement manifested their interest in the proposed society, with the result that at the Hanley meeting of the Trades Union Congress, in 1905, at a gathering of 300 delegates, the temperance fellowship was launched. Every year since its organization the fellowship has given a tea at the time of the annual meeting of the British Trades Union Congress, and in every case fully half of the delegates attending the congress have been present and manifested their active interest in the aim and object of the fellowship. At the last meeting there were present 270 delegates, representative of a body of close upon one million workingmen, which comprised one-half of the trades unionists in England.

Local governing bodies and church officials have been requested to grant the use of the buildings which they control for trades union meetings, with considerable success. The Newcastle-on-Tyne Temperance Institute is a notable exam-

ple of co-operation in this respect. Four thousand labor union meetings have been held in the building since it was opened to them, with an estimated attendance of over 350,000 persons, many of whom were wives and children paying the dues of husbands and fathers.

Probably two-thirds of the labor members of Parliament are actively interested in some Church organization. As a matter of fact, most of the labor leaders in Great Britain received their training as public speakers in the Church, many of them having been lay preachers. Mr. Arthur Henderson, M. P., the chairman of the Labor party in the House of Commons, is one of the vice-presidents of the great Church Brotherhood movement in Great Britain, which has a membership of 500,000. He, together with such men as Will Crooks, M. P.; George Nichols, M. P., and other labor leaders who are not members of Parliament, frequently speak at the national conventions and Sunday afternoon meetings of the brotherhood in various cities. It is quite a remarkable thing that, while the alienation of the workingmen from the Church in Great Britain is pretty nearly as great as it is in the United States, large numbers of the leaders of labor are affiliated with the Church. It is quite evident that whatever the workingman may personally think of the Church and of the temperance question, he is careful to select as his leader and as his champion in the House of Commons the man who is of a high moral character and usually one who is a total abstainer and a member of the Church.

The term socialism is used rather loosely on the other side. While most of the thirty-one members of Parliament elected by the Labor party would call themselves "socialists," they have the English characteristic of opportunism. They are not vainly striving to usher in the millennial dawn thru a single enactment of Parliament, but steadily and with increasing success they are working for such measures as old age pensions, better industrial conditions for women, the eradication of child labor, the municipal ownership of public utilities, and whatever else may make life more livable for the masses. They are decidedly constructive in their program. The situation in Great Britain, however, is such that with the House of Lords standing as an almost impassable barrier to social reform, there is a strong inclination in the average reformer to do something radical, and, of course, whatever is radical is presumed to be socialistic. Of the practically fifty members of Parliament elected by the combined labor interests, only one was elected by the socialists, so that actually Victor Grayson is the only representative of the Socialist party in the House of Commons. The others were elected as *bona fide* trades unionists by the Labor party and by the miners' organizations. The Independent Labor party, which is the socialist wing of the Labor party, represents about 15 per cent. of the trades unionists connected with the Labor party.

The liberal policy adopted by the socialist-trades unionists in Parliament has aroused considerable antagonism on the part of the extreme socialists, including the representative of the Socialist party in Parliament. These expect the representatives of the Labor party, who are socialists, to fight exclusively for socialist measures, and they resent the friendly relations which have been maintained with non-socialist Labor M. P.s and with the Liberal party generally. Indeed, so insistent has become this demand from the rank and file that at the recent congress of the Independent Labor party, held in the Synod Hall, Edinburgh, the ablest leaders of the party, Mr. J. Ramsay Macdonald, Mr. Keir Hardie, Mr. P. Snowden and Mr. Bruce Glasier, resigned from the council as a protest against the want of confidence shown in their policy.

Literature

Another Eve

SOMETIMES in the arid summer months, when the dust lies thick in country roads and when the city pavements scorch the feet, there comes a rain, the dust is laid, the streets are cooled and the pall of heat is lifted from the wayfarer. Just so *Margarita's Soul** comes to the weary reader plodding thru the glare and dust and hideous heat of modern sex-fiction. It is an April sky story with all its characters and situations delicately spring-like in the freshness of their morality. Whoever Ingraham Lovell may be he has the heart of a shepherd and the mind of a poet, and he takes unconventional people, original situations, a young untamed Eve for a heroine, and has made them all work together for good—not the kind of perverted intellectual conception of good that novelists are showing so often nowadays, but the kind of instinctive good that has come down thru time with the Ten Commandments.

The story of Margarita is told by the old bachelor friend of all the people who figure in the story, and, altho it is written in the first person, it has none of the aloofness, nor critical harshness, which is so often characteristic of an ego-book. He takes us into his confidence very early in the story, and wins us over to his own gentle tolerance toward the unexpected whimsies of the primitive lovers. And we develop a certain chivalric protective interest in him when he tells us quite privately (he is constantly telling the reader that he would rather his friends did not know) that he himself fell hopelessly in love with Margarita the first time he saw her, which was on her wedding day, when she married his life-long friend Roger Bradley. He does not struggle against this love. He disciplines it and it becomes the untarnished treasure of his life. If any sophisticated reader doubts that such love can be disciplined, let him read the sweet scriptures of Margarita written by such a psalmist. Only once did it grow unmanageable and he hints to us that it was a certain wet night when he was trying to walk off the sin of passionate thoughts that the rheumatism came upon him which remained with him ever after to remind him of his fault and to warn him with leg-twinges against repeating it. There is evidently a sort of comfort to him in the belief that he paid swiftly and severely for his first and only misdeed even in thought. It is not a fashionable way of writing about retribution, but is eminently satisfactory.

Margarita herself is a new departure in fiction. We thought we had had all possible kinds, those who were conventional but broke conventions, those who have abused their moral sense until it is decadent, those who were voluptuous physically, and those who were sensuous mentally, but in the end most of them were bad. The story seemed written just to prove that. Here we have a woman who has never known conven tions; who is frankly animal, and yet good. One would as soon think of casting aspersions upon the character of the original Eve as upon Margarita. Their knowledge of the world and its artificialities would be about the same. Margarita has been reared in a lonely cottage on a deserted coast somewhere in the neighborhood of New York. Her father was a recluse who saw fit to teach his daughter only what nature taught her —that is, how to satisfy hunger when she was hungry, how to rest when she was weary, and so forth. After his death, left alone with two silent servants, she began to feel a need which nature had not taught her how to satisfy—the need of friends. She tramps to a nearby town and the telegraph operator assures her that if she will only "show herself on Broadway she will have a plenty of friends." With naïve faith in this advice she travels to New York, and it is while she is endeavoring to show herself on Broadway that Roger Bradley discovers her. After that, the tale as Jerry tells it is an idyl of romantic love with the

*MARGARITA'S SOUL. *By "Ingraham Lovell."* New York: John Lane Co. $1.50.

scenes laid on a strip of enchanted coast, the reader hazards somewhere off the edge of New England. Roger, of high birth and great social prestige both in New York and Boston, marries Margarita, who is as yet savage and unaware of herself or of the world save as they affect her physical comfort. After her marriage begins that breaking of her wild ignorance in which Jerry evidently means that we should see the awakening and development of a soul. Everybody in the story agrees that Margarita has no soul, for tho she seems so near perfect they miss the touch of humanness, of relation in her to them which they think a soul furnishes. At last she acquires one in a way so conventional we should be inclined to disappointment if we did not feel under some tender obligation to Jerry who firmly believes that nothing she does is ordinary. She has a beautiful voice, becomes a great prima donna in her soulless state with the world at her feet, when the old problem of fidelity to her art or to her husband and home arises. She foregoes her career and becomes a wife and mother to the exclusion of every other interest.

The literary style of the story is as unique as the situations and characters chosen. To read it after other books is like walking thru a house blazing in high colors and dazzling lights into a dim quiet room, not furnished with the usual bric-a-brac of the novelist, but swept and garnished with simplicity and cleanness.

Harnack on the Acts

THIS volume of the Crown Theological Library* is a continuation of the same distinguished author's "Luke, the Physician," also published in the same form two years ago. In that work he sought to prove by patient philological and historical research that the author of the "We-sections" of the Acts is also the author of the entire book, and that this author can be none other than the companion and pupil of St. Paul, the physician Luke. Harnack now submits the Acts to a more careful examination, to substantiate further his conclusion as to the authorship, and to exhibit the literary character and historical trustworthiness of the treatise under discussion. By investigation of the chronological data, and the countries, peoples, cities, and houses referred to in the Acts, and the attitude of the book toward the miraculous, he attempts to show that recent advanced critics, from Baur and Weizsäcker to Pfleiderer, Wellhausen and Schwarz, have set altogether too low a value on the book as a reliable historical source. He seeks to call a halt in this depreciation, and to gain for the Lukan writings a renewal of confidence and esteem. The work will doubtless be hailed widely as a return of criticism to the conservative position.

Before Harnack is claimed as a conservative critic, however, justice should be done to his exhibition of Luke's "real weakness as an historian—in his credulity in reference to cases of miraculous healing and of spiritual gifts, in a tendency to carelessness and inaccuracy, often of a very far-reaching influence in his narrative, which may be partly due to his endeavor after brevity, and lastly in a tendency to work up important situations." These defects are not discussed at length, but consciousness of them underlies the entire discussion. Harnack is not a traditionalist, and one unfamiliar with the historical studies of modern students in the field of Apostolic history would have his eyes opened by perusal of this book to scores of real and serious difficulties which lie on the pages of the Acts. The English reader must bear in mind that Harnack is not writing against the ordinary homiletic commentators, but rather that he is seeking to show that critics who have maintained that the narrative of Luke is almost totally devoid of historical trustworthiness have gone too far. He is not another Orr or Ramsay: of the latter he says that he "seeks to extract from the sources more than is really in them."

It should be borne in mind further a good deal may be said, and has been said most cogently, by scholars of equal learning and critical efficiency, who dis-

*THE ACTS OF THE APOSTLES. *By Adolf Harnack.* Translated by Rev. J. R. Wilkinson, M. A. New York: G. P. Putnam's Sons. $1.75 net.

agree radically with Harnack's conclusions. The reader of Harnack who has not mastered Weizsäcker, Julicher and Weinel, or at least that excellent monograph of Prof. B. W. Bacon, is in the situation of an auditor of a skillful attorney for one side of a question who has not listened to the argument of the opposing counsel. The Berlin professor is very persuasive, and he has undoubtedly brought forward elements of truth and called attention to services rendered by Luke which have been passed over too lightly, but the fact remains that he who reads the first fifteen chapters of Luke uncritically has his eyes blinded as to the actual course of events in early Christianity, and it is further true that historical appreciation of the character of Paul and his service to Christianity and the world remains impossible while the limitations of the Acts as an historical source are unrecognized. No student of the Lukan writings should remain ignorant of Harnack's contribution to their understanding, but no student of Harnack alone, or of Harnack and the writings of the traditionalists, will grip the real problem of the history of the Apostolic age. The present essay is a contribution to a difficult subject, and an important one, but it is not a complete presentation of the topic, and was not so intended.

The Chinese. By John Stuart Thomson. Illustrated from Photographs. Indianapolis: Bobbs-Merrill Company. $2.50.

Altho, as agent for some years of the Pacific Mail, Occidental and Oriental, and Toyo Kisen Kaisha Steamship Companies, at Hong Kong, and otherwise one who has "held up the banner of American trade at its farthest and hottest post," Mr. Thomson has qualifications that should ensure a favorable report on the Japanese and American "opening up" of the Celestial Empire, and engage the attention of the business man, yet, to one reading his book for general information, there is much that will appeal to the man of average longings as to China. He has the enthusiasm of an advance agent, who must be something of a poet; he has, too, the minute observation of a wide-awake traveler who feels life at every pore, sees it in its kaleidoscopic variety and describes it well. He has, added to this, and perhaps fortunately, only a moderate love for the pagoda, so that the reader does not need to fill his time, in imagination, with fan in hand, looking up to those airy skyscrapers. Sympathetic toward the aspirations of the Chinese, he

COPYRIGHT, 1903, THE BOBBS-MERRILL COMPANY

CHINESE PUNISHMENT FOR BRIBERY,
In Thomson's "Chinese." (Bobbs, Merrill Co.)

gives them full credit for business integrity, physical and mental vigor, capacity for the kind of training which they begin to think necessary to their military and civic salvation, and he blossoms into eloquence over the poetry which the Portuguese colony in China has given opportunity to, if it has not actually inspired it. To him China has a magnificent future. Honest, industrious, home-loving, as we all know, the people are also democratic in spirit, and are awake to the advantages of a republican form of government, or at least of a limited constitutional monarchy. Today they are restless, ready to break the Manchu mold in which their national life has been run. The Quaker spirit of Confucius, the author seems to think, has perhaps rendered them too docile toward the Manchu dynasty, but the sudden activity of their impetuous neighbor across the narrow seas has greatly stirred them. The fever for change has taken an acute form among the young of the educated and business classes. Under the stimulus of new routes of trade and new machinery on wheels, even the masses are moving, while the shoulder-strap, rifle and machine gun, shrewdly introduced by the Japanese—just why one can hardly yet say—are reshaping the masses. The author enumerates the sources from which this new activity has risen—the part played by Japan, by the eager-eyed trader of ambitious nature, by the returned graduates from alien colleges in Germany, England and America, and he indicates the part which America may for her own advantage and for China's prosperity take in this inspiring work. He gives an interesting picture and characterization of some of the new leaders —both those who have led and those who are likely to lead. He says:

"Now that the obstructionist, Dowager Empress Tse Hsi, is gathered to her ghostly traditions, doubtless the Cantonese Kang Ye Wei will return, and the brilliant Yuan Shi K'ai, of Pechili, stubborn Shum from the south; tried and solid old Chang from the central provinces; the Columbia College bred Tang Shao Yi; Viceroy Tuan Fang, the Manchu who, in Shensi, saved the Christians in 1900; the Yale graduate Liang Tun Yen; the Cambridge graduate She Tun Ho, and their like, will gather round the new regent for the renewal of the militant and reform plans so suddenly dropped in 1897."

The Pleroma: An Essay on the Origin of Christianity. By Dr. Paul Carus. Chicago: The Open Court Publishing Company. $1.

If Dr. Carus were a teacher in good standing in Yale or Princeton, and had delivered the substance of this essay on the sources of Christianity in his university chapel before the President of the United States and a distinguished company of statesmen, savants and theologians, we might have straightway in America a national excitement over religious questions, with accompanying deluge of sermons, editorials and pamphlets, like that which entertained Germany a few years ago when Professor Delitzsch delivered his lectures on "Babel und Bibel" before the Kaiser. The thesis of Dr. Carus is very similar to that of the German Assyriologist, namely that the origins of Christianity are to be sought in pagan beliefs rather than in Judaism and Christianity itself. While he does not deny the great influence of Judaism upon Christianity, he maintains that "Judaism did not bear or bring forth Christianity, but that Christianity is, so to speak, a grandchild of ancient paganism, and the motherhood of Judaism is by adoption merely." He holds that the spirit of Christianity was "pagan from the start, not Jewish; yea, un-Jewishly pagan, it was Gentile, and it continued to retain a very strongly pronounced hostility to everything Jewish." He regards Paul as the real founder of the Church, and holds that the great Apostle drew his material from the wreckage of the destroyed temples of the Gentiles, not from Hebrew scriptures, convictions or institutions. Every one knows what a storm of protest arose the world over against the pronouncements of Professor Delitzsch, and it can easily be foreseen that the present essay will encounter vigorous dissent. Not only theologians and defenders of the creeds and the Churches, but also historians and critics devoid of partisan bias will maintain that the popular view, which regards Christianity as a development from Judaism under the mastery of forces resident within itself is nearer the truth than the opinion of those who magnify the elements derived from Babylonian and Persian sources. Nevertheless an essay like

the present has much to contribute to the general understanding of the sources from which the Christian religion drew its forms and its beliefs. The Bible is not the simple book it has been thought to be for so many generations and Christianity contains many elements drawn from others than those who have been regarded as its apostles and prophets. The presentation of Dr. Carus of the practices and beliefs of Gentile faiths which have found their way into Jewish and Christian documents and institutions will serve the cause of truth, but to a fair understanding of the matter there is needed a larger and worthier appreciation of the originality of the Hebrew prophets, and particularly of the founder of the Christian faith, than is contained in this essay.

Historical Essays. By James Ford Rhodes. New York: The Macmillan Company. $2.

Our distinguished historian, Mr. James Ford Rhodes, has brought together, under the title of *Historical Essays,* several lectures and papers prepared for various learned societies and university audiences, and, while they can scarcely be called contributions to the literature of history, they will be warmly received by his host of admirers who regard his lightest word as weighty. The three frank and refreshing essays on history and the profession of the historian will be especially welcomed by students who fain would learn the art which enabled a man, born in the midst of our great sectional struggle, to write a many volumed story that has won the plaudits of wise men North and South. Journalists will be interested to read his penetrating estimate of newspapers as historical sources. Men of letters as well as professed doctors of philosophy may spend many a profitable hour over his appreciation of Gibbon—whom he regarded as the greatest of modern historians—Samuel Rawson Gardiner, W. E. H. Lecky, Sir Spencer Walpole and John Richard Green. American scholars will give double welcome to his tender tribute to Edward Gaylord Bourne, whose death a short time ago in the midst of a life full of promise reminded all of us who knew him of the frailty of human enterprises, and the estimate of E. L. Godkin will convey to the generation that did not fall under his stinging lash a just and fair impression of the services of that splendid pessimist to American politics and scholarship. The purely historical surveys on the Presidential office and Hayes's administration bear the impress of the firm hand that wrote the "History of the United States," but they are to be esteemed as essays rather than serious additions to the lore of history. It is difficult—nay impossible—to evaluate in a single sentence a volume treating such a diversity of topics; for whoever weighs in one balance Herodotus, Cicero, Gibbon, Gardiner, Grover Cleveland and William McKinley is sure to render judgments that will stir red blood.

Home Letters of General Sherman. Edited by M. A. De Wolfe Howe. New York: Charles Scribner's Sons. $2.

These letters of General Sherman, written to his wife and to his brother-in-law, Thomas Ewing, supplement the "Memoirs" (1875) and the "Sherman Letters" (1904). They begin in 1837, when the soldier had just entered West Point, and run to 1888. Nearly half of the book is taken up with letters written previously to the Civil War. Sherman resigned the superintendency of the Louisiana Military Academy in January, 1861, and came North the following month. He showed a wiser understanding of the impending struggle than most men when he declared that Lincoln should have called for 300,000 men instead of 75,000, and a month later, when he predicted "a long war—very long—much longer than any politician thinks." His humiliation over the "shameless flight of the armed mob" at Bull Run was extreme. "Our men are not good soldiers," he writes; "they brag, but don't perform." A racy account of the battle of Pittsburgh Landing gives him occasion to credit himself with some of the glory won, and a little later he is vigorously defending Grant. The Vicksburg campaign is related in a number of letters, tho there is nothing about Chattanooga and Knoxville. But from the beginning of the Atlanta campaign to the surrender of Johnston, the letters are frequent. Tecumseh's rage at politicians

and at newspaper reporters breaks out again and again. It is evident that he wanted them all hanged or shot. He is frank about the devastation caused by his army in Georgia and the Carolinas, yet he defends what was done on the ground of military necessity. He defends also, as a humane measure, the expulsion of the inhabitants from Atlanta. From Savannah he writes that the security of the women and children of the place, with 60,000 armed Federals about them, is as great as it would be in Philadelphia. War, of absorbing interest, and throws a strong light on the personality of the great warrior.

The Grizzly Bear. By William H. Wright. Illustrated. New York: Charles Scribner's Sons. $1.50.

Much of the fiction regarding the grizzly bear is dissipated by this excellent work. The writer has hunted and observed the grizzly for many years, and seems to have read most of the literature on the subject. He has tried to avoid

From a photograph, copyright, 1906, by W. H. Wright.
"HE CAME ON, STOPPING AND SNIFFING."
From Wright's "The Grizzly Bear." (Scribner's Sons.)

Three of the letters refer to the Johnston surrender and the imbroglio that followed, and one of them declares an intention to "insult Stanton." It is curious to note that Mrs. Sherman, in a letter written to her husband at this time, avowed herself strongly opposed to the terms granted Johnston. The volume is, thruout the part dealing with the Civil

mixing his own psychology with the mental processes of the bear, and he has set down "with truth and soberness" what he has seen. The grizzly doesn't leave his mark high up on trees as a challenge and warning to his fellows, tho, indeed, he does sometimes bite chunks out of bark. In one region he eats meat, in another he will not touch

it. He rarely or never kills game, tho the male will sometimes kill and eat the helpless cubs of his own species. He doesn't attack man unless in defense or unless suddenly surprised. He is curious and will sometimes follow a scent or a trail till he comes close up to a man, but he is not aggressive. He doesn't climb, unless when very young. He often rears up on his haunches or on his hind legs, but he doesn't hug his victim. Indeed, he turns out to be a very different creature from what the "nature-fakers" have made him. He is a lone, perhaps rather morose, animal, alert, cunning and resourceful. The male and female do not hibernate together, nor in the summer and fall do they travel together. The mating season is from June to August, according to locality, and the cubs, from one to four, are brought forth seven and a half months later, a month or so before the period of hibernation ends. The mother cares for the young all of one year and part of another, but usually lets them shift for themselves before the second hibernation. Often the little ones keep together for another season, when each starts out on his own solitary career. The book is fascinating in its descriptions, and furnishes another proof that if truth is not stranger than fiction, it is at least more interesting.

Julia Bride. By Henry James. New York: Harper Bros. $1.

Julia Bride is written in Mr. James's most delightful and characteristic manner. Men and women who are doing things and feeling what comes to them in the course of hard work and trouble will find about as much entertainment in it as they would in a book on internal etiquet. But Mr. James does not write for this class. His stories are for those who have leisure to cultivate their delicacies and spiritual manners to the remotest decimal point. What he writes means all and more than anybody else could mean about the exquisite niceness of superfine people. Julia Bride is a pretty woman who frolicked too much in her earlier maiden days and has a reputation for too many discarded lovers. Also she is handicapped now by a mother with a series of divorced husbands to her discredit. Now Julia wants to marry into a good, rich family and these things are against her. The expedients she resorts to in order to cover them are the incidents in the story. But the interest of it is her feelings. It is a thin, red-bound little volume of just a pretty woman's feelings in what any other novelist would show as a very ludicrous or tragic predicament. In the end she does not get married and live happy ever after, she simply rushes home and casts herself, face downward, in an agony of chagrin because, to cover her frolicking record she must help an old lover and his wife top the social ladder to where she will be when she does marry. In short, the story is a textbook in snobbery written with the most discriminating sensibility.

An Introductory History of England. By C. R. L. Fletcher. Vols. III and IV. Dutton. $1.50 each.

Mr. C. R. L. Fletcher has brought his *Introductory History of England* to a close by the publication of two volumes on the period from the Stuart restoration to the battle of Waterloo. The title of this work might very well be "vagarious impressions of the current of English history with many quips and flings added for the delectation of the indifferent reader." This does not mean to say that the work is without value or will be read without profit. Anyone looking for a sober, well-balanced account of English political history ought not to buy it; but anyone who likes a piquant story with lively character sketches and does not care very much for historical accuracy will find these two volumes enjoyable—a thing that cannot be said about most books on history. In the author's view this is the age of hysterics; there are no more great kings except perhaps a near approach on the Continent; the middle class is less educated than it used to be and the lower classes are more restive; the "most disgusting hypocrite of the whole lot" of patriotic revolutionists was Benjamin Franklin, the Pennsylvania Quaker; Paine's "Rights of Man" is mere froth; democracy is the most inexpedient form of government; and the only thing left is to "go pray—for the King" (ii, 319. No one will deny Mr. Fletcher the right to feel that modern times have been a failure; but why should he veil his pessimism in the form of history?

Literary Notes

LATER CHILDREN'S BOOKS.

....There were a few children's books sent to THE INDEPENDENT too late to include in the yearly survey, and to which we take this opportunity of calling attention. *Come and Go* (Dutton, $2) is an oblong volume for tiny picture and verse lovers who will be particularly drawn toward the full page color scenes; red ribbons are attached to mechanical devices, and by pulling these ribbons deftly the progress of the verses is graphically illustrated. Let destructive children beware!

....Beatrice Baxter Ruyl's *Little Indian Maidens at Work and Play* (Dutton, $1.25) is attractive both in verse and in deep-toned, flat-wash illustrations. The author, by adopting the folk-lore habit of repetition, gains a distinct atmosphere thruout her text, which, while simple, is at the same time not devoid of idea.

....*When Mother Let's Us Help* is another serviceable manual which Constance Johnson has done for Moffat, Yard & Co. (75 cents). It follows the same general lines of this author's appetizing volume of last year entitled "When Mother Lets Us Cook." Both books appear to be essentially safe.

....Children's attention may always be held by any member of the "When Mother" class of literature. Ida Waugh has pictured, in clean, bright colors *When Mother Was a Little Girl* (Dutton. $2). A young reader may like the ordinary verses by Amy E. Blanchard, but we do not, even tho we are always in sympathy with healthy sentiment and childish ways.

....The first imprint of 1910 among the juvenile books is the Lippincott's sumptuous *Heroes of Modern India* ($1.50 net), which in point of romance and excitement is more like fiction than like history or travel; the illustrations alone whet the adventurous appetite. Its object is to recall "the lives and work of England's greatest servants in India"; this is the statement of the author, Edward Gilliat.

....Many people will welcome Constance d'Arcy Mackay's *The House of the Heart and Other Plays for Children* (Holt. $1.10 net), a small book full of the morality spirit, and easy, according to direction, for presentation in the schoolroom. The author has read her "Everyman" with excellent results. In all there are ten playlets.

....Anna Marion Smith carries famous jingles a step further in *Mother Goose and What Happened Next* (Dutton. $1.25), and Mr. Reginald Birch has done some charming pen and ink decorations. The idea is clever, but it is difficult to write classic nonsense verse, and Mother Goose is difficult to improve upon. We would have better verse for children if we had more poets with the high faith and subtle humor of little children.

Pebbles

"WHAT is the reading matter at the Pole?"
"Cook-books and Pearyodicals."

SAMBO—What names have you guv to them kittens?
Cuffy—Taft and Roosevelt.
Sambo—Why not Cook and Peary?
Cuffy—Dem ain't no Pole-cats.

"PLEASE, sir," faltered the office boy, "I would like to get off to attend the baseball game this afternoon.

"No, you don't," snapped the boss. "You have no more intention of going to see the game than I have. You want to get off to attend the funeral of your grandmother. Oh, you can't fool me"—*Chicago News.*

DEATH RATE AT NINETY-FOUR.

An old man went into a life insurance office and asked to be insured. The company asked his age. He replied: "Ninety-four."

"Why, my good man, we cannot insure you," said the clerk.

"Why not?" he demanded.

"Why, you are ninety-four years old."

"What of that," the old man cried; "look at statistics and they will show that fewer men die at ninety-four than at any other age."—*Pacific Mutual News.*

THERE are two young men of St. Louis, partners in a business concern, the younger of whom for a long time was addicted to the habit of reading to the other extracts from letters of a tender nature penned by a young woman of Chicago signing herself "Claire."

Not so very long after the elder partner returned from an Eastern trip in time to attend the wedding reception of his friend and business associate.

In his best manner, the senior of the firm offered his congratulations to the bride. "I do not feel that I am addressing a stranger," said he, "seeing that I have frequently had the honor and pleasure of hearing extracts from his darling Claire's letters."

"I beg your pardon," responded the bride, into whose eyes there crept a curious expression, "but my name is Violet."

"A GIRL I know was invited, with another girl, to go to the Harvard-Yale football game with two Yale men," said a young man. "You know the general impression is that girls don't as a rule have much knowledge of sports. Well, those two girls surprised their companions at the game by the way they handled the terminology of football and knew what was going on. I could have enlightened the two Yale men. I spent about five afternoons with those girls with a rule book. We had a regular quiz at the end, in which they were able to answer almost anything I asked them. Of course girls don't go to that amount of trouble just for the fun of the thing. There's a reason. It's a great way to make an impression on a young man you want to impress."—*New York Sun.*

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $3.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

The Tasks for 1910

LAST week we considered the good record of the year just past. We have no such great political reforms to anticipate for 1910, for there is no such tremendous revolution to be peacefully inaugurated as that which made Turkey a constitutional government, or which initiated a similar reform in Persia. We may hope for a more gradual betterment of conditions rather than any that will startle the world. Indeed, startling reforms can never be anticipated. It is of no use to try to formulate them. But we may find what the present course of events is likely to bring forth.

In our own country and thruout the world there is the promise of a tremendous development of the new invention of aviation. It requires the ability to rise directly without gaining speed first by running on the ground. It also requires further precautions for safety and strength. But before the year is out we may expect the flying machine to be a familiar sight in the air, and the beginning of its use for personal and commercial transportation when speed is desired. At first it will, like the bicycle and the automobile, be used for sport, but as speedily reduced to the vulgar usages of toil, so that we shall wonder how we ever got along without it, and to children it will be as commonplace a thing as was the trolley car to the little girl whose father asked her what strange thing she had seen in her visit to New York, and she replied that she saw a trolley car drawn by horses!

We shall see rapid progress in the construction of the Panama Canal, but that is an old story. We expect no very serious legislation by Congress, nothing beyond minor reforms. The Monetary Commission will make a report, but legislation will be deferred; and, equally, the Tariff Commission will take time to reach any conclusions. We have the right to hope that Congress will give us postal banks and the parcels post. We shall have a quiet year under President Taft, and the return of Ex-President Roosevelt from Africa will simply restore an active factor into the public discussion of social and political questions. He will hardly be satisfied to remain a private person. In our cities and States the wave of reform will move on, with more careful search of abuses and corruption, all tending to make ours a better country.

We do not anticipate that the United States is likely to assume any stricter control over the small Central American states; but we do anticipate the speedy restoration of peace in Nicaragua, and the strengthening of the bonds which ought to bring the five little republics into a close federation, or, better, a single nation. For that end our Government may well give its best help, with the aid of Mexico.

Across the oceans, Great Britain is now the center of interested concern. There will be an election in a few days, and we believe and hope that the Liberals will carry the day. That will mean during this year a profound revolution in the British Constitution. The House of Lords, which so gayly rejected the Budget, will find itself shorn of its power, and possibly made a purely electoral body, the principle of hereditary rule rejected finally. That will give the people the rule, with government for the masses, instead of for the classes. But this not all. The Liberal victory

will bring measurably near the assured granting of a local parliament to Ireland, and why not have home rule also for Wales and Scotland and England? Nor is this all. The Liberal victory will register the decision of the people that there must be an end of the union of Church and State in all Great Britain, as well as in Ireland and the colonies. In this the Dissenters will have the help of not a few Churchmen. Think of the meaning of the utterly Erastian decision of the highest British court, which has decided who shall be admitted by the Church to holy communion. In the case of the Banisters, in which the husband had in the colonies married his deceased wife's sister, and on returning to England the rector of his church had refused him the communion, notwithstanding the law of 1907 making such marriages lawful in England, Lord Justice Moulton said:

"It is not in accordance with the practice of our Legislature that the rights of the Legislature should be made dependent upon the views of a particular clergyman, or even of the Church itself."

That is a pretty sort of country to live in, in which the legislature is supreme over the Church on any subject which the legislature chooses to decide; in which the civil judges can decide whom the Church shall admit to communion. Bishop Gore declares publicly that he repudiates the law. That looks as if the Nonconformists would have aid for disestablishment from Churchmen.

On the Continent of Europe there is anticipation of no serious changes. Spain will finish her little war with Morocco, and make little by it. But she is likely to follow France in denouncing, or at least liberalizing, the Concordat, and Italy may feel the same influence. It is too much to expect that Belgium will become a republic, altho the growth of republican and socialistic sentiment makes one think of the possibility. But thruout Europe the burden of military and naval taxation greatly helps opportunist Socialism. Russia will make fair progress under a modified constitutional system, but nothing startling can be expected or much desired, except in behalf of Finland. The future of a regenerated Russia lies in Siberia.

We do not anticipate a new war between Russia and Japan, nor between Japan and China. Russia is still unprepared; so is China, and Japan wants only the recuperation of peace. The real danger is between Russia and China, but neither is ready, altho it looks as if China were making more revolutionary progress than is Russia. There will be plenty of opportunities for the two nations to quarrel.

India is the sore spot in British diplomacy. There is a mighty unrest among the subject races, and it is a question whether Britain can give power to the people as fast as the people ask it. They are not like the Japanese, altho they think themselves quite as capable of self-government; but they have had no centuries of peaceful self-rule. Yet Great Britain means well, and she has a firm hold on the land, and nothing worse than occasional assassination can be expected. Meanwhile the Christianization of the people is going on more rapidly than most people know, and that breaks up caste and softens asperities and spreads education.

Africa is the continent of the future. The death of Leopold and the reform in the rule of the Kongo will hasten the opening of Central Africa and the spread of civilization and just government. Railroads will be a great factor, and will add new access to the very middle of the continent. It is hardly too much to hope that the Cape to Cairo railway will nearly approach completion this year, even as the railroads are piercing Asia also, from Peking to Tibet, and from Beirut to Mecca and Bagdad. The Dominion of South Africa, like that of Canada and that of Australia, cannot but proceed on its steady path, making ever fresh experiments in the ways of popular welfare.

To anticipate what fresh paths science and scholarly research will enter is past conjecture. In exploration aviation will be a chief factor to either Pole, while new discoveries and applications will be made in those ultimate problems which relate to ether and the atomic forces. But these fields are too new to allow of prophecy.

The Church has its old task and its old courage. At home it is learning its duty

of social service, and at home and abroad it will still more this year bring its several parts into nearer union. Abroad it is rapidly multiplying its forces. The ecclesiastical statesman looks on with delighted surprise when he sees India and China and Japan and Korea and the Sudan of Africa so rapidly taking on with Christian civilization, also the Christian faith, and to this the chancelleries of the world give aid, as they can, by treaties and arbitrations and a hundred kinds of international organizations, and by their enlarging commerce, for universal international peace. Is it too much to hope that this year at least the United States and Great Britain may bind themselves thereto and plan for the limitation of armaments?

The Public and Its Intellectuals

INTEREST in the annual meetings of learned societies commonly centers in the interplay of thought and good fellowship which the occasion calls forth. The scholarly or scientific "Proceedings" are by general admission of secondary concern. "Proceedings," in due course of time, appear in print, when they receive such meed of attention under the midnight lamp as they may happen to merit.

The meetings of the American Historical, Economic, Political Science, Statistical, Sociological, and other associations in New York last week, however, were not of the ordinary sort. They constituted an "event" to which the overworked adjectives "brilliant" and "significant" could for once be applied.

That a fitting celebration of the twenty-fifth anniversary of the founding of the Historical and Economic Associations would call together an exceptionally large number of interesting men from all sections of the country, and that New York City would greet them with polite hospitality was assumed. That more than thirteen hundred members and guests would register their attendance; that the scholars of nearly every European country would send at least one of their number to represent them, and that the civic and social life of New York City would permit itself a quiver or two of honest interest in the affair were the substance of things hoped for but not confidently expected. That New York City would officially and in good social form profess its own abounding idealism, its deep conviction that wealth and business are only means to intellectual beatitudes, and its desire to bestow upon modest men of scholarship a recognition that it has never been willing to give to financiers, Madison Square Garden celebrities, or district political leaders, was, we venture to say, not anticipated.

The historical fact, however, is that on this occasion New York City discovered that it has intellectual parts, and became interested in them. A speaker at one of the Sociological Society sessions remarked that communities may live a long time and do many things as angleworms do, without feeling the need of ideas or manifesting curiosity as to what all their wriggling is for. The bigger the town the longer, we suppose, must be the anticipatory evolution. Be this as it may, New York City, the biggest town but one in all the world, has arrived at self-conscious intellectuality. It knows that beauty, thought and goodness are realities that it truly wants, and has all along been trying to attain; that while wealth has its uses and the ticker may amuse for awhile, the day must come when sweatshops and franchises cannot satisfy the soul that thirsts for universities and museums. Mr. Choate said so at Carnegie Hall, and Mayor McClellan showed why, in the nature of things, it must all turn out this way.

To have "assisted" at so interesting a psychological birth must, we think, be counted as the distinguishing circumstance of this Twenty-fifth Anniversary jubilation of the intellectuals. For when we stop to think of it, it is clear that New York could not have undergone this mutation until stimulated by an awakening shock. An unprecedented eruption of savants was the shock. That as many as a thousand American men and women had been engaged for a number of years, and some of them for twenty-five years, in just thinking about things and acquiring knowledge, and that they were coming collectively and organized into "our midst"—this makes New York itself sit up and think.

The response was commensurate to the tingle. We venture to say that New York has never done anything more worthy of itself, and we do not forget the length of the Dewey Parade or the splendors of the Hudson-Fulton Celebration. We do not recall that any city has more superbly honored the scholars of a nation or, in so doing, more honored itself. The Mayor of the city and the Governor of the State welcomed the associations, and the President of the United States also would have added his word of greeting if American railway enterprise could have brought him here from Washington in a snowstorm. The Chamber of Commerce, the Merchants' Association, great corporations, exclusive clubs, and individual leaders of the social world, extended a hospitality that was as gracious as it was unstinted.

And this splendid reception was, after all, a true measure of the influence which the intellectual element has attained in America. It was a frank recognition of the fact that American scholarship has made itself not only worthy of respect, but vital and forceful enough to command respect—and much besides—from the busiest, the richest, the most extravagant, the most materialistic, the most thoughtless and impatient city that has anywhere seethed and glittered since civilization began. Must we not say that this is an achievement that promises something for the worthiness and the dignity of American life in the coming years?

Evangelical Christianity

THE sixty years and a little more of the life of THE INDEPENDENT have seen great progressive movements in religious and ecclesiastical as well as in political and social history; and from its beginning THE INDEPENDENT has never failed to express an active and sympathetic interest in all these movements. We have not only lived to see slavery abolished, the United States a world power, France, Mexico and Brazil republics, Japan one of the sisterhood of mighty nations, China half occidentalized. Russia and Turkey made constitutional states, Australia and South Africa self-governing dominions, and all Africa opened to commerce and civilization while the opening age of steam has developed into the age of electricity, and to the conquest of the sea has been added the conquest of the sky; but we have had to record less spectacular, but no less momentous, movements in the sphere of spiritual life and religious thought.

They have had to do not only with the spread of the Christian faith within the pagan world, but also with the freer definition of what Christianity means. The old creeds have been wonderfully loosened. In theology love stands where law was once central, and that revolutionizes the creeds. God is conceived of as Father, not chiefly as King. With this, within these two generation, has come a far less stringent view of Holy Scripture, so that the old jibe, "That's where Paul and you differ," has much less than its old force. Dr. Bushnell, once a heretic, is now almost a saint, and Dr. Briggs, once removed from the Presbyterian ministry, is a conservative, now arguing against the extremer radicals within his old Church. And meanwhile the jealous hostilities of denominations are passing away, and they have, in mutual confidence, united in one Federal Council of the common faith.

And yet we are sometimes surprised at the rapidity of the theological movement in various denominations. Of late we have seen it among the Baptists, who, in the North, have not only given up close communion as an article of their faith, but have in Chicago and Colgate Universities proved that teachers may remain in the fold and yet maintain beliefs which twenty-five years ago drove out those who dared to hold them.

The very latest, apparently successful, rebellion against the older prevalent theology is among the Congregationalists, who have had a way, since Jonathan Edwards, of trying to make "improvements in theology." Dr. Gordon of the Old South Church in Boston wrote a book, the purpose of which was to show that belief in the biblical miracles is not at present particularly useful, and is not essential to Christian faith. We might have passed this by as exceptional, altho indicative, if *The Congregationalist*, the old defender of the faith of its churches, and now the organ of the Congregational

publishing society, had not frankly come to support this new view. It somewhat surprised us. We recalled the times when that journal, under its earlier names, as *The Puritan, The Recorder, The Puritan Recorder,* and under its present designation, had proved Dr. Bushnell a Unitarian heretic, or had condemned the succeeding innovations down to the later days when future probation was the militant heresy.

The Congregationalist wrote to a dozen leading professors in theological seminaries and to other teachers and pastors, asking what they thought of the doctrine of Dr. Goodwin's book. While some strongly opposed, it proved that the weight of the majority approved the teachings that the present age is not helped in its faith by a belief in miracles, and that the Christian faith does not need them: that it needs Christ and his teaching, but does not need his miracles. Thereupon *The Congregationalist* recorded, assented and approved.

And this remarkable fact we record as a fresh stage, if not an epoch, in our ecclesiastical history. The same infection, defection, or prefection, whatever it may be called, is visible everywhere. Only this past week a leading Presbyterian pastor in Brooklyn has preached the same new doctrine. It comes naturally out of the new view of Scripture, and the passing away of the doctrine of plenary inspiration, so that in place of it we have a teaching which does not essentially distinguish the inspired authority of the writers of the Bible from that of other wise and good men, and which leaves us to accept our sacred writings for what we find them worth rather than for the special grace of those who wrote them. We can judge the sixty-six books of the Bible, and can accept or reject what we find in them according to the evidence for or against it. This view is now current, tho here exprest bluntly, among scholars; and Christianity is accepted not because the Bible requires it, but because we find in the teachings of Jesus a religious view of God and of our duties to Him and our privileges with Him, and of our relations and duties to our fellow men, far superior to what any other religion has taught. This present widely accepted view allows or even justifies criticism of the historical statements about our Lord's birth, miracles and resurrection told in the New Testament; and it fits in with doubts of the miraculous raised by scientific knowledge of the orderly course of nature and the invincible rule of law within its realm.

But all this is very radical. It transcends the old Unitariansm and Universalism. We are a thousand miles from the Athanasian Creed, which consigned to everlasting punishment those who differed or doubted. It must be understood that with the miracles it discards so important a doctrine as the physical resurrection of Christ, and that it must equally allow belief that it was either a pure myth which very early arose, or that it grew out of more or less disordered visions, like those of the Apostle Paul. There can be no sort of historic doubt that the earliest apostles and other disciples fully believed in the resurrection of Jesus, and they, or some of them, believed they had seen him. On this belief the Church was founded, not on the teachings of the Sermon on the Mount. This is a tremendous fact, of which the new theologians must take account. It was because they believed in the actual and visible resurrection of Jesus Christ that they had courage to preach immortality and were willing to die in hope of eternal life. If they had not held this great miracle true they would have held their preaching vain.

This they all held, Peter and James and John, as well as Paul and Barnabas. And much more Paul, the scholar and theologian, added, which we have largely allowed to slip out of our faith—the doctrine of the atonement, the penal sacrifice for sin, and the second coming. But all these are matters either of history or philosophy, and so not matters of duty and personal religion. Whether Jesus performed the miracles attributed to him, whether he was miraculously conceived or rose miraculously from the dead, are questions for evidence, to be believed or disbelieved, like other things, solely on their evidence, and not by any volition of faith. We are no better or worse for believing or not believing, so long as we try honestly to follow the evidence. Equally the philosophy of

religion, what we call theology, depends wholly on reasoning, and we are no better or worse for believing or disbelieving, so long as we try as well as we can to find the reason which shall give us correct belief. Further yet, these historical and biographical facts, or these logical formulas of theology, are intellectual conclusions, not moral. They tell us what we should believe, not what it is our duty to do. Their conclusions are of value, but are relatively unimportant when compared with matters of character and duty. Thus, while it is very hard to believe that the early disciples, the associates of Jesus before His crucifixion, were mistaken when they testified that they had seen him risen from the grave, or that the Christian Church was founded on an historical mistake, yet we have no right to disfellowship those who doubt, but who yet accept Jesus as Master and Lord, and who follow and obey His teachings of duty to God and man. They are yet brethren, even if they follow not us, good and godly Christians, and are not to be repelled even notwithstanding 2 John, 10.

And we presume that this is what is meant by *The Congregationalist* and its correspondents—not that they reject the miracles or disbelieve in the virgin birth or the resurrection, but that they hold that belief in these biographical facts is of no such importance as is loving obedience and worship of God and service of man, and that it is this last, and this only, that gives us acceptance with our Heavenly Father and should give us fellowship in the churches of Jesus Christ.

The Increase in the Cost of Living

BRADSTREET'S *Review* for December 11, 1909, shows that the average wholesale price of 106 general commodities was 60 per cent. greater on December 1, 1909, than on July 1, 1896. It shows also that the average price on October 1, for the three years 1907-8-9, was 35.4 per cent. greater than that for the same day in the three years 1896-7-8. For the eight-and-one-half-year period from June 1, 1901, to December 1, 1909, the increase has been 23 per cent.

These averages, however, are based on a general list of commodities, and therefore include many articles not purchased by workmen or workmen's families. They include naval stores, building materials, oils, metals and many miscellaneous articles used in manufactures. In the commodities necessary in sustaining life and comfort, the increases in price have been much greater than the figures given above. In general provisions the increase for the thirteen-year period has been 70.3 per cent.

According to the careful estimates made by Mrs. Louise Bolard More, in her book on "Wage-Earners' Budgets" (p. 247), the average expenditures of working-class families, with a yearly income of from $750 to $1,100, in New York City in 1904, are proportioned as follows:

Subsistence	45 per cent.
Rent	18 per cent.
Clothing	10 per cent.
Fuel and light	5 per cent.
Sundries	22 per cent.

In food, therefore, which takes nearly one-half of the workman's income, prices have advanced in thirteen years by 70.3 per cent. The advances in the leading commodities for both the thirteen-year and the eight-and-one-half-year periods are as follows:

	Per cent. of Increase.	
Article.	June 1, 1901. to Dec. 1, 1909.	July 1, 1896, to Dec. 1, 1909.
Potatoes	—32.5	100.0
Salt	—10.0	25.0
Beans	13.0	145.6
Codfish	27.2	75.0
Beef, family	36.3	76.4
Ham	38.1	45.0
Bacon	48.5	197.1
Flour	53.6	63.0
Lard	62.1	226.2
Pork, mess	62.3	212.1
Butter	78.9	126.6
Milk	81.9	64.1
Cheese	83.8	156.6
Peas	87.7	119.0

—Decrease.

Only three of the provision commodities listed by *Bradstreet's*—coffee, tea and molasses—have decreased in price during the thirteen-year period, while one—baker's bread—remains at nominally the same price.

For the eight-and-one-half-year period only five articles—sugar, tea, molasses, salt and potatoes—have decreased in

price, while two—baker's bread and rice—have remained stationary. Coffee, tho 34.7 per cent. lower than in 1896, is 36 per cent. higher than in 1901.

Bradstreet's figures do not, of course, include rent, which consumes from 15 to 20 per cent. of the workman's income, or, according to Mrs. More's figures for New York City, 18 per cent. There are no authoritative figures for the increase of rents in the last thirteen years. Various estimates have been made, but all of them are unsatisfactory. It is generally conceded that rent is higher in New York City than in any other city in the world. It is also generally conceded that the increase in this city in thirteen years has been, on the whole, very great. It has been as much as 75 per cent. in some cases, tho in others it has been less than 35 per cent. During the panic two years ago rents in the poorer quarters of the city decreased somewhat from their formerly inflated figures, owing to the return of thousands of foreign families to their own lands. This movement, however, does not seem to have affected the general increase of rents in other parts of the city. An average increase of 50 per cent. for the whole city in the last ten years would be a conservative figure.

Making Country Life Interesting

Farm life was robbed of its old fashioned charms by steam power, which took into factories one after another of our home industries, until we had lost weaving, spinning, knitting, candle making, soap making, shoe making, cheese and butter making, and even sewing would have gone but for the little sewing machine which we could make a household affair. Of course this unloaded a large amount of work from the country home, but it left only the least interesting labor to be performed in the family. The young folk naturally drifted after the machinery, into factory towns and cities. Now we want to know what can be done to recall the youngsters, and make them happy in country life and with country work. It will be of no use to talk about "back to the land" unless we can keep the young folks with us.

The reaction has really set in already, following the change of motor power; that is, from steam to electricity. We have the telephone and the trolley, and there is no such thing now as backwoods territory, or being remote from the centers of civilization. Adding free mail delivery, we have brought the world to us, a hundred miles from the cities, and the news from London or Calcutta is ours almost as soon as it is on the desk of the New York stock dealer. We have only to use common sense in adjusting ourselves to the change in order to hold our boys and girls in the country. Added to what we have named is the fact that all the sciences of the age, botany, entomology, geology, ornithology are all made tributary to farm life. There is really no life to compare with ours in breadth. The education of the age is centering in our Agricultural Colleges and Experiment Stations. These send us bulletin after bulletin, giving us all the most recent scientific discoveries, besides teaching us the positive art of plant and animal culture.

Now what we have to do is to meet these changes half way. No country house should be without its telephone, and its shipments should if possible take advantage of the trolley. Every country home should have direct connection with its State Experiment Station and Agricultural College. These institutions belong to the people, and were created, not to educate a special class, but to give information to the tillers of the soil. There is not a problem that can arise on the farm, in the orchard or the garden, or in household affairs, pertaining to sanitary or economic affairs, but what the bulletins will be found of vital health. That is not the best of it, however, for it is this exalting of our work into a science that makes it so interesting to the young.

As a direct consequence of this scientific culture, every farm ultimately will, and speedily should, become an experiment station of itself. Boys and girls should learn that the highest education is that which comes from personal investigation. Cross-breeding of plants is just as easy at home as it is at the Stations, or at Mr. Burbank's farm in California. There is not a home so small or so humble anywhere in the United States, that

covers a single acre of ground or half acre, that cannot engage in creating something new. This is done either by growing seedlings, as nature gives them to us, or by more accurate crossing of pollen, and then securing the results by sowing seed.

The farm should go a little farther, and the smallest country home should have a shop and a laboratory; the former with a good equipment of mechanical tools, and the latter for studying those forms of nature which lie in the soil of the homestead. The very smallest home furnishes work in geology, botany and entomology. A room devoted to this kind of work becomes very fascinating to the young; while the shop holds the boys that are mechanically inclined.

When we say widen the outlook for the boys and girls, we do not mean therefore that they must go away from home to find the world. If you will just show them that the world is right under their feet, and over their heads, and that they have all the sciences right at hand, and all the arts for that matter, they will not wander from home. Still it is necessary to furnish them intellectual tools and stimulus in the way of books and magazines. Unfortunately most of our country houses have only those papers that give a questionable lot of passing information. A country home magazine, supplemented by historical and geographical magazines, make far better pabulum. The young people like them better, if their minds have not already become dissipated with rambling reading.

Now that the schools are fronting toward the land, and industrialism, we must meet them with our home organism, and as quickly as possible fill the young people with enthusiasm for life as well as knowledge, and for the acquisition of knowledge at first hand. Then, instead of shunting them loose from the family, as soon as they are supposed to have finished their education, we shall find them ready for partnership in our land love and land work. Families will not separate so easily, and the already congested city will cease to swallow up our boys and girls, because in the country they do not see the beautiful nor realize the infinite presence of truth.

Progressive Government for Oregon

Oregon is one of those States that lead the country in the reform of government, having introduced the Australian ballot, direct legislation and direct primary; and a number of the men who succeeded in creating the constitution of the State have proposed to the people yet further amendments, which will probably come before the people for adoption. One provides that there shall be a board of three "People's Inspectors of Government," non-partisan, one of whom shall be present at every session of either house of the Legislature, and whose duty it shall be to watch that the State suffers no detriment, and to make all investigations and inspections; also to publish a monthly report to be sent to every voter. Another plan abolishes all the sixty present commissions, except the Railroad Commission, and puts the power in the hands of the Governor. The Governor and his cabinet shall have authority to be present at any session of either house of the Legislature, to speak, to answer questions, and to present bills. This is a remarkable acceptance of the system of the British Constitution, which we shall be glad to see introduced, and which would be likely to spread. A "short ballot" is also proposed, giving the heads of departments authority to appoint their subordinates. We commend the full statement sent out by C. H. Chapman, of Portland, Ore., and many others of the People's Progressive Government League, to students of government elsewhere.

Boston's Municipal Campaign

In its municipal campaign, Boston has four candidates for Mayor. This is the first campaign under the new city charter, which leaves no room for nominating conventions or any part of the old nominating machinery. Nominations are made by petition, and any man might be a candidate for Mayor who could get 5,000 signatures. Up to the present time the experiment has not been wholly satisfactory. James J. Storrow, nominated by reformers and the Municipal Voters' League, has ideal qualifications, and the best interests of

the city call for his election by a great majority over all others, but the fatuous candidacy of the present Mayor, George A. Hibbard, so complicates the situation that his success is by no means assured. Mr. Storrow's formidable opponent is ex-Mayor John F. Fitzgerald, a demagog whose administration was the worst Boston has ever known. There is plenty of evidence as to its quality in the reports of the Finance Commission's investigation. But there are a considerable number of persons in Boston who like the kind of government by which Fitzgerald won notoriety, and there are many others who support him for various reasons. The presence in the field of Hibbard, a weak public officer, may turn the scale in favor of this utterly unworthy man. Mr. Storrow, a graduate of Harvard, who was seriously considered when a president of the University to succeed Dr. Eliot was sought, is the son of a noted patent lawyer. For some years he himself was a lawyer, but since 1900 he has been a partner in Boston's strongest banking house. A man of high character, he has frequently assumed civic responsibilities for which there was no compensation in money, displaying a keen desire for honest government and the ability to give it to the people if he should have an opportunity. He does not pose as a reformer but as an advocate of common honesty in the administration of municipal affairs. Boston is fortunate in having such a man as a candidate and will be much more fortunate if the people elect him.

Beware

It is a curious report which comes to the public that Russia would like to sell to the United States the northern half of the island of Saghalin, the southern portion of which was acquired by Japan thru the treaty of Portsmouth. We doubt not that the frozen half of the island is well worth having, even unexplored. We presume it can be developed, if in no other way, as a base for fisheries. Even Greenland would be worth buying of Denmark at a fair price, and there would be profit in the south polar continent, where there is a fine volcano. But we do not want to buy a quarrel, certainly not with Japan, whose fleet is within easy and safe striking distance of the Philippines and might endanger our possession of Hawaii and harry our Pacific Coast should war arise, which God forbid. It will be remembered that Japan was greatly disappointed that she did not get the whole of Saghalin, and that the United States used its influence to persuade Japan to accept less indemnity than she thought she had the right to demand. Let Russia sell Saghalin to Japan, for in case of a new war it could not be protected, and the northern portion is less a danger to Russia than is the southern. We have purchased much territory and it has all been profitable; Louisiana from France, Florida from Spain, New Mexico from Mexico, Alaska from Russia, the Canal Zone from Panama, and we paid $20,000,000 even to Spain to possess the Philippines. Besides this, we have tried to buy her West Indian islands from Denmark, and many years ago Cuba from Spain. They are all good purchases, and we are a good buyer, but we do not want to buy ill-will or a war. All Saghalin ought to belong to Japan.

Armenians Naturalized

Hundreds of Armenians have been freely naturalized in this country and are American citizens like the rest of us. So large is the number that they have been the occasion of prolonged diplomatic correspondence with Turkey over the rights of those who return to Turkey to reside there while claiming American citizenship. Of late some meddling officials of the Bureau of Naturalization, eager to shut out as many foreigners as possible, have opposed the naturalization of Armenians, and have persuaded assistant district attorneys to oppose such candidates, and in one case the court has refused to naturalize Armenians on the ground that they are not "free white persons" under the statute. The case of four Armenians has been very thoroly argued before the Circuit Court of the United States in Boston, and Judge Lowell has decided that there is absolutely no ground for excluding them. They are "free," of course, and "white," if any one is. An effort to show that all of Asiatic race—Persians, Syrians, Cauca-

sians, Turks, as well as Chinese and Japanese—are not of the white race, is simply preposterous. Armenians are white Aryans, and their language and race have been known for 2,500 years. Any rule which would shut them out would, as Judge Lowell shows, shut out Jews, who are of an Asiatic race. The opposition to their naturalization on the part of government officials is mischievous, not to say pestilent.

"Tom" Watson, the Georgia Populist, has been issuing in his magazine a series of articles, now gathered in a booklet, bitterly and ignorantly attacking foreign missions. It is a way in the Southwest to fight religious questions out on the public platform, and the friends of missions have challenged him to a debate and engaged William T. Ellis, of Philadelphia, to debate with him. We don't know which will get the better of the tourney, for they fight in different ways. Tom Watson is utterly ignorant of the subject—we have read his book—but he has the larger gift of invective, while Mr. Ellis has visited various mission fields in the East, and he knows his subject; but he has a gentleman's tongue.

A loss of national revenue may be a good thing when it indicates an improvement in moral and social conditions. Such seems to be the case with the deficit of about $50,000,000 in the British receipts for the last year, of which $45,000,000 is due to decreased consumption of spirits. Much more than what is lost in revenue stamps is gained to the pockets of the people. It is the purpose of the Budget bill to reduce still more the use of liquors. The deficit of our own Government for the first six months of the financial year was $56,000,000, which may well cause alarm and lead President Taft to make economy of expenditure a chief feature of his administration.

In rebuilding the Olin Methodist Episcopal Church, at Williamsbridge, New York City, the contents of the cornerstone, laid in October, 1864, were opened. The box contained, with various contemporary documents, a copy of THE INDEPENDENT for that week. These papers and additional ones of the present date, will be placed in the new building. A copy of the current number of THE INDEPENDENT has been sent to the church to duplicate the gift of forty-five years ago. Altho a file with such a hiatus is of little value for reference purposes, the incident is of some historical interest.

While President Taft is trying his best to create a kindly feeling toward the United States on the part of the Southern republics, he finds Americans spoiling his efforts. In Havana two Cuban Congressmen in attendance on President Gomez's New Year's reception entered the American Hotel and asked for drinks. They were served, and then charged four dollars apiece, because of their color. They were angry enough, and there followed a riot and bitter anti-American sentiment over the attempt to draw the color line.

"We want American citizenship" was on the banners which Secretary Dickinson has seen wherever he has been on his visit to the towns of Porto Rico. In an address at San Juan Mr. Dickinson assured the people that Congress was likely soon to give the people much that they want, by which he may be supposed to mean citizenship. Why should not Congress give it? France has this last year given citizenship to the people of Madagascar. And Porto Rico is a thousandfold better fitted for the boon than is Madagascar.

A Pittsburg man died last week and left a fortune supposed to amount to fifteen or twenty million dollars, and not one dollar left in his will to the public in any form of charity. He was hardly known in life and deserves to be forgotten dead.

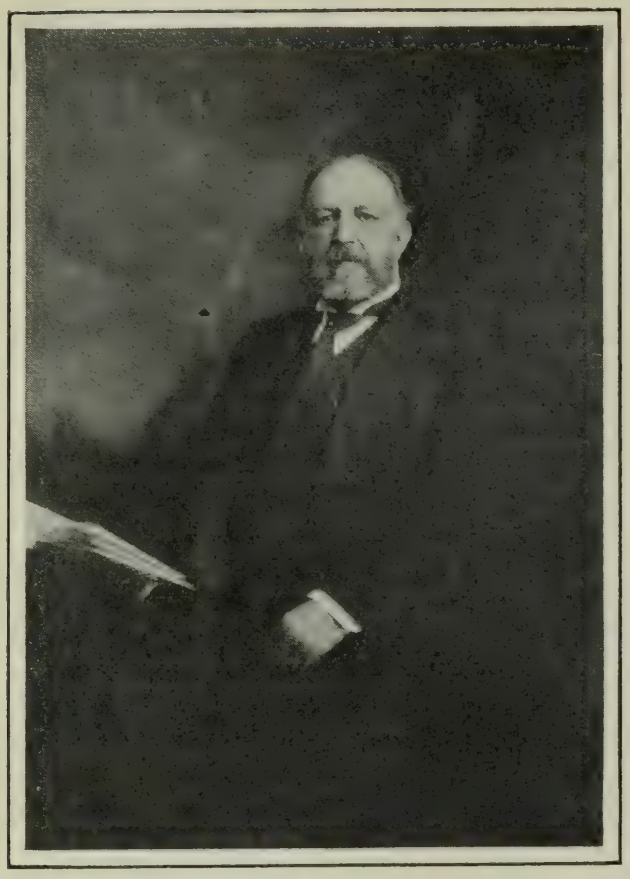
It is almost too good to be true that a projected visit of King Victor Emmanuel of Italy to King Edward has for a main purpose the discussion of a plan to limit naval armaments. We wish that he would visit other capitals as an apostle of peace.

Insurance

The Phenix Insurance Company Merger

FOLLOWING the disclosures of the stock speculations of President Sheldon, of the Phenix Insurance Company of Brooklyn, and the transactions of that company with former members of the State Insurance Department, to which we devoted some space in our issue of December 16, comes the recent announcement of a determination on the part of the directors of the institution to merge the company with the Fidelity Fire Insurance Company of this city. The required approval of the State Insurance Department having been obtained and the merger proposition having been ratified by the respective boards of each company the result will be an entirely new concern to be called the Fidelity-Phenix Fire Insurance Company of New York. The ratification of the stockholders of both companies will be required, but little if any doubt remains of the assent of the needed two-thirds majority. The matter cannot be finally disposed of before January 24. The new company is to have a capital of $2,500,000, which is equal to the capital of the two constituent companies, and will have, according to statements given out by Henry Evans, of the Continental Insurance Company, who is now chairman of the board of directors of the Phenix, a surplus of not less than $2,250,000. The total assets will be about $13,500,000.

While the directors cannot be elected until the stockholders have approved of the merger, the list of those who have agreed to serve, besides Mr. Evans, and who will undoubtedly be elected, includes the names of Francis L. Hine, president of the First National Bank; Norman B. Ream; Albert H. Wiggin, vice-president of the Chase National Bank; Judge William H. Moore, of the Rock Island; E. C. Converse, president of the Bankers' Trust Company; Charles Altschul, of Lazard Frères; H. K. Pomroy, former president of the Stock Exchange; H. C. Tinker, ex-president of the Liberty National Bank; Donald Mackay, of Mackay & Co.; Frederick W. Scott, of Richmond; Samuel A. Walsh, J. J. Riker, Benedict J. Greenhut and Eugene Meyer, Jr.



The Phenix Company, which has a larger plant and business, as well as a larger capitalization, than the Fidelity, is to go into the merger at the rate of 375-725 of the new capitalization, and the stockholders of the Fidelity will receive for their share 350-725 of the $2,500,000 new capital stock.

The Phenix Company has a capitalization of $1,500,000, divided into 30,000 shares of $50 par, against the Fidelity's capitalization of $1,000,000, par $100. On the other hand, against the Phenix's surplus of $500,000 the Fidelity has a surplus of about $1,900,000, so that the value of the stocks is figured at 250 per cent. for the Phenix and 350 per cent. for the Fidelity. The Phenix figures in the deal at a valuation of $3,750,000 and the Fidelity at a valuation of $3,500,000.

The death of George P. Sheldon from ptomaine poisoning at his home at Greenwich, Conn., on Christmas Day, estops the legal proceedings against him, of which he never knew.

THERE is a present-day tendency toward the securing of adequate rates for fraternal insurance societies. At the recent National Fraternal Congress held in Boston, Mass., President C. E. Piper in his address of welcome referred to this. He happily phrased it when he said in continuing: "It is no longer a question to be discussed whether the societies should do business upon adequate rates, but rather how can we reach adequate rates most quickly and safely." During the past year seventeen fraternal organizations, members of the National Fraternal Congress, have readjusted their rates, or have committees charged with the duty of reporting plans for the readjustment of rates. Out of a membership of fifty-four societies a year ago thirty-four of these societies are now accepting new business only on the basis of the National Fraternal Congress table of rates. A recent recruit to these rates is the United Ancient Order of Druids.

FINANCIAL

Spencer Trask

WHILE the New York Central express from Montreal was standing still at Croton, thirty-four miles north of New York City, at 8 o'clock in the morning on the last day of the old year, a following fast freight crashed into it. The only passenger killed was Spencer Trask, banker, philanthropist, patron of art, and the principal supporter of Thomas A. Edison in the early days of the electric light industry, who occupied a drawing room at the rear end of the last of the five sleeping cars. Responsibility for this collision has not yet been placed. Neither the block signals nor the rear end flagman provided protection for the passenger train.

Mr. Trask was a native of Brooklyn, sixty-five years old. Soon after his graduation from Princeton he engaged in the banking business, associated at first with his uncle, Henry G. Marquand. The firm which he afterward established was originally known as Trask & Stone, but in 1881 it became Spencer Trask & Co., and for years it has held a prominent position. Mr. Trask foresaw the future of Edison's inventions. He gave him financial support. From the beginning he was president of the Edison Light and Power System. A large stockholder in many Edison companies, he was also an original trustee of the General Electric Company. He was also interested in several railway and industrial corporations. To the general public he was better known as a promoter of philanthropic and educational projects, and as a patron of art, than as a banker. He was one of the founders, and for fifteen years a trustee, of Teachers' College, one of the founders and a trustee of the Kindergarten Association, a trustee of the General Theological Seminary, the principal founder of the National Arts Club, an active member of the Municipal Art Society, and president of the Reservation Commission which has sought to preserve the springs at Saratoga. His widow is a well known writer, whose play, "The Little Town of Bethlehem," was recently produced by the Ben Greet Players. In Saratoga he had about 100 employees, whom he sought to make happy on New Year's Day. Arrangements for the celebration had been made when he was called to New York on business of the Reservation Commission. Ordinarily he would have made the journey by daylight, but on this occasion he traveled by night in order that he might return in time for the entertainment of his employees.

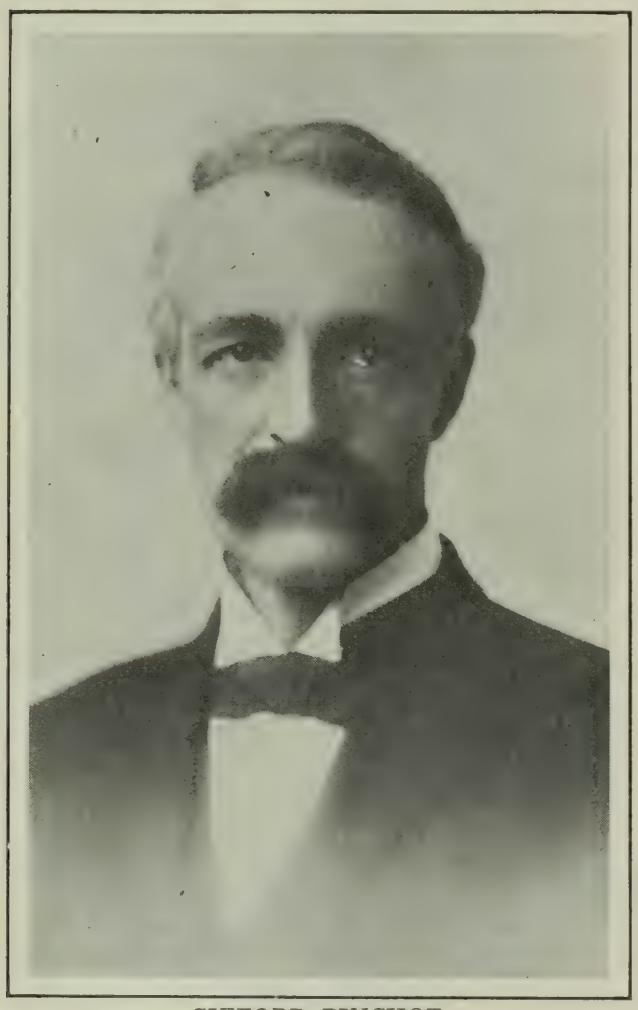
....In all probability the successor of the late Dumont Clarke in the presidency of the American Exchange National Bank will be his eldest son, Lewis L. Clarke, now vice-president. He was born in New York and is about thirty-nine years old. In 1889 he entered the service of this bank, with which he has ever since been connected.

....Charles C. Dickinson has resigned as president of the Carnegie Trust Company, and has been succeeded by Joseph B. Reichmann, one of the directors, who is also president of National Starch Company. Mr. Dickinson, who organized the company, and was its first president (Leslie M. Shaw afterward holding the office for a year), retires partly because he has not fully recovered from the effects of a recent accident, and because other interests require his attention.

The Independent

VOL. LXVIII NEW YORK, THURSDAY, JANUARY 13, 1910 No. 3189

Survey of the World



The Removal of Forester Pinchot

Gifford Pinchot, Chief Forester, was removed from office on the 7th by order of the President. With him were removed the two leading subordinate officers of the Forestry Bureau, Overton W. Price, Associate Forester, and Albert C. Shaw, Assistant Law Officer. On the 5th, a joint resolution providing for the investigation demanded by Secretary Ballinger was introduced in the Senate by Mr. Jones and in the House by Mr. Humphrey, both of Washington. Mr. Jones reviewed the career of Secretary Ballinger, defending him against criticism which has been made in magazines and elsewhere. Mr. Humphrey said he was a friend of both Mr. Ballinger and Mr. Pinchot, believing that both had honestly tried to serve the public. On the 6th, when, in answer to a resolution, the Senate received from the President the report of the Attorney-General and other statements which had guided the President when he exonerated Secretary Ballinger and ordered the dismissal of L. R. Glavis, field agent of the Land Office, the discussion of matters relating to the coming investigation was enlivened by a letter from Forester Pinchot. It was read by Senator Dolliver. It had been written at his request and addressed to him as chairman of the Committee on Agriculture. This letter was the cause of Mr. Pinchot's subsequent removal. It contained about two thousand words and was mainly a defense of his subordinates, Price and Shaw. These men had, Mr. Pinchot said, made public certain official information concerning the Cunningham coal claims in Alaska, and had countenanced the publication of certain facts by L. R. Glavis, after his removal. They had also in other ways directed public attention to the imminent danger that the Alaska coal fields might pass into private hands. The information was officially within their knowledge, and was "of a nature proper to be made public, unless there are secrets which the people are not entitled to know concerning the source, nature and progress of claims made for portions of the public lands." They felt that public interests were in grave danger at the hands of fraudulent claimants. At Glavis's request he had sent Shaw to aid him in arranging his material for submission to the President. Price and Shaw had acted from a high and unselfish sense of public duty and had "deliberately chosen to risk their official positions rather than to permit what they believed to be a wrongful loss of public property." The following passage excited much comment:

> "Price and Shaw were confronted by an extraordinary situation. Action thru the usual official channels, and finally even an appeal to the President, had resulted (because of what I believe to have been a mistaken impression of the facts) in eliminating from the Government service in the person of Glavis the most vigorous defender of the people's interests. Furthermore, the refusal of the Secretary of the Interior to assume responsibility in the cases had left their conduct wholly in the hands of subordinates, each of whom was apparently committed in favor of patenting these claims."

The two men, he continued, had violated a rule of propriety as between the Departments. They deserved a reprimand for this and had received one, but he should recommend that no futher action concerning them be taken. They had successfully directed public attention to a national danger. Rules of official de-

corum were worse than useless if they were used to prevent an honest and vigilant officer from saving the property of the public. Price and Shaw were honorable men of great experience and high efficiency in their work. When they forced publicity concerning the Alaska coal claims they did for the people what the people would have done for themselves if they had been in a situation to do it. He disclaimed any desire to shirk any part of his own legitimate responsibility for what they had done. After the letter had been read, Senator Hale promptly asserted that Mr. Pinchot had been guilty of a serious breach of the rules for the conduct of Government officers, and had disobeyed President Taft's recent order relating to the giving out of information by subordinates. The incident was at once taken up in a Cabinet meeting. Again, on the 7th, it was considered by the President and the Cabinet for several hours. Then the President ordered the removal of Mr. Pinchot, Mr. Price and Mr. Shaw. He also sent to Mr. Pinchot a long letter. At the beginning Mr. Taft said that Price had offered to Secretary Wilson his resignation "on the ground that he had been engaged with Mr. Shaw in instigating the publication in various newspapers and magazines of articles attacking the good name of Secretary Ballinger and charging the Interior Department and the Land Office with corruption." Secretary Wilson had asked for Mr. Pinchot's recommendation concerning this, "and you said" (the President continued) "you wished to make a statement which should be read in the Senate at the same time that my message transmitting the record in the Glavis case reached there, and that you thought you could induce Senator Dolliver to introduce the statement for you." Secretary Wilson advised against such a course:

GIFFORD PINCHOT.

"Without further conference with the Secretary, and before making a report to him, you succeeded in making public, by having it read in the Senate, a letter from you stating that you had sufficiently disciplined Messrs. Price and Shaw by reprimanding them, and that your recommendation would be that no further punishment was required, and this before that recommendation was submitted to the Secretary and me, whose power and duty it was to determine, upon Price's admissions as to his complicity, what action should be taken with respect to his resignation.

"In order to understand the full purport of your letter, in which you admit the complicity of Price and Shaw in the publications of the press, it should be said that the gravamen of the Glavis charges was that Secretary Ballinger and the others were all affected by a corrupt wish to patent thirty-three so-called Cunningham claims upon coal lands in Alaska; that the question whether these claims were fraudulent or not remained to be decided upon the evidence after both the United States and the claimants had been heard; that every patent, as an Executive act, is completely within the jurisdiction of the President to direct the withholding of it in order that he himself may examine the evidence as to the validity of the claim.

"These facts understood, the plain intimations in your letter are, first, that I had reached a wrong conclusion as to the good faith of Secretary Ballinger and the officers of the Land Office, altho you and your subordinates had only seen the evidence of Glavis, the accuser, and had never seen or read the evidence of those accused or the records that they disclosed, which were submitted to me; and, second, that, under these circumstances, without the exploitation by Messrs. Shaw and Price in the daily, weekly, and monthly press of the charges of Glavis, the Administration, includ-

ing the President and the officers of the Interior Department and Land Office, would have allowed certain fraudulent claims to be patented on coal lands in Alaska, altho the matter had been specifically brought to the attention of the President by the Glavis charges. You solicited the opportunity to make such a declaration in Congress for the purpose of offsetting, if possible, in the public mind, the President's decision in the Glavis case, supported by the opinion of the Attorney General, after a full examination by both, of the evidence adduced by the accuser and the evidence on behalf of the accused, while the latter evidence you and your subordinates had never seen.

"You did this against the advice of the Secretary of Agriculture, without notifying him that you intended to do so, and without conferring with me at all. Your letter was in effect an improper appeal to Congress and the public to excuse in advance the guilt of your subordinates before I could act, and against my decision in the Glavis case before the whole evidence on which that was based could be considered.

"I should be glad to regard what has happened only as a personal reflection, so that I could pass it over and take no official cognizance of it. But other and higher considerations must govern me. When the people of the United States elected me President, they placed me in an office of the highest dignity, and charged me with the duty of maintaining that dignity and proper respect for the office on the part of my subordinates. Moreover, if I were to pass over this matter in silence, it would be most demoralizing to the discipline of the executive branch of the Government.

"By your own conduct you have destroyed your usefulness as a helpful subordinate of the Government, and it therefore now becomes my duty to direct the Secretary of Agriculture to remove you from your office as the Forester."

Several of Mr. Pinchot's supporters say that the President was justified in taking this action. It is predicted that Mr. Pinchot will be the leading prosecutor before the investigating committee. Mr. Taft, it is understood, liked both Mr. Pinchot and Mr. Ballinger, believed that both were faithful public officers, and had sought to reconcile them.——Attorney-General Wickersham's report on the Glavis charges characterizes Glavis as a "megalomaniac," and exonerates Secretary Ballinger. The latter, he says, did not violate law by becoming counsel for the Cunningham claimants. —— Connected with the removal of the Forester was the action of the House on the 7th, when a majority voted to withhold from Speaker Cannon the power to appoint the six members of the investigating committee and to vest this power in the House itself. The vote was 149 to 146. Twenty-three Republican "insurgents" joined the Democrats, and with them three Republicans not heretofore regarded as "insurgents." These three are warm friends of Mr. Pinchot. This action of the House may hereafter be reversed. There is much speculation and gossip as to the political or partisan effect of the Pinchot incident.

Governor Hughes on Income Taxes

In a special message to the New York Legislature, Governor Hughes opposes ratification of the proposed income tax amendment to the Federal Constitution in the form that was adopted by Congress, because, in its grant of power "to lay and collect taxes on incomes, from whatever source derived," it would permit the taxing of incomes derived from bonds issued by a State or by a municipality. He is in favor of empowering the Federal Government to levy an income tax:

"But the power to tax incomes should not be granted in such terms as to subject to Federal taxation the incomes derived from bonds issued by the State itself, or those issued by municipal governments organized under the State's authority. To place the borrowing capacity of the State and of its governmental agencies at the mercy of the Federal taxing power would be an impairment of the essential rights of the State, which, as its officers, we are bound to defend. . . . In order that a market may be provided for State bonds, and for municipal bonds, and that thus means may be afforded for State and local administration, such securities from time to time are excepted from taxation. In this way lower rates of interest are paid than otherwise would be possible. To permit such securities to be the subject of Federal taxation is to place such limitations upon the borrowing power of the State as to make the performance of the functions of local government a matter of Federal grace."

Immunity from such Federal taxation, he says, is derived not from any express provision of the Constitution, but from what has been deemed to be necessary implication. Congress has repeatedly endeavored to lay such taxes (on incomes derived from State and municipal bonds), and "its efforts have been defeated only by implied Constitutional restriction which this amendment threatens to destroy." It is now suggested that Congress should change the proposed amendment by omitting the words "from whatever source derived," because it is

thought by many that Governor Hughes's objections (which he fortifies by reference to Supreme Court decisions) will prevent ratification of the amendment by the required three-fourths of the States.

The Revolution in Nicaragua

At the end of last week an admission of considerable importance was made by President Madriz, of Nicaragua, who sent by Rear-Admiral Kimball a message to our State Department saying that the resentment of the United States on account of the execution of Groce and Cannon was justified. After a personal study of the case, he added, he was convinced that the execution was illegal, and he profoundly deplored it. This indicates, it is said, that he will demand the extradition of Zelaya, in order that the latter may be prosecuted in Nicaragua. Zelaya publishes letters and telegrams which, he asserts, were sent to him by Groce and Cannon. In these they admitted their guilt, begged for clemency and promised to support his Government. General Medina publishes letters showing that General Toledo and himself sought to prevent the execution of the two men, and appealed for clemency to Zelaya, who not only ordered that the men be executed at once but also, after they had been shot, sent a telegram rejoicing over the "enforcement of the law."——Gen. Fornos Diaz, one of Estrada's officers and a personal friend of Madriz, started last week for Managua on a peace mission, hoping that he could induce Madriz to withdraw in favor of Estrada. He left Bluefields in a small boat, intending to land at Greytown and proceed up the river on a steamer. On the night of the 6th his boat was upset on Greytown bar and he was drowned.——Estrada began, on the 3d, his advance westward, having an army of about 3,500 men. It is expected that a decisive battle will be fought near Acoyapo. Reports from Bluefields say that the pay of those in the revolutionist army is 20 cents a day, a general receiving the same as a private. ——The commander of a British cruiser lying at Greytown has sent word to Estrada that there must be no fighting in Greytown, now held by a Zelayan garrison. A majority of the houses, he adds, are owned by British subjects, and if there is any fighting in the city he will land an armed force and stop it.——The people of Granada recently entertained three captains of marines from an American cruiser. Referring to this, in a speech at a banquet on the 4th, Minister General Baca, the head of Madriz's Cabinet, remarked that the people of Granada had "groveled at the feet of Americans and kissed the boots of mere coal-passers."——Madriz has issued a decree abolishing monopolies and ordering that property confiscated by Zelaya be returned to those from whom it was taken.

Cuban Negroes Offended

Two negro members of the Cuban Congress entered, on the evening of the 2d, the barroom of the Plaza Hotel (an American house) in Havana. The barkeeper refused to sell drinks to them. Going out, they brought to the hotel a mob of several hundred negroes, and there was a riot, which was quelled only by a strong force of police. In court on the following day the clerk of the hotel was fined $70. The prosecution was conducted by Morua Delgado, the negro president of the Senate, who insisted upon the extreme penalty of $1,000 fine and six months in jail. The negroes exprest their disapproval of the small fine imposed. Hundreds of them, led by the two Congressmen, paraded in the streets, shouting "Viva Maceo!" Afterward many applied for drinks at the Plaza Hotel, where they were promptly served. A newspaper favored by the Government says that blacks and whites are on a plane of absolute equality in Cuba, and that Americans must be taught that they will not be permitted to introduce there the anti-negro sentiment of the United States.

The British Election

Parliament was dissolved by royal proclamation on January 10, and writs issued for the elections to begin on January 15. On that date, 64 constituencies will hold pollings. There are 1,330 candidates for election in the field, of which 601 are Unionists. After the writs of election are issued members of the House of Lords are not allowed to take part in the campaign, altho Lord Curzon and Lord Lansdowne have protested against this restric-

tion of their rights. The lords have improved their opportunities to the utmost during the preceding weeks. As Chancellor Lloyd-George puts it, the peers have never worked so hard in their lives, and the Budget bill even before its enactment, has thus given employment to a large number of the unemployed class. It remains to be seen what effect has been produced by this unusual participation of the members of the Upper House in a political campaign. They have in general met with very unfavorable receptions at the meetings where they have attempted to speak, being interrupted, insulted and sometimes driven from the platform. Nevertheless, they have continued their efforts, and their plucky stand in defense of the Upper House may have caused a reaction in their favor. The British custom of heckling a speaker, which seems so abhorrent to American ideals of fair play and free speech, has been carried to the extreme in the present campaign. Admission to political meetings has been in many cases restricted to members of the same party who could produce tickets of admission, and even then a serious and continuous discussion was often impossible. Sir William Bull, member of the House of Commons for Hammersmith, resorted to his fists in order to defend his right of speech. Being repeatedly insulted by a man in a mass meeting of his constituents, he descended into the crowd, which formed a ring, and the two men engaged in a fight until separated by the police. In the later days of the campaign the ground has shifted somewhat. Less is heard about the danger of Home Rule from the Opposition, or about the obstruction by the House of Lords from the Liberals, but free trade and the German peril have become more prominent issues. Ex-Premier Balfour accused the Government of having wasted its time in amiable and philanthropic but perfectly futile negotiations for the limitation of armaments, while Germany was turning out ships of the greatest fighting strength at an alarming rate. The Government had taken no steps to counteract the German advantage, and it was only accidentally that the country had gained knowledge of it. He said there was absolute unanimity of opinion among the statesmen of the lesser Powers that a struggle was inevitable sooner or later between England and Germany. Unless England should keep up its naval supremacy, it would only exist on sufferance, and some prominent Germans have gone so far as to say that Germany would not allow Great Britain to adopt a tariff against her goods. Mr. Lloyd-George in reply denounced Mr. Balfour's speech as dangerous to the world's peace and a disgrace to British politics. Tail-twisting, he said, had become a discredited practice even in the United States, and Mr. Balfour, in plucking feathers from the tail of the German eagle, was following in the footsteps of the lowest type of American politician. So far from the introduction of the Budget bill having injured British commercial prosperity, the exports and imports of December, 1909, amounted to more by $25,000,000 than those of 1907, the biggest year British trade had ever seen. A letter written by the American Ambassador, Whitelaw Reid, was introduced into the campaign, and created some little excitement because it was feared that it might result in Mr. Reid's dismissal, as in the case of Lord Sackville-West, during the Harrison-Cleveland campaign of 1888. The letter was written in reply to a correspondent who inquired if the statement was true that three or four million men were out of work in the United States. Mr. Reid replied that the statement was a gross exaggeration. When it was shown, however, that the letter had been written in December, 1908, nearly a year before the campaign, it was perceived that Mr. Reid could not be accused of writing it for political effect.

The Manchurian Railroads

A new and surprising factor has been introduced into the Manchurian problem by the proposal of the American Secretary of State, Mr. Knox, that the railroads of Manchuria be turned over to China and placed in the hands of an international syndicate which should develop the system for commercial instead of political purposes and insure its neutrality. A note to that effect was sent late in December to the countries most concerned, China, Japan, Russia, Great Britain, France and Germany,

and made public from Washington on January 5. Mr. Knox explains that in making this proposal the American Government was following out the policy of the late Secretary Hay for the equality of commercial privileges in Manchuria. Last May when the Government learned that two railroad concessions of great importance had been secured by British, French and German financial groups supported by their Governments, the United States suggested that American co-operation would be desirable, and in July took the somewhat unusual step of communicating directly with the Regent, Prince Chun. As a consequence of this protest an agreement has practically been completed by which American bankers are to take one-fourth of the loan and American engineers are to be employed, tho not as chief engineers, and American materials are to "have the same rights, privileges, preferences and discretions for all present and prospective lines that were reserved to the British, French and German materials under the terms of their original agreement." Mr. Knox further says:

"As is well known the essential principles of the Hay policy of the open door are the preservation of the territorial and jurisdictional integrity of the Chinese Empire and equal commercial opportunity in China for all nations. This Government believes that one of the most effective ways, if not the most effective, to secure for political rights in Manchuria, and to promote the normal development of the Eastern provinces under the policy of the open door practically applied, would be to take the railroads of Manchuria out of Eastern politics and place them under an economic and impartial administration by vesting in China the ownership of its railroads; the funds for that purpose to be furnished by the national treasuries of such interested Powers as might be willing to participate and who are pledged to the policy of the open door and equal opportunity; the Powers participating to operate the railway system during the period of the loan, and enjoy the usual preferences in supplying materials.

"Such a policy would naturally require for its execution the co-operation not only of China but also of Japan and of Russia, who already have extensive railway rights in Manchuria. The advantages of such a plan are obvious. It would insure unimpaired Chinese sovereignty, the commercial and industrial development of the Manchurian provinces and furnish a substantial reason for the early solution of the problems of fiscal and monetary reforms which are now receiving such earnest attention by the Chinese Government. It would afford an opportunity for both Russia and Japan to shift their onerous duties, responsibilities and expenses in connection with these railways to the shoulders of the combined Powers, including themselves.

"Such a policy, however, would effect a complete commercial neutralization of Manchuria, and in so doing make a large contribution to the peace of the world by converting the provinces of Manchuria into an immense commercial neutral zone."

In conclusion Secretary Knox gives force to his argument by stating that an Anglo-American syndicate has obtained a concession for a railroad connecting Aigun in Northern Manchuria with Chin-chow-fu and that the British and American Governments intend to support it diplomatically. Since this line would approach the Amur River and cross the Russian railroad at Tsitsihar, thereby decreasing the profits and adding to the burdens of the Russian administration, it may induce Russia to look with favor on this project for releasing her from her Manchurian embarrassments. It is generally supposed that the interview which had been arranged between the Russian Minister of Finance and Marquis Ito, and which was prevented by the assassination of Ito, was for the purpose of disposing of the Russian railroad rights to Japan or otherwise. Japan will doubtless regard the plan as inimical to her interests, as robbing her of one of the fruits of the war. According to the treaty of Portsmouth, the Chinese Eastern Railroad was divided between Russia and Japan at the point where their armies met, Russia holding the northern section of about a thousand miles and Japan getting the southern of about five hundred miles. But while the northern section has been a useless burden to Russia, the southern section has been used by Japan to secure a commercial dominance of half of Manchuria. Japan has hitherto prevented China from granting any concessions to the financiers of other nations for the construction of railroads in Manchuria, and has recently secured for herself the privilege of running a second line into the interior of the province from Korea. An English syndicate which had secured a concession for a railroad paralleling, tho at a distance, part of the Japanese Manchurian line, were forced to abandon it on account of the opposition of Japan.

This caused considerable resentment among the English against their ally, and they may be inclined to favor the American plan in order to break up the Japanese monopoly. It is understood that the syndicate of New York capitalists which was formed to take the American share in the Hankow-Sze-Chuen loan is ready to furnish the one or two hundred millions necessary to take over the Manchurian lines, according to Mr. Knox's plan.

Aviation

All records for high flight were far surpassed by M. Hubert Latham on January 7, at Mourmelon. He rose in a spiral until he finally attained a hight between 3,400 and 3,600 feet, as indicated by his barometer. He ascended at the rate of about 30 feet a second, and the total distance traversed in ascending and descending was about 40 miles. The machine used was an Antoinette monoplane. ——M. Léon Delagrange was killed at Pau on January 4 thru the breaking of his machine when at a hight of about 65 feet. He was using a Blériot monoplane with a new and more powerful motor. A strong wind was blowing and as he attempted to turn in the face of it, one of the wings broke and the machine fell, crushing the head of the aviator. M. Delagrange came into prominence two years ago thru his daring and successful flights, often taking the risks that other aviators refused, rather than disappoint the spectators. Several times he has broken the world's record for speed and twice before has met with dangerous accidents. He began his career as a sculptor and became interested in automobiling, and then took up flying as a sport. He was last month awarded a medal by the Paris Academy of Science for his achievements. —— M. Santos-Dumont had a fall from his machine at St. Cyr, January 4. Rising in a thick fog to a hight of nearly 80 feet, one of the braces of the wings snapped and the machine fell in somersaults to the ground, without, however, seriously injuring the operator.——Mr. Meal, practising with a Blériot monoplane at Cannes, fell from a hight of 30 feet and was badly injured. —— Mme. de la Roche, while making a flight in a biplane at Chalons-sur-Marne, ran into a tree and was somewhat bruised. —— The Wright Brothers have been granted an injunction by Judge Hazel, of the United States Circuit Court, at Buffalo, against Glenn H. Curtiss, to protect their patents granted May 22, 1906, against infringement. Notice of injunction was also served upon M. Louis Paulhan, on his arrival in this country to take part in the Los Angeles aerial races. An agreement was reached between the attorneys of the Wright Brothers Company and the Herring-Curtiss Company, by which Curtiss will be allowed to take part in the Los Angeles meet by giving a bond to hold all money realized from the exhibitions subject to the decision of the court.

Foreign Notes

A British expedition under command of Captain Robert F. Scott will start for the South Pole next July. The money for its expenses, estimated at $200,000, will be half paid by the Government and half raised by public subscription. Captain Scott, in command of "The Discoverer," visited the Antarctic in 1901 and stayed during the winter near Mounts Erebus and Terror, returning in 1903.——Two officers of the Russian army have purchased dirigible balloons in Paris for the purpose of reaching the South Pole. They will leave their ship at the edge of the ice sheet and embark in balloons, keeping in communication with the ship by means of wireless telegraphy.——A bill has been introduced in the Belgian Parliament to legitimize the children of King Leopold and Baroness Vaughan. The question has been raised whether the marriage of King Albert and Queen Elizabeth is valid and entitles their children to the succession, on the ground that the marriage had never been approved by King Leopold or authorized by Parliament.——The Porte has protested to the Powers against the act of the Cretan Executive Committee in taking the oath of allegiance to King George, and the adoption of a resolution of the Cretan Assembly to introduce the Hellenic code of laws. —— Marquis Cusani-Gonfalioneri, Italian Minister to Switzerland, has been appointed ambassador to the United States in succession of Baron Mayor des Planches.

The Situation in Nicaragua

BY AMOS S. HERSHEY

[Mr. Hershey is Professor of Political Science and International Law in the University of Indiana. He has written to a considerable extent on diplomacy and international law, and is an authority on these subjects. He is also known to the readers of THE INDEPENDENT as one of our contributors on the Peace Movement.—EDITOR.]

RECENT events in Nicaragua and their treatment at Washington raise several questions in international law of great interest and importance to the American public. The first of these arose from the execution, on November 18, 1909, after a summary court-martial, of two American officers in the insurgent army operating in Nicaragua. The legality of this execution would seem to turn upon the question whether the law of nations recognizes a status of insurgency as contrasted with that of belligerency proper, and upon the further question whether such a status had been recognized in Nicaragua prior to the execution of the two Americans.

In the absence of documentary evidence, the latter point must for the present be left undetermined. But the failure of our State Department to furnish even a scrap of such evidence affords a strong presumption against the view that a status of insurgency had been recognized, either by our own Government or that of Nicaragua. Even if recognized, the existence in law of such a status apart from that of belligerency is somewhat doubtful; and if it exists, its effects are not very clearly determined.

The existence of a status of insurgency has been almost wholly ignored or overlooked by authorities on international law; but it has received a certain amount of recognition in recent international practice, notably by Great Britain in 1869 during the first Cuban insurrection, and by President Cleveland during the second Cuban insurrection in 1895. It has also been given judicial sanction in Great Britain and the United States.[1]

From a study of all available data bearing upon this generally neglected subject, it would seem that a status of insurgency may be recognized when an insurrection with a political purpose has passed beyond the stage of a mere riot or mob outbreak into that of an organized insurrection, with responsible leaders and a military organization capable of observing the rules and customs of civilized warfare. Tho it is held that such a contest (one in which belligerency proper is not recognized) does not amount to war "in a legal sense," it does constitute war "in a material sense," and should be recognized as such.

Recognition of insurgency by the parent state implies the admission of certain mutual rights and duties relating to the conduct of hostilities, as, *e. g.*, the treatment of combatants as prisoners of war rather than as traitors and pirates, at least during the course of the struggle. Recognition by third Powers involves certain obligations of neutrality on the part of the latter, such as the enforcement of neutrality laws, and certain rights, as the protection, wherever possible, of the lives and property of neutrals.

On the other hand, certain rights and duties are recognized as belonging to the insurgents, as the right to prevent access of supplies to their domestic enemy, exemption from treatment as pirates, and the duty of affording protection to neutral life and property in so far as this is possible. But insurgents may not exercise the rights of visit and search, capture contraband goods or institute blockades, unless their belligerency has been recognized.

It will thus be seen that our attitude toward the execution of the two Americans in Nicaragua is highly questionable, to say the least. Lawful belligerents they certainly were not, and it is

[1] See *The Salvador* (1870), 3 Privy Council Rep. 218 and *The Three Friends* (1896), 116 United States. 1. Both cases are contained in Scott's "Cases," pp. 743 and 748.

even very doubtful whether they were entitled to the rights of prisoners of war as recognized insurgents.

This does not mean that they were wholly without rights, even as mere rioters or rebels. Foreigners found in arms against a government during times of riot and insurrection are ordinarily on the same footing as natives found guilty of similar acts. Unless given special privileges by law or treaties, they are entitled to the same forms of trial and subject to the same penalties. They must and should suffer the just consequences of their actions, and there is no good ground for diplomatic interposition in their favor, unless there is evidence of unjust discrimination against them because they are foreigners, a flagrant denial or gross violation of justice, or a breach of treaty or international law.

It is not alleged officially that any of these reasons for interference existed. Surely our Government does not intend to encourage participation in Latin-American revolutions on the part of our citizens by throwing over them the mantle of the national protection. The correct rule to be observed under such circumstances was thus stated by Daniel Webster in 1842:

"A citizen of the United States who in a foreign country joins as a combatant a hostile expedition there set on foot against another country, and is captured by the authority of the latter within its jurisdiction, forfeits his claim to the protection of his own Government."

In no case could the head of a state be held personally liable unless possibly after the nations had declared him an outlaw, an enemy of the human race, or a disturber of the peace of the world.

In the following dispatch to the Bluefields S. S. Company, dated November 18, 1909, our Government practically recognized the conditional belligerency of the insurgent forces:

"If the announced blockade or investment of the Nicaraguan port of Greytown [by the insurgents] is effectively maintained and the requirements of international law, including warning to approaching vessels, are observed, this Government would not be disposed to interfere to prevent its enforcement."

The belligerency of the insurgent forces appears to have been definitely recognized on December 1, but it should be noted that this favor was not extended to the insurgent government, if any exists—which is highly improbable.

This recognition appears to be unprecedented. It is impossible to see any legal justification whatever for a recognition of the belligerency of the Nicaraguan insurgents at this state of the contest. There is virtual unanimity among the authorities on international law as to the tests which must be applicable before such recognition may be accorded lawfully. These have never been more clearly stated than they were in President Grant's special message on the Cuban question in 1870:

"The question of belligerency is one of fact not to be decided by sympathies for or prejudices against either party. The relations between the parent State and the insurgents must amount, in fact, to war in the sense of international law . . . and to justify a recognition of belligerency, there must be, above all, a *de facto* political organization of the insurgents sufficient in character and resources to constitute it, if left to itself, a State among nations capable of discharging the duties of a State."[1]

It will scarcely be contended by any one that these tests bear application to the present situation in Nicaragua. In days when our Government was in the habit of paying greater attention to law and precedents, it repeatedly refused to recognize a status of belligerency in Cuba under circumstances which were far more provocative and under conditions far more favorable to the application of such standards than any now existing in Central America. And it is greatly to be regretted that our State Department has given cause for just criticism in this as in other respects.

On December 1, 1909, our Government not only accorded virtual recognition of belligerency to the insurgent forces of Nicaragua, but it broke off all official relations with the Nicaraguan Government. In his extraordinary letter of this date, Secretary Knox justified this action on three grounds: (1) The violation of the Washington Conventions of 1907 providing for means of preserving peace and amity between the Central American States. (2) Acts of tyranny

[1]The real credit for this admirable statement of the law governing the recognition of belligerency belongs to Richard Henry Dana, Jr., from whose valuable note (15) in his edition of Wheaton's "Int. Law" (1866)) the passage cited above is taken almost textually.

and despotism on the part of President Zelaya. (3) The execution of two Americans caught in the act of attempting to dynamite several Nicaraguan public vessels. For this execution our Government showed a disposition to hold President Zelaya personally responsible.

The first two charges were unaccompanied by any specific data or evidence. Even if proven, they can hardly be said in themselves to constitute valid grounds for the cessation of diplomatic intercourse.

It is true that the Washington Conventions of 1907 were negotiated under the auspices of the United States and Mexico; but they were not guaranteed, and their violation imposes upon us no legal rights or duties. Besides, no instances of such violation were cited. It may be, of course, that the treatment of Americans by President Zelaya and his coterie of self-elected officials was so scandalous and outrageous as to justify even sterner measures than our Government took in the premises; but there is no proof or evidence of this in Secretary Knox's letter. The American people are certainly entitled to such information on this head as is contained in the archives of our Government.

There is a much more important problem involved in the Nicaraguan question than any hitherto considered. It is that of armed or forcible intervention. Our Government appears thus far to have refrained from direct interference in the internal affairs of Nicaragua, but it is evident that we may soon find ourselves under the necessity of taking this important step.

Should this prove to be the case, it is highly desirable that the grounds for such action be carefully considered by our people and Government, and that they be stated in such form as to appeal to the conscientious and intelligent support of an enlightened public opinion in this and other countries. Above all, we should be careful to avoid wounding the susceptibilities of the Latin-American states.

It is reasonably certain that the correct, normal, everyday rule of the law of nations is that of non-intervention. The only cases in which intervention may be said to be in a sense legally justifiable are those involving the exercise of the primary right of self-preservation, to prevent or terminate an unjustifiable or illegal intervention, or in pursuance of a right granted by treaty. Obviously, none of these tests can be applied to the situation in Nicaragua.

It must be admitted, however, that this doctrine of non-intervention is of somewhat limited application. It is necessarily restricted to fully sovereign states and to nations which have governments capable of maintaining a fair degree of order and of affording fairly reasonable protection to foreign interests. Whether such states as Nicaragua, with all their boasted sovereignty, afford such order and protection is highly questionable.

International theory and practice also admits other exceptions to the rule of non-intervention. Forcible interference in the internal affairs of another state has been justified in rare and exceptional cases, like those of Greece and Cuba, where great evils existed, where great crimes were being perpetrated, or where there has been serious danger of race extermination. The humanity of our time, combined with an increasing desire for justice and a growing consciousness of interdependence and international solidarity, will doubtless make such interventions more frequent in the future than they have been in the past. But no revelations regarding the conditions in Nicaragua have thus far been made which would justify intervention from moral or humanitarian motives. If such intervention shall be justified, it must evidently be on political grounds.

Without prejudging the case of Nicaragua or rendering a final verdict, it may be admitted that the Monroe Doctrine, more especially in its present form, involves certain responsibilities toward foreigners as well as our own citizens, which it is not always easy to evade or avoid. We have been forced to establish a "debt-collecting agency" in Santo Domingo, and our troubles with Venezuela are still fresh in our minds. There may be worse in store for us in Central America. The completion of the Panama Canal will greatly increase our interests in all regions bordering upon the

Caribbean Sea, and these interests will probably need ever-increasing protection.

Whatever justification there may be for intervention in Nicaragua, it is much to be regretted that our initial moves have been of such a character as to greatly prejudice us in the eyes of the nations, more particularly in Latin-America. For it cannot be true that the American people are indifferent to the enlightened public opinion of the world, or that they do not desire their Government to observe diplomatic usage and the customs of international law in its dealings with the states of Central America.

BLOOMINGTON, INDIANA.

In the Egret's Nest

BY ANNE McQUEEN

THE Angel who numbers the birds for the God of All Things That Be
Had come afar from his journeying over the land and the sea,
And he spake to the Lord of the Sparrows: "True was my count today,
Them that were slain I numbered, and the sparrows that fell by the way;
And down in the reeds and water-grass of an island in the west,
I counted the young of an egret, that starved in the egret's nest.

"And some they were slain that man might live, for so hast Thou made the Law;
And some for the lust of their shining plumes, and all of them I saw;
And counted all whose songs were hushed within their little throats—
The slain for the Law of Living, and the slain for their shining coats.
True have I numbered them all, and the smallest along with the rest—
The young that starved in the rushes, alone in the egret's nest!"

And the Lord of the Little Creatures, who marks where His sparrows fall,
And in the hollow of His hand makes room for the weak and the small;
The Father of the fatherless gave ear, and He listened and heard,
And behold, He has asked a question: "And what of the mother-bird?"
Now answer, you who wear the plumes that were stript from the mother-breast:
Tell why the young of the egret starved, alone in the egret's nest!

Sheep Ranching in the West

BY BARNUM BROWN

(Photographs copyrighted by Huffman, Miles City, Mont.)

IN many States west of the Mississippi River there are large tracts of country where the rainfall is either insufficient or so uncertain that agricultural farming has not as yet been carried on successfully. The history of these semi-arid sections is similar to that of the more favored areas near by, that are now under cultivation and may be traced thru three stages in the transition from the home of the red man to the complex life of the permanent white farmer. With the coming of the pioneers, the countless thousands of buffalo that once roamed over the prairies vanished like chaff before a gale. Then the range was restocked with great herds of cattle. But the big herds have now practically all gone and the plains are at present covered with thousands of sheep, while the bulk of the cattle are raised by agricultural farmers and small ranchmen.

In the United States there is no law as there is in Canada that restricts cattle and sheep to different ranges, consequently there is often friction between cattle and sheep raisers, for under no condition, except actual starvation, will cattle feed over range where sheep have recently grazed. No sooner do sheep invade a cattle range than the cattle become restless and begin to wander. It soon becomes impossible to keep track of the herds, and this necessitates moving the cattle to a new range or selling them and buying sheep. No branch of husbandry in the United States offers such quick and bountiful returns as sheep raising. While the life of the sheep

A TYPICAL MONTANA SHEEP RANCH.

ranchman is more prosaic than that of the cattle raiser, it is nevertheless of absorbing interest.

Ranching is profitable because the stock can be grazed over Government land free excepting on forest reservations, where, under certain restrictions, grazing privileges may be had at about five cents per head for the summer season. As a result of the free range privilege, the ranchman can invest all his capital in stock except enough to carry the business thru till some of the cattle or sheep are sold. The chief inducement in sheep raising is the small amount of capital necessary and the quick returns from the investment.

INTERIOR OF A SHEEP-HERDER'S CABIN.

A ewe purchased in the fall will cost from $2 to $4, acording to the season. This ewe will have a lamb in the spring, which is worth an equal amount the following fall, and the wool shorn from the mother pays the expense of her keep, shearing, and interest on the investment. Many ewes have twins, so that the percentage of increase runs high—often 110 to 120 per cent.

In the Western States the average clip of wool is about seven pounds, which was worth during the last four years from 12 to 25 cents per pound. The cost per head for running sheep averages from 50 to 75 cents each year. It can readily be seen what a handsome profit there is in the business. As an example, the writer met a young ranchman in Central Montana, who lived in the bad lands on the breaks of the Missouri River. He owned eighty head of cattle. But the revenue derived from the increase of the cattle was not sufficient to support his family, so he worked on a nearby ranch by the month. In 1902 he sold the cattle and invested the proceeds in sheep, adding to his herd by taking some on shares. By industry and good fortune he prospered, and at the end of the fourth year sold all the sheep, putting $19,000 in bank. This, of course, is a case where the man had no

A SHEEP-HERDER'S MOVABLE WINTER CAMP.

losses and the seasons were exceptionally favorable. He told me that he realized 90 per cent. on the money invested, if compounded annually.

While fortunes can be made quickly in the sheep business, they can be lost even more quickly, where owners are in some way negligent, for losses are due chiefly to lack of preparation for winter storms. This was exemplified by two young men, neighbors of the former, who came to Montana from a neighboring State with no knowledge of the sheep business. Their capital amounted to $500 between them. With this they purchased a wagon and necessary outfit and took a band of sheep on shares, agreeing to return the same number with half the increase at the end of three years. The winters were mild, wool was a good price, and there was no loss, consequently they were soon free from debt with a good-sized herd of their own. At the end of three years they took another band on shares and by the fourth year were worth about $12,000 apiece. But the mild winters and success bred in them a certain contempt for thoro preparedness and the fifth winter came on unusually severe. They had insufficient hay and no shelter sheds on the range. The sheep died in droves, starved and frozen to death. When spring came they had just enough sheep to repay those taken on shares plus the increase, while they for themselves had netted five years' experience.

The ranch is always located where there is a flowing stream or springs, that never dry up. It may comprise 160 or more acres of land, if not deeded at least filed on. In this way the water right and nearby range is commanded, thus excluding other ranchers. Here there are several ranch buildings, often made of logs, including a winter shed, and with one or more similar sheds located in the hills near by for emergency during winter storms. Hay is put up on the surrounding prairies for feed during winter storms, but in ordinary winter weather the sheep graze over the hills as they do in summer. Where there is little rainfall, the grass dries up without loss of quality and is quite as nutritious as when green. Often the winter snow is wet and packs and freezes a solid crust over the grass, or it may fall so deep that the sheep cannot paw thru to the grass. In either case the snow is plowed off. This is done with an A-shaped plow made of heavy lumber with the bottom boards iron shod. The plow is dragged over the prairie, pushing most

of the snow aside, after which the sheep follow in its path, easily pawing down to the grass.

Unlike cattle, which except for the round-up seasons are left to themselves, sheep must be herded the year round. One man can herd 3,000 head and keep them in good condition, but seldom more than that number. Usually the herder is supplied with a wagon, the width of which has been increased by projecting top box, so that a bed can be placed crosswise in the back end. In front there is a stove bolted to the wagon box, and a cupboard with a side that forms a table when let down. Everything is made snug and shipshape in these covered movable homes, and as a rule the owner of the sheep provides all the variety of food that the herder craves. It is most important that the herder be contented, for hundreds of dollars' worth of helpless creatures are entrusted to his care and their welfare depends on him absolutely. His wagon is located on a stream or water hole in summer, for the sheep require plenty of water and cannot travel far from it. In winter they eat snow for water and can range farther. When the grass near camp has been eaten off the camp tender comes from the home ranch and moves the wagon to a new location, usually in the bend of some stream or near a hillside where the sheep can be bunched together every night within sight of the herder's window.

One or two good dogs are supplied to each herder and they are as indispensable as the man himself. It is really remarkable to see a trained dog work a band of sheep, following directions from his master's voice and whistle, and if too far away to hear, by movements of the hand. Dashing up to the herd, he is too wise to bark till the point where they are to be turned is reached, then a few barks and a nip here and there send the stragglers toward the center and the mass is turned at will. Nor is the dog unaware of the importance of his trust, for every wag of the tail is filled with conscious pride, and he seems quite superior to the ordinary dog without an avocation. At night he guards the band

A FLOCK OF SHEEP GRAZING IN THE BAD LANDS.

from coyotes and wolves, and should the sheep leave the bed ground unknown to the herder he follows after them.

In summer long before sun up the sheep are restless and begin moving from the bed ground in straggling white streams. Soon they are all traveling, and then the herder must be astir directing the band where he wants them to graze. Slowly they spread out, clipping the fine grass down to the very ground. The sheep has no upper front teeth, consequently, in grazing, the grass is taken between the lower teeth and the upper lip. A quick forward upper thrust of the head tears it from the root or pulls up root and all. Fifty head may pass over a given spot and small show is there for any grass to escape. If a range has been closely fed off by sheep, two or three years without molestation are required for it to fully recover.

When the herd has gone out a mile or two from camp it is turned back toward water, for as the heat of the day increases the progress of the band decreases, and by 11 o'clock it has reached water, where the sheep bunch in the shade of trees and cut banks. If there is no shade, one stands with its head under another's body, for the head is very sensitive to the sun's rays, and apparently is the only vulnerable part of the body. The herd remains near water till the heat of the day is passed, usually 3 or 4 o'clock in the afternoon, when it slowly feeds over the nearby hills again and back to the wagon and bed ground by 8 or 9 o'clock.

SHEEP-SHEARERS AT WORK.

The hardest work with sheep is during lambing season, early in the spring. At this time, if the herd has been a mixed one, the ewes are separated from the wethers and driven to a different range. As soon as the lambs are born they are flagged—that is, a mark is set up near them, so that they can be easily found. When two or three hundred of the ewes have lambed they are taken some distance from the others and herd-

ed till the remainder have lambed. The ewe band is now herded closely and require constant, vigilant care, night and day, for the mothers and baby lambs are

A HUNDRED LAMBS TO THE ACRE.

restless and hard to keep on the bed ground at night. The herder has a helper at this season, and one of them spends most of the night walking or riding around shooting, to keep away the coyotes and wolves. Lanterns are displayed at night near the sheep to aid the same purpose, and for the daylight every prominent hill is crowned by a scarecrow who waves his wiggly arms at the coyotes, scaring them almost as effectively as a man.

When the lambs are about two weeks old they are docked. A temporary corral may be set up on the prairie into which ewes and lambs are driven. The lambs are then caught and brought one at a time to a table, where a man cuts off the tail and slits the ears. Cutting off the tail is not a cruelty, for if not docked the sheep has a long tail that reaches the ground and soon balls up with mud, being a source of great inconvenience. The lambs are next branded by stamping on their backs, in lamp black and oil, some letter or design that does not easily blur. Both ewes and lambs are then counted and the percentage reckoned. Lambing and shearing are the harvests of the sheep business. In the Southern States shearing begins early in the year. Many men do nothing but shear sheep, beginning in the South and moving Northward as the season advances.

In Montana shearing begins near the end of May and lasts for a month. Most of the sheep are sheared at contract pens, that are operated independently. The manager of one of these pens agrees to shear so many head at a certain time, if not delayed by rain. This is a necessary proviso, for when wet the wool cannot be cut.

A cook house and sleeping tents are erected near the pens for the accommodation of the shearers, who are charged for board. Each man is paid for every sheep that he shears from eight to ten cents, according to the season. Some years the wind blows more dirt into the wool so that it is hard to cut, and in some places spear grass gets in the wool, adding greatly to the labor. A very rapid workman will shear from 150 to 200 head per day of ten hours, but the average is from 80 to 100 head. At some pens the wool is cut with clippers oper-

ated by steam. They are more rapid than the hand shears, but cut the wool closer, and for this reason are not used in many places far North, where sudden cold weather often chills to death the newly shorn sheep. At the pens there are several large corrals. When an ewe band arrives, they are driven into one of these corrals from which opens a long,narrow chute, wide enough for one sheep only to pass thru. Near the opposite end the chute divides, each division opening into another corral with a small gate between that can be quickly thrown across one opening or the other. A man stands near this gate and once the sheep are started they keep him busy closing the gate against one pen, then the other, separating the mothers from the lambs as they run thru in a steady stream. Let one jump over a shadow as they run thru the chute and every sheep that follows will jump at that point. Each shearer has a small pen outside the large one which holds from eight to a dozen head. When the pen is filled he seizes a sheep, sets it up between his legs and beginning at the head works downward, shearing around the body. Click, click, click, go the shears and there are few other sounds as the wool is rapidly peeled off in a continuous sheet.

As soon as a sheep is shorn it is turned into a big corral with its coatless fellows, and when the whole flock has been shorn they are branded and driven out to the range. When the fleeces are gathered from the shearers they are taken to the sackers, who pack from sixty to eighty in a large sack, which is then sewed up and stamped with the brand of the outfit that owns the sheep. After shearing the sacks are hauled to the railroad, where buyers come from the East and purchase the wool.

New York City.

A Study of a New York Daily

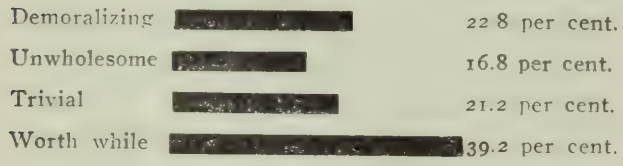
BY BYRON C. MATHEWS

THE press is often mentioned as one of the great educational agencies of our day. It certainly is a great agency, but whether it is an educational agency depends upon what is meant by education. The public school system is unquestionably the great educational agency in this country and in the leading European countries. Its purpose is educational and nothing else. Its purpose is to improve the character and the condition of the people in every desirable way. Its entire machinery and all its methods have the accomplishment of this purpose as their one and only end. Its methods are those approved by students of educational problems. If the purpose of the public school system were private profit instead of public welfare, its methods and hence the results would be wholly different from what they are now. The thoughts of those who determine methods would be on dollars instead of on improved human beings, and the methods would point toward dollars, and the results would be dollars. Exactly so it is with any institution. The purpose for which it exists determines the methods employed in accomplishing that purpose and the character of the results that follow from its methods. The press is no exception to this principle. So far as its purpose is to improve the character and conditions of human beings, and so far as its methods are bent toward the accomplishment of this purpose, the press is truly an educational agency.

There are good reasons for thinking that this is true, in greater or less degree, of some of our monthly magazines, of some of our weekly reviews, and possibly of some of our dailies. On the other hand, there is a mass of convincing evidence that the chief purpose of the daily press is dollars. Its methods point toward dollars and evidently the results are dollars. The daily press is generally owned by individuals or cor-

porations who are not its editors or contributors. The owner is the power behind editors to determine its purpose and character. The object of ownership, exactly as in any other business enterprise, is private profit. Editors are usually hired agents to accomplish the purposes of owners, and are allowed to determine methods to be employed only so far as these will accomplish the purposes of owners. Under these conditions the methods employed and the results accomplished will not be such as to entitle the daily press to be ranked as one of the great educational agencies. Its influence is great and far extended. But this does not make it an educational agency. Because its influence is great and far extended, it is able to impress upon the public what is positively bad, or what is positively good, to improve the race or to degrade it, and whether it is doing the one or the other is a matter of grave concern. It is impossible for a man interested in social improvement to read the daily papers, even the best of them, and not regret that so small a percentage of the news given is devoted to what ennobles and improves character, and so much is devoted to the trivial and demoralizing.

With a view of determining about what percentage of the news items are to be approved from an educational point of view, the writer has made a study of one of our best New York dailies. It would not be fair to judge the daily press as a whole by the results of a study of any of the so-called yellow journals, or even of the more sensational which are not quite yellow, but the sensationals and the yellows certainly cannot complain if judged by the results of a study of one of the few that are universally acknowledged to be the best of our daily papers. The writer wishes to say that the paper selected is the one which during the last ten years he has bought and read more than all other New York dailies together. He has tried at least half a dozen others, but invariably comes back to the one chosen for this study. It certainly holds a place among the first.



This study, the results of which are herein given, embraces the daily issues for a period of three months of the current year. Attention has been given to the *news* items only. The editorial page, devoted to criticism and the expression of opinion on the part of editors and contributors, has not been included, except as news items were occasionally found on that page. All advertising matter has, of course, been eliminated. An attempt has been made to classify all news items under such headings as will indicate their character, such, for example, as art, accident, blackmail, benevolence, catastrophe, club life, social functions, engineering, forgery, humanitarian, judicial, literary, matrimonial, military, murder, musical, religious, robbery, etc. Under 177 such headings, 13,330 news items were classified. These items include the markets, which are news items, altho intended for a particular class of readers, and any study of the news items would be incomplete without them, but they do not figure in our final conclusions. This number, 13,330, does not include many short, unimportant items occupying less than an inch of space, nor does it include any items which regularly appear on the news pages generally read under set captions like matrimonial, died, maritime, weather, etc.

Considerable difficulty was met in classifying many items. In some cases classification was quite impossible, so one heading was called the unclassified, and under this 96 items were placed. It was soon discovered that the character of an item could not be determined with certainty from the caption, so that, since this is not merely a classification of captions, it was always necessary to read into the item to insure correct classification, and often necessary to look it entirely thru. Of course, this classification is a matter of judgment, in which men in many cases would differ. For example, one might place an item under recreation, while another would place it under sports. One might place an item under financial, while another would place it under monetary. There would also be differences of opinion in dividing into groups the headings under which the items are classified. These differences are to be expected. However, among men of like habits of thought and of like standards of conduct

and character these differences would be unimportant.

For the sake of drawing some general conclusions concerning the character of the news, the headings under which the items had been classified were arranged in four groups. From this arrangement in groups the market items were eliminated, since they are the expected thing from day to day. So, of course, were the unclassified items eliminated. These omissions left a fairer basis for judgment. After these omissions were made, 173 headings, embracing 10,029 items, were grouped. In studying these headings, together with the character of the items under them, with a view of grouping them, one is constantly imprest that much of the matter is trivial, that much of it is really demoralizing, and that another portion of it, while not positively demoralizing, is nevertheless depressing and unwholesome. A considerable portion of it is, of course, worth while. So the groups we decided upon were the "Trivial," the "Unwholesome," the "Demoralizing," and the "Worth While." Under these four groups the case may be tabulated as follows:

Groups.	No. of items.	Per-centage.
Demoralizing	2,289	22.8
Unwholesome	1,684	16.8
Trivial	2,124	21.2
Worth while	3,932	39.2
Total	10,029	100

Our effort has been to use these terms as they are used by intelligent people in ordinary parlance. By the "Trivial" is meant the light, inconsequential matter, such as is a loss of time for one to read if he has anything to do that is worth doing. It may not be harmful *per se*, it may not have enough meaning to have real influence, yet it may serve the purpose of entertainment for idle people of small brain caliber whose only function in life is existence. This trivial kind of news is illustrated by a caption that appeared on the front page of one of our morning dailies of a recent issue, "Alfonso Grows Whiskers." On the front page of the next issue we were told that the "King Loses His Whiskers." These two items of tremendous significance to the American people were given prominent places on the front pages of two successive issues, where they occupied seven and one-half inches of space. We would not object so strenuously to the publication of such news if it could be segregated in a journal published especially for the idle and the feeble-minded, but it is very annoying to busy, serious men, who want and need a newspaper made up of matters that are worth while. According to our classification of the items under consideration 21.2 per cent. were of this trivial order.

We have called one group the "Unwholesome" and another the "Demoralizing." The word demoralizing is used to embrace all such items as when read will leave one's character not quite as clean as it was before reading. This influence on character of a single item or of a half dozen items is imperceptible, but nevertheless real. Its reality is seen in the case of one who is a habitual reader of such literature, whether found in newspapers or printed in books. Many items do not have exactly the effect of soiling one's character, but rather of depressing his spirits. They tend to demoralize in the sense of throwing out of order, or putting into disorder, as we say a holiday demoralizes the work of a school. All such items were classed as "Unwholesome." The distinction we make is seen by illustration. To read about disasters and catastrophies is not necesarily demoralizing in the sense of injuring character, but it certainly is depressing and unwholesome, while to read of assaults and prizefights is positively demoralizing, even brutalizing. Likewise to read about insanity and disease is depressing and so unwholesome, yet not demoralizing, while to read of wars and murder and suicides and divorce suits is demoralizing. According to our classification and grouping of the 10,029 items, 16.8 per cent. were unwholesome and 22.8 per cent, were demoralizing. It is a conservative estimate, therefore, that one-fifth of the items that appeared during the three months under consideration were positively demoralizing. In this estimate we are eliminating the items of news of the

stock and bond markets, which formed 15 per cent. of the whole 13,330 items. It is true that much of this 15 per cent. is legitimate and deserves a place, but it is just as true that much of it is harmful and ought to be cut out. Market news constitutes a channel of influence for the sharp, questionable and downright dishonest practices excused as "bizness," as well as a channel of influence for the methods of that master gambling shop called the Stock Exchange. When the influence of this side of the modern daily is taken into the reckoning there can be no question of the fairness of the estimate that at least one-fifth of the number of the news estimates were demoralizing to readers. One-fourth would perhaps be nearer the truth. If our estimate for this, measured by daily press standards, this model daily, is reasonable, what would be found in a similar study of the sensationals and the yellows?

If we had an endowed press and the function of the modern daily were truly and entirely educational, the unwholesome news even then could not be wholly eliminated, as that which is demoralizing could and ought to be. Much that is unwholesome ought to be eliminated. There is absolutely nothing gained, but much is lost in publishing the repulsive and nauseating details of railroad disasters and lynchings, of the horrors of cyclones and earthquakes. However, in this day of injustice, much that is depressing ought to be published, so that those who are living in comfort and plenty may know what their fellows in life are suffering because of wrong economic conditions. When, for example, a mother is crazed because of her own hunger and that of her babes the public ought to know it. When a man out of a job, in a fit of desperation, steals bread for his hungry family or kills himself, the public ought to know that. To furnish the public with such news, however depressing it may be, is a part of the truly educational function of the entire press.

After we have deducted the trivial, the unwholesome and demoralizing from our 10,029 news items, we have a little more than 39 per cent. left, made up of that which is "worth while," clean, wholesome news freed from scandals, murder trials, suicides, divorce proceedings, and all other news for the publication of which there is never any excuse.

The character of the news contained in the 13,330 items considered can be seen in contrasts. For example, there were 6 items pertaining to the peace movement of the nations and 227 pertaining to war and military operations. There were 178 items devoted to benevolence and philanthropy, to making the other fellow comfortable, and 2,228 devoted to self gratification in one form or another. While 129 were concerning art, 1,011 pictured the details of disasters and calamities. While 157 pertained to educational affairs, 1,683 presented some form of lawlessness. While 12 items pertained to ethical matters, 720 were given to matrimonial affairs, divorce and inane society life. The number of items devoted to business was 4,221 out of the total of 13,330. Of this same total 9,143 were devoted to business, lawlessness, personal gratification, horrors and disasters, while 827 pertained to art, science, travel, things literary, educational, benevolence, philanthropy, natural phenomena and reform movements.

In these days, when scientific psychological research has demonstrated the power of suggestion from without over the functions of both the human body and of the human mind, it becomes a fearful responsibility for any man to determine to put before his tens of thousands of readers day after day, for three hundred and sixty-five days in the year, the unwholesome and demoralizing stuff that appears in most of our daily papers. The proprietors of these papers cannot excuse themselves on the ground of the freedom of the press. Neither reason nor national or State constitution gives any man freedom to do thruout all the days of the year that which is so obviously and positively harmful to the public. Neither can they excuse themselves on the ground that they are giving the public what the public wants, without at the same time confessing that their chief aim in life is pelf, even at the cost of public degradation. The character of the modern daily is simply one phase of the modern economic problem. It is one manifestation of the frenzy for wealth accumulation, which has become a menace to the permanency of American de-

mocracy. When or how this frenzy will terminate the future must disclose. It seems not unreasonable to hope that the still sober portion of the people will take some step toward raising the standards of our daily newspapers, all of them. Will not that capitalist who said to a friend not long since that his greatest problem was to spend his surplus wisely, or some other equally unfortunate man, endow a great daily that can hold its head high among all the world's press, and which cannot be swerved one iota by political influence or by the love of pelf?

NEW YORK CITY.

The Constitutional Crisis in Westminster

BY JUSTIN McCARTHY

THE thrilling constitutional drama now going thru its performance in Great Britain has not yet reached its fifth and final act. The House of Lords has done its worst; has actually exhausted its possibilities with regard to its rights and powers over the finances of the state, and it now remains to be seen what the British public can enable the representative chamber to do by the votes at a general election. So far as I can form an opinion I do not think there can be any serious doubt as to the decision of the country in general to limit distinctly and definitely the powers of the Lords for the future with regard to measures of finance, and to make any further dispute on that subject impossible in the coming time. But then, it may naturally be asked, will the new Parliament called into life at the general election be satisfied with the accomplishment of no greater change than that—which, after all, will not be an actual change, but only the reassertion and the re-establishment of a constitutional condition which was believed until quite lately to be thoroly accepted? Will the country not begin to consider whether the hereditary chamber itself is an institution which in its present form ought to be a part of England's constitutional system? Is the principle of a parliamentary chamber to which the members succeed not by any form of constitutional election but merely by the right of birth one suitable in any sense to the population of a free country? For myself I cannot believe that this present crisis can pass over without raising this question from the very moment when the general election starts upon its work. Thus far we have had hardly any disturbance of a serious kind, one great reason for this being found in the fact that the new and extravagant claims made on behalf of the hereditary chamber had practically no support whatever from the public at large and that the small minority who did or do support the extreme claims set up for the Peers' chamber do not belong to the class who assemble in great crowds and make thrilling demonstrations. My own impression is that when the whole question comes to be tested the principle of birthright succession to the second chamber cannot fail to come up for discussion and decision. I do not believe that there is thruout these countries any serious objection to the existence of a second chamber in the National Parliament. We should all be well content to live under the government of the Sovereign and a Senate and a House of Commons, the Senate, whatever its title and qualifications, elected by public suffrage and not created by family title. We have some stormy times before us. Parliament has been dissolved for several days back and the appeal to the country thru the means of a general election will begin somewhere about the middle of January. As yet there has been hardly any public demonstration on the side of the House of Lords. We know that all the great measures of advancement and reform now regarded as national triumphs by all parties alike have been accomplished in our days of reform in spite of the opposition, and, in-

deed, over the heads of the Peers in their hereditary chamber, and that the intervention of the Sovereign himself has had to be applied in several famous instances to compel the stubborn Peers to abandon their position of obstinate hostility. There can be no doubt that King Edward will consistently use his best influence during the present crisis to bring the Peers to a better sense of their constitutional and national duty, and as he has already some of the ablest, most truly educated of the younger Peers on his side we cannot but hope that even the Lords themselves may allow some rays of modern and constitutional light to shine upon their consultations. In any case, however, we have an exciting time before us for the next few months.

Meanwhile we are having some interesting incidents and manifestations almost every day. Winston Churchill has been welcomed by a vast and most enthusiastic meeting in Liverpool, and delivered there one of his most characteristic speeches, a speech the practical and solid arguments of which were lighted up with frequent flashes of wit and humor which reminded me as I read the report of the style which his famous father, the late Lord Randolph Churchill, made so popular and so powerful during his brilliant and only too short-lived parliamentary career. Then there has been the presentation to Mr. Asquith, the Prime Minister, of a portrait for the National Liberal Club, a portrait presented by a donor who, as the papers tell us, desires to remain anonymous, and painted by a distinguished artist, Mr. Solomon J. Solomon. During the course of the presentation Mr. Augustine Birrell, Chief Secretary for Ireland, and one of the most eloquent members of the House of Commons, took the opportunity of delivering an authoritative reply to the rumors which have for some time back been in circulation as to divisions of opinion in the present Liberal Cabinet. Mr. Birrell declared that "Mr. Asquith presides over a Cabinet of loyal colleagues. There is not a man who sits at the table with him who does not recognize his right to occupy the place he does, and a more loyal-hearted and affectionate body of men I do not believe ever before gathered round that historic table." Nothing could be more timely or ought to be more welcome to the Liberals of the country than this announcement from the lips of a thoro Liberal who himself holds an important position in Mr. Asquith's administration. Of course any one who has any intimate acquaintance with English political life at the present day must know that Mr. Asquith's government is not composed only of men who think alike on all political questions. It is not generally supposed that all who hold office with Mr. Asquith are as far advanced Radicals as Lloyd-George or John Burns or Augustine Birrell, or that Mr. Asquith himself has advanced quite so far on the way to genuine democracy. But many Liberals had begun to feel rather anxious lest during this present extraordinary crisis the differences of opinion as to mere questions of political theory in the Asquith Ministry might be allowed to influence and interfere with

AUGUSTINE BIRRELL.

the united action of the administration with regard to the issue between Lords and Commons which has now been forced upon the people by the Peers. This is in itself the very anxiety which Mr. Birrell evidently meant to allay, or, indeed, to banish altogether, by the words which he spoke as to the thoro union of sentiment prevailing on this subject among all the members of the present Administration. I may say, indeed, that in a recent contribution of mine to the pages of THE INDEPENDENT I exprest my confident hope that the course taken by the Lords would of itself tend to bring about a thoro union of resolve among all the members of the present Cabinet with regard to the manner in which the rights of the people and the principles of the constitution must be maintained. Mr. Birrell's emphatic assurance gives full authority for the conviction that such has been the result. Mr. Asquith appears to have risen fully to the height of the great occasion and to be as resolute in his maintenance of the people's rights as if he were another Gladstone. He is to be welcomed tomorrow night at a great meeting to be held at the Albert Hall, in London, where he is expected to make his definite announcement on the question of the Lords. The *Daily News* tells us that "Notwithstanding the fact that all seats were disposed of several days ago the demand for tickets has continued, and as much as five guineas has been offered for a single seat at the eleventh hour." Thus in every way the Peers seem to be justifying my prediction that by the very extravagance of their attack upon the chartered rights of the representative chamber they will only more and more inspire the whole Liberal Administration and the whole Liberal party with a determination to put aside for the present all minor differences of opinion and to unite in a firm and unalterable resolve to stand up as one man for the maintenance of the hereditary chamber's absolute control over the finances of the State.

Since I wrote that latest paragraph a day and night have passed away and I have had an opportunity of reading the speech delivered by Mr. Asquith. I find with much satisfaction that the Prime Minister has risen fully to the height of the occasion and that he has delivered a speech which amply justifies the brightest hopes that his warmest admirers could have formed as to his course of action. He has declared that the Peers must be deprived once for all of any control over the finances of the country, and has even given the public to understand that while he is not opposed to the existence of a second chamber he is of opinion that the second chamber of a free country ought not to be constituted on the principle of membership by right of birth. My countrymen in the United States, and many others there as well as my countrymen, will be rejoiced to hear that Mr. Asquith has definitely announced or proclaimed that he and his colleagues will, if restored to office at the coming general election, make a measure of Home Rule for Ireland one of their early projects of administration. Now we know that some at least of Mr. Asquith's colleagues in office were not until quite lately to be counted upon as pledged supporters of Ireland's demand for Home Rule, and it is therefore a great relief to all genuine Liberals and to all my countrymen at home and abroad to learn, as they must learn, from this latest speech of the Prime Minister, that his Cabinet is thoroly at one upon this great subject.

Literature has not made much of a display during recent weeks. The approach of the Christmas season is usually not very profitable for the publication of anything but what is called Christmas literature and lately we have, of course, been passing thru a period of political and constitutional storm and stress which would in any case be likely to distract our attention from the world of fiction. Moreover, I have already told my American readers there has been thruout these islands a considerable falling off in the demand for the work of the novelist and his prices, or to put it perhaps more cor rectly as a general description her prices, have been undergoing a very considerable reduction.

We have had, however, some extremely interesting works of fiction given to the British world since my last contribution to the pages of THE INDEPENDENT, and one conspicuous volume among these is "Nameless," by the Hon. Mrs. Walter R. D. Forbes, and published by John Murray, London. This is decidedly

an interesting novel and like some of its author's former productions rather peculiar in its construction. It might be described to a certain extent as a number of stories interwoven into one consecutive narration. In other words it is made up of the fortunes and misfortunes of several groups of persons whose life-stories are quite distinct and whose fortunes are contemporaneous rather than connected. The scenery of the greater part of the novel is set out in Scotland—Mrs. Forbes and her husband are both belonging to old Scottish families—and the closing scenes of the story are laid in Algeria. The Scottish scenery is described with touches alike easy and impressive and make the readers feel merely as if they were looking on the scenes, the mountains, lakes, streams and hills brought before them, and not as if they were being told what the pictures looked like when gazed upon. I am able to say the same thing on my own part with regard to the closing chapters which carry us off to Algeria, for I once spent a winter holiday in that North African region and I think Mrs. Forbes has made it genuine and living reality for her readers. The most prominent and important feminine figure in the book is that of Mrs. Cecil Gray, married early to a military officer whose career was made a failure, altho not because of any culpability on his part but only because of accident and perverse fortune. I shall not anticipate the story of this gifted and suffering woman as set forth by Mrs. Forbes. None of Cecil Gray's troubles are owing to defects or wrongdoings of her own—they are misfortunes and not faults, and I shall only say that she finds her full reward as the story comes to its close when she is no longer under the bright suns and the blue skies of Algeria. I shall leave any readers whom I may have encouraged into acquaintanceship with this novel to find out for themselves why its authoress has given it the title of "Nameless."

LONDON, ENGLAND.

School Days in the '30's

BY SARAH MARTYN WRIGHT

DURING a recent visit to one of our prominent kindergartens, I was much interested to note the differences between these modern playgrounds of instruction for our babies, and the "Infant-Schools" of seventy-seven years ago, when I was first a pupil in one of them.

My parents were residents of New York City, and I was sent, as was then the custom, when a mere baby of two and one-half years, to one of these "Infant-Schools."

Altho so many years have come and gone between then and now, my memories of those first school days are most vivid, and certainly of the pleasantest.

No mere play or amusement, with instruction wisely and skilfully intermingled, were these schools, I assure you; but the young "idea" was taught "to shoot," by the good old-fashioned way of primer and spelling-book; and wonderful proficiency it frequently made, too; whether to the permanent benefit of the babies, seems at the present day to be a mooted question. One thing, however, is certain; it made such correct spellers of the English language as we seldom find in the present generation.

Our day always began with the reading of a chapter or part of a chapter from the Bible, each child who could do so reading two verses in turn. Some simple hymn was then sung—such as:

"How doth the busy bee
Improve each shining hour,
And gather honey all the day
From every opening flower.

In works of labor or of skill
I would be busy too;
For Satan finds some mischief still
For idle hands to do."

This to the tune of "Auld Lang Syne"; or perhaps these lines:

"O that it were my chief delight
To do the things I ought!
Then let me try with all my might
To mind what I am taught."

The Lord's Prayer was then repeated in concert, and thus we were considered well launched upon our day's work.

I remember our often repeating the Ten Commandments also in concert; thus supplementing the religious training which was generally supposed to be a part of all home life.

These schools were all-day affairs, with an intermission at noon, when, after eating lunch, brought with us from home, we would romp and play, always under the watchful eye of our teacher.

The pros and cons of co-education had not yet loomed up, even in the far distance, and all the pupils, in this particular school at least, were of one sex, answering to the old-fashioned names of Grace, Sarah, Sybil, Bathsheba, etc. Imagine a three-year-old proudly carrying the name of Bathsheba, Mehitable or Zibiah!

No "school-carriages" were sent for us, nor were any such needed, altho I remember being taken to and from school by an "Abby," and I presume the youngest scholars, those of my own age, were accompanied by a nurse or big sister morning and afternoon. But the streets of New York were as safe in those days as the streets of one of our modern country towns—indeed, far safer—for there were no "speeding" automobiles to menace the tiny pedestrians. To the truth of this statement the following incident will fully attest:

My home at that time was in Greenwich street, then a favorite residence location, and the school on the lower part of Broadway.

Several tots, of from four to six years, including myself, then five years old, were accustomed to stop in the afternoon on their way home from school and "play house" on the steps and around the large pillars of the old "City Hall"; running gaily about the walks and grassplots surrounding it.

We would occasionally stop and try to get a drink of water at the old wooden-handled pump, which the largest child could with difficulty manage at all. Imagine, if you can, such a pump with a tin cup hanging at its side, country-fashion, standing in front of the "City Hall!"

Here, and on our further way home, we were perfectly safe—no policeman being needed to pilot us across the streets—altho our childish hearts would often beat with terror at the prospect of meeting some of the many pigs which were then permitted to roam the streets at their own sweet will.

By the way, as late as 1850, during my girlhood days, it was a frequent occurrence to confront one of these porcine pedestrians in crossing the street—even Broadway!

There were no "school-stores" to coax the little ones' pennies from their tiny pockets, but we managed to spend them, nevertheless, for the coveted "goodies."

Confectionery was not then the poisonous concoction that it too frequently is now. Old-fashioned molasses and taffy, with stick candy, were common; while the special delicacies were rock-candy and a small flat chocolate drop, much like those sold today. But the chief delight of our hearts was a sugar strawberry, similar to those we have now. These were of a size which we then never saw in the real fruit, and were to us even more inviting than that.

Proud, indeed, was the child who could display two or three of these crimson treasures to her mates on the upper row of seats; for in those schoolrooms the seats were arranged in galleried style, like the balconies of our modern theaters.

The tiniest ones sat in the front row, while those who had attained to the mature age of four or five years looked proudly down from above the others.

We studied our lessons diligently—did we babies—reciting them standing in a row before our teacher, with our toes exactly touching the edge of one of the planks in the floor, to insure the straightness of the line, and bravely spelling "c-a-t," or "d-o-g," or "l-a-d-y," or "b-a-k-e-r," as the case might be.

Each syllable was pronounced distinctly, as well as the whole word when spelled.

To stand at the "head" of the class

was an honor greater than any ever achieved since, and to remain at the foot, a keener disgrace. I say "remain," because after, by dint of superior scholarship, having kept at the "head" for one week, the fortunate one was obliged to go to the "foot," and work her way up again. Was there one misplaced letter or the failure to pronounce one syllable, the fateful word "next" lost the little one her place in the class.

The simple rules of arithmetic were taught by means of movable wooden balls on a rod in a frame, an abacus, very similar to that now in use. A perfect object-lesson was thus given in addition and subtraction, and very good little arithmeticians were thus made by these primary rules.

We were all taught to write by copying on our slates words and short sentences written on a blackboard.

One of the modes of discipline was certainly unique and always proved salutary. In one corner of the room was a triangular sort of cupboard, the top of which was just above the average hight of a child of five or six years. This cupboardlike corner was left entirely uncovered. Into this the little offender was placed. She could, of course, see nothing but the ceiling of the room, but could hear all that was going on outside of her prison, and as it was light, there was nothing to frighten her. It was, however, considered such a disgrace to be there, that the more sensitive little ones generally spent the time, which was never long, in bitter crying and sobbing.

Of course we were all too young to have any system of "marks" make much, if any, impression upon us, but another method, quite as unique as the cupboard, was adopted.

At the close of the day's session a small square card of pasteboard was given each little one. Every good child, who had been guilty of no misdemeanor —our behavior and manners being under quite as strict surveillance as our studies—or who had "missed" none of her lessons, received a perfectly square card, with every corner intact. For each offense a small corner was clipped off, and in the case of a very naughty child, a hole was made in the center.

At the end of the week, the one who could show five good unmarked cards, or with only one or two corners clipped, was given a larger colored card; four of these at the end of the month to be replaced by some small gift, as a "reward of merit."

We carefully compared cards every night, and as we were required to carry them home for our parents' inspection, we were very much ashamed of any departure from the perfect square.

We were certainly thus early taught that a "square deal" was most desirable. But it was not, by any means, all study for these baby pupils.

Several times during the day we marched around the room, clapping our hands, and keeping step, as our childish voices, led by our teacher, rang out with such songs as:

"Children go, to and fro,
In a merry, pretty row.
Footsteps light, faces bright,
'Tis a happy, happy sight.
Swiftly turning round and round,
Do not look upon the ground.
Follow me, full of glee,
Singing merrily."

or,

"Hold up your head, and in your chin,
Toes turned out and heels turned in,
And so the day we will begin."

Then, too, we had a simple kind of calisthenics, the arms being thrown backward and forward and raised above the head; in this, also, keeping time to singing. Indeed, singing formed a large part of our daily exercises.

There were two feminine accomplishments which were never neglected in the early education of these embryo women: those of needlework and knitting.

One hour every day was devoted to teaching us the mysteries of the needle, thread and thimble; and the little girl of four or five who could not sew a seam "overhand," or knit at least part of a stocking, was considered as a very badly brought up, or sadly neglected, child. This was, of course, long before the day of ready-made underwear, and even the most delicate and elaborate articles were fashioned at home by the skilful fingers of mother and daughter.

One of the earliest feats to be accomplished was the making of a shirt for father or big brother.

Sampler-work, too, was not wholly out of fashion, altho it was on the wane.

The intricacies of "tent" and "cross-stitch" were taught, and many of the "new" shades of our day, such as "shrimp-pink," "mahogany," "peacock-blue," etc., were worked into these "samplers" with the softest and loveliest silk floss.

I have in my possession, carefully treasured from childhood, a "sampler" worked by my mother, which is a marvel of beauty; every color being as fresh as if worked yesterday. A border, three or four inches wide, of exquisite flowers and fruit, surrounds the alphabet, which is wrought in various colors and stitches. Below these letters of different kinds and sizes is a verse of four lines, extolling the "useful needle's fame," and under this the name, "——— ——— ———, aged eight years, 1811."

This needlework was, however, considered as if it were a mere side issue, when compared with the main one of learning to read, write and spell.

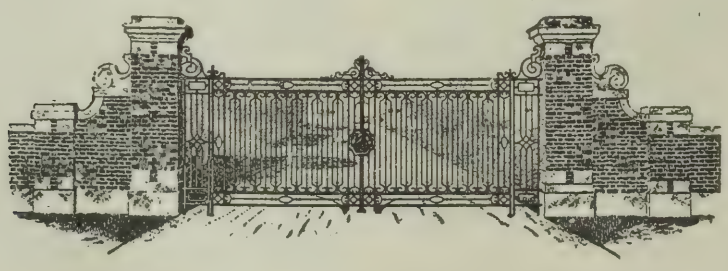
I have also a Bible, on the fly-leaf of which is inscribed my name, to which is added, "given her on her fourth birthday for proficiency in reading."

It often really seems to me that I was born able to read, for I have not the slightest recollection of learning to do so; and had it not been for the seeming play of standing in a line and watching whose toes were the nearest to a crack in the floor, I should doubtless be equally oblivious to those early lessons in spelling.

I do not remember when I was promoted to a regular school, but it must have been at a very early age, for at eight years I was drawing maps and studying "Smith's Grammar," "Goodrich's History of the United States," "Greenleaf's Arithmetic," with Greenleaf himself for my teacher, and, best of all to my enthusiastic and nature-loving heart, botany.

Among other souvenirs of my childhood is a miniature herbarium, in which, neatly arranged, are flowers picked by me sixty-eight years ago, many of which still retain their original color. Most of them were gathered in a lovely nook, called then, and I believe still so called, "Paradise Glen," a well-known spot adjoining the grounds of one of our most popular female academies of today, which I then attended as a boarder.

At this age—eight years—a peculiar and quite unusual feature was added to my rapidly progressing education.



My father, who was a clergyman, employed a Jewish teacher, whose name I well remember, a Mr. Seixas, to instruct me in the Hebrew language. I thought it no hardship to be obliged to learn my Hebrew lesson before going out to play. I thus attained considerable proficiency in reading the Old Testament in the original. I have never forgotten the first verse of Genesis in Hebrew, which seemed to imprint itself indelibly upon my childish memory, remaining even to this day.

The study of Latin, too, was begun at about this time, to which lessons on the piano were soon added.

I was by no means considered an infant prodigy, or even a precocious child. Such things were taken as a matter of course in those days by families of education and culture.

I was a vivacious, fun-loving child, and neither my health nor my spirits seemed in any way to be affected by my early studies; nor am I aware that they interfered at all with my later intellectual growth, theories to the contrary notwithstanding.

CHICAGO, ILL.

The Japan of 1909

BY J. H. DE FOREST

THE sad event of the latter part of the year should be mentioned first —the assassin's act of October 26, a deed that called forth the sympathy of the whole world for Japan. The assassin made a great mistake, for he killed the best friend Korea had among the Japanese; the wisest official protector of the great missionary movement in Korea; the man known thruout the world as the framer of Japan's remarkable Constitution, with its open recognition of the liberties of the people; the greatest statesman of the East; a profound lover of peace.

Strange, indeed, that such a man should have been for decades an object for an assassin's weapon. At times he had to be protected from this peril at the hands of his own countrymen. Then he was always in danger so long as he lived in Seoul. "I often wonder that my life has been spared so long," he recently said. At last, at the ripe age of sixty-nine, he met his fate a thousand miles from home in North Manchuria.

But really such a death was great good fortune for Prince Ito. "Vastly better than to die on his mat at home," said an aged Samurai to me with a covetous expression. "He couldn't have lived much longer anyway," said another with the same envious look. Very likely he would have had a national funeral in any event, but the manner of his death made his funeral the greatest national manifestation any Japanese has ever received. And in addition to all the Imperial honors conferred upon him during his life, posthumous honors, precious to Japanese and a potent source of noble endeavor, have been bestowed by the Emperor.

How did the Japanese regard this Korean murderer? A few of the papers asserted that now was the opportunity for a more positive attitude toward the whole Korean problem, probably hinting at absolute annexation. But the more influential papers recognized that political assassination is something that all nations suffer from, and freely cited such cases as that of the Japanese policeman who, twenty years ago, thru his distorted patriotism, almost killed the present Czar, when as Crown Prince he was visiting Japan; and that of another Japanese who almost did Li Hung Chang at the Shimonoseki Peace Conference. There is quite a line of Japanese assassins who took the valuable lives of such men as Okubo and Mori and others, just missing that of Okuma.

No, Japan will not take this occasion to tighten her grip on helpless Korea. The Koreans have long been inviting their political doom by their utter incapacity to deal with international problems, and have become a standing peril to the peace of the East. It was a choice between China, Russia and Japan, one of which had to protect and control that peninsula. While such an experiment of necessity brings much of profound suffering and loss and even brutality, together with the indescribable pain patriotic people feel at the loss of their country's independence, yet it is apparent that Korea never had, in education, in finance, in all that pertains to civil and criminal law, the blessings Japan has thus far given her, or rather forced her to take for the good of the world.

The fact is that Japan is more or less suspected and disliked by considerable sections of people all over the world. I think the best explanation is found in a statement that the Premier Marquis Katsura made to me a year ago: "The only reason I know of for being misunderstood and disliked is our too rapid progress." And, indeed, there is nothing else that can account so well for nine-tenths of the suspicions so freely bestowed upon Japan. As an editorial in the most widely circulated paper in Northern Japan recently said: "These wide suspicions of us all come from amazement at out rapid progress, and therefore we are badly misunderstood." The real meaning of these words comes

out much better in the blunt expression of those who dislike Japan: "She's an upstart."

In this connection it is persistently stated that while Japan talks "open door," she is shutting out foreign competition wherever she can, especially in Manchuria, where she is freely reported to be letting in millions of Japanese goods duty free; and that she is underhanded in scheming to oust the West from the commercial advantages of the East. This whole subject needs a thoro ventilation, and I venture a contribution toward it. Japan certainly has a natural inside track here in the East. Her people know the conditions as Westerners do not, and are at home in the language and customs and business methods of this populous part of the world. And they not only have natural innings, but they constantly seek to improve on what they have.

Here is an illustration of their business methods: I saw scores of young men leaving Nagasaki this summer for Shanghai. On inquiry I found they were students for the Japanese "Eastern World School" in Shanghai, where they acquire a perfect knowledge of the Chinese language, both written and spoken. Then they can go anywhere in the Empire, and do business directly without the intervention of native compradores. They have the financial and commercial conditions at their finger's end. And as one of them says: "In ten years it will not be the white people, but our capitalists who shall obtain the financial rights of China." Already this one school has over a hundred graduates at work in the eighteen provinces, with intimate knowledge of conditions at the disposal of Japanese capitalists.

Now an open door may seem pretty well closed to foreigners who are thus handicapped. Westerners have developed a mighty trade out here, and have built up such world centers as Shanghai, but there are more Japanese living in that emporium than all the Westerners put together. Moreover, they have a much simpler style of living, can do business on a less expensive scale, and can do it directly. They are naturally disliked. They are "upstarts."

It is the same in Manchuria, where Japanese have immediate access thru language and customs to the insides of things. Such men can, of course, get their goods put thru more expeditiously, can be quicker at buying, can find out changes in conditions more rapidly than foreigners who have to rely so much on compradores and interpreters. The natural ease with which Japanese enter into the commercial fields of the East brings them a pile of unjust curses.

This is the lesson to be learned from this year 1909. The royal welcome given to our fleet and to the Commissioners of the Pacific Coast, and the exchange of diplomatic notes of friendship between Secretary Root and Baron Takahira of a year ago, seemed to the world an intimation that there could be no more suspicion on the part of the United States toward Japan. Moreover, the welcome extended everywhere in the States to Baron Shibusawa and his company of business men would seem to prove conclusively our entire good will toward Japan. Yet thru more than half of this year there have been perpetual newspaper intimations that the United States had grave doubts over the doings of Japan in Manchuria, and the Crane incident, itself a serious diplomatic blunder productive of a large crop of suspicions, simply added fuel to the fire. What we need is protection against the natural misunderstandings arising from American ignorance of Oriental languages.

Perhaps the greatest misunderstanding of the year was the one between Japan and China over the Antung-Moukden Railroad. Month after month China delayed and obstructed, affirming that all the treaty granted was the right to repair the present road, whereas Japan claimed the right by treaty to make the road a part of the Manchuria-Korean system, and capable of handling merchandise and passengers in a large way. It would thus be the shortest overland route between Europe and Japan, with only a ferry of 122 miles between Shimonoseki and Korea. I have had the pleasure (?) of riding a short distance on this road with its two-and-a-half foot gauge and its eight-mile-an-hour gait, and it is easy to see that no repairs could make it a passenger route.

Anyway, after Japan had vainly en-

deavored, thru patient diplomacy, to secure China's co-operation as promised by treaty, to China's amazement Japan quietly cut off farther negotiations by notifying Peking that the reconstruction of the road would be begun at once "without waiting for the co-operation of China."

This one act did more to arouse China from her attitude of "obstruction and procrastination" than anything since the Boxer movement. Undoubtedly the Chinese are a great and gifted people, but they have absolutely, one may say, no idea of the right way of carrying on international relations; nor does she want to learn. She is badly behind in the fulfilment of her treaty obligations with the nations, and Japan's action in this railroad affair is a sort of public warning that the policy of obstruction is unfitted to the international life of the twentieth century.

I have no doubt but that Japan consulted her ally and some other Powers before giving this ultimatum to China, and that Japan had ample approval of her act. Right here is one great difference between these two Eastern nations. Japan has from the first studied most carefully every phase of international law, and so she virtually never makes a mistake, whether it be in sinking an enemy's ships before any declaration of war, or in the practical treatment of that delicate problem of extraterritoriality. But China from the first has spurned international law, and consequently is always in hot water in her treaty relations. It would mean a new China if Peking would employ and be guided by an able international lawyer, as Japan always has done even to this day. It would save her endless humiliation and millions of money, and would win her a respect and confidence worthy of the great historic nation she is.

As to internal affairs, Japan has had one of those generous crops of rice, 275,000,000 bushels, that make the farmers feel poor. This magnificent harvest is worth about $300,000,000, but the price having fallen nearly one-quarter, producers get a poor reward for their toil, and so business is generally dull.

This year is, we must confess, exceptionally unfortunate in the exposure of corruption in high places. The most astonishing discoveries were in connection with the Nippon Sugar Refining Company, a $6,000,000 trust, whose 50 yen stock was quoted at 80 yen, and whose dividends were 15 per cent., went to the bad, and dragged down in the mud some twenty members of the Diet who have been condemned to fines and terms of imprisonment. It was a bad shock to the moral and financial world of Japan. This was followed by the exposure of rottenness in the Marine Products Company, whose president, a Lieutenant-General, has just been deprived of all titles and decorations, and condemned to seven years of imprisonment.

It is a strange coincidence that this same year should bring to light a similar scandal in the United States over the same stuff, sugar. It brings a bitter sense of shame to this Bushido land to have the world know that among her statesmen and soldiers are men of such pitiable moral weakness, men who have fallen from the lofty ideals of the Samurai. There is a similar feeling of shame in Christian America that among our princely merchants there are some who carry out gigantic swindles, and in our municipal governments there is so much of abominable graft.

But in one respect Japan's feeling of shame produces a peculiar public sentiment as to the duty of the defaulters. They should commit suicide! The old Bushido sentiment is yet strong, and the story of the two presidents vividly illustrates it. The Sugar Trust president was a fine specimen of a gifted and upright Japanese, who from inexperience with the financial world fell into unexpected disgrace. Baron Shibusawa had urged him to take the presidency of the company, and then when he committed suicide the Baron is said to have openly called him a fool, which blunt expression brought down on him a torrent of abuse. The papers then took up the question, one for, one against, suicide, but the Baron, so far as I know, was the only prominent man outspoken against suicide.

The accused soldier, however, being a Bushido-ite, was naturally expected to follow the code and do away with himself. Indeed, a number of the papers

urged upon him this course, but he replied that having been misled by his advisers, and not being conscious of any guilt, he felt no call to do *harikiri*. I think there is a rather wide feeling of disappointment that the General did not follow the ancient code, and thus save his name and family from this reproach. The fact is, Japan is midway between her old Samurai ideals and the larger and universal morality. So that the papers on both sides of this question call the General a coward—if he does and if he doesn't. It seems that those who have studied in the West have caught the larger view and see that the old code of honor can no longer be defended. One of these men who had studied at Yale wrote a sincere and powerful protest against this Bushido solution of disgrace, but he was roundly called down by many writers of the old school, who, however, did not sign their names to their rejoinder.

The great fire in Osaka that burned over 12,000 houses in August, has called out another side of Japanese morality. One of the licensed quarters of the social evil, containing 744 women, was burned out, and at once the moral forces of the city, under the leadership of the Christians, made a monster move to prevent the rebuilding of these seductive houses in the heart of the city where they are a menace to the students and business men. At first the movement was laughed at as visionary and impracticable by the city authorities. But when enthusiastic mass meetings resulted in petitions signed by tens of thousands that were carried right over the heads of the city authorities to the Premier and the two Ministers of Education and of the Home Department, the moral victory was won. Bushido in the Tokugawa age was in many respects a noble moral code, and it actually kept the social evil out of two or three provinces in the interior. But it never would have dreamed of handling this problem in a commercial city by an appeal to the moral sentiment of the nation thru the Premier, as was successfully done in Osaka. Let the West take notice that the moral life of Japan is not to be measured by the commercial failures of this year, but by the higher moral standards that are being more and more recognized widely thru the Empire.

SENDAI, JAPAN.

At Singing Time

BY ANNE P. L. FIELD

I HAVE a little daughter
  Who's scarcely half past three,
And in the twilight hour
  She climbs upon my knee,
And snuggles down within my arms
  With, "Mother, sing to me!"

The light grows faint and fainter,
  The Sandman guards the door;
My baby's boat drifts slowly
  Upon the slumber shore;
But if the singing stops, she cries
  "O mother, sing some more!"

I sing about the squirrels
  That frolic in the wood;
About two furry kittens—
  One naughty and one good—
And then some tender lullabies,
  Just as a mother should.

I'm sure no prima donna
  Adored from East to West,
Feels half the satisfaction,
  Or is so truly blest
As I, when singing to my child
  Held closely to my breast.

Not all the fame and glory
  Of divas can compare
With that deep thrill of pleasure
  Which is my humble share;
For precious are the laurel wreaths
  That singing mothers wear!

BROOKLYN, N. Y.

Literature

Religion and Miracle*

THERE is no question of more serious moment to large numbers of religious people in this age than the question of belief in miracles and the relation of faith in the miraculous to everyday piety and consistency in a religious profession. Multitudes have lost to a greater or less extent their former faith in the miracles recorded in Scripture, and in great sorrow they confess that there hath passed a glory from the earth. They are not so sure of God as they were when they did not doubt that the waters of the Red Sea stood upright as a wall, that Jesus turned water into wine, and that he restored Lazarus to life. Nor is it at all strange that men are troubled over the loss of the miracles. For nearly two thousand years all Christian people accepted miraculous occurrences without question. Learned scholars and discerning leaders shared the common faith in their credibility. It was only a few years ago that doubt was cast over the Old Testament miracles, and then the apologists assured us that, while the patriarchal narratives may be legendary, the New Testament stands firm; that salvation does not depend upon the floating of an axe-head, but upon Christ, whose resurrection on the third day was declared to be the "best attested fact of human history." The entire generation now actively participating in religious endeavor was brought up to unquestioning faith in every miracle recorded in the Bible. Religious adjustments are slowly effected, and it should not be accounted strange that the modern habit of casting all the miracles aside occasions difficulty and distress.

Dr. Gordon scarcely does justice to this situation. He confesses that for many years he has felt small need of the miraculous in his own religious conviction. He says he had "quietly ceased to regard the tradition of signs and wonders that accompanied the Lord," until one day he "fell into conversation with a company of young ministers," and found them "greatly troubled; they felt as honest men they could not say they believed in miracles, and that incapacity created suspicion as to how much of the Gospel remains when miracles are cast aside." He has written this volume, the Nathaniel W. Taylor Lectures at Yale, to show how Christianity can get along without miracles, and it appears to him an easy task to demonstrate that want of belief in supernatural occurrences does not make impossible earnest faith in God, nor devout acceptance of the leadership of Jesus, nor earnest spiritual life in the fellowship of the Christian Church. He does not seek to disprove any particular miracle, nor does he deny that miracles are logically possible, but he does hold that they are improbable, incapable of verification, of small concern to the believer, and that as a matter of fact they have no place in the intelligent faith of today. He writes with easy confidence, with no indication of mental or spiritual struggle, and almost with a feeling of surprise and distress that he should be compelled to discuss the question of miracle, so great is his confidence in the higher and better faith that is independent of such accessories. He is in much earnestness to be thru with his demonstration that belief in God and the spiritual life does not rest upon miracle in order that he may speak of the more serious obstacles to faith and to the progress of religion, with which he feels modern religious men should be occupied.

Whether Dr. Gordon has said the last word on the subject may be doubted. The faith of pious souls in all past ages has been in a God who stretched forth his hand on certain extraordinary occasion to accomplish wonders beyond the happenings of every day. He rode upon a cherub and did fly, and his chariot was the wings of the wind. For these extraordinary doings men believed in Him. A conception like that of miracle, like that of the transcendent God, which has held the minds of men for these count-

less years, must have more truth in it than is clear from Dr. Gordon's pages. Yet it will undoubtedly be a surprise to many readers to learn from him what large elements of acceptable piety are entirely divorced from belief in the miracles recorded in the Bible, and this will be a message of comfort to many troubled spirits. We referred, in an editorial of January 6, to the discussion of this volume in the *Congregationalist*.

The Desert Woman

THE seed referred to in the Scriptures that fell on good ground, in the deeper soil, and that did so well afterward, took a longer time, in all probability, about sprouting than that which fell in the thin places and among the stones. The latter came up quickly and withered soon. These reflections are suggested by the theme of Mr. Robert Hichens's latest story.*

It is a seed that was planted a good many years ago, when Rudyard Kipling wrote verses about the "vampire." They made the elegy of a bad woman, but in three verses one could not tell all she was, one could only plant the seed of the knowledge of her. Immediately there was a spring flowering of frivolous vampire ladies in the poetry and fiction of the year. They came up where Mr. Kipling's idea had fallen in their imaginative soil, and made no more impression than little poisoned blossoms that bloom and fade in a fortnight. But all this time the deeper mind of the times held the seed of that original "vampire" as a suggestion to be understood and worked out. It was the gestative process in the heavier soil. Only last year she came up, really, the vampire woman, the seed of which Kipling sowed in his little poem. She appeared first last winter in a New York play—a rather gross plant she proved to be there, poppy-colored and poppy-spirited. But the fate of the man she betrayed was too nastily dramatic, too commonplace. This was probably necessary in order to catch the attention of a somewhat sensual, coarsened audience, like the average theatergoers in New York. But in Mr. Hichens's new novel we come at last upon the real vampire in full flower, a woman not nearly so limited in her influence as the lotus lady in the play, whose achievement was confined merely to demoralizing a man and reducing him to the beast level. Bella Donna gets in her work upon a good man because he is good and an idealist, and she leaves him good; but for those who understand the remains of him are far more tragic to contemplate than the ruins of the degraded man in the play. When a good man is deprived in a moment and forever of the power to believe and idealize and hope for the best in women particularly, something worse has happened to him spiritually than if he had been drugged for a season into the insensibility of a libertine and a drunkard.

This is what Bella Donna accomplishes for Nigel Armine, the young English gentleman who marries her. She is years older than he, has been infamously famous on the harlot edge of English society as a "greedy" woman masked by nature in a remarkably beautiful form and exotically delicate face. After their marriage, which is attended by a sort of universal wink at Armine's expense, they go to Egypt. And here he engages in a tremendous effort to reclaim two kinds of desert. That on the edge of the Fayum oasis, a part of the Libyan sands, responds as quickly as a man dying of thirst revives beside a fresh water spring; but the other desert, the dry heart of Bella Donna, never yields anything beyond a lying mirage of life and love. She is the Libyan dust left after years spent in living greedily and licentiously. One occasionally sees the same desert phenomenon in a good woman, of course. Hichens simply makes Bella Donna a demimondaine out of consideration for public opinion, which associates such vices as greed and selfishness alone with this class. As a matter of fact, some chaste women develop the desert nature by cultivating the same covetousness, the same passionate desire to preserve the flesh, the beauty of face and form at the expense of better things. This desire is not necessarily licentious, but it is always importunately selfish. There are varieties and varieties of the vampire woman. The point is that they

*BELLA DONNA. *By Robert Hichens.* Philadelphia: J. B. Lippincott Company. $1.50.

all, "good" or "bad," belong to the irreclaimable desert tract in human nature. And if they are not wholly destructive of ideality in men as Bella Donna was, they are so nearly so that they deserve to be placed in the same general class with her. Some writer has yet the chance to dramatize in fiction the character of the vampire good woman.

The particular problem suggested by Mr. Hichens's story over and above this interpretation of the arid heart of Bella Donna is whether one who has already "fallen," as we say, does not fall further when tempted and tortured by the contact with goodness. There is something frightfully terrible in purity and ministering virtue to the utterly bad woman. They have a capacity for abandonment, a conscious sincerity in evil to which few men ever attain, and therefore they shrink from opposite influences as a gangrened man shrinks from the surgeon's knife. Death, a horrid decay, is their horrid form of life, poor souls, and so Bella Donna, who had only been idly and naturally bad before her marriage, when confronted with the exalted ideality and tender adoration and perfect trust of her husband, experienced a revulsion which rendered her almost superhumanly bad and vicious in her effort to escape an environment so dreadfully accusing of all she was or wished to be. It is a nice point, and Mr. Hichens proves it against her with a logic that is far more scientifically convincing than much of the laboratory twaddle of the new biological novelist, which is limited to blood cells in its application.

From the standpoint of art, this author has never before produced a book so poorly constructed. His work is characterized by the quick impressionistic method, especially if the scenes are laid about the desert. But the story of *Bella Donna* drags from the first page to the last, only it drags the reader with it. Apparently, Mr. Hichens's purpose has been to write a textbook concerning the real vampire woman, and he has not cared how tediously long he was about it, so that he made it sufficiently accurate. Of this there can be no doubt. It may always be referred to as an authority on the desert and upon all desert types of the human, from Bella Donna to Homza, the praying donkey boy.

A Whisper of Destiny and Other Poems. By Virginia Bioren Harrison. New York: E. P. Dutton & Co. $1.25.

Mrs. Harrison's poems are pleasing lyrics, for the most part in the minor strain and shadowed by a gentle melancholy. "A Whisper of Destiny" and "The Shadow of the Cross Upon the Hill" have a touch of imaginative power, lacking in many more pretentious poems, and "The Mother Heart" is tenderly true to the longing of all real mothers, the whisper of Mary Mother to her little Son:

"Forget, Sweet, thy heavenly throne
And O, for a little while be *just mine own.*"

The volume is bound in lilac and gold and would be a dainty gift for lovers of devotional poetry.

Labrador: The Country and the People. By Wilfred T. Grenfell and Others. New York: The Macmillan Company. $2.25 net.

A land of unused water power sufficient to turn every railway and factory wheel in the Dominion of Canada; of probably great mineral wealth; still teeming with game, tho the fur trapper has been busy; possessing on its shores a source of food supply (the fisheries) more valuable in dollars and cents "than the diamonds of Golconda or the gold mines of the Rand": yet with all its potential and actual resources and its area of more than half a million square miles, having but a paltry few thousand inhabitants and these largely of the primitive races pushed hard in the struggle for maintenance—such is the view Dr. Wilfred T. Grenfell and his helpers give us of *Labrador: the Country and the People,* in the thick, well-illustrated volume just issued. For his part, the famous medical missionary thinks Labrador will not alway remain the most backward of sub-Arctic lands in this hemisphere. He prophesies railways, industries, tourists and extensive white settlements to subdue and dominate these wilds, and despite the rigorous climate which makes latitudes corresponding to those of the British Isles as cold as Siberia or Alaska, his prophecy may come true. In a succession of monographs by eight or ten different hands—in treatment, scientific; in style, popular—the fog of misconception about Labra-

dor is cleared and the results of the latest investigators and explorers are collated.

The Life and Times of Laurence Sterne. By Wilbur L. Cross. New York: The Macmillan Company. Pp. xv, 555. $2.50.

The apology with which Mr. Cross begins his preface for the old-fashioned title of his new life of Sterne is quite unnecessary. Nor as an explanation does it wholly cover the ground. *The Life and Times of Laurence Sterne* not only relates the personal history of Sterne, together with "some account of the numerous men and women with whom he associated at home and abroad," but Mr. Cross has succeeded in giving his readers more than this. No modern English or foreign writer of eighteenth century English history has succeeded better than Mr. Cross in reconstructing the social framework of the Georgian period, or in depicting eighteenth century rural England, with its scenery, its economy, its inhabitants, and its manners and customs. His description of Sterne's first parish, Sutton-on-the-Forest, some eight miles north of the city of York, shows not only first-hand knowledge of the topography of Yorkshire, but also an understanding of rural life, of methods of farming and of social conditions in northern England in the days of George II. Mr. Cross ranks Sterne almost but not quite with Cervantes and Rabelais. But Sterne had not the deep seriousness which underlies the humor of Cervantes, nor the vein of savagery that runs thru the works of Rabelais. It is impossible to take Sterne very seriously. He was first of all a humorist in his life as well as in his writings. His feelings were quick but not deep, and it was sentimentality rather than passion that he showed in his various love affairs. Sterne was not a man easily to be understood by the ordinary public, and the fact that he was much misunderstood in his own day, and has been grossly misrepresented since, is Mr. Cross's best justification for his painstaking and sympathetic study. Even Mr. Percy Fitzgerald in his life of Sterne published thirteen years ago did not free himself from the influence of some of these misrepresentations, and neither Mr. Fitzgerald nor Mr. Sidney Lee, who wrote the life of Sterne for the Dictionary of National Biography, took the trouble to prepare himself for his task with anything like the loving care that Mr. Cross has expended in regard to every detail that concerns the life either of Sterne himself, his family and connections, or the men and women with whom he came in contact.

Miss Selina Lou. By Maria Thompson Davies. Indianapolis: Bobbs, Merril Co. $1.

To those of our readers looking for a handbook of sweetened wisdom we recommend *Miss Selina Lou.* It is not only a delightful story; it is a good woman's psalm of life. And we need it this year in particular when so many other women in so many other novels are behaving indecently. Miss Selina Lou is a middle-aged maiden woman, who while living lonesome by herself away up in Warren County, Tenn., with the marrying part of her buried in the grave with her lover, gets a "call," not to preach, but to hike down the road and "look for them that needs her." She is a new kind of pragmatic missionary, and finds a plenty to do, and she does it in a manner that divides the reader's emotions between tears and laughter. When the story opens she is keeping a grocery store on the Bluff. The Bluff is the ugly kettle top outside of a big city, connected with it by a kite-tail trolley line, where just the poor live, not paupers, but native to-the-earth paupers, who buy their groceries one dinner at a time and soap every two weeks. In a row of soap boxes in the back of the store she keeps a kind of impromptu day-nursery for all the babies whose mothers work in the city, or who are sick in the hospital, or who have been forgotten altogether by their mothers and left like bleating lambs upon her tender-hearted door sill. There is a pretty girl in the story also, and an artist-man who turns out to be a fairly good lover for her. And the babies in the soap boxes develop more individuality than half the star-spangled heroes and heroines we meet in fiction, but the

interest of the book depends upon the philosophy of Miss Selina Lou, who reduces the homeliest experiences of life to essence sentences that are more than printed words upon the page. They have a quaintly familiar fragrance, like worldly wisdom in the remote green valleys seasoned with the beatitudes, where men and women are still good according to Scriptures and not according to some new-fangled fashion in ethics.

Douris and the Painters of Greek Vases. By Edmond Pottier, Member de l'Institute. Translated by Bettina Kahnweiler, with a preface by Jane Ellen Harrison. New York: E. P. Dutton & Co. $2.50.

A Handbook of Greek Archeology. By Harold North Fowler, Western Reserve University, and James Rignal Wheeler, Columbia University. With the collaboration of Gorham Phillipps Stevens. New New York: American Book Company. $2.

We are perhaps warranted in giving small space to Douris, because he is simply appearing in a new dress, albeit a beautiful one. Miss Kahnweiler has put life into her work, showing that one small book is often better than a larger one. Twenty-five excellent, red-figured illustrations, with bibliography and a full index, must make the author feel proud of her work. This is no *μέγα βιβλίον μέγα κακόν*, but a labor of love. How often it is that a small book is more precious than a large one. Fowler and Wheeler, most excellent bookmakers, have swept over a wide area. Their work seems definitive unless some startling discovery appears. Fowler takes the responsibility for the bulk of the work. Wheeler takes the chapter on vases and painting, with the preparation of the illustrations, 412 in number. A generous bulk, over 100 pages, is given to sculpture, with 72 illustrations. It is to be regretted that many of these are not sharp, because they are so diminutive. There should be also more full-page illustrations, but in such a mass of excellencies who can find words for blame? The index in extremely fine print, covers nine pages, and the bibliography, in larger type, covers as much more. The bulk of the book is Fowler's. His footnotes are numerous and good. The only feature that is to be regretted is that the print is perforce rather too small. The recent work in Crete is generously treated, and the famous steatite vase from Hagia Triada is given in full. Fowler justly regards the "procession" as a "harvest home." "Their mouths are opened wide, not to shout defiance, or to raise the hymn of victory over the conquered, but to sing the harvest song."

The Redemption of Kenneth Galt. By Will N. Harbin. New York: Harper Bros. $1.50.

Mr. Harbin's genius shows signs of immigration. And it is the kind of genius that ought to remain where it was born and raised. The scenes of his last story are laid, as usual, in a rural North Georgia village. Even the characters are the same we have found in all of his stories, under different names, of course, but serving the author in the same capacities. There is the nagging, tattling old woman in Fred Walton's stepmother, and the malevolent, suspicious old man in his father. There is the inevitable sick old woman who either keeps or tries to keep her bed in all his stories to be recognized in Mrs. Barry. There is the good and beautiful girl who is seduced and who lives nobly ever after, and the other rich girl, both of whom we have met before. The men are the same who have been figuring like Dearing as the sterling young man, or like Whipple behind the counters or between the plow handles of every story he has written these ten years. We even recognize Fred Walton's dress suit as the one with which Mr. Harbin always rewards the young scamp in the tale when he finishes sowing his wild oats and settles down to make a success of life either as a lawyer or as a groceryman. But, in spite of these details of an old incantation which has never failed to charm his readers till now, Mr. Harbin has missed his cue in this story. It may be because he scattered his characters into new scenes in Oklahoma and New York. Certainly it lacks what the others had—a literalness of life in conditions and results. Some feverish artificiality of the times has crept into it and destroyed the atmosphere of simplicity which before this has redeemed his work from the sentimental commonplace.

Literary Notes

....Rev. Charles Reynolds Brown, D. D., of Oakland, Cal., has something worth saying on every page, and there is a note of candor and moral vigor in his discourses on *The Young Man's Affairs* (Crowell).

....Where a man unites in himself explorer, hunter, adventurer and missionary his story makes a stirring romance. Dr. John C. Lambert has brought together in one volume several of such hero tales under the title *Missionary Heroes in Africa.* The work is well written, and makes the sort of missionary literature that even a lively boy is likely to enjoy. (75 cents. Lippincott.)

....The Donnellan Lectures delivered before the University of Dublin in 1906-1907 on *Prehistoric Archæology and the Old Testament* by H. J. Dukinfield Astley, M. A., Litt. D., are imported by Messrs. Charles Scribner's Sons ($2 net). The volume is apologetic in aim, seeking to show that discoveries in archeology and anthropology leave the religious content of the Bible undisturbed.

....Mr. W. D. Ellwanger defensively and cautiously calls his *A Snuff-box Full of Trees* a collection of "apocryphal" essays. He is not a profound thinker—at least not in these pages—but he gives us some rather interesting facts, about the seeds of the *sequoia gigantea,* for instance, sent east in a snuffbox by the tree's discoverer, and distributed to all parts of the earth for planting. Again, he finds but two cases of real suicide in the Bible—that of Ahithophel in the Old, and of Judas in the New Testament; Abimelech, who ordered his sword-bearer to slay him, and Saul, who threw himself upon his sword only after his attendant had refused to obey a similar command, Mr. Ellwanger places in a different category, together with Samson, whose self-destruction was but incidental to the wreaking of his vengeance upon his enemies. The book is artistically made. (Dodd-Mead. $2 net.)

....Mr. R. A. Douglas-Lithgow, M. D., LL.D., has gathered from all available sources the contents of his *Dictionary of American-Indian Place and Proper Names in New England,* adding to the library of the specialist a reference book whose value will be increasingly recognized. Dr. Douglas-Lithgow does not enter into abstruse philological considerations in these lists, which are alphabetical and by States. In the case of the place names, he gives the location, the meaning whenever possible, and variants; the proper names he gives are those of Indians mentioned in the history of New England, their tribal affiliations being noted. To these lists he adds a list of the principal tribes of New England, lists of Abnaki, or Maine, and Natick, or Massachusetts, Indian words, a comparison of the principal Indian dialects spoken in New England, and a bibliography. Already, so he informs us, he is at work on an English-Indian dictionary, in which the existing localities will be given in English, accompanied by their American equivalents.

Pebbles

"Mrs Nagget," said the doctor, "your husband needs a rest. He must go to Hastings for three months."

"Oh, splendid!" she exclaimed. "I'll be delighted to go there."

"Very good. You can go for three months after he comes back. That will give him six months' rest."—*Tit-Bits.*

WHAT EVERY JOURNALIST KNOWS.

Nice Old Lady—Will you kindly tell me if the lady who writes "The Mother's Page" every week in your paper is in? I want to tell her how much I have enjoyed reading her articles on "The Evening Hour in the Nursery."

Office Boy—That's him over there with the pink shirt smokin' a pipe.—*Minneapolis Tribune.*

As a South Jersey country physician was driving thru a villiage, he saw a man amusing a crowd with the antics of his trick dog. The doctor pulled up and said: "My dear man, how do you manage to train your dog that way? I can't teach mine a single trick." The man looked up, with a simple rustic look, and replied: "Well, you see it's this way: You have to know more'n the dog, or you can't learn him nothin'."—*Christian Endeavor World.*

A progressive young pastor in a Tennessee town was teaching the children of his flock Edward Everett Hale's famous motto. One day a colored woman passed the church as he was drilling the children. To the first person whom she met afterward she addressed these remarks:

"Miss Nannie, what is dey doin' down yander at de Meth'dis Ch'uch? As I come by dar jes' now, de preacher and all he chillen were shouten at de top of dey voices, and de preacher louder dan eny of 'em:

'Look up and look down,
Look out and look in,
Go out and come in,
Git up and sit down.'"

UNWRITABLE ENGLISH.

"Did you know that there is at least one sentence in English that can be spoken, but that it is impossible to write?" asked a university student.

"Yes, it's correct English, I suppose, and then again it isn't. Here is the sentence, altho I vow I don't know how you are going to write it: 'There are three twos in the English language.' You see, if you spell *two,* t-w-o, the sentence is incorrect, as it is if you spell it either *too* or *to.* Cath the point? Really, it should be possible to express the thought. This thing has set me going, and it simply goes to show what a tangle the English language is. There certainly is a word *two,* and a word *too,* and another *to,* and they are all three pronounced alike—*two, too,* or *to*—which makes it correct to say: 'There are three *twos* or three *toos* or three *tos* in the English language. But what's the use?"—*Sacred Heart Review.*

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $3.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

THE semi-annual index for the last six months is now ready. Subscribers may obtain a copy free of charge by sending us their request on a postal card.

Railroads and Trusts

IN his special message, the President makes recommendations concerning two subjects of great importance which will undoubtedly excite much interest thruout his term. These are the Federal control or regulation of railroads, and the treatment of monopolistic combinations.

With a majority of his propositions for additional legislation relating to railways the public was already familiar, altho they had not been so exactly defined. Nor had his reasons been so clearly given. His argument for the creation of a Court of Commerce is convincing. Under the present procedure the orders of the Interstate Commerce Commission encounter delay that prevents enforcement of the law. Railroad companies should not be deprived of their right to a review by the courts of orders which they characterize as confiscatory or oppressive, but final decisions should be reached within a reasonable time. The proposed Commerce Court would have exclusive original jurisdiction over the railway cases, and its judgments would be subject to review only by the Supreme Court. It is said that the railroad officers who were in conference with the President last week opposed the creation of such a court, predicting that it would become merely a second Commission. But the judges are to be those of the Circuit Court, and undoubtedly the standard of that tribunal would be maintained. As the President suggests, the Commission should not be required to initiate and defend litigation concerning its own orders. This should be done by the Department of Justice.

Pooling agreements as to rates are unlawful under the Sherman act. Mr. Taft repeats the recommendation of his predecessor that such agreements, subject to the Commission's approval, should be permitted. There would be ample protection for the public, if his recommendations for an increase of the Commission's power should be followed in legislation. The Commission now may take action concerning an excessive rate only upon complaint. He would have it empowered to investigate and act upon its own initiative. This would be a reasonable enlargement of its power. He would also have it authorized to pass upon the companies' rate classifications of freight. It should do this because classification has been used to cover up unjust discrimination.

When roads propose new and higher rates, the Commission cannot make an official inquiry as to the reasonableness of the new rates until they are in operation. It should be empowered, the President says, to defer the enforcement of them for sixty days, pending investigation. He would not advise that companies now owning the stock of other companies be required to sell it, but he asks for legislation forbidding a company to buy hereafter the stock of a competing company, or to buy or lease the road of such a company. But if it already owns one-half of another road's stock, it may buy the remainder. This, however, is not to validate the acquisition of competing roads in violation of the Sherman act. The desired legislation would not only tend to prevent suppression of competition, but would also check the highly

profitable speculation of ruling officers in such securities as their companies acquire.

If Congress follows the President's recommendations, railroad companies will be forbidden to issue stock or bonds without payment of their par value, or to take property or services in payment except upon a valuation of the same by the Commission. This prohibition is modified, however, by a provision that when bonds are issued at less than par, the payment must be the "reasonable market value of such bonds," as ascertained by the Commission. And when a company is reorganized, the Commission's approval of the amount of stock and bonds issued must be obtained.

We believe that these amendments of the railroad laws are required in the interest of the public, and we are glad to hear from Washington that the enactment of them at the present session is expected. Those which relate to the holding of a competing company's stock and to issues of securities were suggested in part by the operations of the late Mr. Harriman and of the companies in which he was a dominant figure. The submission of them to Congress follows a report in the press that he had accumulated a fortune exceeding $200,000,000, nearly all of which was acquired during the last ten or fifteen years of his life.

Years ago it was sometimes necessary, for the promotion of railroad enterprises in undeveloped regions, to issue stock for which prices very much below par were taken. As a rule there is now no warrant for such a practice. We suggest, however, that discretion might be given to the Commission to permit issues for payment below par in exceptional instances resembling those of the early days of railroad construction.

The Trust problem is one of great difficulty. In the Sherman act "every contract, combination in the form of a Trust or otherwise, or conspiracy in restraint of interstate or foreign trade" is made unlawful. President Roosevelt said three years ago:

"It is unfortunate that our present laws should forbid all combinations, instead of sharply discriminating between those combinations which do good and those which do evil. . . . It is a public evil to have on the statute books a law incapable of full enforcement because both judges and juries realize that its full enforcement would destroy the business of the country."

And, quoting the remarks of the Interstate Commerce Commission as to the effect of the Supreme Court's decisions in the Trans-Missouri and Joint Traffic cases, he added: "This means that the law, as construed by the Supreme Court, is such that the business of the country cannot be conducted without breaking it."

But President Taft, after an examination of the Supreme Court's Trust decisions, finds that they are of such a character that there is no necessity for an amendment of the Sherman act "to exclude incidental and beneficial covenants in restraint of trade." They apply the statute, he says, "only to the real evil aimed at by Congress." Therefore he would "leave it as it is, to accomplish its useful purpose, altho, if it were being newly enacted, useful suggestions as to change of phrase might be made."

He asserts that it is possible for manufacturers to secure the economies due to the concentration of many plants without violating the Sherman act, and points out what the practices are which constitute a violation of it. To draw a line in a statute between "good Trusts" and "bad Trusts," he says, is not practicable. To require the courts to decide what is reasonable and what is unreasonable restraint of trade or suppression of competition would be, he asserts, to "put in the hands of the courts a power impossible to exercise on any consistent principle which will insure the uniformity of decision essential to just judgment, to thrust upon them a burden they have no precedents to enable them to carry, and to give them a power approaching the arbitrary, the abuse of which might involve our whole judicial system in disaster."

Investigation by the Department of Justice as to all combinations which are objects of suspicion would be "a heavy work" and would "produce a halt in our present prosperity." Therefore he seeks to reform the violators of law by persuasion and invitation, and would have Congress give them an opportunity to become incorporated with Federal charters. In this way he would prevent the

abuses which the law forbids. Combinations taking such charters would submit to restrictions concerning issues of stock, would make full reports of their operations, and would hold stock of other companies only with the approval of the Government. There would be "complete Federal supervision and control." To those who obect to such centralization, he says, there is no other method which offers both Federal protection and close Federal supervision. The "worst offenders" would accept charters or be dissolved or expose themselves to criminal prosecution by continued violation of the law.

The recent growth of great corporations doing an interstate and national business suggests that national charters are better suited to their needs than the charters of a State. National incorporation is the logical accompaniment of the national breadth of a company's operations. By careful legislation and honest administration such incorporation could be utilized to prevent, in large measure, the unjust practices which caused the enactment of the Sherman law. It would promote the enforcement of that law. Thus far enforcement, or attempt at enforcement, has been confined to a few selected cases, and the results are by no means satisfactory. For example, is there evidence that the Beef Trust injunctions have been effective? Everybody knows that there are unlawful and harmful combinations which have not been touched or even menaced. But when Congress takes up Mr. Taft's plan it will encounter serious opposition in the interest of State control and State taxation. Such opposition is stimulated by those parts of this message which say that the proposed Federal incorporation would "protect" the chartered companies against "undue interference" and "harmful, vexatious, and unnecessary invasion by the States."

Forester Pinchot's Swan-Song

Forester Pinchot's letter to Senator Dolliver has brought him his official death. Whether the swan will prove a phenix the future will tell. He is not the man to stay dead.

The President's letter dismissing him is very weighty, and it has behind it the support of his entire Cabinet. It is proved that Mr. Pinchot's official insubordination was serious. He sought the opportunity thru Senator Dolliver to oppose and criticise his superiors, and he could hardly expect that the President would show further patience with him. And yet his letter to Senator Dolliver is such a one as a man of noble purpose may have written. It was doubtless imprudent, very imprudent. Doubtless he knew it was so when he wrote it. There appears to be in it no reservation against its being published. He desired that Senator Dolliver should make it public, should read it in the Senate. He must have known that he was risking his official position, that there was danger, great danger, that he would be removed from office for criticising his superiors, and yet he took the risk, and Senator Dolliver took the risk for him. Senator Dolliver is no novice in politics. He went to the Department and asked for information, and what he asked for he got. If Forester Pinchot did an imprudent and irregular act, then Senator Dolliver participated in it, approved his doing it, and Senator Dolliver is one of the ablest and truest men in the United States Senate.

What is prudence? It is taking care and foresight for one's own personal interests or safety. The prudent man foreseeth the evil and hideth himself. It is a sort of limited virtue. It is of a different sort from courage or patriotism. The courageous man, the patriotic man, may see the danger and rush into it, for the higher purpose he has in view. But it must be a high purpose, or courage sinks to rashness and folly. It is a duty at times to throw prudence to the winds, to despise warnings of danger, if a man's dear ones or his country are in danger of loss.

It is because Forester Pinchot believes that Messrs. Price and Shaw, his subordinates in the Forestry Service, were influenced solely by high motives when they made public the danger that the coal lands in Alaska "might pass forever into private hands with little or no compensation to the public" that he defends them. "This information was," he says, "of a nature proper to be made public." Messrs. Price and Shaw were convinced "that the public interests in a matter

within the line of their official duties were in grave danger at the hands of fraudulent claimants." Forester Pinchot says:

"It is clear not only that they acted from a high and unselfish sense of public duty, but that they deliberately chose to risk their official position rather than permit what they believed to be the wrongful loss of public property."

Yet "their action violated a rule of propriety as between the departments," and deserved a reprimand, but nothing more. The approval of their purpose and its success more than overbalance the reprimand. They directed public attention to the danger, and that danger is vastly less than it was before they violated the rules of official decorum between departments which "exist solely in the interest of efficient administration." Forester Pinchot says:

"A public officer is bound, first, to obey the law and keep within it. But he is also bound, at any personal risk, to do anything the law will let him do for the public good. In taking unusual steps under this principle of public duty the faithful public servant may risk reprimand or dismissal. So may any man who does his duty under difficulties."

Where Forester Pinchot defends Messrs. Price and Shaw, he defends himself. Where they risked dismissal from a sense of public duty he does the same. He is removed from the position he has so ably filled for an infraction of official etiquet in constructively criticising his superiors, and even the President, but the people will none the less honor his purpose; and the President much regrets that his sense of the obligation of loyalty to one's superiors requires him to dismiss Mr. Pinchot. The country will honor its Forester none the less for his purpose, and yet will not disapprove the President's action.

In this we have said nothing of Secretary Ballinger. A close examination of his course since he assumed office finds no failure on his part fully to serve the interests of the people. It was in the brief interval between his service on the Pacific Coast and his appointment as Secretary that he acted as counsel for the men whom Mr. Pinchot charges with fraudulent action. It is not strange that he was under suspicion, and we can well imagine that his selection was recommended to the President for purposes not the best. But he has been under close scrutiny and has acted with prudence, so that the President has had no occasion to find fault with him. We shall look for a searching investigation by Congress which will make clear what criminal acts have been attempted, and how far those involved in this controversy have offended against official propriety, or have attempted to enrich themselves by seizing the hundreds of millions of value in the coal lands of Alaska.

Nineveh and Jonah

THE British Museum has just issued Part XXVI of its "Cuneiform Texts," which happens to contain matter of somewhat unusual interest in several directions. It is mainly devoted to the text of a large octagonal prism covered with a historical inscription of the Assyrian King Sennacherib, the one who "came down like a wolf on the fold" attacking Jerusalem in the days of King Hezekiah. Other records of Sennacherib, long ago published, tell of his wars and are familiar to scholars, and throw much light on the biblical history. This newly acquired prism in part repeats what was previously known, but is new in its account of the great work of Sennacherib in building his palace and city walls, and greatly enlarging the city. It is dated in 694 B. C. Of the eight campaigns reported two are new, and one is of historical interest as it is concerned with the task in 698 B. C. to put down an Ionian revolt in Tarsus which had blocked an important trade road. But more important is the account of his renovation of Nineveh. Interesting to geologists will be his account of the sources of the material for building his mighty palace. Besides the huge timbers from Mount Amanus and Mount Sirara (biblical Sirion?) he brought, according to L. W. King's translation, the choicest stone for walls and statues from distant lands. He says:

"At that time Ashur and Ishtar, who love my priesthood and have pronounced my name, disclosed to me the locality of great beams of cedar, which had grown from distant days and

had become mighty, standing concealed in the midst of the mountains of Sirara. In the depths of Mount Amanus they showed me alabaster, which in the times of the kings, my fathers, was esteemed precious for inlaying the hilt of a sword; and breccia, for great stone vessels, such as had never before been found, was revealed in Kapridargila, which is in the district of Til-Barsip. In the neighborhood of Nineveh, in the district of Balatai according to the command of the God, white limestone was discovered in abundance; and I fashioned colossal bulls, and sculptured images of alabaster, fashioned from one stone, of mighty proportions, standing high on their own foundations; female colossi of alabaster, whose appearance was glorious, and whose bodies shone like the bright day, and mighty slabs of breccia I cut from the mountain and caused them to be dragged into Nineveh. Colossal bulls and female colossi of white stone, thru the labor of the goddess Ninkurra, I fashioned in the land of Balatai and made their form complete."

We have also an unexpectedly interesting account of Sennacherib's work in metallurgy:

"When in the earlier days of the kings, my fathers, they made a bronze image in the likeness of their form to set up within their palaces, during their labor all the workmen groaned thru want of understanding and lack of knowledge for their desired work, and they poured out oil and in their lands they sheared the fleeces of sheep [probably for divination]; but I, Sennacherib, the chief of all princes, who had knowledge of all handicraft, made great pillars of bronze, colossal lions open at the knees, such as no king before me had fashioned. Thru the clever understanding with which the mighty Ninkiazag has endowed me, in my own wisdom to carry on the work, I took careful counsel with myself and by the decision of my will, and thru the prompting of my own heart, I fashioned the bronze castings and cunningly executed them. For twelve shining lions, as well as for twelve bull-colossi complete in form, and twenty-two female colossi who were clothed with exuberant strength and abounded in might and vigor according to the command of God, I fashioned molds of clay with great beams and wooden frameworks, and poured bronze therein, as in casting half-shekel pieces, and I completed their construction."

This mention of half-shekels as if they were coins, long before we know of coinage, is peculiar. But they were cast, not stamped, tho they may have had a design on them; and they were probably ingots, and may have been weights. We know of none that have been found. Larger bronze weights are known. He proceeds to tell how two of these bronze bulls were coated, apparently with gilding, and how great pillars of wood were sheathed with bronze and lead. He then tells about his system of water-works for drinking and for irrigation, brought from the mountains, and particularly of his botanical garden:

"A great park, like the forest of Mount Amanus, I planted, wherein all kinds of herbs and fruit-trees, and forest-trees, the product of the mountains and of Chaldea, and trees that bear wool [or hair] were included."

Mr. King thinks these trees were some sort of a fiber-bearing palm. We may presume that the park was much finer than any ascribed to Solomon, who is represented in Ecclesiastes as saying: "I made me gardens and parks, and I planted trees in them of all kinds of fruits: I made me pools of water to water therefrom the forest where trees were reared," precisely as Sennacherib boasts of his irrigation works for the same purpose.

But perhaps most interesting of all is Sennacherib's account of his enlargement of his city and his measurement of its extent; because of the extravagant statement in the book of Jonah of the immense size of Nineveh. We are told in that interesting story which goes by the prophet's name, "Now Nineveh was an exceedingly great city of three days' journey. And Jonah began to enter into the city a day's journey." It would seem as if the diameter was represented as three days' journey, about sixty miles. There is no date given to the story of Jonah, no king mentioned. Nineveh probably reached its greatest extent less than a hundred years later under King Assurbanipol, shortly before its destruction. Sennacherib's account of its extent is as follows:

"For Nineveh, the extent of whose circuit in former days had been 9,300 cubits, and for which the princes who went before me had built no inner nor outer wall, I added to the former measurement 12,915 cubits, and 21,815 I made its extent."

That would make a circuit for the city of about seven miles, enough for a very large Eastern walled city, taking no account of the suburbs, which might extend as far as six or eight miles. The King then proceeds to describe the fifteen gates which he made in the wall.

This interesting old vainglorious document will hereafter be referred to in all Bible dictionaries.

The Evolution of Gratitude

THERE was once a Pup. He was not distinguished and never had been to the Dog Show. He belonged to a boy who needed a pup to torment. When angry, the boy beat the pup, and when good-natured he adorned the pup with firecrackers and tinware. But the boy was kind, for all that. He fed the pup—inexpensively—and called him a "good doggie." So the pup was glad, and gratitude swelled in his heart. All the days of his doghood he followed the boy, caressing and fawning, and always obeying.

There was once a Boy. He was poor and an orphan. The court bound him out to a man. The man gave him much work to do and simple food to eat, which made the boy healthy and strong. When the years of servitude were ended, the man gave the boy a suit of clothes and a recommendation. The grateful boy gave up his plans for college and the Presidency of the United States, and continued to work for his benefactor, as a hired man.

There was once a Man. He loved his country and went to the war. While he was gone his country taxed his farm, two of his children died, his wife became ill, and the farm was neglected. But the kind-hearted Squire loaned her money to pay the taxes, the doctor's bills and the funeral expenses. As a matter of form he took a mortgage on the farm, at 7 per cent. When the man came back from the war, the mortgage had been foreclosed. The man knew that this was just, for the interest had not been paid, and he was grateful to the Squire. So he voted to send the Squire to the Legislature, and when the Squire had become a Great Man, and had obtained a franchise for a street railroad, the man worked for the Squire as a section boss. Always on election day he saw that the "hands" got safely to the polls, whatever the stress of work or weather, and that they voted the "right way," as good citizens should.

There was once a Tribe. It lived by herding cattle, and when it wanted more cattle, it stole them from another tribe nearby. It had a Chieftain who was clever in managing the cattle-stealing raids. So the tribesmen gave him half of the stolen cattle, and modestly divided the remaining half among themselves. They gave the Chieftain, too, the exclusive use of a part of their land, to pasture his enlarging herds upon. As the Chieftain waxed rich, his tribesmen became proud of him, and appealed to him to settle their disputes. From among the ruined men of other tribes whose cattle had been stolen the Chieftain selected an efficient band of cowboys, and he paid them well to serve him loyally. Then he turned these followers against his fellow tribesmen and compelled them also to work for him and to bestow upon him a part of the annual increase of their own herds. Thereupon the tribesmen said: "Of a truth this man is great." So were they grateful, to him and to their gods, that so powerful a lord should rule over them. Anointing him they bowed before him and hailed him as their King.

There was once a Town. It waxed in wealth and in tongues like Babylon, and in wickedness like Sodom. It was a democratic town, and the people chose their rulers from among themselves. From the humblest of their ranks there arose a leader. Intuitively he grasped the economic interpretation of history. Broad and deep he laid the foundations of political power in enterprises that need not be too particularly described. Step by step he climbed the ladder of preferment to the hights of aldermanic glory. But he never lost touch with "the people." Old neighbors were never forgotten, and new friends became as old. No family in distress, no unfortunate "unemployed" appealed to him in vain. His constituents knew the sources of his wealth. They knew that they paid for his benefactions. They knew that their tenements were firetraps because he "stood in" with real estate interests. They knew that their children were killed in the streets, while they hung to straps of cars as they traveled to and from their work because he was a useful man to the traction corporations. They knew that the fate of their daughters was the work of a system which he shielded from the law. But his hand-grip was hearty, his word was cheery, and the turkey never failed to arrive for the holiday feast. And so

they were grateful. And when Little Tim died, fifteen carriages were needed to convey the flowers taken from the house before the coffin was put into the hearse. The people by thousands lined the route to the church. The Mayor of the city, the judges of the courts, and the Napoleons of finance sat in the pews. The choir sang "Lead, Kindly Light." Little Tim Sullivan's work was done, but Gratitude, primordial, perennial, inexhaustible, inextinguishable, remained!

"Social Vice"

THE designation "Social Vice" is a euphemism for the most disgusting ulcer on the body of modern so-called Christian civilization. Just now attention has been called to one phase of it by accounts of the "white slave" traffic, but that is only one phase, and probably not the chief portion of the evil, altho the most terrible one. This evil connects itself with the saloon evil, and with what in this State we call the Raines law hotels. It is a subject so utterly disagreeable, so essentially mephitic, that we dislike much to speak of it; but those who fight evils cannot ignore the worst of them all; and the summoning of John D. Rockefeller, Jr. to be foreman of a grand jury for investigation here in the city where the white slave traffic is most prevalent is sure to call needed public attention to it. Young Mr. Rockefeller is doing more Christian work in probing this evil than he can do with his large Bible class of young men.

Another phase of the evil is disclosed in the efforts of a Committee of Fourteen in this city headed by Dr. John P. Peters, to investigate and shut up the multitude of dens of vice that masquerade as Raines law hotels. Dr. Peters says that investigation by the Committee of 1,200 out of the more than 2,700 so-called hotels in the city "shows that 700 of them are criminal and could have been put out of existence by the enforcement of the law." He adds:

> "It was in connection with these hotels that the cadet system sprang up and flourished. They are the originators of the white slave traffic."

Of course these nurseries of vice are protected by the negligence, or worse, of the police. But they have other protection such as we could not have believed. Under the law these hotels have to put up a bond not to violate the laws. Reputable bonding companies have agreed not to bond disreputable places. They belong to an association pledged to this refusal. But the Bankers' Surety Company of Cleveland has taken up the business, a very profitable one. The Committee of Fourteen, which includes such men as Henry L. Stimson, Congressman Bennet, Prof. William Adams Brown, of Union Seminary; Prof. F. M. Burdick, head of the Columbia University Law Department; Rabbi Pereira Mendes, and Isaac N. Seligman, has appealed to this Cleveland company to withdraw from the business, but it refuses. There are on its board of directors men of high reputation, members of churches, such as Harvey D. Goulder, chairman; George H. Olmstead and Charles E. Kennedy. We get these facts from an article in the New York *American,* sent to us by Dr. Peters and endorsed by him. He asks why the more respectable morning and evening papers of the city, read by the better class, persistently exclude such facts. Probably they think it an unclean subject. That journal reports that the secretary of the Bankers' Surety Company admitted to its representative that they knew it was "dirty money," but they needed it, and that they "are in bad repute with the Association of Surety Companies for accepting such business." It is a shame that men of reputation should thus support such disorderly houses.

The investigation initiated by Mayor Gaynor and conducted by Mr. Rockefeller will do good. It will prove how much truth there is in the sensational stories. But the great evil is the protected system of "social vice," whether carried on by "white slaves" or of free will. It is too much of an accepted belief that human nature is such that there must be disorderly houses and that their existence is actually a protection to virtue. They can and should be abolished. It is done in the country and should be in the city. They prevent marriage, and they are the source of more disease than the white plague itself, and that, too, within mar-

riage, to innocent and confiding victims. We have for many years been fighting intemperance and are reaching prohibition; we are equally beginning to attack tuberculosis; the time must come before long when a combined effort must be made to stamp out the social evil and its accompanying disease.

A Planetesimal Prophet

THE end of the world has always been a favorite theme of prophecy. Every generation has probably been told that it would be the last, tho there has been a wide difference of opinion as to how and why the final catastrophe was to come about. Ancient prophets, inspired by moral law, usually foretold a universal conflagration as the consequence of certain sinful courses on the part of the sons of men. Modern prophets, interested solely in physical law, have been inclined to predict an ultimate congelation as the result of the continuous loss of energy thru radiation. Science was in fact even more merciless than religion, not that there was much choice between being melted or frozen, but the religious prophet generally held out some hope that mankind might avert or postpone the doom by better behavior, while the scientific prophet would not allow the human race a chance for its life, only a lingering death in the losing fight against increasingly adverse climatic conditions.

But science, the beneficent magician, has the power to lay the specters that it conjures up. It does not leave us long to be frightened at the same future, but provides at least a change of terrors. Mankind received a reprieve when radium was discovered. Here was an unsuspected source of heat which, tho not inexhaustible, would yet serve to postpone for indefinite millenniums the freezing up of the world. Radium and its parent, or grandparent, uranium, and the rest of its radiant relatives were found to be widely diffused, tho in minutest quantities, among the rock that we had access to, and it was to be presumed that the interior of the earth, being of much greater density than its crust, contained these heavy metals in greater abundance. We felt therefore as cheerful as a man who at the beginning of winter has his cellar full of good hard coal. But how could he be cheerful if the thought occurred to him that the coal in the cellar might be afire? This, in fact, was the next wo with which science threatened us. The analysis of the rocks showed that they contain more than enough radio-active minerals to account for the heat observed in mines and tunnels, and if the interior contained anything like as much as the crust it was going to make things too hot for us by and by. We were between two fires, a molten globe some fifty million years behind us, and a molten globe in the indefinite future. In the meantime we were left with the realization that a trifling variation in the temperature, or the humidity or the composition of the atmosphere would render the world uninhabitable, even tho it escaped being hit by a stray comet or one of the more mysterious "dark bodies" driving thru space like a runaway automobile with no lamps.

Being then so badly scared by these fairy tales of science, we feel deeply grateful to Professor Chamberlin, of the University of Chicago, for taking the opportunity afforded him as retiring president of the American Association for the Advancement of Science at the recent Boston meeting to give us a more cheerful prophecy of the future of our world. If the truth of a theory is in any degree confirmed by the comfort it gives to those who hold it, as some of the pragmatists appear to teach, the planetesimal hypothesis gets a new claim to credence. On this hypothesis, indeed, Mother Earth has a past which we do not care to think about and a future which is unpleasant to contemplate, but the period between is long extended and the conditions during this period are likely to be quite endurable.

If we adopt this new view we have in the history of our planet no gaseous state, no molten ball, no cloud-wrapped globe, no world-wide ocean. The earth is solid, has always been solid, and is likely to stay solid for a time indefinitely remote. It grew from the gradual accretion of little planets, by a process as natural as the formation of a trust or trades-union. The geological record, as Professor Chamberlin reads it, shows no wiping of the slate clean for a new prob-

lem in life, but alternating periods of humidity and aridity, of glaciation and torridity, of rising and falling, which, affecting different regions at different times, left the earth always about as habitable as it is today. There seems to be some kind of an automatic mechanism, more reliable than those controlling the heating and ventilating apparatus of our rooms, which keeps the atmosphere properly warm and moist. The loss of three or four hundredths of one per cent. of carbonic acid, or its increase by a few per cent., would make life impossible but this never occurs. We live upon a breathing earth which absorbs and emits the gases of the air, and we carry on interstate commerce with the atmosphere of the sun, receiving matter as well as energy from the center of our system, and so maintaining the equilibrium necessary for existence.

"There is little escape from the conclusion that ever since the birth of air-breathing life, some 30,000,000 or 40,000,000 years ago, let us say, the interplay of these agencies of supply and depletion has been so balanced that neither fatal excess nor fatal deficiency has been permitted to cut short the history of the higher life.

"It is profoundly significant that the thermal states of the narrow zone of life on the face of the earth should have been kept within so close variations as to permit the millions of species forming the great genealogical lines leading up from the primitive types to have perpetuated their lineages in unbroken continuity for such ages, while the prevalent temperatures a few miles above them or a few miles below them, as well as in space generally, would have been fatal

"There appears to have been an unceasing contest between the agencies that made for the extension of the land and the agencies that made for the extension of the sea. While each gained temporarily on the other, complete victory never rested with either. From near the beginning of the readable record there appears to have been an unbroken continuity of land life, and from a like early stage, an unbroken continuity of marine life."

If, then, we may judge of the future by the past there is little danger that we shall be smothered, starved, frozen, burned, or drowned, and, if we have average luck, our sun will not collide with another sun for some billions of years yet. He therefore reaches the reassuring conclusion that:

"The geologic analogies give fair ground for anticipating conditions congenial to life for millions or tens of millions of years to come, not to urge the even larger possibilities."

But, like an ancient prophet, he brings in the ethical lesson at the close, reminding us that, however favorable the conditions may remain, the future of the human race is in its own hands and its existence and prosperity are dependent upon the study and application of the laws of life and conduct. The final paragraph of the presidential address is not very explicit but apparently he puts hope in a combination of hygiene and eugenics:

"But to be most efficient, moral purpose needs to be conjoined with the highest intelligence, and herein lies the function of research. None of the earlier races made systematic inquiry into the conditions of life and sought thereby to extend their careers. What can research do for the extension of the career of man? We are witnesses of what it is beginning to do in rendering the forces of nature subservient to man's control and in giving him command over the maladies of which he has long been the victim. Can it master the secrets of vital endurance, the mysteries of heredity and all the fundamental physiological processes that condition the longevity of the race? The answer must be left to the future, but I take no risk in affirming that when ethics and research join hands in a broad and earnest endeavor to compass the highest development and the greatest longevity of the race the era of humanity will really have begun."

A State Park

New York City has its own little parks, and very fair ones they are, but it is good news that there is to be a State park not quite so far from the center of population as are the Adirondacks. The gift by Mrs. Harriman of ten thousand acres and $1,000,000 additional, and the gift of $500,000 each by John D. Rockefeller and J. Pierpont Morgan, and $625,000 in sums from $25,000 to $50,000 each by fifteen other persons, assures the extension of Riverside Park for sixty miles along the Hudson River and the Palisades, for there is no doubt that the State will add $2,500,000 for the purpose. This will put an end to the cutting of timber and the blasting away of the cliffs which have already done serious damage. Governor Hughes strongly supports the plan, and Governor Fort, of New Jersey, recommends that his State take part in a similar and neighboring enterprise. It should be mentioned that in making her gift Mrs. Harriman is carrying out the wish and plan of her husband. The commission which has the matter in charge and has collected the large additional sum is headed by Mr. George W.

Perkins, has been at work for seven years, and has in that time acquired for $600,000 a tract of fourteen miles along the western river front,. and the expense of this commission during these years has been only $400. That is the kind of commission to have, composed of men who are not after graft. It will be a great playground for the people, just as we are providing playgrounds for children.

Tim Sullivan's Wisdom

This is the way that Tim Sullivan, the Tammany leader who was buried the other day, expounded his doctrine of politics:

"Show me the silk stocking who can quote Latin in his political speeches; did he ever pay a widow's rent? Does the college graduate who talks politics to an audience in evening dress up at Carnegie Hall know what it means to bring a spoon to a christening—that it means more votes than all the quotations he knows from John Stuart Mill or Adam Smith? Did he ever think what bailing out a poor fruit peddler who has been run in by some too officious policeman means? Does he know how many votes a ton of coal will bring in.

"The Tammany Hall man—if he's a good one—knows everybody's troubles, and is expected to remedy them as far as he is able. If he can't, he goes to his district leader. There is one of these to every Assembly District in the city. These men are the great bulwarks of Tammany Hall. Without them we should be helpless. They must be in court when a citizen is in trouble, ready with bail if the case demands it. They must feed the starving, clothe the naked,, bury the paupers, and be good friends with everybody."

But it pays financially, and the Tammany leaders get rich.

The work of stirring up enthusiasm for foreign missions is not to be left to ministers and women; laymen are beginning to take hold of it. It would surprise many to know that women's organizations provide something like one-third of the funds for the support of the work of our foreign mission boards. They are far better organized than the men are, and they know more on the subject than men do; but so they do in music, literature and art. What is called the Laymen's Missionary Movement is well organized and is beginning to move over the country. It reaches this city next week in a series of dinners and meetings, at which dozens of leading speakers will take part, and in which the effort will be made to give wide information and to stir up interest and support. There is a large co-operating committee here, of which William J. Schieffelin is chairman. This is interdenominational, and has the support of all the leading mission boards.

Mr. Merrian, chief of the Biological Survey of the Department of Agriculture, tells the House Committee on Agriculture that the bubonic plague is endemic in California about San Francisco. That is, infected rats from the wharf have infected squirrels, and infected squirrels have been found fifty miles from San Francisco, and a few people die every year from the plague, the infection carried by fleas from the squirrels. He wants the squirrels all killed within the limit of the infection, just as he is killing the prairie dogs. Mr. Merrian fears that what is endemic may at some time become epidemic, as in India, where hundreds of thousands have died in a year. Let him have the money needed to exterminate the infected animals.

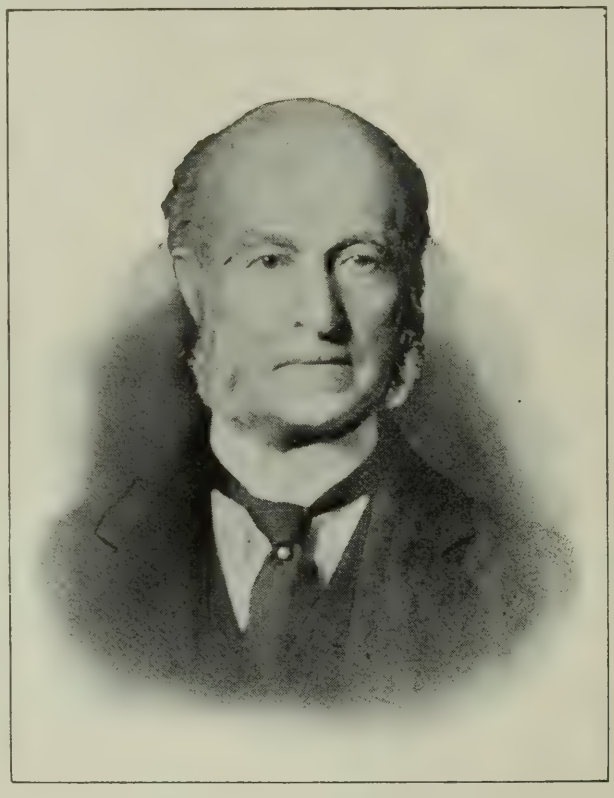
It was expected that New York would reject the constitutional amendment giving Congress the right to impose an income tax, and Governor Hughes's message against it makes rejection certain. To be sure, he favors the general proposition that the national Government should have power to impose such a tax, but he believes that the proposed amendment is too general in its terms, and that State and city bonds, sold with the provision that they should be untaxed, and so sold on very favorable terms, should be excluded from any national income tax. This seems reasonable, and will have weight in other doubtful States. Congress can properly amend the amendment. It is not too late.

There are three or four universities in Washington appealing to the same general constituency, and we do not see why any one of them can properly appeal to Congress for aid as against any other one. It is well for Congress to take up no new applicant.

Insurance

"Are You Still Insurable?"

STATISTICS show that one person in every nine who applies for life insurance is rejected. It is likewise true that persons of insurable age who might have been able to pass a medical examination at one time, for various reasons become unable to do so at another and later time. When a man is being actively canvassed for insurance by several agents, he is very apt to forget that the time may come when he cannot get insurance, no matter how carefully he may seek to obtain such protection. It has been well said that time once lost can never be regained, and yet young men the world over go on losing time. Opportunity is also said to knock at least once at every man's door; but if no response is made the summons may not be repeated. It is much the same with life insurance. Because a man is young and strong and because he is a good risk today, it is by no means true that similar conditions will prevail tomorrow. There is no absolute certainty except in instant closing in with the insurance solicitor while there is a meeting of minds. Imagine if you can the feelings of a man when he learns from the lips of the medical examiner that he is no longer insurable! He has halted in seeking insurance protection and has halted too long. His estate may be slender. He may have dependents that are near and dear to him, but for whom the beneficence of insurance is suddenly cut off. It is not in any sense a pleasant prospect. Nor is the prospect made any more pleasant by the thought that once upon a time the insurance principle might have had a personal application if—that fatal "if"! How often has he said to himself: "I can get insurance at any time. I will take out a policy on my life a little later, when there is a more convenient season," etc. Every insurance agent knows the stock excuses that come trippingly to him from prospects over and over again, and if he is conscientious, how he has tried to combat these excuses. How good it would seem to take out a big policy if the company would only give the rejected one another chance. It seems as if the closed door must open just once. The money to pay premiums would be forthcoming somehow and in some way. Every one knows how needful life insurance really is and how good it is to have a policy, but procrastination has more than once done its deadly work, and the uninsured man dies with no estate when it might so easily have been otherwise. Every man who reads these lines ought to realize that the time will come, sooner or later, when his application, if he applies, will meet only with rejection. The question is, Are you still insurable? And it is a very vital question when you think about it.



A STARTLING fact developed in considering the value and fire risks of Government buildings is that the total cost of fires in 1907 amounted to almost one-half the cost of new building construction in the country for the year. The cost of building construction in forty-nine leading cities of the United States, reporting a population of less than 18,000,000, amounted to $661,021,286, and the building construction for the entire country is conservatively estimated at more than $1,000,000,000. A preliminary inquiry has shown that the cost of fires to the people was nearly $500,000,000 for the year 1907.

WILLIAM H. H. MOORE, the well-known underwriter, whose death was announced last week, was born in 1824 and was graduated from Union College in 1844, and for many years was connected with the Atlantic Mutual Insurance Company, beginning as third executive in 1856, vice-president in 1886 and afterward the president of the company. In 1882 he was elected a trustee of Union College, and in 1886 he received from Union College the degree of Doctor of Laws.

Financial

D. O. Mills

DARIUS OGDEN MILLS, capitalist, banker and philanthropist, who died suddenly of heart disease on the 3d at his winter home near San Francisco, was born eighty-four years ago a few miles from New York City, and at the age of fifteen he began to earn his living as a clerk in a store. Six years later he became cashier of a bank in Buffalo. In 1848 he went to California, and from the beginning he was very successful there, at first as a merchant in general trade and later as a banker and an investor in mines, timber and railways. In 1880, when he removed his business headquarters to New York, his fortune exceeded $25,000,000, and present estimates of his estate range between $50,000,000 and $75,000,000. On the Pacific Coast he was a regent and a benefactor of the University of California and a trustee of the Lick Observatory. In New York he was a trustee of the Metropolitan Museum and president of the Botanical Garden. With many banking institutions, railroad, steamship and industrial companies he was connected as a director. He was widely known as the builder and owner of the three Mills Hotels in New York. More than $2,000,000 was invested in these houses, where (in the first two) men could find comfortable and clean lodgings in cheerful surroundings for 20 cents a night, and a meal for 15 cents. Prices in the third house are a little higher. Mr. Mills insisted that this was not a work of charity, for he expected a return and the investment is said to have yielded not less than 3 per cent. His daughter, the wife of Ambassador Whitelaw Reid, was with him when he died.

D. O. MILLS.

*

....The report of the Irving National Exchange Bank to its shareholders shows a very notable growth for the last eleven years, especially in deposits, which have risen from $2,045,400 to $27,216,300. Capital has been increased from $300,000 to $2,000,000, surplus and profits from $53,400 to $1,538,500. and assets from $2,651,700 to $31,554,900. Lewis E. Pierson is president of the bank, and James E. Nichols and Rollin P. Grant are vice-presidents.

....The Lawyers' Mortgage Company in 1909, most successful year in its history, sold $35,333,294 of guaranteed mortgages (about seven-eighths of this total to net 4½ per cent.), the year's net gain of such mortgages outstanding being $17,424,546, with a total of $94,702,480 outstanding on December 31. Of these mortgages, 64 per cent. are in Manhattan Borough, 27 per cent. in Brooklyn and 9 per cent. in the Borough of the Bronx. The average amount loaned is 62 per cent. of the company's appraisal. The company's investments are safeguarded by many wise limitations. Its losses by foreclosure proceedings in fifteen years have been only $13,057. It has a capital of $4,000,000 and its surplus is $2,000,000. Richard M. Hurd is president.

The Independent

VOL. LXVIII NEW YORK, THURSDAY, JANUARY 20, 1910 No. 3190

Survey of the World

The President's Message on Conservation

President Taft sent to Congress on the 14th his special message on the conservation of natural resources. Pointing out at the beginning that our public domain of 1,055,911,288 acres in 1860 had been now reduced to 731,354,081 acres (not including Alaska), confined largely to the mountain ranges and the arid and semi-arid plains, he reviewed briefly the manner in which the public lands had been treated and regarded years ago:

"The rapid disposition of the public lands under the early statutes, and the lax methods of distribution prevailing, due, I think, to the belief that these lands should rapidly pass into private ownership, gave rise to the impression that the public domain was legitimate prey for the unscrupulous, and that it was not contrary to good morals to circumvent the land laws. This prodigal manner of disposition resulted in the passing of large areas of valuable land and many of our national resources into the hands of persons who felt little or no responsibility for promoting the national welfare thru their development. The truth is that title to millions of acres of public lands was fraudulently obtained, and that the right to recover a large part of such lands for the Government long since ceased by reason of statutes of limitation."

In recent years, however, there had developed, he continued, a deep concern in the public mind respecting the preservation and proper use of our natural resources. Referring to the noteworthy reforms of his "distinguished predecessor" in this field, he said that the investigations into violations of the public land laws and the prosecution of land frauds had been vigorously continued under his own administration, together with the withdrawal of coal lands for classification and the temporary withholding of power sites, withdrawals of such sites having been made on 102 streams, or 229 per cent. more streams than were covered by withdrawals prior to the beginning of his term. Having spoken of the antiquated and unsatisfactory character of the land laws, and of the exercise by the Secretary of the Interior, for the public interest, of power not clearly defined, he urged Congress to validate withdrawals already made and to authorize further withdrawals pending the submission of projects of legislation. There was a pressing need of the classification of the lands. It was now proposed that the surface should be disposed of as agricultural land, and that the minerals beneath should be leased on a royalty basis under conditions designed to prevent monopoly:

"It is exceedingly difficult to frame a statute to retain Government control over a property to be developed by private capital in such manner as to secure the Governmental purpose and at the same time not frighten away the investment of the necessary capital. Hence, it may be necessary by laws that are really only experimental to determine from their practical operation what is the best method of securing the result aimed at."

The extent of the value of phosphate was hardly realized, and this product would probably hereafter "attract the greed of monopolists." In the future, the power of water falling in the streams would to a large extent take the place of natural fuels:

"In the disposition of the domain already granted, many waterpower sites have come under absolute ownership, and may drift into one ownership, so that all the water power under private ownership shall be a monopoly. If, however, the waterpower sites now owned by the Government—and there are enough of them—shall be disposed of to private persons for the investment of their capital

in such a way as to prevent their union for purposes of monopoly with other water-power sites, and under conditions that shall limit the right of use to not exceeding thirty years with proper means for determining a reasonable graduated rental and with some equitable provision for fixing terms of renewal, it would seem entirely possible to prevent the absorption of these most useful lands by a power monopoly. As long as the Government retains control and can prevent their improper union with other plants, competition must be maintained and prices kept reasonable."

Turning to the conservation of soil, he spoke of the work done by the Department of Agriculture, adding that State action also was essential. The reclamation of arid lands was a work of great importance. More than thirty projects had been undertaken. But the funds available, under the law, were "inadequate to complete them within a reasonable time":

"And yet the projects have been begun; settlers have been invited to take up, and, in many instances, have taken up, the public land within the projects, relying upon their prompt completion. The failure to complete the projects for their benefit is, in effect, a breach of faith and leaves them in a most distressed condition. I urge that the nation ought to afford the means to lift them out of the very desperate condition in which they now are. This condition does not indicate any excessive waste or any corruption on the part of the Reclamation Service. It only indicates an overzealous desire to extend the benefit of reclamation to as many acres and as many States as possible. I recommend, therefore, that authority be given to issue not exceeding $30,000,000 of bonds from time to time, as the Secretary of the Interior shall find it necessary, the proceeds to be applied to the completion of the projects already begun and their proper extension, and the bonds running ten years or more to be taken up by the proceeds of returns to the reclamation fund, which returns, as the years go on, will increase rapidly in amount."

There should be new laws providing for the disposition of timber at public sale, the land afterward to be subject to the agricultural or mineral land laws. What he had said, the President here remarked, was really an epitome of the recommendations of Secretary Ballinger, who had prepared bills giving effect to them. He earnestly recommended that all of the Secretary's suggestions be embodied in new statutes. While there were 190,000,000 acres of forest reserves under the control of the Department of Agriculture, there were in private ownership more than 400,000,000 acres of forest land, and only 3 per cent. of it was being treated scientifically, with a view to maintenance. But this land was under the control of States. He suggested a moderate expenditure each year for reforestation at the sources of certain navigable streams. Taking up the subject of inland waterways, he said it was the duty of Congress to make provision for improvement projects the cost and advantage of which had been definitely ascertained. It would be wise to begin with the dams in the Ohio. Several had been built, fifty-four in all were required, and the cost would be $63,000,000. Provision should also be made for continuing contracts to complete the improvements in the upper Mississippi and the lower Missouri. The completion of these might prove the advantage of making the depth in the lower Mississippi greater than nine feet as now planned. River and canal traffic was the most effective regulator of railroad rates. Briefly mentioning the order for an investigation of the land and forest service he said that the results of that inquiry were not needed to determine the value of and the necessity for the new legislation he had recommended, and he earnestly urged Congress to act upon his recommendations without waiting for those results.

Forestry and Land Service

The President has appointed Henry S. Graves Chief Forester, to succeed Gifford Pinchot, removed. Mr. Graves for some years past has been director of the Yale Forestry School, which was established by the efforts of Mr. Pinchot. He was induced by Mr. Pinchot to take up the study of forestry, was associated with him before he entered the Government service, was his assistant in the Forestry Bureau from 1898 to 1900, and upon Mr. Pinchot's recommendation was placed at the head of the school in New Haven. He is an earnest supporter of Mr. Pinchot's forestry policy. —— Mr. Pinchot has published a long statement. He proposes, he says, to stay in the fight for conservation and equal opportunity, and will support the Administration when "it moves toward the paramount end," which is "the welfare of the plain people." Out of the work of the Forestry Service, he asserts, grew the conser-

vation movement. Following the Conference of Governors, in 1908, the National Conservation Commission made a report which, with Mr. Roosevelt's message transmitting it, furnished a complete statement of policy and pointed out what should be done. Then the work was checked by enemies of conservation in Congress:

"The situation is serious. The dangers which confront the movement today must be met by positive Congressional action. No action will be equivalent to bad action. Unless Congress acts, the water powers will pass into the hands of special interests without charge and without limit of time. So with the phosphate deposits. So with the enormously valuable coal deposits in Alaska, which the present law would sell for $10 per acre. The danger of bad legislation is no less serious. The special interests must no longer be allowed to take what they choose out of the property of all the people. . . . The first great immediate danger is that the water powers will be lost; the second that the coal lands will be lost. But these specific dangers of public loss are merely parts of the great issue between the special interests and the rest of us. That issue is whether this country shall be managed by men for human welfare or by money for profit. The conservation of natural resources and the conservation of popular government are both at stake."

——Binger Hermann, for sixteen years a member of Congress, and for several years Commissioner of the Land Office, is on trial in Oregon for complicity in extensive land frauds, involving 200,000 acres of land and an expected profit of about $1,000,000. He was indicted jointly with the late Senator Mitchell and several others, three of whom were convicted some time ago. Francis J. Heney is the prosecutor.

Bribery Cases in Pittsburgh

Five prominent citizens of Pittsburgh, two of them millionaries, were arrested on the 14th, charged with conspiracy, perjury, bribery and other offenses. Last year, following an investigation by imported detectives, several bankers and Councilmen were prosecuted. Seven of the defendants were convicted. One of these was President Ramsey, of the German National Bank. The charge was that Councilmen had been bribed to vote for an ordinance making the bank a depository for city funds. Dallas C. Byers, a millionaire engaged in the steel industry, was indicted for bribing the Council to vacate a street adjoining his property. He fled to Europe, crossing the Atlantic in disguise as an employee on a cattle ship, and he died a few months ago in Switzerland. He had been associated with the men arrested last week, who are as follows:

Edward H. Jennings, millionaire, president of the Columbia National Bank, the Pure Oil Company, and the Colonial Trust Company; Frank F. Nicola, millionaire, a prominent and influential business man; Max G. Leslie, county delinquent tax collector, friend of Senator Flinn, the Republican leader in Pittsburgh, who furnished bail for him; Frank A. Griffin, formerly vice-president and cashier of the Columbia National Bank; Charles Stewart, formerly a member of the Council.

Councilmen were bribed to make the Columbia Bank a city depository. Leslie, it is said, was the go-between, and it is asserted that the Councilmen betrayed him because he withheld from them a large part of the $25,000 which the bank paid into his hands for the purchase of votes. Stewart and Nicola are said to have solicited the bribe or to have suggested such a use of the bank's money. It is reported that the District Attorney has a confession made by one of the bank's officers.

The Boston Election

In Boston, on the 11th, John F. Fitzgerald was elected Mayor by a plurality of 1,415 over James J. Storrow. There were two other candidates. One of them, George A. Hibbard, the present Mayor, received only 1,816 votes, altho his nomination (by petition) had required the signatures of at least 5,000 voters. For the other, Nathaniel H. Taylor, only 613 votes were cast, altho at least 5,000 voters had by petition exprest a preference for him. Of the nine members of the new City Council, seven were candidates supported by the Citizens' Municipal League, and the remaining two were followers of Mr. Fitzgerald. Six of the nine had the support of the Good Government Association. Mr. Fitzgerald was Mayor during the term preceding Mayor Hibbard's. He is a Democrat in national and local politics. Mr. Storrow is a leading banker, and until recently was president of the Chamber of Commerce. While an inde-

pendent Democrat in national politics, he was not regarded as a partisan in municipal contests. The present Mayor, Mr. Hibbard, defeated Mayor Fitzgerald two years ago, when the issue was municipal reform. The recent campaign was an exceptionally active one, and the votes cast, 95,358, were about 85 per cent. of the number of voters registered. There was a majority of more than two to one for license. The new Mayor will take office on February 2. This was the first election held under the new charter, which makes great changes. To eliminate party politics, conventions were abolished and nominations were made by petition. No party name was placed on the ballot. The Mayor's term was made four years, but he is subject to recall after two years have elapsed. The Council of nine members supersedes the old Council and Board of Aldermen. The power of the new Mayor will be much greater than that of any of his predecessors, and will approach that of boards which govern cities where the commission plan has been adopted.

The Islands

In the libel suit of Dean C. Worcester, Secretary of the Interior in the Philippine Government, against *El Renacimiento,* the newspaper organ of the Nationalist party, the court awards $30,000 damages. Secretary Worcester sued for $50,000. About a year ago he caused the prosecution of the manager of this paper and three members of the staff for criminal libel. Two of the defendants were found guilty, sent to jail for six months and required to pay a fine of $1,000.——Owing to the recent decision permitting the sale of Philippine friars' lands in large blocks, the sugar planters of Hawaii are inquiring concerning these lands and may decide to buy parts of them.——Dr. Rossiter, of the navy, senior medical officer at the Tutuila naval station, says that from 40 to 50 per cent. of the natives of Samoa have the hookworm disease.——Governor Colton, of Porto Rico, in his message last week, recommended a reduction of the budget by $300,000, the publication of an official gazette, extension of the public school system, better care of prisoners in jails and insane persons in asylums, and the establishment of a leper colony.——In the Porto Rican Assembly, the leaders of the dominant (Unionist) party have again introduced the six bills which caused a deadlock last year and led to the passage at Washington of a bill providing for the annual appropriations.——The tunnel under the Cabanas fortress at Havana and leading to the sea has been completed. The sewage of the city, now discharged into the harbor, will be carried thru it and, by means of a pipe line extension, discharged in contact with the currents of the Gulf.

The Revolution in Nicaragua

At the end of last week the main army of the Nicaraguan revolutionists, which had been moving westward, was not far from Managua. Approaching Acoyapa it had driven in the Government outposts and occupied the town. A decisive battle at that point had been expected, but the Madriz forces retreated, intending, probably, to fight at some place near the capital. All of the prisoners taken by Estrada at Rama have enlisted with his army, and it is said that many volunteers have been received during the westward march. Madriz has asked the revolutionists to send another peace envoy in place of General Diaz, who was drowned, but Estrada prefers to fight. The revolutionists assert that by such overtures Madriz simply seeks delay. Madriz has undertaken to prosecute those responsible for the execution of Groce and Cannon, but it is said that Zelaya's responsibility cannot be shown because he is not involved in the official records of the court martial proceedings. Mexico's Ambassador at Washington says that Zelaya will have in Mexico only the rights of any other foreigner and will be subject to extradition as any other Nicaraguan residing in Mexico would be.——It is asserted that two American aeronauts have been engaged by Estrada to bring dirigible balloons or airships to his camp and use them during the war.——In the House, at Washington, last week, Representative Sulzer, of New York, introduced a resolution authorizing the President to recognize Estrada's Government and also committing the United States to a recognition of it. In the Committee on Foreign Affairs the resolution was laid on the table.

Aviation at Los Angeles In accordance with the old saying that we learn to skate in summertime and learn to swim in wintertime, it appears that the ability to fly has been very rapidly developed during the comparatively inactive period since the Reims meet of last summer. Three or four aeroplanes are seen in the air at one time at Los Angeles, sometimes racing across the field side by side, sometimes meeting and overtaking one another, passing below and above. They show the gracefulness and facility of motion characteristic of birds in soaring and diving, turning in narrow circles and figures of eight. Flights have been made every day regardless of the weather, and the aviators seem no longer afraid of wind or rain. Altho the machines used start by a run on the ground instead of from a monorail like the Wright machines, they have been successfully launched even when the ground was quite muddy. Mr. Glenn H. Curtiss, the American aviator, holds the record for speed, but M. Louis Paulhan, from France, has gained most applause from the crowds by his daring feats. He broke the record for altitude in a heavier than air machine by making an ascent to the height of 4,165 feet, surpassing the flight made the week before by M. Hubert Latham of 3,600 feet. Over 50,000 spectators watched him rise in great circles until he became a mere black spot in the sky, nearly a mile above them. Then he soared easily down, shutting off the power part of the time, and landed in front of his tent, where he received the embraces of his wife and assistants. He was in the air about fifty-one minutes. In the earlier part of the same day Madame Paulhan had made an ascension with a party of friends in the balloon "New York," and as they approached the concourse M. Paulhan got into his aeroplane and flew out to meet his wife, passing under, over and around the balloon. He also astonished the people of the seacoast by sailing from Los Angeles out across the harbor into the ocean and back, a distance of about 20 miles. He uses chiefly a Farman biplane, but sometimes for short trips a Blériot monoplane. Several ascents have been made at Los Angeles with two passengers, sometimes ladies, besides the operator. The army officers have made some experiments in the dropping of imitation bombs into a marked space when passing over the ground at a height of two or three hundred feet in aeroplanes or dirigibles. The dirigibles, two or three at a time, have raced together in a straightaway or circular course. Several of the aeroplanes have met with slight accidents in landing or when near the ground, but no one has been injured.

The British Election As we go to press returns have been received of the first two days of the polling, from which it appears likely that the Liberals will remain in power, altho with a reduced majority, and possibly dependent upon the Labor and Nationalist votes for their parliamentary support. Of the 91 seats voted for on the 14th and 15th, the Unionists secured 43, Liberals 37, Laborites 6, Nationalists 5. This is a gain of 18 for the Unionists and 3 for the Liberals, besides which the Laborites gained one seat formerly held by the Liberals. The total popular vote so far is Unionist, 369,817; Liberal, 333,244; Laborite, 70,394; Socialist, 9,514. The issues brought before the voters were so diverse that it is impossible to state definitely from these inadequate returns what effect the various arguments had upon the electors. In producing an increase of the Unionist vote apparently the German scare was more powerful than the plea for a tariff. In some country districts the hope of increased prices for farm products and the influence of the landlords insured the return of a Conservative. A surprising feature of the campaign was the active part taken by the foremost advocate of protection or tariff reform, Joseph Chamberlain, who is partially paralyzed and nearly blind. He received no visitors, but sent out an immense number of personal and public letters thru his secretary, and finally, upon the eve of the election, joined with Mr. Balfour in issuing a manifesto declaring that the imposition of tariff duties would not increase the cost of living for the working classes, but reduce it while promoting higher wages and providing employment. Mr. Chamberlain was returned without opposition from Bir-

mingham West, as a token of respect and sympathy, altho he will not be able to take his seat in the House. The two seats from Plymouth were contested by an ex-American, Mr. Waldorf Astor, and by Mr. H. Mortimer Durand, former Minister to the United States. Both ran as Unionists, but were defeated, altho they cut down the Liberal majority of 1906 by more than half. Sir Gilbert Parker, from the Gravesend district, retains his seat as Unionist, but with a reduced majority. Grimsby changed from Unionist to Liberal, notwithstanding the fact that Mr. Lloyd-George, speaking in that precinct just before the election, received such a harsh reception from the crowd in the hall and outside that he was obliged to escape thru a back way under escort of the police and take refuge in a small station a quarter of a mile up the railroad. The new Parliament will contain for the first time a Christian minister in active service. The Church of England clergymen are debarred from sitting in Parliament, but the law does not apply to a Nonconformist, as he is not recognized as a clergyman. Rev. G. Silvester Horne, Congregational minister from Ipswich, was elected as a Liberal. Among the curious reversals of public opinion is the defeat of Mr. W. Joynson-Hicks, the Unionist who defeated Mr. Winston Churchill in 1908.

French Politics

The most exciting matter before the Chamber of Deputies is the school question, which is arousing a partisan spirit of equal intensity and much the same character as that brought out by the Dreyfus case. The attacks made by the Catholic episcopate against the public schools on the ground that they are not neutral and impartial, but decidedly anti-religious and atheistic, has been met by the Government with a project for the extension of the state control over the Catholic and all other private schools. A bill to this effect has been introduced by Minister of Education Doumergue into the Chamber, where it is now being hotly discussed. The students in the law school of the Sorbonne have carried the controversy between clericals and anti-clericals so far as to indulge in classroom fist fights. In a recent skirmish of this kind the Catholic students were worsted and driven from the building. Besides the bills relating to the school question, the Chamber will take up the old age pension bill, which has been returned from the Senate. The budget and the tariff will also have to be settled at this session. The income tax which was passed by the Chamber and sent up to the Senate seems to have been shelved there, and the Government manifests no disposition to bring it to a vote. M. Barthou, Minister of Justice, has introduced a bill for the reform of judicial procedure in consequence of the public disgust excited by the conduct of the Steinheil case. According to its provisions, the presiding judge will no longer conduct the cross-examination of the prisoner, and witnesses may be summoned at the expense of the state when the prisoner is unable to pay for them.

The Manchurian Railroads

The proposal of Secretary of State Knox, that China should repurchase the Manchurian railroads from Japan and Russia by the aid of a syndicate of foreign capitalists which would undertake to finance the commercial development of that province, has been discussed by the press of the different countries concerned, and altho no official statements of the way these Governments regard the proposition has been given out, some inferences may be drawn. China, as a party most concerned, is understood to favor control by an international syndicate in preference to the present status. Germany is the most frank and enthusiastic of all the Powers in its support of Mr. Knox's project. England and France are to a certain extent bound to defer in this matter to the opinion of their allies, Japan and Russia. The Japanese papers express unanimous opposition and some indignation at the suggestion of the neutralization of Manchuria. The English would be as much inclined as the Germans to favor an open-door policy, because Japan has prevented British capitalists from constructing railroads in Manchuria, and the new syndicate which Mr. Knox states is ready to construct a trans-Manchurian railroad, connecting with the Peking Railroad, is composed

of English as well as American financiers, but the British Government could hardly join with the other Powers in forcing upon Japan a policy decidedly repugnant to her interests. The London *Times,* in an editorial discussing the question shortly before Mr. Knox gave out his plan to the public, exprest the opinion that an interchange of views of the interested parties in regard to the status of the Manchurian railroads would clear up the atmosphere, and suggests that:

"Japan would, in our opinion, contribute handsomely toward an amicable and equitable solution of existing difficulties by defining more clearly than she has hitherto done the extent and nature of the participation which she claims in recognition of the special situation created for her in Manchuria by the events of the last decade."

The Russian papers as a rule resent the inference of the United States and assert that Russia has no intention of resigning her rights and privileges in Manchuria to any syndicate or power. The only exceptions to this are the papers which have been advising the complete abandonment of the projects for Russian expansion in the Far East, which have brought such disastrous and heavy financial burdens upon the country. The *Russ* takes this attitude and so approves of the American plan. It publishes the secret memorandum presented by Minister of Finance Kokovsoff to the Cabinet before his trip to Manchuria for the purpose of meeting Marquis Ito, in which he brings forward a proposal similar to that of Mr. Knox:

"If an insistence on our conditions is impossible without risking a war, and we are not prepared to support our demands with arms, then the sole solution appears to be the liquidation of our concession after the expiration of the term of our contract and the completion of the Amur Railroad.

"Under these circumstances the most satisfactory issue of the difficult relations between Russia and China would be the transfer of the administration of the East Chinese Railroad to a special international organization, each nation taking over a part of our invested capital and a corresponding share of the guaranteed revenues. The date of liquidation must depend upon the construction of the Amur Railway, as otherwise Primorskaya Province would be cut off from Russia."

Now that the matter has been made a subject of international concern it would be perhaps impossible for Japan and Russia to arrange to come to a private agreement, such as was expected to result from the Kokovsoff-Ito conference at Harbin.

Spain and Portugal

A military conspiracy for the overthrow of the Liberal ministry in Spain has been disclosed thru articles in the *Correspondencia Militar,* written by Señor Llorens, a Carlist Deputy and officer. A police raid upon the office produced evidence upon which the Government removed the Captain-General of Madrid, Count de Villar. It was found necessary also to remove the Captain-General of Valencia, Valladolid and Coronna. The military club was closed by the police and two hundred army officers are under arrest for suspicion. Prince Pignatelli, who is supposed to be the instigator of the movement, has been arrested. The army men complained of favoritism in the promotion of officers and in the awarding of honors to those who took part in the recent Morocco campaign, but the disaffection was promoted by the Conservatives for the purpose of overthrowing the Liberal administration of Premier Moret y Prendergast. A strike of 2,000 workmen in the naval arsenal of Ferrol has added to the embarrassment of the Government.——King Manuel of Portugal opened the session of the Cortes with a speech from the throne, in which he referred with cordiality to his reception on his recent visit to England. It is reported that he will, in May, be married to the Princess Victoria Patricia, youngest daughter of the Duke of Connaught. A plot has been discovered for the assassination of King Manuel in which some of the conspirators are said to be the same as took part in the murder of the late King Carlos. King Manuel has just installed a new cabinet, the fourth of his reign. Dr. Wenceslau de Lima gives place as Premier to Senhor Beirao, of the Progressivist party. The change has little significance except as indicating a return to the old *régime* of rotation in office by mutual agreement between the two dominant parties, by which a small group of politicians nominally of opposing parties keep the power in their own hands.

The British Budget and the Election

BY HERBERT ADAMS GIBBONS

ORDINARILY one can get an insight into British politics by reading the newspapers and those excellent weekly and monthly reviews, with which England is blessed and of which America has so few. But I am safe in saying that it is impossible to find in Great Britain to-day a journal unbiased on the issue of the Budget. Bitter partisanship, blind and uncompromising, has permeated the whole press. So long has the Budget of 1909 been with the people from breakfast to bedtime that even the most phlegmatic and stolid of a race which prides itself in those qualities cannot furnish any "mugwumps" on this particular issue.

For eight weeks I have been traveling continuously in England and Scotland, talking Budget on trains, in hotels, and in the homes to which I had the good fortune to be invited. City merchants, provincial business men, commercial travelers, lawyers, clergymen, farmers, laborers—all the classes which go to make up the voting population of the land—north, south, east, west, have striven to enlighten me and to show me the exclusive justice of their individual point of view. I have found Liberal Tariff Reformers; Conservative Free-Traders; Unionists who mistrusted the judgment of Mr. Chamberlain; Nonconformists who had their doubts about the Education Bill; Anglicans who believed in Welsh Disestablishment; Imperialists who were not worrying about Germany; temperance people who admitted the injustice and lack of wisdom in too drastic legislation against the Trade; pluralists who were willing to give up some of their votes; but of men who could see two sides to the Budget issue—none crossed my path!

Out of this confusion of press and people I have endeavored to find what the Budget really intends to accomplish, and why this Budget in particular should have aroused such a storm that the Lords thought they might safely reject it.

The Chancellor of the Exchequer is required every year to make an estimate of the total anticipated national expenditure for the coming year and the total anticipated revenue to meet that expenditure. If the expenditure is likely to exceed the revenue, it is his duty to present to Parliament a scheme for raising the amount needed to meet the expected deficiency. To this end he can propose the increase or revision of existing taxation and the imposition of new taxes. His proposals are then presented to the Finance Committee of the Commons. By ratifying the Finance Bill the Commons approve the estimates and the taxation schemes of the Chancellor, and the new taxes become law. Technically speaking, the Chancellor, when he presents the Budget, is asking in the name of the Crown for the money needed to carry on His Majesty's government for a year; and the Commons, in approving the Finance Bill, are making their annual grant to the Crown.

It will easily be seen that the discussion of a Budget can be carried farther than the mere advisability or constitutionality of new or revised taxation, embodied in the year's Finance Bill. The Government is open to attack upon the question of the estimates which it has made. Is the Chancellor justified in his estimate of probable revenue from existing taxation? If there is a falling off, has it not been due to a faulty finance bill of the year before, and is not the ministry in office responsible for the lack of revenue to meet deficiencies? Or, if the deficiency is on account of new expenditures, are they justifiable? Will the new or increased taxation bring in additional revenue the amount expected? Is the Sinking Fund being impaired?

Mr. Lloyd-George has proved himself in the past a man of excellent judgment in the matter of estimates. The results of the last fiscal year, so well foreseen, make impossible criticism of the Chancellor's estimates of anticipated revenue. A falling off in revenue of some £3,000,000, largely owing to decreased consumption of alcoholic liquors, is admitted on both sides. For some time after the Budget's appearance the Opposition maintained that this amount and the additional revenue needed for justifiable new expendi-

tures could have been partly met by the reimposition of taxes which the Government has taken off or lowered since coming into office. These taxes were: Coal export duty of one shilling per ton removed; penny taken from tea duty; sugar duty lowered one-half; registration fee of one shilling per quarter upon imported grains and flours remitted. Now that the General Election is imminent, they no longer avail themselves of this argument, fearing to accept the direct sponsorship of food taxes. In the light of the latest revised estimates even the restoration of such taxation would not meet the item required for Old Age Pensions alone in the new Budget.

The deficiency is estimated at £18,000,000, divided as follows:

Old age pensions	£8,750,000
Naval increase	3,000,000
Minor departmental increases	1,500,000
Road improvement	600,000
Establishment of labor exchanges	100,000
Development grant	200,000
Land valuation	250,000
Grant from land taxes to local authorities	300,000

Almost half the deficiency, it will be seen, is due to the Old Age Pensions Act, an innovation of the Government. It is an open secret that this measure, of dubious advantage when adopted, is most distasteful to Conservatives and Unionists, and has become so to many Liberals. But, so immensely popular is it with the electorate that the Opposition parties do not dare to say a word against it, nor could the Liberals now repudiate it if they wanted to. So it is accepted without question by every one in politics, independent of his party affiliation. To a foreigner, the Old Age Pensions Act seems like a millstone about the neck of the Chancellor of the Exchequer, but none has the courage to reproach him for having placed it there himself! This measure is the main cause of the necessary increase in taxation, and yet the question of its wisdom can have no part in the impending General Election.

The large naval increase will, in all probability, become a permanent Budget estimate, just like the old age pensions. The policy of keeping the British navy ahead of that of every other nation is popular with the rank and file of the electorate. No political issue is to be made out of this estimate.

To allow £1,500,000 for an increase all along the line in other departmental expenses meets with universal approval. The development grant and the establishment of labor exchanges, at election time, must pass muster without a word.

The only avoidable expenditures in the deficiency seem to be the £600,000 for road improvement and the £550,000 for land valuation and grant to local authorities. As these two items, however, are contingent upon new taxes introduced in the Budget, their criticism is included in that of the taxes.

It is clear then that almost £17,000,000 of the £18,000,000 is of such a nature that the Opposition cannot, or at least does not think it expedient to, contest the wisdom of the governmental estimates. This eliminates from the General Election a number of possible points of attack against the Government. The brunt of criticism, therefore, must be confined to the measures proposed in the Budget for raising the revenue to meet the deficiency. The Budget issue in its broadest sense is the advisability of the new taxes embodied in the Finance bill of 1909. Now we shall see how it is brought within a much narrower circle.

Here is the estimate of the additional yield provided for by new or increased taxation:

Death duty, estate duty, legacy and succession duty	£4,150,000
Liquor licenses	2,100,000
Incomes and super-tax	3,200,000
Tobacco duty	1,900,000
Stamp duties	900,000
Spirit duty	600,000
Motor cars, motor cycles and petrol	600,000
Land values, reversion of leases, and mining royalties	600,000

A total of £14,250,000 is to be met by these taxes. The balance of the deficiency will be provided for by a reduction of £3,500,000 in the amount usually deposited every year in the Sinking Fund.

The only innovations in the Budget are the taxes on land values, etc., and on petrol, involving hardly £1,000,000 in the estimates. The additional yield is in the increase of existing taxation. Particular interests are opposed to the increased taxation. The liquor trade declares its additional burdens are more than can be borne, and will end in an enormous reduction of revenue. Protest against other

increased duties is merely such as generally meets a Budget, and does not have great political importance because the increases are not such as affect the bulk of the electorate. The most bitter and widespread opposition to the Budget, the real ground upon which the general election is to be fought, is reduced to the £600,000 which the Chancellor of the Exchequer asks to be provided by a tax on land values, reversion of leases and mining royalties. There is no question but that the House of Lords would have passed the Budget had it not contained these obnoxious provisions. Indeed I believe the reversion of leases and mining royalty taxes could have passed the Upper House. As far as the Budget of 1909 goes, the real struggle is over an amount hardly in excess of £400,000.

The "nigger in the wood pile" is the land taxes. The money accruing from them this year is insignificant. Mr. Lloyd-George could have found his millions to meet this year's deficiency without them. Those upon whom they will fall can pay them. It is as absurd to think that the Budget of 1909 would seriously embarrass a landed proprietor as it is to suppose the tobacco tax would deprive a man of his after-dinner cigar. Every time I talk to a British elector on the Budget, the boiled-down result of the conversation is either "I believe in land taxes" or "I think the land taxes are wrong." We may have discussed the danger to revenue of imposing an additional burden upon beer and spirits, the justice or injustice of making automobilists pay for road improvements and the discrimination against the gasoline-driven cars, the grading of death and inheritance duties, the circumventions of income taxes, but we always end by saying, "Well, now, about those land taxes."

From the first the Conservatives have seen in the Budget a revolutionary, socialistic measure which must be opposed on principle. From the first the Unionists have scented the initiation of a scheme of taxation small and modest now, but bound to increase when it has tasted blood, which would offer a sufficient substitute for their pet protection policy. Uniting in desperation and fear, they have persuaded the Lords to meet one revolutionary measure with another, and now the Budget is before the people. It is not my purpose to discuss the justice or wisdom of the land taxes. There is much to be said on both sides, and it is hard for an American to understand and appreciate the Conservative standpoint. I frankly confess that I cannot, and yet I admit that they have reason, for in their ranks are thousands whose patriotism and unselfishness are beyond question. From the practical point of view, they seem to have no case, if they are at the same time Conservatives and free-traders, as very many of them are. If you ask them frankly where they expect to find the revenue, with the burden of old age pensions and increased naval expenditure, unless some entirely new taxation is evolved, they cannot answer you.

The Liberals may lose the coming election. For the liquor trade is fighting for life, and the landed interests are all powerful and have ways of influencing votes not unlike those we have the misfortune to be familiar with in America. Then, too, there is a feeling among thinking men that the Government has been hasty and has tried too much at one time. Mr. Winston Churchill and Mr. Ure have alienated friendly elements of the electorate. The hatred of the women's suffragists is a factor not to be despised. It must be remembered, too, that the man who has most at stake fights best, and that there is no incentive to battle quite so strong as a threatened raid on a man's pocketbook.

I am willing to say quite positively, however, that the bulk of the British electorate is in favor of Mr. Lloyd-George's Budget in its entirety. England seems to be drifting inevitably toward land taxation. The people have to choose between the land, the food, and the imports. Everything else is almost "up to the hilt" now. A Conservative and Unionist Cabinet cannot stay long in power, unless they devise temporary expedients and refuse to meet the issue of a constructive and permanent financial policy. Mr. Lloyd-George may not be a great statesman, or even a skilful politician, but he has pointed out the necessary, even if unpalatable, taxation policy for England.

THE NEW PENNSYLVANIA RAILROAD STATION IN NEW YORK.

Rapid Transit in New York City

BY HENRY IRVING DODGE

IT is said that William H. Vanderbilt, when asked to subscribe to the building of the elevated railroad in New York, answered, "Nobody will go upstairs to take a train."

With what marked accuracy the prophecy of that far-seeing man—if, indeed, he really made any—is fulfilled, is shown by the fact that more than 800,000 persons mount stairs to take trains in this city every day. And as many more go "down stairs" to take trains. Nor does the subway seem appreciably to have cut into the business of the elevated. To the casual observer, the latter appears to be doing no smaller a traffic than before the existence of its rival. During rush hours the elevated trains are run with such frequency as almost to tread on one another's heels—and packed at that—an endless chain, marked at regular intervals by the colored headlights. The wonder then is how the hordes who habitually take the subway used to travel before that system went into operation. Probably many of the patrons of the elevated road were diverted from that route, but nowhere near enough to account for the number that travel to and fro on the underground. Nor does the enormous growth of the city adequately explain the vast amount of subway patronage. To be sure, the subway penetrates the remote fastnesses of the Bronx, catching the ebb and flood of daily travel from that quarter. But the people up there used to go back and forth before this route was built. Also the facilities for surface travel have been greatly developed and extended. Be this as it may, the significant fact remains that the underground road is today preparing to extend its platforms to accommodate ten-car instead of eight-car trains.

At first there was much speculation as to the effect of subterranean travel on the health of the passengers. People complained of disagreeable odors, stuffiness, and the like, and even today individual patrons may be found who do not enthusiastically endorse existing conditions. But the New Yorker is adaptable. He

had his growl, and then resigned himself to the inevitable. But in all fairness, one must admit that the company did not turn a deaf ear to complaints. Concessions were made in the matter of ventilation. Where available, sidewalks were slatted to let in the air, and rules against carrying lighted cigars, pipes or the unspeakable cigaret were effectively carried out.

To facilitate the loading and unloading of trains and to protect passengers, special policemen, paid by the company and reporting to the Police Commissioner, are assigned for duty at points of greatest congestion. But tho these austere and uniformed personages rarely do more than walk about, there is no question that the moral influence of their presence is effective. Still, a policeman is like a gun, seldom needed, but when needed—needed badly.

When the building of the subway was contemplated, it was estimated that this road would carry some 400,000 passengers per day. But so kindly did the people take to this method of travel, that within a few months after its completion it was running pretty close up to the original estimate of business. In other words, it carried during the year included between January 1 and December 31, 1905, no fewer than 116,209,313 passengers—roughly speaking, 318,000 per day. During the following year 149,778,370 persons were transported by this route, while in 1907 182,559,990 patrons availed of its services. In 1908, the road carried 220,991,212 passengers, a daily average of 605,455, or 50 per cent. over and above the dreams of the prophets.

On one day, during the Hudson-Fulton celebration, more than a million persons traveled one way or another by this route, but this can hardly be considered a criterion, either of capacity or facility, since conditions were abnormal. One ordinary business day—November 26 of the present year—866,554 passengers traveled by the subway, while those transported under similar conditions for one day on the elevated system numbered 863,921. However, as a rule, the subterranean route carries from 15,000 to 20,000 passengers fewer per day than the elevated; but it is of greatly inferior mileage. The fact that the subway gives its rival so keen a contest and allows it so small a margin of superiority of absolute business will be appreciated when one considers that the elevated system has altogether over 118 miles of single track.

The subway might be measured thus: The distance from the bridge to Ninety-sixth street being covered by four tracks may be resolved into two double track roads, and so the Broadway and West Farms routes may be considered independently. The distance from the bridge to the Bronx terminal is 13.46 miles, while from the bridge along the west prong of the fork to 242d street is 14.17 miles. The distance from Atlantic avenue, Brooklyn, covered by double track, to Brooklyn Bridge, Manhattan, is 3.25 miles—a total of 30.78 miles of double track. Some three track portions, sidings and turnouts bring the total single track mileage of the subway up to 82 miles. About 16 miles of this is built in the open on a regular elevated structure.

This makes particularly interesting the opinion of Mr. Bion J. Arnold, special consulting engineer of the Public Service Commission. Mr. Arnold says that a subway under New York conditions costs approximately three times as much to build as the present elevated road, and should handle considerably more traffic than one of the latter of corresponding length. It should, therefore, be apparent that subways be constructed only where the traffic be of sufficient density to justify so expensive a type of road.

During the first fiscal year after the beginning of operation the car mileage (by a car mile is meant one car moving one mile) of the subway was 31,931,073. The following year this increased to 37,184,940, and for the fiscal year ending June 30, 1908, it was 44,005,213. The earnings for the fiscal year of 1906 from transportation and other sources were $7,052,012; for 1907, $8,506,923.61; for 1908, $10,253,337.37. The total operating expenses for these years were $2,978,109.35, $3,883,369.68, $4,423,313.27, respectively, the net earnings being $4,073,902.65, $4,623,553.93, $5,830,024.10 for the same years.

It is amazing that a transportation company can carry a passenger seventeen or more miles for five cents. Respecting

this, Mr. Arnold claims that each passenger should pay at the rate of a cent a mile in order to make a comprehensive subway system yield a fair return on the

only possible way to offset losses due to passengers riding from ten to fifteen miles for five cents," says Mr. Arnold, "is to furnish a local service which will

THE WAITING ROOM IN THE NEW PENNSYLVANIA STATION.

investment. Passengers carried more than five miles and contributing less than one cent a mile each must be balanced by others traveling less than that distance and thus paying more per mile. "The

attract a greater number of passengers who will ride comparatively short distances on a five cent fare. This short haul business will not be an advantage, however, unless it can be handled in short

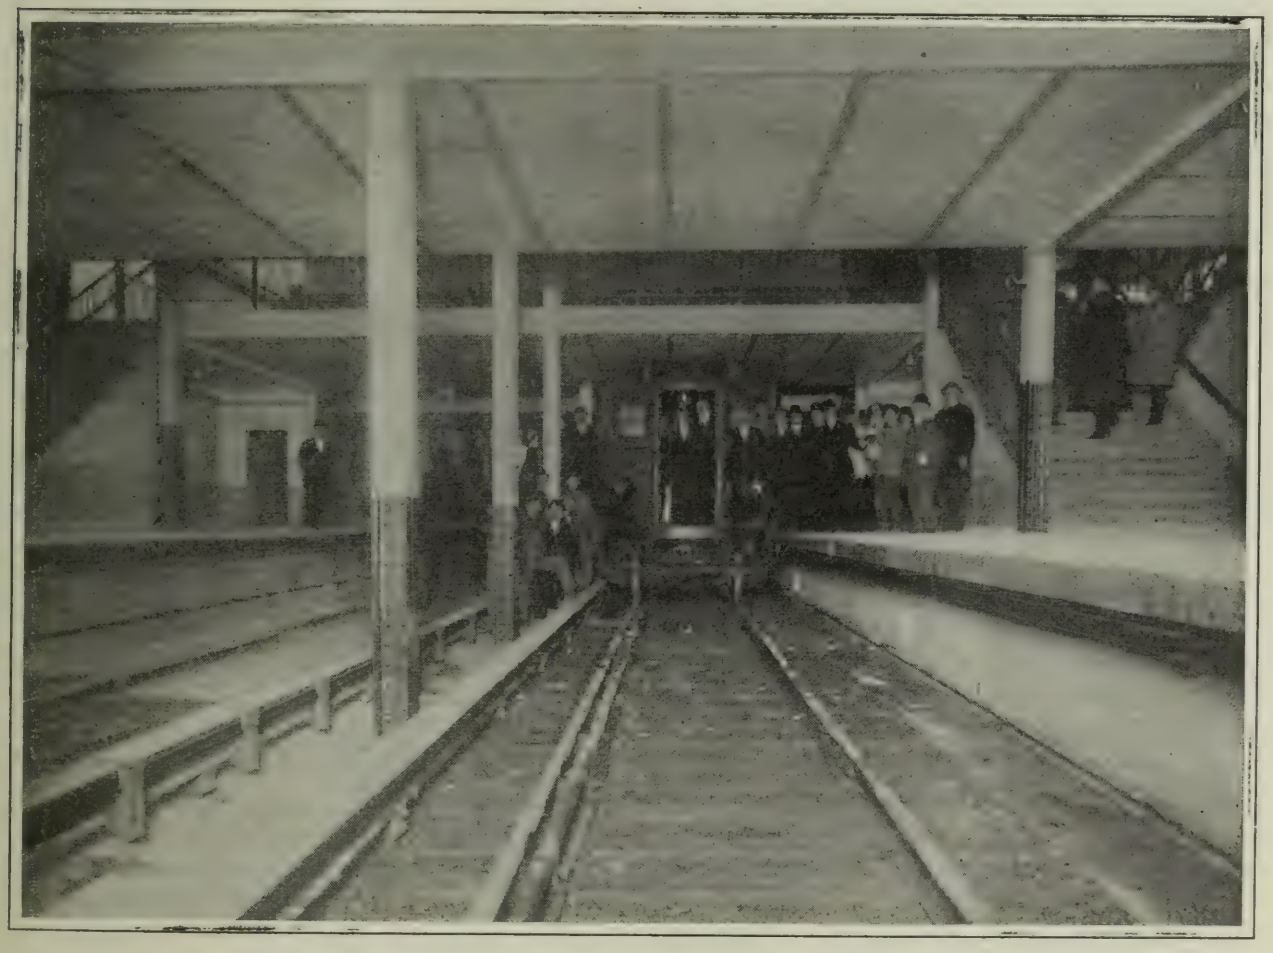
haul cars, can be accommodated by cars which otherwise would run empty, or can be handled by means of moving platforms at a lower cost per passenger than by train operation. It is a matter of every day observation that there is a large amount of short haul passenger business available in the down town district of Manhattan which is not at present accommodated by the surface or elevated systems, and it is this kind of traffic which would produce relatively the largest net returns for a subway system."

That unlooked-for business far exceeding the original estimate is coming to the subway is manifested by the action of the company in extending its facilities for handling traffic. The extended platforms will accommodate two more cars. These cars are some fifty-one feet long by eight feet seven inches wide, and seat fifty-two passengers each. It is almost impossible during any hour of the twenty-four to ride from one end of the route to the other without being in a well-filled, if not crowded, car during some period of the journey. So great is the traffic that altho the company runs some thirty-four express and as many local trains per hour during the rush time, it is no uncommon thing to see, besides two lines of strap-hangers, dangling from above and twisting and bobbing and knocking their knees against those of the sitters, and occasionally tumbling into their laps, an interior line from one end of the car to the other. One often sees twenty-four persons crowded into the two vestibules, and eighteen riding in one vestibule, while uncommon, is not extraordinary. As a matter of fact, a thousand persons to an eight-car train during the busiest hour of the day is no uncommon thing.

Surely there must be some exceptional advantage to outweigh the inconvenience of traveling thru a tube, packed like herring, and with no diverting landscape.

NEW PENNSYLVANIA ELECTRIC ENGINES FOR THE TUNNEL SYSTEM.

The unfortunate thing is, Manhattan Island is so fashioned that people have to live at remote distances from their places of business. And when one considers that persons may travel from Atlantic avenue, Brooklyn, away across Manhattan Island and into the fastnesses of the Bronx—some seventeen or eighteen miles—in fifty minutes and for five cents, he must admit that there is little to growl at. But he does growl, for all of that!



Notwithstanding the strenuous treatment to which passengers are subjected, to the strain of standing for a long time, and to the comparative lack of ventilation, almost no sickness results from traveling in the subway. As a matter of fact, standing up may be beneficial to many persons who have to remain seated during the day, and swinging around and twisting on the strap is the only exercise many of them get.

The engineers of the road are constantly studying up improvements in the handling of passengers. There is no

limit to the capacity of the roadbed. But, obviously, trains cannot be run at much shorter intervals. Therefore, the length of the train is to be increased. But with a longer train comes the danger of even greater congestion. To obviate this, side door cars have been introduced to some extent. It is believed by adopting this method of egress, the time devoted to getting a train into and out of the station may be reduced to thirty seconds.

At present the traveling public doesn't quite know how to avail itself of this particular kind of side door, and unfortunately there aren't enough policemen at the congested points to regulate the use of them. It is natural for persons to dash for any opening they see in a subway train, and this they do. Therefore, it is probable that once these doors are applied to all cars, the public will require some little educating before their beneficent efficiency will have been fully attained.

The great McAdoo system of tunnels connecting New York and New Jersey is apparently being used by numbers more than sufficient to justify its construction. That portion of the system which runs from Hoboken to Twenty-third street, New York, began operating in February, 1908; the other portion, running from Jersey City to the Hudson-Terminal, July, 1909. About ten miles of tracks are now in use by this system. There are four single tubes under the river. On the Jersey side is a transverse tunnel extending over a mile along shore beneath the tracks of the Pennsylvania, Erie and Lackawanna railroads, with entrances to each station. In Manhattan, the company is pushing its tunnel up Sixth avenue, and will presently cut under the corner of Bryant Park and connect with the subway at the Grand Central depot. In New Jersey, the system is extending its lines, and within a year will be running trains to and from Newark.

A STATION IN THE NEW YORK SUBWAY.

New York City.

Mexico Judged by Its Friends

BY W. J. GHENT

[Mr. Ghent is a student of Mexican conditions. He shows in this article that even from the statements of the eulogists and friends of Mexico the situation is serious. Mr. Ghent has been a frequent contributor to THE INDEPENDENT. Last spring he visited the Panama Canal with an editor of THE INDEPENDENT to collaborate a report to our readers on the conditions there.—EDITOR.]

NOW that several newspapers and at least one prominent magazine have turned their guns on our sister republic to the south, it is well to turn back and take note of some of the golden tributes that have been paid both to the nation and to its ruler. Diaz has so long been enthroned in American minds as the one benevolent autocrat of modern times, and the people over whom he rules have so long been considered fortunate and happy, that these recent allegations of tyranny, brutality and expropriation come to us as a great shock. Let us pause for a time in giving credence to these strange tales, and let us examine again some of the testimony to the glory and moral greatness of Diaz and to the blissful condition of his people.

Mr. Frederick Palmer, in a series of four articles published in the New York *Times* February 22 to 25, 1909, makes it plain that Mexico is a modern Happy Valley, and that all its blessings are due to Diaz. Mr. James Creelman, in an article in *Pearson's Magazine* for March, 1908, puts to shame Mr. Palmer's efforts at idealizing both ruler and nation. Mr. E. S. Smith, in the *Bankers' Magazine* for November, 1909, in a well-sustained flight of rhetorical "tall talk," strikes a note somewhat similar to Mr. Creelman's. Mr. Elisha Hollingsworth Talbot, in *Moody's Magazine* for December, 1909, is unrestrained in his praise, and the truth of his statements is cordially attested by no less a person than Señor C. Romero, Consul-General of Mexico in New York City. Mr. Franklin Johnston, in the *American Exporter* for December, 1909, takes it upon himself to refute some of the statements made in the *American Magazine,* citing for authority the testimony of an unidentified "American business man in Yucatan." Finally, a special correspondent of the New York *Times,* whose letter from Mexico City is published in the issue of that newspaper for December 5, 1909, adds his valuable contribution to the volume of testimony. It may have been noticed that for years there has been no lack of favorable comment upon Mexico and its ruler—just as there is no lack of like comment upon Russia and Nicholas II. The articles here mentioned are merely casual instances.

The greatness and goodness of Diaz is a matter rather insistently thrust upon the reader by these writers. To Mr. Creelman he is the "hero of the Americas," the "foremost figure of the American hemisphere." To Mr. Palmer he is "one of the heroic figures—perhaps the most Olympian figure—of modern history." He is the "possessor of a warm heart, a magnanimous and forgiving disposition, a soul as brave as ever inhabited human body, and [one] who fears only his God," according to Mr. Talbot. His "constructive statesmanship and tenderness of heart recall these same traits in our Lincoln," says Mr. Smith. Mr. Johnston somewhat more carefully measures his words. With the others, for the most part, panegyric assumes its most unrestrained form.

Unfortunately, the details given do not invariably warrant, to the unbiased reader, the conclusions of the panegyrists. Very often, indeed, these details suggest a directly contrary estimate of Diaz's character and of the conditions of the Mexican people. Then, too, in many matters the witnesses do not agree. Sometimes the witness does not agree with himself, and often he disagrees with his fellows to a ludicrous degree. Moreover, the assertions are frequently not in accord with well-authenticated, or, at least, accepted, data. There are readily accessible official figures regarding certain social conditions in Mexico with

which some of these writers seem unacquainted. It will be well to look over the testimony in order to reach independent conclusions.

For instance, Mr. Talbot, in glowing phrase, ascribes magnanimity and a forgiving spirit to the Mexican ruler. Mr. Palmer also gives an instance of Diaz's magnanimity. But Mr. Palmer also has these words:

"I heard an old resident estimate that the execution of 30,000 men stood to Diaz's account. Such is his power that a score of malcontents may be shot without anybody except thier neighbors being the wiser."

Indeed, a free and generous amount of killing by Diaz of his enemies is admitted by several of the eulogists. It was necessary, they declare, for the glory and good of Mexico. Mr. Creelman permits Diaz to speak for himself:

"'We were harsh. Sometimes we were harsh to the point of cruelty. But it was all necessary then to the life and progress of the nation. If there was cruelty, results have justified it. . . . It was better that a little blood should be shed that much blood should be saved. The blood that was shed was bad blood; the blood that was saved was good blood.'"

Mr. Smith is less direct, and contents himself with this philosophical observation:

"Civilized governments have often found it absolutely necessary to shed the blood of bad men for the preservation of the blood and life of good men, and to fully guarantee the safety of life, limb and employment and home in the national life, and to promote international peace."

Mr. Smith is less specific in this matter as well as in a number of others. He considers it "unjust and unreasonable" that "specific denials should be called forth from Mexico's friends," and accordingly indulges in rhetorical generalizations. But Mr. Johnston has something to the point. He is not so certain about the prevalence of democracy and political liberty as is Mr. Talbot. He writes:

"What possible comprehension could most of them [the peons] have of what a democratic form of government means? . . . The lower class in Mexico—the peons—have not fostered the democratic idea and have not the slightest idea of what it means."

Mr. Creelman, as usual, permits Diaz to say the word for himself:

"'We preserved the republican and democratic form of government. We defended the theory and kept it intact. Yet we adopted a patriarchal policy in the actual administration of the nation's affairs, guiding and restraining popular tendencies. . . . I have waited patiently for the day when the people of the Mexican Republic would be prepared to choose and change their government at every election without danger of armed revolutions and without injury to the national credit or interference with national progress. I believe that day has come. . . . It is true there is no opposition party. I have so many friends in the republic that my enemies seem unwilling to identify themselves with so small a minority.'"

So the benevolent Diaz seems to have won a unanimity of support which not even the great Washington nor the amiable Monroe could win. But again the witnesses do not agree. Mr. Palmer has another explanation of the lack of opposition to Diaz:

"One seeking an office, a favorable judgment in the courts, the overruling of the action of any Governor of a State, a privilege in the development of resources, has learned to go to Diaz for what he wants. . . . Oppose him, and your political career is finished. Serve him, and he may make you a Governor."

The *Times* special correspondent above referred to has also a few illuminating sentences. Gen. Bernardo Reyes, it appears, had notions of succeeding Diaz in the presidency. Diaz apparently had different notions. Now

"General Reyes has been exiled. There is no other word for it. Ostensibly he has gone abroad 'to study foreign military methods.' . . . All of which is absurd and merely a subterfuge to save the pride of one who was a war comrade of Porfirio Diaz."

There follows some comment upon Gen. Heriberto Barron, now in New York City, and his presumed ambitions toward the succession. "This is the man," writes the correspondent, "who has announced his candidacy for the Presidency of the Mexican Republic from the safe vantage of a New York hotel." This is much as tho Mr. Bryan or Mr. Debs should feel impelled to announce his candidacy for the American Presidency from the safe vantage of a hotel in Toronto or in London. No doubt the matter of political liberty in the two nations is to be judged by different standards.

The increasing barbarity of political persecutions, the imprisonment of opposition editors and of members of opposition clubs is asserted by all the critics of Mexico, and a multitude of specific instances are given. Mr. Talbot, however,

knows better. He declares that there is no political prison and there are no political prisoners in Mexico, and that the dungeon of San Juan de Ulua, at Vera Cruz, contains only long-term criminals:

"It can be safely asserted that President Diaz has never sent or caused to be sent to that famous retreat for evildoers a single editor for 'criticising the policy of the administration' or 'refusing to publish' any matter of any kind, at any time. The press of Mexico is as free to criticise in a civilized manner any 'policy' or any public official, or to refuse to publish sentiments it may not approve, as is the press of any other self-respecting and self-protecting country."

Mr. Johnston, tho he glorifies ruler and nation alike, has no illusions about the freedom of the press:

"It is true that Diaz has subsidized newspapers and controls practically all sources of news—that is part of his business, and is of vital importance in maintaining peace at home and credit abroad. Means of this sort will have outlived their usefulness when the country is on a still firmer basis."

Mr. Creelman and Mr. Smith disdain to notice so trifling a matter as political persecution and press censorship. But Mr. Palmer, with easy nonchalance, bears much the same testimony as does Mr. Johnston:

"There is no censorship of the press; but criticise Diaz vitally and the editor will surely feel his power, directly or indirectly. He is 'kind' to the press with subsidies. One of the two American papers published in the capital has its monthly allowance from the Government—the only Government subsidized American paper in the world."

Yet Diaz, so Mr. Palmer declares, is in many respects an "easy boss." It would seem that all he demands is obedience. It can hardly be suspected that the Czar of all the Russias or the Ameer of Afghanistan demands less than this. Whether you are a member of Congress, or a State Governor, or a Supreme Court Judge, you have only to obey and you will be secure and happy. There is no trouble for any others than those who believe in exercising an individual mind in regard to the reform of social and industrial conditions or an individual preference for candidates for political office. Such persons are the bane of Diaz's contentment and security. Mr. Talbot is very strong on this point:

"The only unhappy persons in Mexico—and they are comparatively few in numbers—are the criminal classes and the socialist or restless element composed of disappointed office seekers, plotters against orderly government, enemies of progress, and persons who are jealous of the foreign capital, influence and brains that are rendering such important aid in the development of the country."

Mr. Johnston has little to say of killing as a specific mode of achieving order, but he frankly acknowledges the employment of the iron hand:

"Neither Diaz nor any other man could have forced Mexico ahead as he has without using the sternest methods, without using spies (even the United States has its secret service) and prisons to crush the demagog and the agitator whenever they threatened to disturb the peace and prosperity of the country."

Mr. Palmer has a number of further references to Diaz's attitude on the matter of killing:

"On one occasion, when he [Diaz] was asked by wire what disposition to make of a certain revolutionist who had been captured, his prompt, unexpurgated answer, I am told, was: 'Kill him while he is hot.' . . . Probably Don Porfirio has had to kill relatively more of the people of his own tribe, the fighting, vigorous, bartering, bathing Oaxacans of the south, than of any other."

But none of the panegyrists, curiously enough, makes any mention of the wholesale killings at Juchitan (1878), about Papantla (1886), at Tomochic and at Mexico City (1892), or at Monterey (1903). They might have offered some word of explanation in order to make these episodes more fittingly accord with the character of a benevolent ruler. More or less wisely, they have chosen silence.

One of the gravest charges of the critics of Mexico is the existence in that land of a particularly harsh and brutal form of peonage. Are the charges in any measure true? The panegyrists are divided in opinion. Mr. Palmer admits the impeachment:

"By batches they [the Yaquis] have been sent to what is undeniably practical slavery in Yucatan, where they die of homesickness and the heat in a few years. No doubt some members of the Government have made a good profit out of this traffic, which is now to be stopped, as the few remaining Yaquis are needed for labor in their own country."

Mr. Johnston, quoting from the "American business man," admits the existence of peonage in Yucatan. But it is a mild system, he says, and the peons do not wish a change. Peonage, also, he admits, exists in other parts of Mexico,

It is conceded that the Yucatan peons are beaten, that their liberty is curtailed in various ways, that they are not permitted to marry the peons of other plantations, and that at the door of each of the quarters of the unmarried men is stationed a guard "armed with a club, a sword and a pistol." But the peon is satisfied; he has known nothing else, and he wants nothing else. He would not change the existing order.

Mr. Creelman sees none of the darker things, and apparently has heard nothing about peonage. But Mr. Talbot has. Only he declares that it has been abolished:

"The only slavery known in Mexico since the conquest has been the slavery of peonage, and to Diaz belongs the credit for its abolition. Now, every Mexican, if he so wills, is master of himself and of his services. . . . [Diaz is] as tender and just in his treatment of the millions of peons, whom he considers to be the nation's wards, as Lincoln was of the millions of negro slaves to whom he gave freedom."

Mr. Smith goes him one better:

"The laboring classes of the great farms are a sympathetic, contented, patient, happy, industrious and obedient people."

Of the population of Mexico "two-thirds are peons," says Mr. Talbot. His statistics are wofully at fault, and the term "peons," which he uses, does not give the meaning he intends. Of the 2,890,991 persons engaged in agriculture in 1895, according to Dr. Walter E. Weyl, in the *Bulletin of Labor* for January, 1902, 2,555,316 were farm hands. Only a part of these were peons in the real sense. But the total population of Mexico in 1900 was about 15,000,000, so that the proportion of peons, whether according to the scientific or the popular meaning, was nothing like what Mr. Talbot declares. However that may be, it is Mr. Talbot's declaration that the peons have been the especial wards of Diaz:

"If teaching them to read and write, to become better men and women, to make their labor decently productive, to strive for a higher plane of existence and to deserve the rights and privileges of citizenship is to enslave them, then the blame is upon them. He has checked them in their downward course of centuries; has turned their faces toward the star of a higher destiny; and they are now steadily and surely advancing."

It would be interesting to know how many of the Mexican people can read or write in this year 1909. Terry's "Mexico," a friendly work just published, says that more than 8,000,000 who have reached their majority are illiterate. Dr. Weyl, quoting from the census of 1895, gives 1,782,822 as the number who can both read and write and 323,336 as the number who can read only. The percentage of illiterates to the whole population is given as 79.2. It is really larger than this, Dr. Weyl surmises, since the thousands of natives who evade the census are probably all illiterate. There is no doubt that education has been advanced in Mexico; for that matter there is no country touched by civilization that cannot show an advance in literacy these last twenty years, and the increase in students in Mexican schools from 544,000 in 1890 to 828,078 in 1898 is indeed a fair showing. But where Mr. Talbot gets the figures or the facts for his sweeping statements no one can guess.

The critics of Mexico assert that civil and political liberty does not exist in that land; that elections are a farce, that opposition to the administration is attended with the utmost danger, that prosecutions of political malcontents are savage and relentless. What do the defenders say? Mr. Talbot rises to a lofty height of indignant denial:

"Every Mexican . . . has the constitutional right to go to the polls and vote his principles and his preferences, and is more certain of non-interference and the protection due to every decent citizen than are our own people in many parts of the United States."

We have already seen how Mr. Johnston exults in the use of prisons "to crush the demagog and the agitator whenever they threatened the peace and prosperity of the country." Mr. Smith also says hard words about the "disgruntled office-seekers" who so readily jeopard the tranquillity of Mexico. Thus he describes them:

"Government destroyers, who from time to time are leaving Mexico for refuge in the United States, where they take shelter under the guise of being political refugees, to plan revolution against Mexico, and with their presence poison American society, stir up the latent forces of anarchy among our own evil-minded, and jeopard international tranquillity."

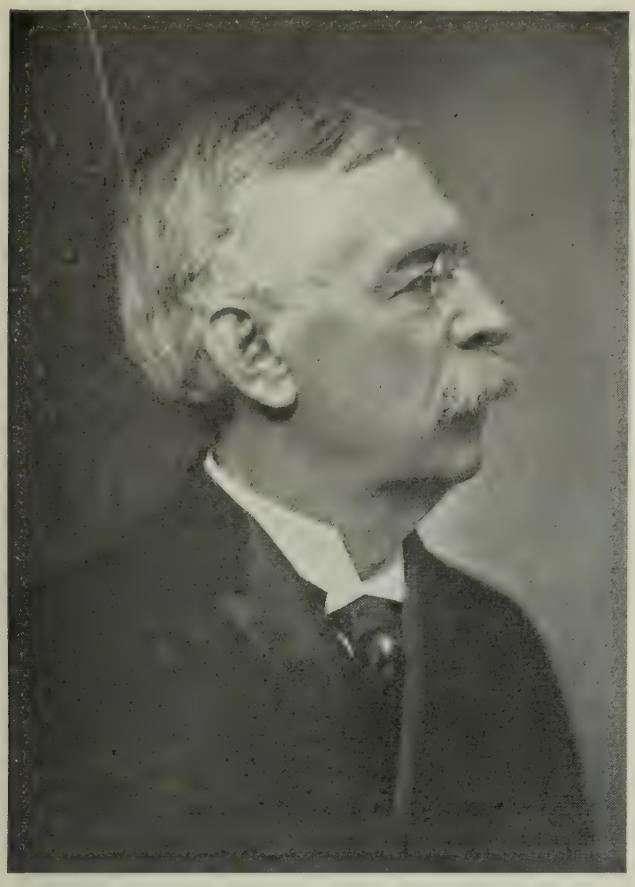
As a matter of fact, Mexican political refugees find little "shelter" north of the Rio Grande or the Arizona line. Any one familiar with the history of the mat-

ter knows that. thru the conspicuous zeal of American officials, from dog-catcher up to Circuit Court Judge, all along the border, these refugees are hounded from place to place, are arrested and almost invariably convicted and sentenced to imprisonment in our penitentiaries. The cases of Magon, Rivera, Villarreal, Araujo, Espinosa, Sarabia, Guerra and others are too fresh in the minds of well-informed men to enable them to listen patiently to any talk of a refugee finding "shelter" on this side the line. From all the information available, it would seem that the Mexican who has independent notions about politics and society, and who chooses to speak his opinions to another, has his choice of two alternatives: one, to remain in Mexico and take his chance of execution or of imprisonment in Belem or San Juan de Ulua, and the other, to come to the United States and serve for from one and one-half to two and one-half years in Yuma or Fort Leavenworth Penitentiary.

All the witnesses agree on one point: Agitation is hurtful to business. About $800,000,000 of American capital is invested in Mexico, and the continuance of large profits on this capital requires the maintenance of the existing régime and the absolute cessation of agitation and criticism. It is an argument curiously like that heard thruout America during the anti-slavery agitation. The "peculiar institution" of the South must not be disturbed out of regard for the sanctity of commercial profits. The slave is contented, and would not change his lot; liberty is freely accorded to all who can rightly use or appreciate it, and the real evil lies in a "disturbance of conditions" by unscrupulous agitators.

It was a good argument—from the standpoint of vested interests and the exploitation of the weak. But it appears that a majority of the American people were not convinced by it, and that after a time they concerned themselves about the matter at issue in a very forcible manner. It is an argument that is always reappearing, and is always prompted by the same motive—the material interests of the strong.

New York City.



Men We Are Watching

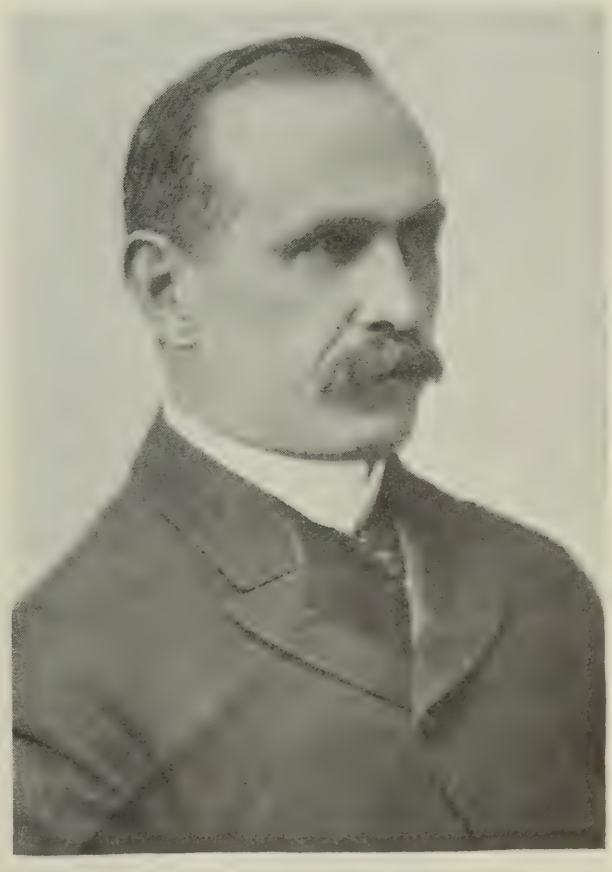
BY A WASHINGTON JOURNALIST

HERNANDO DE SOTO MONEY, UNITED STATES SENATOR.

BRIGHT among the intellectual brilliants of the United States Senate is the new minority leader, Money of Mississippi. He is a rare combination of the best qualities of the ideal Southern gentleman. He is highly cultured, a cultivated and entertaining conversationalist, cordially democratic and considerate. He is tall, with iron-gray hair and mustache effectively emphasizing a strong Southern face. He is a good man to lead if he had a tractable following, for he is absolutely fearless on the floor of the Senate, without being pugnacious. He is among the very few who understand the art of being severe and parliamentary at the same time. He has frequently demonstrated the fact—notably when he replied to Senator Root, during the tariff debate. He is only serving his second term in the Senate, barring the unexpired term of Senator George, which he completed, but the Democrats could not have selected a better parliamentarian for leader.

Previous to his appointment to the Senate Money served in the House fourteen years, to which he came as a lawyer, graduate of the University of Mississippi. Behind that he has a Civil War record. He was twenty-two when the war broke out and served in the Confederate army from the beginning till late in '64, when he was forced to retire, on account of serious trouble with his eyes. This trouble has been the bane—yet in a sense the blessing—of his life. For many years now the Senator has

Photograph by Clinedinst, Washington, D. C.
SENATOR MONEY, OF MISSISSIPPI,
Democratic Leader of the Senate.



been practically blind, seeing with but one eye and only large objects, indistinctly. It certainly serves to enhance the victory of his life, for a readier and more effective speaker, quicker and keener in debate and retort, better posted in volume and detail, could not easily be found. His speeches are not, however, thoroly satisfactory to strangers in the Senate galleries, especially if they come from the North or West, for the Senator retains a strong Creole tendency to soften, often to obliteration, many of his consonants, and to wander along thru words in a leisurely, drawling way which is not easily plain at a distance, especially as his voice is not strong at the best. But those who would have a treat of wisdom, wit and comprehensive English will always find it in the *Congressional Record* the next morning. In fact, he is among the few whose speeches are always worth reading afterward. Two years ago, wholly impromptu, he delivered one of the most complete and graphic dissertations extant on the anthropology of the color line. He was forced to his feet to help out a Democratic filibuster. A question from Senator Foraker set him onto the subject, with a result which will live in English literature.

Senator Money is over seventy and retires in 1911. It is a pity for Congress that he should quit, but for many years he has not known an hour without keen physical suffering. In the meantime, to make the most of him, the Democrats have elected him floor leader. In chatting of his proverbially difficult task he said: "My efforts will be chiefly toward securing harmony, irrespective of measures. In that I hope I may not wholly fail."

If there is any man on the Democratic side who can successfully harmonize, it is Money of Mississippi.

Edward Butterfield Vreeland, M. C., Vice-Chairman of the Monetary Commission.

The Vreeland-Aldrich currency bill a year ago brought into national prominence the name of the man who is now chairman of the House Committee on Banking and Currency, and vice-chairman, with Aldrich, of the Monetary

EDWARD B. VREELAND,
Vice-chairman of the Monetary Commission.

Commission. From that on he has been watched by many as a growing influence in the financial affairs of the country. Mr. Vreeland has served in the House since 1899. He came both as a lawyer and as president of the Salamanca Trust Company, with the combination of experience giving him the best practical preparation for a position on the Committee on Banking and Currency. The work was agreeable to him and he has devoted himself to it with an energy and earnestness which have caused him rapidly to develop along those lines. His colleagues realized it before he launched upon the troubled waters his temporary currency bill, which, after certain compromises, apparently carried the day, where the Aldrich bill had failed. They were not surprised when he was made chairman of the House committee and vice-chairman of the Monetary Commission now delving into every phase of finance, in the hope of evolving a perfect system of banking and currency. It is an important position, full of grave responsibility. Even the framers of the Constitution had not a more perplexing proposition and problem.

Vreeland is fifty-two years old, tall, strong and forceful in manner and method. He has a high forehead, with clear, keen eyes, dark hair and vigorous color, which gives one the impression of a younger man. He has not posed as a public speaker. His strength is as a student. He is a forceful and entertaining conversationalist, cordially willing to tell what he knows of a subject under discussion, and not afraid to say so when he does not know. He is not a debater, but a practical, earnest business man, always ready for any amount of hard work. He is a courteous listener and patient investigator, who has sometimes given the impression of being readier to follow than to lead. But they are mistaken who think that when Mr. Vreeland is satisfied and fully understands, he lacks the courage or quality to stand pat.

His great ambition is to serve effectively in eradicating the unscientific conditions of our present monetary system. To it he is devoting every energy. Of his personal progress in the matter he said to me the other day: "I am clear as to the errors existing, and perfectly satisfied as to what we must eventually attain, to avoid them and secure the best possible banking and currency system; but I do not feel at all sure, as yet, of the wisest way to reach the desired end."

Charles Dyer Norton, First Assistant Secretary of the Treasury.

When Secretary of the Treasury MacVeagh appointed Charles Dyer Norton, of Chicago, his first assistant secretary, a name was brought to the front which

CHARLES DYER NORTON,
First Assistant Secretary of the Treasury.

was comparatively little known at large, outside of Illinois; but the overwhelming commendations which forthwith emanated from the Lake City brought with them the conviction that a man of unusual qualities was booked for the most important post in the Secretary's office of the national treasury. The prospect thus far has been fully realized.

Norton was born in Wisconsin, in 1871. When he was sixteen he entered the employ of the Northwestern Mutual Life Insurance Company. Four years later he entered Amherst College, gradu-

ating in 1893. For over a year he was on the staff of *Scribner's Magazine,* but ill health forced him to take a year abroad, and returning, he went to Chicago, where he again entered the service of the Northwestern Life Insurance Company, becoming general manager for Illinois, a position which he held till he resigned to come to Washington as Assistant Secretary of the Treasury.

In the meantime, besides evincing most unusual administrative ability in building up the business of the insurance company, Norton had recognized Chicago and Chicago had recognized Norton. As president of the Merchants' Club he was the chief inspiration and vital energy of the signal reforms inaugurated by that organization, and when the club consolidated with the Commercial Club, he became chairman of the committee which worked out the scheme and plans for the beautification of the city and suburbs which are the glory of the community. He was the soul of several important measures of practical reform in which he came frequently in contact with Secretary MacVeagh, resulting in his selection for his present position. Chicago finds words of praise for Norton altogether inadequate, and the prophetic in Washington are equally enthusiastic concerning his future in the national treasury. He is only thirty-eight, which gives him an exceptional running start. He is tall, slender, active, full of energy, democratically cordial, quick, clean, well poised and keen. His face is smooth shaven, with a fine forehead topped with thick brown hair, close cut, giving the general impression of one who is ready for most anything at a moment's notice. He has good looks, running a close second to Bacon, whom he rather resembles, but, like the late Apollo of the State Department, now Ambassador to Paris, he evidently holds them subservient to business. He gave up a fifty-thousand-dollar income for his present $4,500 position, much as Bacon did. Like Bacon, he has evidently brought with him a fifty-thousand-dollar ability and old-fashioned patriotism, regardless of present perquisites. Like Bacon, he will be heard from higher up, before long.

His present duties make him the right hand of the Secretary. When I asked him what his ruling passion was in the new office, he replied instantly, "Efficiency and economy." He has been making good along those lines, but to know him is to realize that he has only laid the foundation as yet, and that he will be one worth watching as he climbs.

WASHINGTON, D. C.

Among the Shilluks of Southern Sudan

BY F. SCOTT THOMPSON

FOR eight days and a half from Khartum we traveled and tied up by turns on the White Nile. As we steamed slowly up the river man-eating crocodiles sunned themselves on the sands, while huge hippopotamuses raised their giant heads above the water to behold a monster too large for even them to attack.

It was hard for us to realize we were approaching very near to the Equator, as it was the season of rain and greenness, and the heat was not nearly so oppressive as in dry, burning Egypt, which we had just left. Still and slow flows the rising river that each year bears life and healing to "old hushed Egypt and her sands." Great clouds of brilliantly colored birds settle on the bushes along the bank in the evening, and during the night time wild beasts creep down to the water's edge to drink. A few squalid villages dot its shores. Occasional herds of humped cattle graze on the marshy plains reaching back from the higher banks of the river. Beyond these in the distance stretch great forests of mimosa trees, reminding one not of the old geography pictures of giant trees with great long snakes dangling from the branches

matted together above, but rather of poorly kept plum and apple orchards. It is a sort of a survival of the strongest and scrawniest. A more luxuriant forest growth is hindered by the fires the natives kindle in the autumn to burn off the dried grass that during the summer grows higher than a man's head. An effort is being made to protect the forests from these fires, and during the past year 65 miles of fire line 30 feet wide was cut at a cost of $9 per mile.

At last, 600 miles south of Khartum, we reach the Sobat River. About 3 miles up on its right bank, in the midst of a grove of Doleib palms, we find an American mission station where a minister, a doctor and a farmer are working together for the evangelization, education and general advancement of the aborigines.

Here, 2,000 miles up the Nile, in the heart of Africa, nine degrees from the Equator, we halt for a few weeks to visit the Shilluks and their kingdom.

Their villages are scattered irregularly along a line about a mile back from the White Nile bank, for a distance of 218 miles, or from Kaka on the north to Lake No on the south, also up the Sobat for a distance of 35 miles. In addition to these towns along the two rivers, they have eight groups of villages some twelve to twenty miles inland. The census of 1903 gives the number of inhabitants of the river villages as near forty thousand. Add to these a liberal number of the inland villages, and we find the Shilluks of today to be very few, as compared with the population spoken of by Dr. Schweinfurth, who, about 1870, wrote:

> "No known part of Africa, scarcely even the narrow valley of the Nile in Egypt, has a density of population so great; but a similar condition of circumstances so favorable to support a teeming population is perhaps without a parallel in the world. Everything which contributes to exuberance of life here finds a concentrated field—agriculture, pasturage, fishing and the chase."

Since the above was written, the ranks of the Shilluks have been greatly thinned. Many of their villages built of the most perishable material have entirely disappeared. The nefarious slave trade and the savage reigns of the Mahdi and Califa were the agencies that brought calamity and woe and broke the power of the tribe. The Shilluks bore perhaps more than their share of suffering during the time of the scourge, that in less than a score of years reduced the population of the Sudan to one-fourth, and the amount of possessions in flocks and herds to one-twenty-fourth. Many boys and girls, born during the rule of the Califa, bear names which show that their parents would have preferred they had not come to life. The Shilluks re-

WASHING CLOTHES IN THE OLD WAY.

WASHING CLOTHES IN THE NEW WAY.

A common way of resting among the Shilluks, is to put one foot against the opposite knee and then throw the weight of the body on a spear or some object held by the hand.

sisted the authority of the monster, but clubs and spears were no match for fire-arms, and thousands of these wretched creatures were carried away to Omdurmann. Hundreds perished by the way. Their ears were cut off as proof to the owner that his property had died on the road. Slatin Pasha, a captive in Omdurmann, tells of their entry into that city. Some were too wretched to even sell as slaves. "Wearily they dragged their emaciated bodies to the river bank, where they died, and, as nobody would take the trouble to bury them, the corpses were pushed into the river and swept away." This was little more than ten years ago.

As an eminent American millionaire passed thru the Shilluk territory a few months since, he wrote home to a friend: "If I were a young man, with a thousand to invest, I'd sail straight for the mouth of the Sobat." Indeed, this section does seem something like the land "Where every prospect pleases and only man is vile." The soil along the river bank is twelve feet thick and very fertile. The natives use little patches of it for their durra, known to us as Kaffir corn, and tobacco. Their name for the latter is a corruption of the old Spanish word, tobacco. They grow just enough of these to supply their needs, if the crop is good, and, in case of any failure, are left in a condition of want or famine. Ants, both white and black, are abundant. The white ones build great sand hills several feet in diameter and as much as three or four feet in hight. In these they store grass seed for the dry months of the winter. In times of hunger a Shilluk will occasionally go to the ant hills and scratch out the ants' food for himself. It is certainly a case of the sluggard going to the ant. The natives' greatest trial seems to be that the same fertility and rain which bring the durra bring also a luxuriant growth of weeds, which must be rooted up two or three times a year to save their grain. Men and women join together in the work. They sit on the ground, and dig out in front of them with rude little hoes. Two persons, by a work and rest arrangement, are just about able to keep one hoe and one pipe going.

The land back from the river is poorer, and far removed from water in the dry season. The fertility of this inland soil would be very materially increased if the land's own vegetable growth were allowed to mulch upon it instead of being burned, as is now the case. Irrigation and drain-

age will be comparatively easy. But improvements will require much labor, and labor among the Shilluks is scarce. They are born warriors, not workers. The Sudanese batallions draw a large proportion of their soldiers from this tribe, altho no conscription is enforced. Count Gleichen says: "They are exceedingly plucky and the best warriors in the Sudan." Many of them, who have served for years in the Egyptian army, come back to their native huts in their old age, there to end their days in savage nakedness.

The Shilluks are tall, the average hight of the men being at least 5 feet 10 inches. They are rather slender and noticeably light in the shanks. Some of the men wear a body cloth—a piece of cotton about two yards long. Two corners of this are knotted and passed over the head with the cloth under the right arm. It is a sleeveless shirt, open down the left side. Most of them, however, go naked except for their ornaments, and these are not a few.

Behold a village warrior! His hair is his glory, and you will perhaps notice it first. The styles of dressing it are varied and extraordinary. Sometimes, with the help of a mixture of gum, mud, and cow dung, it is twisted and matted into a material resembling thick black felt. This is trained into various shapes. Sometimes it gives the appearance of a crownless hat, again of a jaunty cap, or it may be made into an arc of spokes a few inches in length. Another style is to plaster the hair down close to the head with a mixture of clay and ashes, the long part being drawn forward and allowed to stick out in front as a horn. When the plaster is removed, the color and kink of the hair are gone, and it fluffs and shakes about with much resemblance to the mane of a yellow dog. One requisite of household furniture is the narrow neck rest, about six inches in hight, which serves to keep the hair off the ground at night. It reminds one of a miniature saw-horse. But there is about six feet of warrior beneath the hair. His body, including his face, is smeared with dust and ashes; around his waist are several strings of beads cut from the shells of ostrich eggs; about his neck is a band made from the stiff black hairs of the giraffe tail. On his arms are bracelets of rope. iron or ivory, worn so tight that the muscles are knotted out between them. In his right hand he carries a laurel leaf bladed spear, on the handle of which dangles an ostrich plume. With his left hand he manages a shield, made from giraffe or crocodile hide, and under his left arm he holds a ball-headed war club. Ask him to show

A WARRIOR IN FULL DRESS.
The band around his head is made from buttons. It is fastened so tight that when it is removed the buttons will have made a permanent impress on his forehead.

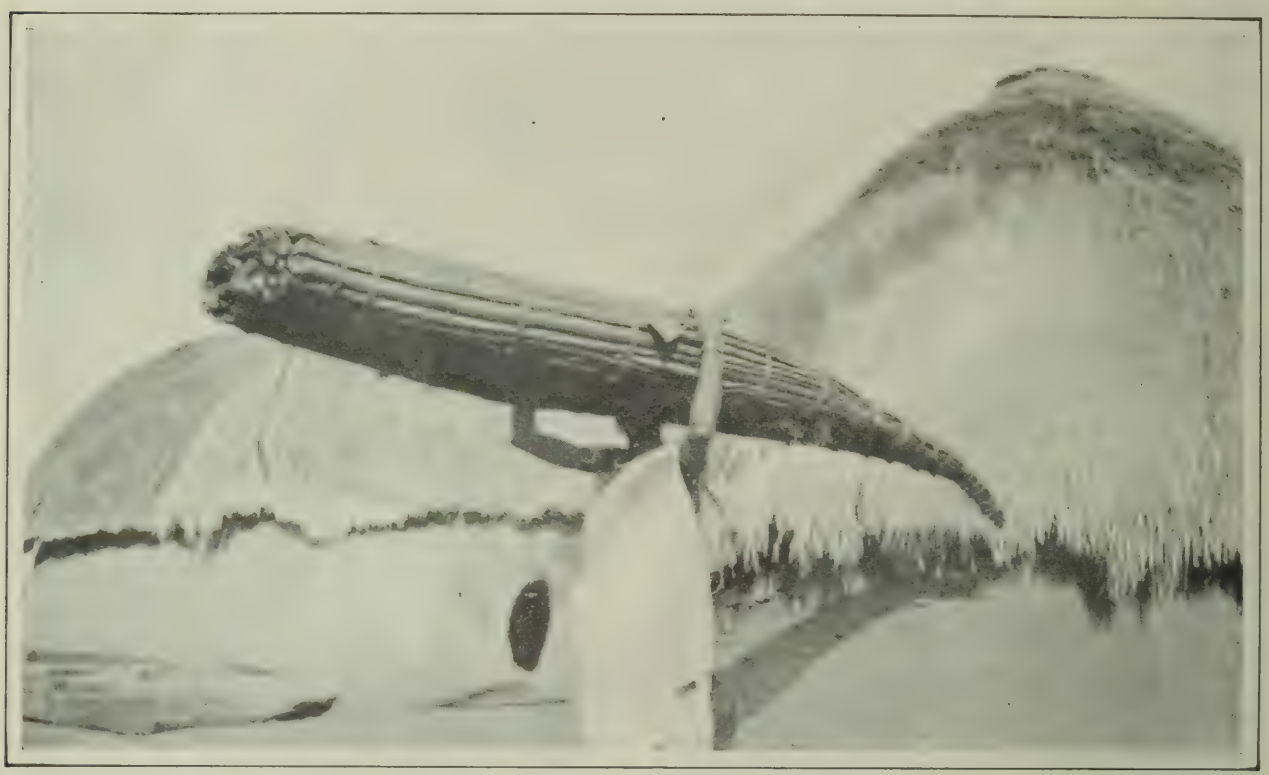
you how his people perform in battle, and he leaps and jumps about as only a savage can, warding off the imaginary blows of his enemies, and stabbing and striking with his spear. At last he sees his opportunity and hurls his spear for the death wound. As he brings back his weapon, he is perspiring and trembling from the excitement of the mere thought of battle.

The women wear loin cloths, and over these the skins of goats, sheep, or gazelle, with the hair side inward. They are tall and well formed, and act with much more independence than the Mohammedan women farther north. The work, without which the household finds it impossible to exist, is about equally divided between the men and the women.

The villages are built in a circle about an open court, except in a few places, where they are now built in straight rows in accordance with government orders. The Oriental mind moves in curves. The inhabitants of each town band together closely, and feuds between different villages are very common.

The Shilluk house, or tukl, as it is called, is a circular affair, about fifteen feet in diameter. The walls are built of mud and stand about as high as a man's head. The conical-shaped roofs are made from dry grass, and a village, from the distance, presents something of the appearance of a group of haystacks. The mud floors of the tukls are kept very clean. A man builds a separate tukl for each of his wives, so each is the mistress of her own house. A small oval opening serves as door, window and chimney. A smoldering fire is built inside the tukl at night, and the mosquitoes, as any sensible creatures should, move out to better air. But the black men, instead of being suffocated, as we would expect, go calmly to sleep. The mosquitoes of this section are poisonous—the kind that kick up their heels and throw all their weight onto their bills when they bore into you. Animals as well as men must be protected from their bites, and the largest tukls are those built for the village cattle.

Cattle grazing is the chief business of the people. Cows are the measure of a man's wealth, and it is with them alone that he is able to purchase wives. The price of a wife, according to the latest quotations, is five or more cows, according to her charms. The father takes the cows he has gained in exchange for his daughter's hand, and buys another wife for himself. A man may have as many wives as he is able to pay for. The king, with two hundred wives, is the most married man in the territory. If a wife proves unsatisfactory, inside of a certain time, her husband may rue his bargain and get back his cows. Owing to the existence of strict laws, the people until quite recently were notably moral in their sexual relations, but they are now being corrupted by the influence of soldiers and Arab traders, who have known life farther north.



Cattle are seldom used for food. A bull is occasionally sacrificed at a funeral feast, and beasts that have died naturally are eaten. The sheep and goats are of an inferior sort, and are little valued. The sheep grow hair instead of wool, and one of them may be had for fifty cents. The chickens are small and sell at about five cents each. The common people are not allowed to own donkeys, as the King reserves that privilege for himself.

The Shilluks are the only black tribe that recognize the sovereignty of one Mek or King. The educated tribesmen can repeat the names of their rulers from the beginning. The latter phrase, by the best calculation, means with them about 1200 A. D., according to our chronology.

They believe in a great creator called Jouk. One of the third generation after the creation, named Nyakang, with some of his relatives, took to himself wings and flew from a far country to the district north of the Sobat. In order to people his country quickly, he created men and women out of the animals which he found in the forest and river. The descendants of this new creation are the Shilluk common people. The direct offspring of Nyakang makes up the royal family to this day. Those who are not of royal birth must as a mark of servitude have the four front teeth of their lower jaw removed. The boy whom we have been trying to teach to take care of our camp has all his lower teeth, so he must belong to the royal family. Perhaps he does; he shows no signs of being a born servant.

With a Boss American washing machine and two blacks, a man and a woman, at my disposal, I undertook to oversee the weekly washing exercise of the station. My male assistant, who was easily six feet two, laid aside his spear and war club, and the pointed end of the latter served to stir the clothes while in the hot water. It seemed to me that

turning a war club into a laundry stick was something after the spirit of making "swords into plow shares and spears into pruning hooks." With club and spear laid aside, my man was as clear of encumbrances as if he had been going to wash himself. And if none of us had worn more clothes than he, our forenoons would have been wholly unnecessary. As we had no competitors within a radius of several hundred miles, we were not anxious to have our clothes on the line early. We were glad to find that they were so well washed that we could wear them without being ironed.

SHILLUK WITH CANOE ON HIS HEAD.

The canoe is made from ambash wood, which is lighter than cork and resembles pith. The canoe is made as a raft and the water comes up thru it, but those who ride on it have few clothes to get wet.

The territory abounds in game. Ducks, geese, bustards, crested crane, and guineas are found along the river in the wet season, but one must go farther inland to find larger game, such as elephant, lion, antelope, tiang, gazelle, etc.

Accompanied by some Shilluk youths, we made an excursion for tiang. After many vain efforts to get near them we saw a small herd lying in the midst of the plain, their long horns sticking up above the grass. We told one of our boys to make a great semicircle and come upon them from the other side, hoping he might scare them toward us. He seemed to understand, and we waited. At last we saw him, a mere speck across the plains. He went off to our right; he came back on our left, having made a complete circuit of the game without frightening it in the least. He grinned as tho he thought he had done something worthy of note. Perhaps he thought we wanted to charm the beasts! At last we got our tiang, a fine young bull, large as a yearling steer, dun-colored with a black stripe down his shoulders. His meat, hide and horns were enough pay for our tramps across the plains, our immersions in the swamps, and our mosquito bites in the night time.

When the natives see us bringing in more game than we can use, they come in strings to the camp, for they are not allowed to have guns, and can get little meat with their spears. They take their portions and go away with few or no signs of any gratitude. They are just big children that have never been taught. The clergyman started a school in one of their villages, but in a short time the village fathers came to tell him he'd better stop it, as they had noticed an extra amount of sickness among them since the opening of the school. We went with him to church one evening. The villagers finished tying their cattle, and

then gathered in the shade of a tukl for the beginning of the services. The Fifty-first Psalm in the Shilluk tongue, and set to "Rock of Ages," is the only song they have tried to learn. The preacher led and the black congregation, with serious looks and struggles excruciating to behold, followed a word or two behind, striving in everything to imitate their leader. He coughed once, and a cough went round the whole chorus.

The policy of the British Mudir, or Governor of the province of which the Shilluk territory forms a part, is to rule, as far as possible, thru the native agencies—the King, the chiefs and the village leaders or sheiks. As a brother officer exprest it, "he rules by an insinuating peace rather than by war." The King receives government presents to the amount of a few score of pounds each year, which is a large sum to a black man. During the last three years upward of sixteen hundred cases of complaint about the ownership of cattle and marriage disputes have been submitted to the government officials by the tribesmen, and settled aparently satisfactorily. The revenue of the province has risen from twenty-five hundred dollars in 1902 to twenty-one thousand dollars in 1906. The annual taxes amount to about fifty-five cents per person. This sum is equal to a little more than four days' wages for the ordinary workman. The tribe believes in collective punishment, and, in case a crime is traced to a certain village, if the wrong-doer is not found and delivered by his fellow townsmen, the whole village is punished. The King may order the destruction of a whole village and the confiscation of all its cattle. The fine for murder is seven cows, which is paid directly to the King. He sacrifices two for the soul of the deceased and uses the other five to purchase another wife for himself. Under the British Governor are several Egyptian minor officials, who, in the various parts of the territory, act as justices of the peace, postmasters, etc.

A GROUP OF VILLAGE CHILDREN.

The Sudan's past is a record of slavery, famine, and bloodshed. The journals of explorers in turn tell of a land of promise, rich in resources, and a land of death and squalor, with nothing to attract but deserts and swamps. It was veiled in darkness and too far away to be given light. But on the death of Gordon something of the interest that the Western world attached to the man past over to the country for which he gave his life. England arose in earnest to vindicate her self-respect. It was the conquest of

a land rather than the conquering of a people—a battle with the desert. And when Khartum was reached, many were ready to exclaim with Mr. Stevens respecting the gain, aside from the vindication of self-respect: "The poor Sudan! The wretched, dry Sudan! Count up all the gains you will, yet what an irony it remains, this fight of half a generation for such an emptiness."

But the march southward that Sir Herbert Kitchener began with brain and brawn, steam and steel, continues. It no longer follows the Nile bed a compact column, but with the dividing of the streams at Omdurmann separates as waters that enter a swamp, and spreads itself every way but backward. Trading posts are being established in the most remote districts, and great schemes for dredging, draining and irrigating are being projected by the government. Gain will eventually come to England. Already she is finding that she has gained a foothold on a quarter of a continent that is not all "desert, wilderness, squalor and devastation," and that will not be "forever and ever a God-accursed wilderness, an empty limbo of torment." Other parts of Africa, whose natives are being oppressed for the enrichment of the "mother country," are brought often to our attention, but here in the Sudan, without much notice and with little demonstration, England is quietly building an empire. She has gained control of the upper waters of the Nile, thus protecting Egypt, and at the same time giving herself a greater right to remain in Egypt.

With millions upon millions of acres that yield largely of most of the products that go to make man's food and clothing; with, in the southern part, a wet season as long as the American summer, during which the sky is usually so overcast with clouds as to render the rays of the tropical sun easily endurable; with facilities for irrigation which will render agriculture practicable during the dry, warm months of the winter, thus making three crops per year possible; with a railway to Halfa on the north and Suakin on the east; with a government that furnishes protection to life and property without exacting more than its due, this "land of the rustling of wings which the rivers divide" is destined to be a formidable competitor in the agricultural markets of the world.

THE SHILLUKS' MEASURE OF VALUE AND MEDIUM OF EXCHANGE.

But what of the two million blacks that slavery and famine, war and pestilence have left in these million square miles? The government is making every effort to better the people's condition. Adventurers and speculators are being

carefully restricted in their actions, but the black man remembers the past and looks upon his white brethren with distrust.

One day an old Shilluk chief named Ariu came to the mission house, and thru an interpreter the following conversation took place: "Now, chief, you have a good and righteous government; it will protect you and will help you; it will fight your battles if need be. And these missionaries will teach your children; will help you cultivate your lands; will find a market for your grain, and they have the Book and will teach you about God; you ought now to be quiet and peaceable; till your lands and care for your herds."

The old chief smoked a while in silence, then laid his pipe aside and replied:

"Master, you speak well. We had here the Turks (old Egyptian government), and they said: 'Be submissive to us; we will protect you; we will fight your battles for you; we will teach you of God.' But they took our cattle, they destroyed our villages and carried away our women and children into slavery, and they are gone. Then came the Ansar (the Mahdists), and they said: 'Come with us; we have a great army; we will care for you and protect you; we will give you plenty to eat and a good place to live; we have the Book and we will teach you the truth and teach you of God.' But they slew our men, and right here where these houses stand many of our men fell fighting for their women and children, and they, too, have gone. Now you come and say: 'We will care for you; we will protect you; we will fight for you; we have the Book; we will teach you.' Master, you speak well; but we will see, we will see."

The old chief's children will see the waste plains made into cultivated fields, the mud tukls changed to dwellings of brick and stone, domestic animals crowding out the wild beasts, and clothed men possessing the soil of the naked savages. We can foretell the march of civilization and progress, but we cannot prophesy the future of the black man. Concerning his place in the coming prosperity of his land, we can only speculate, and in the words of old Chief Ariu say, "We will see, we will see."

ASSIUT, EGYPT.

The Abstruse and the Obvious

BY A. J. PORTENAR

MEMBER OF TYPOGRAPHICAL UNION, No. 6.

[With the returned copy and proof from the press-rooms comes this statement from one of our own typesetters. We believe it fairly represents an important side of the question. We give it to our readers for their consideration.—EDITOR.]

I WENT up to the hook and took off a "take" marked "editorial." Then back to the machine to earn my bread and improve my mind at the same time by putting that copy into type, for much of instruction for the head and balm for the heart have come to me while setting INDEPENDENT editorials. This one opened well: "The *Annals* of the American Academy of Political and Social Science considers . . ." So I sat down to consider with them. But that innocent looking piece of paper held mental disquietude for me, and I was not long in reaching it. Eyes on the copy and fingers on the keyboard soon had to deal with the following:

"The writers who take a philosophical view of the general situation agree with the judgment exprest by Senator Crawford, in our issue of November 25, that the essential factor in the increase of prices is not the trusts or railroads or anything other than the great increase in the amount of gold, which is the basis of all our circulation. But if the gold supply is increased it becomes cheaper, that is, it will buy less, and prices in gold will soar."

Crash! Down went my most cherished grievance. Not the greed of men, not the imperfect organization of society, were the cause of economic hardships, but the bountifulness of Nature, in putting useful metals where men could find them, was to blame. Fortunately the work of typesetting becomes mechanical after long practice. My fingers did not

stop, altho my head was in a whirl. But more, if not worse, was to come. Crushed already by the ponderous authority of Senator Crawford and the afore-mentioned "philosophical writers," that editorial proceeded to turn defeat into rout by bringing up Mr. John Moody and Mr. Thomas Gibson as a supporting column, and mental resistance was at an end. I was heart-broken. What was the use of striving for initiative and referendum, public ownership of public utilities, tariff revision downward? What would it avail us to stop speculation in food products, to secure the power of recall of corrupt or incompetent officials, to curb the waste of public funds? The mines would continue to pour forth their golden stream in increasing volume, and all our efforts would go for naught. Let anybody that can monopolize anything or everything we need; it does not make any real difference. My soul travailed for my lost illusions.

But there came a reaction. Albeit amazed at my own temerity, I had the hardihood to decline to regard it as settled that "the *essential factor* in the increase of prices" is the increased production of gold. I realize that it may seem ludicrous for one situated as I am to oppose his opinions to those of men acknowledged to be experts on the subject, men whose daily life is concerned with questions of government and finance, while my own horizon is bounded by the four walls of a printing office; and yet, while admitting my failure to grasp the abstruse, I crave permission to present the obvious.

It is my purpose to examine how this question looks to the man in the street. Altho I have already confest my incapacity to grapple with the masters quoted above, I can speak for the man in the street because I am one of him.

Some years ago Mr. C. P. Huntington fixt railroad rates by making them "all the traffic will bear." Railroad corporations have not changed their methods since then. Transportation rates are an "essential factor" in increasing the prices of all things transported.

Tariff rates are admittedly too high in this country. Steel rails, watches, sewing machines, are exported at prices much lower than they are sold for at home. It would seem that the tariff is an "essential factor" in increasing the prices of many things.

The newspapers complain that a combination has fixt an extortionate price on white paper. If their contentions are well founded, that combination is an "essential factor" in increasing the price of paper.

Waste of forests that are being cut and the withholding of forest lands for speculative purposes are charges against human greed that are not denied. This may be an "essential factor" in raising the price of lumber.

A half dozen railroad corporations have a practical monopoly of the anthracite coal lands. Legislative investigations have plainly demonstrated what thrifty use they make of their opportunities. Small doubt of what is the "essential factor" in the increase in the price of coal.

The Borden Company earned in net profits in 1909 $2,617,029, and then raised the price of milk because they claimed there was no profit in the business. This might properly be considered the "essential factor" in the increase in the price of milk.

To further multiply instances will be to use space without adding to the weight of argument. Now add to these "essential factors" the increase in taxation caused by official corruption; the myriad devious burrowings into the public purse which Supreme Court Justice Howard estimates at 40 per cent. of the amount collected; and then add to that again the increase in prices caused by the "unearned increment" in appreciated land values created by all and appropriated by a few; and I begin to doubt the infallibility of the wise men—Senators, financiers, sociologists.

I think I will take up my grievance again. I feel my faith in the efficacy of the initiative and referendum, the power of recall, and, greatest of all, the single tax, reviving as I write. In the meantime my prayer shall be: O Lord, if Thou will deliver us from the evils that are so plainly discernible, we will bear with resignation the afflictions that may follow the discovery of any metals that Thy bounty has provided for our use!

New York City.

Literature

Washington Gladden's Recollections

Dr. Gladden has done well to put into print these *Recollections** of a very useful, if not very adventurous or extraordinary life. It is the simple record of a simple-hearted man, whose simplicity consisted in his having inherited a quick and versatile mind, trained in the earliest years to democratic and Christian principles, and a purpose to see the ethic truth and follow it, and defend and push it to the extent of his ability, and with gracious, whole-hearted persistency. He has been nothing more than a preacher in country towns or in second-class cities, with an interval of four years nearly forty years ago as the religious editor of The Independent. But he has had the will and power to make the country his parish, and his name is known and his influence has been felt in two continents.

He is pleased to tell us that both his grandfathers were shoemakers and his father a country schoolteacher. He could read at family prayers before he was three years old, and memorized portions of an English grammar before he was four years old. This process of cram, he says, "was, of course, highly unscientific and altogether reprehensible," in which judgment, if he means it seriously, he is wrong. To begin study early has not hurt him and hurts no one else. His father died when he was very young and his mother took him back to her country home in New York, where he worked on a farm, was printer's boy, went to school, and finally entered Williams College, taught and preached, and at last, with no attendance at a theological school, was ordained, and became pastor first of a little country church, then of a struggling church in Brooklyn, then of another in upper New York City, then of a larger church in North Adams, Mass., then for four years he was with The Independent, after which followed a short pastorate in Springfield, Mass., and a long one in Columbus, Ohio, where he still is.

But this book is not an autobiography, nor is it complete *Recollections;* it is, and is meant to be, a succession of expositions of his matured views and conclusions on the movements and events, religious, political and social, which he has seen and in which he has had active part; so that, we judge, he would regard this as the most important, as it is the largest, of the more than thirty books he has published. The breadth of topics is unusual, the judgments are sane, and the clear and simple style befits serious and wise discussion. It will interest any reader and help not a few.

Dr. Gladden's chief interest is in making the religious life plain, so that one who wants to be a true Christian will know what it means; and, further, in making the applications of Christianity to our complex civilization, and particularly in the relations of capital to labor. He has no patience with the pulpit which would confine itself to theology or general ethics and have no word of denunciation against strength and wealth which oppresses weakness and poverty. the reader will remember his attack on "tainted money," and he gives a chapter to it.

Dr. Gladden has been a force not only in the Congregational denomination, which made him its active national leader for three years, but thru all the Churches and in all the country. The Independent has special reason to remember, love and honor him, and the four years with it gave him an outlook over the world, valuable for the subsequent service which has not been limited by any local pastorate.

We note one omission in these *Recollections.* No mention is made of his hymns, which have found permanent place in books of worship, nor of his too rare poems, such as "The Baby Over the Way." Are these not enough for a volume?

*Recollections. *By Washington Gladden.* 12mo. Pp. vi, 443. Boston: Houghton, Mifflin Co. $2.

The Darwin Book

FEW men have ever had so notable a tribute as that contained in the *Darwin Memorial Book*.* The most eminent men of science here unite and give testimony to the moral and intellectual greatness of Charles Darwin and to the influence of his work upon every branch of scientific and philosophical thought. It is a tribute which brings to mind Milton's lines on Shakespeare:

"And so sepulchred in such pomp doth lie,
That kings for such a tomb would wish to die."

Prof. J. Arthur Thomson treats of "Darwin's Predecessors," quoting generously from Prof. H. F. Osborn's excellent book, "From the Greeks to Darwin." Darwin, says Thomson, gave the first convincing verification to the idea of organic evolution; he is still its chief interpreter, and thru him it became "a causal theory, the most convincing part of which men will never cease to call Darwinism." Prof. August Weismann incidentally praises Darwin, but devotes most of his space to a statement of the pure-and-simple selection theory. "All adaptations *can* be referred to selection," he writes; "the only point that remains doubtful is whether they all *must* be referred to it." Prof. Hugo de Vries he dismisses in rather curt language. Darwin was right, he says, "in regarding transformations as taking place by minute steps," and De Vries's "mutations" "rest upon a very insecure foundation." De Vries summarizes his views in a paper on "Variation." His interpretation of Darwin's opinion regarding variations is criticised by the editor of the volume, and De Vries's reply is unconvincing. Darwin's chapter on "Pangenesis" is regarded by De Vries as indicating a belief in the importance of the agency of mutations.

"Darwin's work in regard to the descent of man has not been surpassed," says G. Schwalbe, professor of anatomy at Strassburg. Prof. Ernst Haeckel's praise of Darwin as an anthropologist is unstinted. "By his illuminating discovery," he writes, "Darwin did more for anthropology than thousands of those writers, who are more specifically titled anthropologists, have done by their technical treatises." Darwin's influence an embryology is treated by Prof. A. Sedgwick, and that on paleontology by Prof. W. B. Scott, of Princeton. "To no branch of science," says Professor Scott, "did the publication of the 'Origin of Species' prove to be a more vivifying and transforming influence than to paleontology." Sir W. Thiselton-Dyer declares that the "publication of the 'Origin of Species' placed the study of botanical geography on an entirely new basis." "Few men have in greater measure enriched the thought-environment with which it is the aim of education to bring educable human beings into vital contact," writes C. Lloyd Morgan, "than has Charles Darwin." Prof. H. Höffding, of Copenhagen, writes of Darwin's influence on philosophy, and Prof. C. Bouglé, of the Sorbonne, of his influence on sociology. His influence on religious thought is summarized by Dr. P. N. Waggett: "He has, in fact, rendered substantial service to interests bound up with the daily conduct and hopes of common men; for his work has led to improvements in the preaching of the Christian faith."

Such brief mention can give only the merest indication of the contents of this remarkable volume. There are twenty-eight essays in all. They constitute, within the lateral dimensions of an inch and a half, a veritable five-foot shelf of scientific lore.

*DARWIN AND MODERN SCIENCE. Essays in Commemoration of the Centenary of the Birth of Charles Darwin and of the Fiftieth Anniversary of the Publication of the "Origin of Species." Edited by *A. C. Seward*. Cambridge, England: The University Press. New York: G. P. Putnam's Sons. $5.

The Wander Years. Being Some Account of Journeys Into Life, Letters and Art. By J. H. Yoxall, M. P. New York: E. P. Dutton & Co. Pp. ix. 329. $2.00.

Sir James Yoxall's essays, most of which have previously appeared in *Cornhill*, are to be tasted, not devoured. And it is not every palate which will enjoy the piquant, occasionally irritatingly prickly, flavor of his rhapsodies. The liberties taken with words already in use and the free coinage of new forms, the abundant use of Latin and French words, phrases and sentences, the lavish sprinkling of the pages with dashes and interrogation and exclamation points all

tend to make caviar of the book to many even of the most intelligent readers. The strongest appeal that the little volume will make to Americans will lie in Sir James Yoxall's graphic reconstruction of bygone days in his wanderings over France and England. He is well read in the gossipy literature of the eighteenth and nineteenth centuries, and is ready with quotations from Sterne, Dickens and Thackeray on every appropriate occasion. The essay on the House of Commons is disappointing. Seventeen sessions within the chamber have disillusioned Sir James Yoxall and he treats the Mother of Parliaments with careless cynicism. There is, however, even in this chapter some comfort for the women who are fighting the battle for a right to political existence. Sir James Yoxall is thruout a champion of the cause of the women, and his little skit on the opinions of Titmouse Junior concerning the suffragists is an instance of his manner of presenting the argument. "It's revolution, you see," Mr. Titmouse went on to his fellow-member.

"We'll not be lords and masters much before long. I always found girls a deuce of a sight too clever for me at anything. Don't care if it's Latin, don't care if it's lawn tennis, they're ripping good. Only—well, it'll be revolution, you know. And you can't knock a woman down or fix bayonets at her."

What Have the Greeks Done for Modern Civilization? The Lowell Lectures of 1908-09. By John Pentland Mahaffy of Trinity College, Dublin. New York: G. P. Putnam's Sons. $2.50.

Profesor Mahaffy is known in both continents not merely for his Irish wit, but for his learning. He also is breezy and discursive. He calls Gray "a poet of really Greek temper and spirit," and speaks of "the dreariness of Wordsworth's prosaic excursion." He has brought to light a fragment which prophesied that "her girl friend will shine at Sardis like the moon among the stars in a summer night." For the recently discovered "Persians" of Timotheus Mahaffy has nothing but contempt. "Now that Menander, too, has been discovered, we have the same triviality, the same stupid repetitions or vulgar and immoral plots." Mahaffy is far from being satisfied with the age; he says:

"Our purblind toothless children may have their congenital defects vamped up by science, and without it we should indeed be stranded upon the reefs of despair. But happiness does not lie here, no, nor in motors, nor in wireless messages across the globe, nor in daily newspapers full of inextricable fact and falsehood."

He speaks of the "huge amount of time spent by Americans in traveling" as the chief obstacle to their intellectual advancement. He declares that the most serious defect he has observed in American education is the small attention given to good logic. He recognizes the fact that the loss of Latin is as nothing compared to the Greek. Virgil is, of course, only a translator. Several corrections are to be noted. The treasure-house at Delphi, formerly called Siphnian, has been found to belong to Cnidus. Jacques Correy also no longer figures as the copyist of the Parthenon frieze. It was done by an anonymous painter. The Treasury of Atreus is called by a slip (101) "Treasury of Athens." But we will not weigh mint, anise and cummin, even if a rather too large letter (v) jostles the smaller letters. But the type, and especially the paper, as a whole is wonderfully fine.

Savoy Operas. By W. S. Gilbert. With illustrations in color by W. Russell Flint. London: George Bell & Sons. (Imported by the Macmillan Company). $5 net.

The text of four of the most popular of the Gilbert and Sullivan operettas, which made the London Savoy Theater famous—the perennially mirthful and ever enjoyable "Pirates of Penzance," "Patience," "Princess Ida" and "The "Yeomen of the Guard"—a foreword in which Sir William tells briefly something of the early history of each libretto, and thirty-two pictures in colors, make up one of the finest holiday volumes of the season. Mr. Flint's pictures are altogether delightful, quite as sparklingly operatic in spirit and execution as the masterpieces of wholesome fun and frolic which they so admirably illustrate, and they have been most skillfully and beautifully reproduced. Such color printing is rare indeed. The whole book

is an excellent piece of printing—is, in short, a pledge of many hours of joy without alloy. Its fortunate possessor will want others like it, and luckily there are enough other "Savoy operas" to fill several such volumes; but where is the "musical comedy" of these degenerate days that is worthy of or could stand such exaltation?

Open Country. By Maurice Hewlett. New York: Charles Scribner's Sons. Price, $1.50.

Mr. Hewlett calls his new book a "comedy with a sting," which is his way of taking the double-edge off the word tragedy. But after all it must go by that hard name when a young British Diana, chaste and sweetly dignified, cannot make her mind and heart co-ordinate with the moral proprieties of society. The people of it are: Sanchia, one of several daughters in a solid, prosperous and ambitious British family; Senhouse, the outdoor optimist, whom the reader is inclined to believe is a sort of picture of Mr. Hewlett himself, so charmingly does the author sketch him; and Nevile Ingram, the lover; the outdoor man may rather be called a worshiper. Mr. Hewlett devotes a great part of his book to a correspondence between Sanchia and Senhouse, tho only the man's letters are used. Thru them we see Sanchia an austere little dryad with clear, sincere eyes, and a fragrant, innocent mind, who comes drifting upon the wooded horizon of this open-air philosopher. He loves her immediately, but, as the book says, "her confidence in him was one of the sharpest trials he had to suffer." He is a better teacher than a lover, and because she accepts him as a master-teacher "his reverence never let his heart out of hand." From him who had cut loose from the frettings of life inside of walls and who now camped along the hedge-row lanes of his friend's property, she learned a gospel of freedom and love and goodness which she assimilated and practised in her own feminine way. The philosopher was certainly not to blame that the child (for such the author makes her, with her remarkable capacity for innocence) could not understand that the gospel of freedom and love and goodness may be preached very beautifully and simply out under an open sky with no one save the birds to argue the points, but that the practise of it among people may become a very dangerous thing if not handled wisely. Sanchia goes away from him full of his theories about many good things and falls in love with a married man who has neglected to divorce his wife. No arguments of society prevail against her adamant conclusions that love is love—and that love is beautiful and therefore cannot be wrong. Not even the philosopher, who is responsible for her theories, tho not her mode of reasoning, can shake her, and so leaving behind her the moralities which she does not or will not see, she goes to her lover. Mr. Hewlett leaves the reader in the embarrassing predicament of having to condemn a really good woman. He ends his book artistically but not ethically.

The Ships and Sailors of Old Salem. By Ralph D. Paine. Illustrated. New York: The Outing Publishing Company. $1.50.

Salem has a pride in its early history, and has sufficient material evidence, collected in the Essex Institute and elsewhere, to show a very satisfactory basis for that pride. As a harbor town, one of the earliest on the Massachusetts coast, its boys took at once to the water, tested the fish of the neighboring shoals at their own tables, and then recommended the favorite varieties to the neighbors inland, taking toll, of course. As Gloucester and other coast competitors got wind of the "fish slicks," Salem struck out for gayer commodities, scoured the Atlantic seas and their islands, and then crossed the waters for Guam, Manila, Japan—the story over again of the Phenecian coast towns, of the Ionian dwellers on the Ægean, of the Greeks in Sicily, the Venetians, Spain, Holland, and of England, when she cornered the Dutch in their "new-catched miles," and then bullied Spain off the seas. So for a century that was the history of Salem, unheralded by the brave old sailors who made the history, but recounted now with justifiable satisfaction by their descendants. Mr. Paine's

work is well done. It covers the sailings of Salem captains in every quarter of the world, whose ships went stem and stem with the most adventurous ships of the "most favored nations," and it uncovers old letters of travel long hidden in Salem garrets or half hidden in Salem archives, which lend the piquancy of good narrative, if not always a literary charm, to many moving incidents in peace, piracy and privateering, and of that patriotism which in some ways illustrates them all.

The Menace of Socialism. By W. Lawler Wilson. Philadelphia: George W. Jacobs & Co. $2.

This book is primarily intended for English consumption, since most of its data are drawn from English sources and its conclusions apply to English conditions. Socialism, it appears (p. 33), "is not only a symptom, but a form of disease; an outbreak of social insanity." The author admits the many defects in social conditions at present, and, indeed, makes a somewhat formidable catalog of them. "So inhuman and repellant, indeed," he says, "are the conditions under which our proletarians live that there is great danger of a lapse into Socialist housing principles to provide a remedy." The remedy, however, is not Socialism, but state action. He essays somewhat painfully to discriminate between the two, and he formulates a new code of anti-Socialist economics. He concludes with a summary of what he calls the alternative policy, which is warranted to defeat and crush Socialism forever:

"Unite the empire, develop its resources, strengthen the national Government, defend and extend private property, establish a race of freeholders, control public expenditure, improve communications, regulate commerce, protect capital and labor, forbid strikes and lockouts, encourage invention, save agriculture, educate and sanitate, throw open the professions, redeem the proletariat."

Scenes and Portraits. By Frederick Manning. New York: G. P. Putnam's Sons. $1.75 net.

This is a series of philosophical dialogs, suggestive of Renan and also of Landor, each dialog, however, made lifelike by means of a bit of background characteristic in scenery, manners and human ideals of the time chosen for the philosophical talk. The form is simple, the manner graceful, the persons clearly drawn, the discussion not too abstract. There are six of the dialogs, and all take their start in what the author calls "the only two religions on this little planet," the religion of the humble folk, "whose life is a daily communion with natural forces," and "the religion of Protagoras, Lucretius and Montaigne, a religion of doubt, of tolerance, of agnosticism." The author admits the influence of Renan in a degree, and is certainly studied in the admirable form of dialog which has its head in Plato's "Phaedo"; but he has a charm of his own. The first of the scenes is called "The King of Uruk," and the characters arrange themselves, with a little group of chorus, outside of Eden, whose attention once drawn to the happy pair within the garden, they approach, and entering, find the troubles of this world are already begun. Adam, Eve and the serpent are on the stage, and good and evil come under discussion. The sceond scene is in the house of the democratic poet, Euripedes. Sophocles, in his old way, sits on the bed and nurses his leg. Protagoras sits by the host. A select company of inquirers enjoy the dissection of a play or so of their host, who, at the end of the discussion, is a little uncertain himself how he stands on the question of the existence of a god, and if any exists, whether he is most interested in affairs elsewhere or has an eye on the life of his earthly children. Even Protagoras is by that persistent rubbing of the leg which goes on where Socrates sits, and by an equally persistent application of the Socratic method of argumentation, brought to a state of modest dubiety. St. Paul and Serenus serve to bring out the new claims risen from Galilee, in a third scene. Then Francis of Assisi persuades the Pope to let him try an humbler method of settling philosophical questions. Thomas Cromwell and Macchiavelli; and lastly, Renan and Leo; and we have three views of Christianity in successive ages, to supplement the Chaldaic, the Greek and the Roman forms of peopling the earth with the divine presence.

Literary Notes

....“Can Pragmatism Furnish Philosophical Basis for Theology?” was the first topic for discussion at the Baptist Congress held in New York in November, and according to the report of the *Proceedings* just published by the University of Chicago Press (50 cents, postpaid), the new philosophy was viewed with considerable favor.

....A copy of Thomas Woolnoth's *Facts and Figures,* with an unknown poem of Charles Dickens written on the fly leaf, sold at auction recently for $40. The unpublished lines are the following:

Man's face—the index to his soul,
Shows what may be found within.
The broad brow has a heavenly goal,
The narrow a haven of sin.

....Volumes on Christian ethics are more abundant in German than in English. One of the better known of the German treatises is by Dr. Theodor von Haering, now of Tübingen, formerly the successor of Ritschl at Göttingen. It now appears in English translation by Rev. James S. Hill, rector of Stowey, Somerset, and is entitled *The Ethics of the Christian Life* (Putnam, $3 net).

....Even those who agree with the authority who pronounced the pun the lowest form of wit must give credit to a past master in that art. Prof. William Lyon Phelps's contribution to Arctic literature, *A Dash at the Pole,* scintillates with genuine humor, and the full significance of the diction dawns only on an alert reader (Ball Pub. Co., Boston, 75 cents).

....The new management of the London *Times* shows itself in some minor typographical modifications such as headings to the editorials, but most conspicuously by the issuance of a South American number on December 28, giving seventy-two of its immense pages to descriptive articles and advertisements on the industrial development of the continent south of us.

....The tourists who have visited the Rockies and attempted to identify the new flowers seen there have found that they could not depend upon their old reliable Gray or Wood. Even when they had recourse to “Coulter's Manual” they received only inadequate assistance because this pioneer work had never been revised since it first appearance in 1885. Now, however, the work has been rewritten and the new material incorporated by Prof. Aven Nelson, of the University of Wyoming, who has for over twenty years devoted himself to the collection and study of the flora of Wyoming, Colorado and the adjoining States. No one is better qualified to handle this subject than Professor Nelson, because he has contributed more to our knowledge of this region than any other living botanist. Almost every page of the new *Manual* contains one or more new species described by him and his students. The work is an admirable piece of book-making, compact, light and handy, with unprecedently complete citation of references to the original publication of all names and synonyms. (*New Manual of Botany of the Central Rocky Mountains.* By John M. Coulter and Aven Nelson. New York: American Book Co. $1.62.)

Pebbles

THE CHRISTMAS SHOPPER.—I want a box of cigars for a fair, slim gentleman, please.—*Punch.*

THO dumpy girls are not the sort
Who most bewitchingly enthrall,
'Tis better to have loved a short
Than never to have loved a tall.

THE FIRST THING.

Mrs. Wise—So you're going to marry and go to housekeeping, eh? Why, you don't know the first thing about keeping house?

Miss Pert—Oh, yes, I do.

Mrs. Wise—I'd like to know what?

Miss Pert—The first thing is to get a man to keep house for.—*Catholic News.*

As the line he tried to cross
The express ran into Jim;
Bitterly I mourn his loss,
For I was to have lunched with him.

A POLISH coal miner in Ohio, biting into a slab of Pittsburgh mince pie, struck a rivet and broke off seven teeth; but, being extremely hungry and having no money to buy actual food, he kept at his grim task. A minute later he struck a stick of dynamite in the core of the same pie and was buried from his late residence the next day, leaving a wife in Poland and another in Ohio.

THE VERY LATEST.

“Let me see some of your black kid gloves,” said a lady to a shopman. “These are not the latest style, are they?” she asked, when the gloves were produced.

“Yes, madam,” replied the shopman; “we have had them in stock only two days.”

“I didn't think they were, because the fashion paper says black kids have tan stitches, and *vice versa.* I see the tan stitches, but not the *vice versa.*”

The shopman explained that *vice versa* was French for seven buttons, so she bought three pairs.—*Detroit Free Press.*

A SUCCESSFUL young novelist was praising the critical powers of a certain famous author.

“I once had the honor of reading a tale of mine to this author,” he said, “and, thanks to his criticism, the story was greatly improved. Originally it was too high flown; he brought it down to earth and made it homelier and truer.

“For instance, the tale concluded with these words:

“‘Mabel's lovely eyes drooped for an answer; a faint flush tinted her cheeks and she gave him both her hands; and there in the old orchard, in the shade of the heavy fruited trees, he drew her to his breast, and, raising her long ringlets to his lips, kissed them reverently.’

“The author, at this ending, blew a cloud of smoke thoughtfully into the air. As he watched it curl upward, he drawled:

“‘What do you think now, honestly, of a young man who would go nibbling at a girl's back hair when she had her face with her?’”

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $3.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

The President's Conservation Plan

THAT the President has Mr. Roosevelt's plan at heart for the protection of the natural resources of the country is clear from his message to Congress on the subject. His removal of Forester Pinchot is no evidence to the contrary. That was a matter of official discipline. We doubt not that he removed Mr. Pinchot with sincere regret. If any one doubted his earnestness, the appointment as his successor of Prof. H. S. Graves, of the Yale Forestry School, Mr. Pinchot's pupil and friend, is proof sufficient of his good faith; and to this may be added the fact that the policy and personnel of the bureau will suffer no change. The public will have no further interest in any personal question as between the President and Mr. Pinchot, but it will be deeply interested in the investigation of Mr. Ballinger.

And now President Taft has sent to Congress his promised message on the subject. It is partly historical, partly descriptive, and partly given to recommendations for legislation. It tells how 325 million acres of public land, out of somewhat more than three times as much, has passed into private hands in the last fifty years, leaving little besides the mountainous or arid regions unsold. We were so anxious to have the land settled that we administered the laws loosely, and many millions of acres were fraudulently obtained. President Roosevelt waked us up to the value of this national wealth and the importance of preserving it for the people. He showed us the importance of punishing frauds and of preserving the control of special sources of wealth, deposits of coal, oil, gas, phosphates, and water for power or irrigation; and particularly of the means of reclamation of arid or semi-arid land. The good work has gone on since, and now more than three times as many power streams have been withdrawn as on March 4 last. These and other withdrawals are in the public interest, but the law under which it is done is not clear, and President Taft wants these withdrawals validated and suitable legislation enacted. Congress ought not to delay. The lands should be classified by the Geological Survey, and laws enacted controlling the sale or lease of each class. Very wisely the President would have the surface land sold, but without mining rights, which Congress would reserve, so that coal, oil, gas, or phosphate should be mined under leases, there being proper protection against monopoly.

The water power problem is a very serious one. Those who own the land adjacent to a stream must be able to control its use. The President would have the Government own these lands and lease the power, which will largely take the place of fuel, under leases say of fifty years, with reasonable terms of renewal and provisions against monopoly. This is a new feature, but seems wise.

President Taft treats further, in his message, of the arid lands, the forest reserves, and the waterways. All are of immense importance, and legislation is recommended which will require appropriations. On the two latter we are far behind the nations of Europe, and as to the first we have made a magnificent beginning. There are millions of acres

of arid lands which can be recovered for agriculture, and which will provide homes for a dense population. There are over thirty projects that have been undertaken by the Government (besides many more by private enterprise); too many for the funds in hand, as the work will ultimately be paid for by the sale of irrigated land. Already settlers have taken up such land and are waiting for the promised work to be completed. The President asks Congress to authorize the sale of $30,000,000 of irrigation bonds for this purpose, and the wisdom of the proposal is beyond reasonable question.

But already serious opposition is aroused by interested parties to procure defeat or delay. There are immensely wealthy combinations which wish to own and control water rights for power or irrigation, for the sake of exploiting the settlers. They will not easily consent to see the profits go to the people instead of to themselves. There is concealed monopoly, and where individual rights are secured they will easily pass into the hands of powerful combinations, which will milk the public. Besides these legitimate private schemes, there are arising a multitude of illegitimate wild-cat schemes by promoters who misrepresent their value. Even of those already begun by the Government, a few may fail from lack of sufficient water. In these private schemes there is an element of doubt, making them at times gambling ventures, so that the public should examine them with great care, whether for investment or settlement. But there can be no greater assurance of security than that which will come from supervision by the Geological Survey; and the bonds backed by the Government will doubtless be purchased at a low rate of interest. There will also be private reclamation plans of much value, for the Government cannot assume them all, and private enterprise has already in not a few cases taken up schemes which the Government might well have taken and which will be very profitable; but there are those of another sort, against which the settler or investor should be on his guard.

We thank President Taft for this admirable message, to which he has given great care. Congress will need to attend speedily to its recommendations.

The Rise in Prices of Food

It may well be that various causes conspire to increase the cost of the necessities of life. We know that all the common elements that enter into food consumption are growing more costly, whether in the raw state or in the prepared. But why this is so Mr. Bradstreet does not undertake to say. Secretary Wilson's agents are said to be busy in every State of the Union, studying up this matter, but if they are only going to give us statistics, we shall hardly be able to solve our difficulty. Are there not some other causes besides the over-production of gold, or the trust evils recounted by Mr. Portenar?

Taking the articles from *Bradstreet's,* we find that potatoes have gone up in price, so as to cost considerably more than twice as much as they did twenty-five years ago. The same radical rise has gone on with nearly everything that the farmer produces. The story, however, is not fully told, for the lists as given leave out the consumption of our garden stuffs, or truck, as it is sometimes called, and our orchard fruits. A barrel of apples could have been bought twenty-five years ago, in the orchard, for 75 cents; in the New York market for $1.50 to $2, for the choicest select. Berries brought on the average about 8 or 10 cents a quart, but it is impossible to get a good box of strawberries at present for less than 20 or 25 cents, unless the market is glutted. Low grade fruit, of course, is cheaper. Raspberries in the same time have gone up from 8 cents to 16 or 18, while the blackberry remains a little nearer its old price. Currants are nearly doubled in their market value, and the same is true of gooseberries and cranberries. Cherries are on the same rising scale, and the plum, altho sometimes glutting the local market, does not any longer remain an unsalable article anywhere in the country.

Here, then, we have a very remarkable and on the face of it unexplainable rise in the price of fruits that are very common, and a few years ago were always to be had at a very low rate. This could not have occurred by any decrease in production, with the simple exception of the apple—a fruit that has

been remarkably left to the mercy of wind, weather and insects. While enormous orchards have been planted in the Middle and Far Western States, the New England States are just waking up to the fact that New Hampshire can grow just as good apples as Oregon, and Massachusetts can do as well as Missouri. The statistics cannot be furnished with sufficient accuracy for us to say that the rise in the apple market from one dollar a barrel to five or even seven or eight is due in any degree to the decrease in stock. The fact that prices have remained, with one single plunge, at high range, for the last four years, indicates very clearly that this price is due mainly to increased consumption. Certainly the call for apples for winter storage has greatly increased. In the case of all other fruits it is indisputable that consumption has enormously increased in proportion to production.

Now let us get back one step farther, and we shall perhaps get somewhat nearer the explanation of our problem, if not its solution. Meat began to rise in price when cattle ranges began to decrease in the Southwest. At present very few of the old-time big droves of cattle are found in Kansas or in Texas, or are seen on their way to the Northern markets. The cowboy is pretty nearly played out. With him has gone a very large share of our meat supply. Now, what we want is a series of statistics showing accurately the decrease in meat consumption, for this decrease has surely gone on. Put this condition of affairs with the increased consumption of fruits and cereals, and the enormous increase in sales of breakfast foods and other preparations, and we are a stride nearer an understanding of our problem. The decrease in meat supply, complemented with a decrease in meat consumption, has led to a very marked increase in the demand for such articles as Mr. Bradstreet names. There is no other reason under the sun why eggs, which we used to sell for 10 cents a dozen, and thirty years ago were actually retailed in our city markets at 10 and 12 cents a dozen, should now be finding sale at 40 cents, or even 50. This explains the correlated rise in all other farm products. The consumption of peas and beans has a great deal more than doubled. Summer vegetables, that come under the head of trucking, are raised and sold on a scale not dreamed of twenty-five years ago. In Florida, while the State is no longer a cattle range, large tracts of land are given over to three annual successive crops of celery and lettuce, while the potato, which was formerly grown at 20 cents a bushel in New York State, is now turned out by the tens of thousands of bushels (in March) and shipped to the Northern market—at the high price of $9 to $12 per barrel.

Now, what are you going to do about it? Statistics may be interesting if they are sufficiently startling; but they do not help us very much in making our flour cheaper or bringing potatoes back to 30 cents a bushel. Laboring men must have a larger income in order to stand the strain. The farmer is thriving—that is, the intensive farmer, who has had the common sense to adjust himself to changed conditions, but the poor man in the city remains hard up. His meat has gone sky high, and his vegetables are following hard after. There is simply one remedy—a remedy instinctively suggested some time ago, but now imperative; it is, go back to the land. Let us see. A man with five acres of soil can easily grow one-half acre of potatoes, out of which he will get, with good tillage, all the potatoes that his family can use for a year. All he has then to say about prices is, that if he has a surplus of ten bushels, he will get $1 per bushel instead of 30 cents. We are following Mr. Bradstreet's listed articles. Beans come next in the list, and here the man with five acres can grow not only all he needs for winter consumption, but string beans and shell beans may enter very largely into his household consumption, and possibly he may have a surplus for market. As for the meats, which come next in the list, the man may have his pig and fatten it with the surplus which he would otherwise sell. It would be much easier, however, if instead of a pig, he would raise a calf; for this might be made a fine article of winter consumption, if mostly fed from the grass in his yard and pasture. Perhaps better yet, and more easily, the man with

five acres may keep about twenty hens, feeding them with his table waste and surplus, and getting all the eggs his family can use, and some chickens in the bargain. As for beef, he should at least confine himself to the cheaper pieces, which, with his fine array of vegetables and herbs, he can make as toothsome and more nutritious than the costly pieces.

Coming down to flour in the list, he can raise his own corn; and meal is a capital substitute for a large part of the poor man's Pillsbury. Lard may go as high as it pleases, so long as the pig is in the pen. Butter is a home product where there is a cow, as there may be in this five-acre homestead. Milk becomes an article of diet, in a way that it never can when purchased from the city milk can. It is to be had absolutely pure, and your Holstein will give you anywhere from eight to eighteen quarts a day. A thoroly good cow is kept just as easily as a poor one, and will average from ten to twelve pounds of butter per week. For cheese we have our cottage cheese in abundance; and this, with sour milk, and buttermilk, and clabber, is Metchnikoff's prescription for long life. It probably will not prolong the life of the hens and pig, but it certainly will increase flesh and egg production. We have now left only one item (as quoted by THE INDEPENDENT)—that is, peas—to provide for; and as nothing is easier than to grow a good stock of this legume—with beans, half the living of a family is already in hand. At the same time the land is growing richer rather than poorer by such production of legumes. We have then our sugar, tea, salt, rice, and a few more items to provide for from the surplus, or the wages.

What is wanted is a rational use of the soil and a rational distribution of our population. In some parts of the country we have not a single family to ten acres of good dirt, while in other sections we have ten thousand people to the acre. Nature's plan is distributive. She would not carry the food to the people, but the people to the food. The productive capacity of the United States has not yet been touched, while the consuming capacity is constantly increasing, and the unbalancing has gone about as far as it can go. Prices are already high, to be sure, but they are going higher, and nothing can stop it but increased production. More agriculture and better agriculture is one chief need of the United States.

Federal Incorporation

IT is expected at Washington, we understand, that the recent decision of what was practically a Circuit Court of Appeals in the Standard Oil case will be affirmed by the Supreme Court. That decision was regarded by Assistant Attorney-General Wade Ellis as especially important because of its application to holding companies of the rulings previously made with respect to plain combination agreements. Judge Hook, in his concurring opinion, said that he and his associates agreed in the conclusion that

"a holding company, owning the stocks of other concerns whose commercial activities, if free and independent of a common control, would naturally bring them into competition with each other, is a form of combination prohibited by the Sherman act."

And the court said, in an introductory statement of the main points in its decision:

"The power to restrict competition in commerce among the several States vested in a combination is indicative of the character of the combination, because it is to the interest of the parties that such a power should be exercised, and the presumption is that it will be.

"The combination in a single corporation of the power of many stockholders holding the same proportions respectively of the majority of the stock of the several corporations engaged in commerce in the same articles among the States are with foreign nations, to restrict competition therein, renders the power thus vested greater, more easily exercised, more durable and more effective than that previously held by the stockholders, and it is illegal."

In his recent special message recommending provision for the Federal incorporation of Trusts, or large corporations engaged in interstate business, the President said that the Attorney-General had drafted a bill embodying his views. This bill, a long one, containing about 12,000 words, has been published. It seems to us that it provides for the creation and maintenance, under a Federal charter, of such holding companies as, according to the Standard Oil decision,

are illegal. In section 7 of the bill are the following words:

"Any corporation organized hereunder may acquire and hold not less than a majority of the capital stock of a corporation organized under the laws of any State or Territory and engaged only in the manufacture within such State of articles or commodities which the corporation formed under this act uses or proposes to use in the interstate or international trade or commerce conducted by it."

This is clearly a provision for holding companies of unlimited extent. It permits the acquisition by one corporation, thru majority stock control, of every company engaged in its field of production. It may be said that Federal incorporation would prevent this combination from indulging in unjust practices either to acquire the separate plants or in its general trade. But, as we understand the court's interpretation of the statute, the mere existence of such a combination would be a violation of the law. It may be intended that the Executive branch of the Government shall decide whether any holding company so chartered practices "reasonable" or "unreasonable" restraint of trade. This is a power, however, which the President would not give to the courts, saying it would be "a power approaching the arbitrary, the abuse of which might involve our whole judicial system in disaster." He said, it should be remembered, that "the measure contemplated" did not "repeal the Sherman Anti-Trust law" and was not to be framed "so as to permit the doing of the wrongs which it is the purpose of that law to prevent."

This provision for great holding companies is especially surprising because he also said in his message:

"Corporations organized under this act should be prohibited from acquiring or holding stock in other corporations (except for special reasons upon approval by the proper Federal authority), thus avoiding the creation, under national auspices, of the holding company with subordinate corporations in different States, which has been such an effective agency in the creation of the great Trusts and monopolies."

The words we have quoted from section 7, however, appear in all the published copies of the bill and attention is directed to them in the summaries sent from Washington by the press associations and special correspondents.

The British Elections

THE inadequacy of our newspapers in their treatment of foreign affairs has never been more conspicuously shown than during the campaign preceding the current election in England. There has been in our generation no political struggle of equal importance, and most of the issues involved are matters with which we are also concerned. From the embarrassments of a House of Lords and an Established Church we are happily freed, but income tax, death duties, taxation of ground rent, liquor traffic, unemployment, workingmen's insurance, old age pensions protective tariff, big navy, congestion of the cities and depletion of the country are problems which confront Americans as well as Englishmen, and on which English experience and discussion would be helpful to us. Yet the American papers published only meager and fragmentary reports from day to day of the progress of the great debate which has been for months going on in Parliament and in public. We are aware of the fact that Americans as a rule pay no attention to foreign politics, but in this case at least they would have taken more interest if it had been presented to them as fully and competently as it might have been.

The English on the other hand have taken a greater interest in us than ever before. The United States has been an active factor in the campaign, being brought forward upon almost every platform either as a model or a warning. Our statistics of manufactures and of unemployment, of high wages and high prices, have been quoted, interpreted and contradicted. The old weapons which have done service for or against protection for many a year have been shipped to England for use in this campaign, just as our discarded muskets are sent to South America to equip revolutionary armies. But our tariff arguments have to be made over to suit British taste and conditions. The word "protection," which has such magic power in this country, is avoided in England. The advocates of import duties use instead "tariff reform," which is quite as bad in begging the question and has even less

meaning. Since they have no tariff to speak of it is absurd to talk of reforming it.

The protectionists or tariff reformers of England were at a great disadvantage because they had no experience or even concrete program to appeal to, and they had to combat the traditional faith of the mass of the people. Free trade had been for two generations classed in the category of unquestionable things like free speech, self-government and trial by jury. Then, too, the tariff reformers had to put their weakest foot foremost. They had to ask for a tariff primarily for revenue and yet plead for the admission free or at lower rates of the products of the colonies. The chief importations of England are food and raw materials, yet they had to argue that the imposition of a duty on these would not cause an increase in their cost. In this country the question of the duty on raw materials has always been the most difficult one to settle, but our protectionists were not confronted with a rise in the cost of food as the direct and necessary result of a tariff. If they had been obliged, like the English tariff reformers, to propose to raise the bulk of the revenues of the Government by duties on the articles consumed by the masses instead of on luxuries, they would not have had such an easy time converting the people to their policy.

One of the graphical illustrations attempted by the tariff reformers to prove how easy it would be to make the foreigner pay the tax turned out rather a demonstration of the ineffectualness of patriotism in commercial transactions. They opened a shop in London containing all kinds of foreign made goods duly priced, but it was discovered that a number of the articles bearing German or American labels were really made in England and had adopted the foreign brand to secure a better price and readier sale.

It appears from the reports of the earlier pollings that the Liberals win and that the tariff issue did not have much effect in reducing their majority. But the movement for protection is undoubtedly gaining and will probably be stronger at the next election, whenever that may come, than it was at this. A Liberal victory does not mean that the tariff question is settled. It means probably that the Government may proceed with its program of reform by alleviating the condition of the poor thru the taxation of the privileged classes; that the House of Lords will be reformed or have its power curtailed; that the Welsh Church will be disestablished, and that Ireland will receive some measure of home rule. All of these measures the Government may properly regard as having been approved by the people, for they were brought forward as definite issues in the campaign, but whether its Parliament will succeed in carrying them thru before dissolution remains to be seen.

The Economists at Variance

We confess that we have been surprised by recent utterances of economists upon the cause of rising prices. Without calling names, we may remind our readers that two distinguished professors of political economy who were interviewed, when the American Economic Association was meeting in this city, declared that the increased production of gold had little or nothing to do with rising prices. They attributed the increased cost of living to the tariff, the trusts, the "standard of living," and, in fact, anything you please, except the money supply. Two other professors, not less distinguished, insisted that prices always follow the fluctuations of gold production.

Less than a generation ago it was the proper thing for practical men of business to jeer at the political economist as a "theorist" whose knowledge of real life was negligible. At the jollification anniversary dinner of the Economic Association, Professor Ely told how, in these happier days, the economist has come to be looked upon as a competent adviser to the man of business, the corporation lawyer and the statesman. We sincerely hope that this new repute will not be lost, but we fear that it could not withstand many such shocks as a point blank disagreement of theorists upon a question which, by comparison with some others, is simple and elementary. If the political economist does not know whether an increasing gold supply raises the general

level of prices, is there anything of much consequence that he does know?

Far be it from us, modest journalists that we are, to presume to teach our professional economic friends any subject so much their own as the theory of prices. But we hope they will take no offense if we suggest that the journalist, by the nature of his calling, is obliged to cultivate one habit which, we believe, is regarded as of first rate importance in inductive research. We refer to the habit of looking over the whole ground before pronouncing too positively upon its boundaries and differentiations.

The journalist is not permitted to forget that the United States is not the only country now doing business on five or six continents and the seven seas. It therefore occurs to him to ask whether the United States happens to be the only country at the present time where nourishing food has become a luxury and the prices of commodities generally have risen rapidly.

The answer to this question we find to be that the rise of prices in the last ten and particularly in the last five years is a world-wide phenomenon. Not only the United States and every country of Europe is restive under it, but from Mexico and other countries of Latin America come complaints like those that we hear from Boston to San Francisco, that the cost of living has advanced by unprecedented bounds, while wages and salaries have risen so slightly that the struggle for existence in the middle and working classes is becoming unmistakably severe.

But the American tariff, as revised by Payne and Aldrich, has not as yet been adopted by all the other countries of the world, and while combinations and trusts of the American pattern are being instituted elsewhere, they have not as yet strangled individual business enterprise in all the remoter parts of Europe and South America. Presumably, therefore, neither the new American tariff nor the trusts is the efficient cause of rising prices from Patagonia to the Rio Grande in the western hemisphere, or from the Cape of Good Hope to St. Petersburg in the eastern hemisphere. Therefore, with all deference, we respectfully suggest to our distinguished friends, the economists, that they try again. On second thought we believe they will agree with us that a world-wide effect probably has a world-wide cause.

A Great Occasion

Last Friday night was the culmination in this city of the severe storm, when more snow fell in this city than in any previous day for five years. It was a night when Nature provided a good excuse for any one who wished to take his ease in his inn or his home. But thru that storm came nearly 1,800 business men to attend a dinner, not to honor some political leader, but to express their interest in the mission work of the Churches. It was in support of the Laymen's Missionary Movement. Stormy as was the night, there were no letters of regret and no telegrams to read. Of course there were addresses; by John R. Mott, who has lately returned from a tour about the world to visit missions; from Mr. J. Campbell White, secretary of the Movement, who called for a fourfold increase in the contributions for the work, and others. On Sunday a monster meeting filled the Hippodrome, where Mr. W. Jay Schieffelin presided, with Seymour M. Ballard as secretary and Stephen Baker as treasurer, and the enthusiasm was unbounded. It was shown by various speakers that even as a financial investment missions pay, for trade follows the Cross as truly as the flag. And yet there are those who think the Church is decadent. It was never more earnest, never more determined to evangelize the world. It is proposed that Greater New York should increase its annual contribution for missions from $400,000 to $725,000. This Movement has been moving since the middle of October, and will continue to move from Boston to San Francisco in a series of meetings till the 1st of May, attracting the support of all denominations.

The Boston Mayoralty

Ex-Mayor Fitzgerald is re-elected Mayor of Boston by a sufficient plurality after the hottest election the city has ever known. Mr. Fitzgerald is a Democrat, but was not elected as a Democrat, while Mr. Storrow, his principal competitor, is a Republican, but was not defeated as such. The nominations, under a new

charter, are not made by a primary, but by petition of 5,000 voters, who ask that a name be put on the ticket. What their politics is makes no difference. It is interesting to know that the Boston daily papers supported Storrow, while the voters supported Fitzgerald, whose previous administration had been sadly discredited. What was the reason? There must be influences behind not seen by the editors. One who looks behind the published obvious will notice that Boston is not inhabited by those of the old colonial stock, but chiefly by Irish Catholics, who are very clannish, and that Fitzgerald is one of them, and that the several Irish Catholic papers in Boston all supported him. Then the women have some influence, if no votes; and the women who take an interest in politics had been offended by certain language used by Mr. Storrow when he was a school commissioner. Another influence which went against Mr. Storrow was the entrance into the field as a candidate of the outgoing Republican mayor. It was very ridiculous on his part, and the few votes he diverted would have been enough to give Storrow the election. While the result is not what was hoped by those who secured the new law, yet this is no argument against the law, which gives a short ballot, a sort of commission to rule the city, and the authority to the people, in the middle of the mayor's term of four years, to recall him and choose a new mayor. But, like Judge Gaynor, in this city, Mayor Fitzgerald may disappoint his supporters and gratify his opponents by giving an honest and unpartisan administration. We particularly desire to see the new municipal experiment thoroly tried.

The Sidis Boy

The case of the Sidis boy, who gave a talk the other day on the fourth dimension before a mathematical club at Harvard University, is not as marvelous as it would seem from the papers. A daily of this city, which gives "all the news that is fit to print," said he was ten years old. Another daily, which "shines for all," said he was eleven years old. In fact, he is thirteen. That makes a serious difference. Some years ago a Hebrew mechanic appealed to a professor for instruction as to how to improve his education. When asked why he happened to apply to this particular professor, of whom he knew nothing, he replied that he had seen on the catalog that he was "professor of divinity," and the title seemed to imply a benevolent mind. He was unwilling to take financial assistance. Such help as was desired was given him, and young Sidis is his son. The father believes that the boy has no extraordinary ability, and that any bright boy who is carefully educated from the earliest years can make as much progress as this boy has made. We agree. There is usually a sad waste of time in the first seven years of the education of a child. By dead memory and hard work a child learns before he is three years old the words of a language. If he hears two or three languages he learns them at the same time. Plenty of children learn English and German, or English and French, or English and Arabic, before they are three years old. It need not be half the effort to learn to read, and when one can read the next steps are plain. A case like this of the Sidis boy does not mean precocity, but good education. If special attention is given to mathematics, as in this case, there is no reason why a boy of brains could not be expected at thirteen to have reached calculus and to wander about in the fourth dimension. It is not pretended that he has made any mathematical discoveries; he has been busy learning. Nor is there any reason why health should be sacrificed. This is a perfectly healthy boy, and he has doubtless eaten enough, slept enough and exercised enough, the three conditions of a sane body to hold a sane mind. His is by no means a unique case.

Anglican Rebellion

We have called attention to the letter of the Anglican Bishop of Birmingham, in which he declared that he "repudiated" the unanimous decision of the British judges that under British law no clergyman has the right to exclude from communion one who marries his deceased wife's sister. We now have a yet more revolutionary pronouncement from "Joh.: Norvic:", *alitér* the Bishop of Norwich, written from "The Palace." He not merely

nullifies, but goes so far as to threaten dissolution. He says:

"It is quite obvious that, if the law of the State invades the spiritual sphere of the Church, and alters the terms of her Communion without the consent of the Church being obtained or asked for, it is absurd to talk of the 'union of Church and State.' A very different term would have to be applied to the relation between them."

And he concludes even more plainly:

"But it may still be said, You must expect these 'aggressions upon the spiritual sphere of the Church,' as you call them, as the price of your establishment. But I do not know that there have been these aggressions upon the spiritual sphere, certainly since Parliament has been a body of all religions or no religion. But, if it be so, there are many who will think that disestablishment would be for the advantage of religion."

Then let us see some conscientious Churchmen join the conscientious Dissenters and move for disestablishment. They would by it lose prestige and glory, but they would gain freedom. But we fear they are few. The price of freedom is too great. It pays to wear the collar, as the dog told the wolf in the fable.

Canada's Future

In our issue of December 16 we spoke of the position of Prof. Goldwin Smith, who had been spoken of at a public meeting as the only resident of Canada who desired to see Canada made a part of a greater union with the United States. The speaker on that occasion was the Hon. William Renwick Riddell, a member of the High Court of Justice for Ontario. We have received from him a communication giving us the words used by him. What he said was:

"Until within a very few years there did exist amongst us a number of citizens who held the view that it was the manifest destiny of Canada to become part of the greater Union of States. With the exception of a very few indeed—and in the open with the exception of one man, who is not a Canadian by birth at least—such a feeling does not now exist.

"There is no fear or hope (put it each one as he will) that Canada will ever form part of this American Union—there must be two great English-speaking nations upon this continent. I am assuming, as, indeed, the contrary is to me inconceivable, that the nation which showed the world an example of self-abnegation in the case of Cuba may be trusted never to grasp a territory occupied by those who will not freely and gladly receive it, or force an unwilling people to unite their destinies with those of the Union."

What Justice Riddell and Canadians generally object to is not union with the United States but separation from Great Britain. To ask Canada to separate from the Mother Country would be as offensive to them as it would be to its citizens if Michigan were asked to separate from this country and join Canada. But what he would welcome is the grand union of the English-speaking people of the world in one mighty nation. To those who would look for something less, the union of Canada with the United States, he says:

"Such a union can take place only as a part of a greater, more comprehensive, union of all the English-speaking people of the world. What a nation that would be! Some see with the eye of faith two twin fleets sailing together forth under the flags which float over kindred freemen—these fleets bear the single mandate, 'There shall be no more war.'"

But this would be rather a federation than a union. To our notion the United States and Canada are much nearer connected by all their interests than either is with Great Britain, and it is a beautiful but profitless sentiment that keeps them apart. There is no reason to expect any change in the sentiment so long as Great Britain keeps her hands off of Canada, protects her, and allows her to do just as she pleases. Should the time ever come, which God forbid, in some stress of an Eastern war, when Great Britain cannot protect Canada, then she will see where profit and sentiment will both direct her.

A New Professorship

Following the magnificent gift of $650,000 from Mrs. Russell Sage to Yale University to gain possession of much needed land, comes the unusual gift of $100,000 from J. Pierpont Morgan to Yale for a professorship of Assyriology, in honor of the late William M. Laffan, editor of *The Sun*. This may surprise many, inasmuch as neither Mr. Laffan nor Mr. Morgan graduated from Yale, and also because the public generally do not know that both these gentlemen have been interested in Assyriology. But of late Mr. Morgan has been adding to his wonderful library remarkable collections of Babylonian records and art, and has issued several valuable volumes from these collections by Oriental scholars. In this work Mr. Laffan took the greatest

interest and gave his advice, as also to the various Oriental collections in the Metropolitan Museum. Hardly any other memorial could have been so pleasing to Mr. Laffan. For this new professorship of Assyriology Yale could not have made a better choice than that of Dr. Albert T. Clay, of the University of Pennsylvania. There is not a more enthusiastic and fruitful young scholar of that field in the country. He has published more than one learned volume of Cuneiform texts from the collections brought to the University of Pennsylvania from Nippur, besides an admirable popular volume, "Light on the Old Testament from Babel," and his latest, "Amurru," which defends the independence of the Israelite religion and culture from that of Babylonia. He has of late been editing the collection of tablets belonging to the J. Pierpont Morgan Library. We doubly congratulate Yale University for the professorship and the professor.

One cannot but admire the sweet credulousness of the board of directors of the Sugar Trust as to the desired corresponding credulousness of the public. They believe that they can make the public believe that they made millions by a fraud in their behalf by their humble subordinates, and never knew that these markers and checkers had so wantonly and magnificently stolen just for their benefit. The directors give to the public the statement that while these cheap men were guilty, no officer of the company had any knowledge of it. Now, the public has some knowledge of human nature, and the public cannot be made to believe that higher officers did not know and did not pay handsomely to reward those who tampered with the scales.

We have a Bureau of American Republics, and it is useful. Why should there not be a corresponding pan-European bureau of nations? That is what Alfred H. Fried, of Vienna, urges in his Peace journal, the *Friedenswarte*. There is already a growing multitude of international European bureaus, for telegraphic administration, the universal postal union, for weights and measures, the protection of works of literature, the abolition of slavery, the study of tariffs, international transportation, besides several bureaus at The Hague, Berne and Brussels for peace. A special one given to the maintenance of mutual knowledge and friendship would have a larger field of service.

In an editorial last week on "Nineveh and Jonah," we referred to the fact stated by Sennacherib in an inscription just published, that he planted in his pleasure garden near Nineveh, "trees that bear wool," which the translator, Mr. L. W. King, supposed to refer to some kind of palm with fibrous bark. But in a later paper in the *Proceedings* of the Society of Biblical Archeology he gives reason for believing that it was a real cotton tree, the *Gossypium arboreum*, of India. It is a small tree held sacred by the Hindus, who use its fiber for their sacred triple thread. Herodotus speaks of it, and the Indian tradition goes back to the time of Sennacherib.

In an open letter Bishop Grafton, Episcopal Bishop of Fond du Lac, famous for his polychrome millinery, appears to propound the millennial doctrine of despair as follows:

> "It must ever be remembered that Christianity is not destined to conquer the world, which will more and more reject it, and finally formulate a counterfeit Christianity. . . . The Church's mission is to gather out of this world and train the predestined number of the elect for that kingdom of righteousness which is to be evolved out of the present condition of creation."

But this is never to be remembered and never to be believed. The Church has no such selfish mission, and its faith holds fast to the complete victory.

After reading Judge Lindsey's article in *Everybody's* for January, and the reply issued by Chancellor Buchtel, of the University of Denver, we have come to the conclusion that the Chancellor has ably refuted the charge that the Judge did not make.

In connection with an article by John Moody, in our issue of December 23, 1909, we stated that he is the editor of "Moody's Manual." He is editor of *Moody's Magazine*, and has severed his connection with "Moody's Manual."

INSURANCE

Superintendent Hotchkiss' Report

THE fifty-first annual report of the State Insurance Department was issued by William H. Hotchkiss last week. An extensive scheme of legislation affecting fire insurance companies and casualty companies is under contemplation by the department. The superintendent proposes that the limitation placed on the new business of domestic life insurance companies be extended to non-State companies.

That the provisions of law prohibiting rebating by life insurance agents and giving the superintendent discretion to refuse them licenses should be extended to fire insurance agents.

A substantial increase in the examining force of the department.

Real supervision and control of Lloyds associations by the State Insurance Department.

That the department's jurisdiction be extended to include the control and regulation of town and county co-operative fire insurance companies.

The far-reaching effect of the amendment enacted by the last Legislature which gives him the power of liquidation in case companies are insolvent or so conduct their business that in the judgment of the department, their further continuance would be hazardous to their policyholders or to the public is also pointed out.

The report recognizes the need of a complete recodification of the insurance law, as well as the present impossibility of attempting such recodification. In lieu thereof, it suggests many changes in the law intended to strengthen it in certain directions and to take out of it sections and provisions which lead now to discriminations in favor of classes of companies and even of companies in specified classes. Thus it practically recommends the repeal of three of the ten articles of the law and of all sections and clauses in Article 1, which except from the general provisions contained in that article fraternal beneficiary societies, assessment livestock associations and town and county co-operative fire insurance companies, as well as certain foreign and alien companies admitted to do business prior to the codification of 1892.

Regarding life companies the report, after commenting on an investigation of the effects of the amendatory laws of 1906—which indicates that, while there had been a considerable falling off in the new writings of domestic life insurance companies, due to such investigation, sets forth that normal conditions have now been restored, and that there has been a very considerable saving in expenses, a marked increase of assets and a substantial addition to dividend participations—suggests that a period of legislative peace is what is now needed by companies of this class and, therefore, but few recommendations are made. Among the latter are that the limitation on new business now applicable to domestic companies be extended to non-State companies; that life companies be no longer permitted to issue policies secured by actual deposits in the department and that companies of this class be permitted, on securing the advance approval of the superintendent, to write policies in not more than $3,000, the premiums on which will be payable monthly—the belief being that there is a growing demand for insurance of this kind from a large class of wage earners, farmers, tradesmen and professional men who are unable to carry ordinary life insurance and, on the other hand, are unwilling to insure on an industrial plan.

As to casualty companies, the report recommends that the uniform bill adopted at the recent convention of the insurance commissioners, which provides for standard clauses in the policies of such companies and prohibits the use of other clauses which have been condemned by experience, be made a part of the insurance law of New York. The report also recommends amendments which will permit companies of this class to give a broader policy against accidents due to automobile collisions and to insure against property damage by horses and horse-drawn vehicles.

....The Mutual Benefit Life Insurance Company, of Newark, N. J., incorporated sixty-five years ago, of which Frederick Frelinghuysen is president, has made another increase in its dividends to policyholders. Eight years ago a similar increase in dividends was made.

FINANCIAL

Rock Island Affairs

ROBERTS WALKER, formerly assistant general counsel of the Chicago, Rock Island & Pacific Railway Company, was elected, on the 13th inst., president (and a director) of the Rock Island Company, the holding corporation of the Rock Island system, succeeding Richard A. Jackson, resigned. He was also elected a member of the board, chairman of the executive committee, and general counsel, of the Chicago, Rock Island & Pacific, as chairman succeeding D. G. Reid, resigned, who remains, however, a director of both companies. Mr. Jackson, who retired from all his offices, had been an intimate friend of Mr. Reid (one of the controlling capitalists of the system) from the days when they were young men together in Richmond, Ind. It is reported that they recently disagreed as to a personal business matter. Mr. Walker, the new president and general counsel, is only thirty-five years old. His residence is in Scarsdale, N. Y. Born in Rutland, Vt., the son of Aldace F. Walker (formerly chairman of the Interstate Commerce Commission), he was graduated at Amherst in 1898 and at the Columbia Law School three years later.

These important changes were made on the day when the decision of the Governors of the Stock Exchange in the case of what is called the "Rock Island flurry" was made known. At the opening of business on December 27 last, large buying orders caused an advance of thirty-one points in Rock Island common shares in a few minutes. Then the price fell back again. It appears that the firm of S. B. Chapin & Co. executed for a customer an order to buy 40,000 shares "at the market," following his instructions that twenty brokers should be employed, each to purchase 2,000 shares. The general belief is that this was manipulation, such as had been practised for some time in Rock Island stock, and that for some reason the intended accompanying order to sell something less than 40,000 shares (say 30,000) went astray. Manipulators seek to make a semblance of legitimate activity in a stock, gradually raising the price and drawing in "the public" as purchasers. The Governors suspended Simeon B. Chapin for sixty days and Frederick D. Countiss, his partner, for thirty. Mr. Chapin is a cousin of J. Ogden Armour, and Mr. Countiss, in charge of the firm's office in Chicago, is president of the Stock Exchange in that city. The firm's brokerage business is said to be the largest in the West. The Governors say that "the firm should have known that the execution of an order in such a manner would serve no proper or legitimate purpose, but would cause panic, confusion and loss, and deprive the quotations of transactions on the Exchange of their value as standards of the real market value of securities."

There has been much gossip in the press as to a possible connection between the stock "flurry" and the Rock Island office changes. Rumors that Mr. Reid and Ex-Judge W. H. Moore are no longer in harmony have been authoritatively denied. Mr. Reid has sued a New York paper for libel.

....James N. Wallace, president of the Central Trust Company, has recently been elected a director of the Continental Insurance Company, the Hanover National Bank and the Mechanics' and Farmers' State Bank of Albany.

....Charles Elliot Warren, cashier of the Lincoln National Bank has been elected vice president. Mr. Warren was former president of the New York State Bankers' Association and is now a member of the finance committee and executive council of the American Bankers' Association. Samuel H. Miller, cashier, has been elected vice president of the Chase National Bank and Henry M. Conkey, assistant cashier, has been made cashier. Henry P. Davison, of J. P. Morgan & Co., has been elected a director of the Chemical National Bank, and Richard H. Williams, of Williams & Peters, a director of the National Park Bank. Charles A. Boody, president of the People's Trust Company, of Brooklyn, succeeds the late Charles Stewart Smith as a director of the Merchants' National Bank. Charles W. Riecks, vice president and cashier of the Liberty National Bank, has been elected a director of the First National Bank of Brooklyn.

The Independent

VOL. LXVIII NEW YORK, THURSDAY, JANUARY 27, 1910 No. 3191

Survey of the World

A Widespread Boycott of Meat

A remarkable popular movement against the purchase of meat has been caused by the continued rise of prices. In some places the temporary boycott is also against certain other kinds of food, the price of which, it is alleged, has been unduly and wrongfully enhanced. While the first steps were taken a few weeks ago in Washington by the Anti-Food-Trust League, the meat boycott may be said to have originated in Cleveland, where, on the 16th, 460 superintendents and foremen employed by a score of large manufacturing concerns, signed a pledge requiring them to abstain from meat for thirty days, or for sixty days if prices should not fall within a month. They set out to procure the support of the workingmen of the city. The number of signatures rapidly increased, and at last accounts was about 25,000, representing at least 100,000 persons. The local consumption of meat was perceptibly affected. One company, which has twenty-seven stores, dismissed one-third of its drivers. There has been a slight reduction of prices. The example of Cleveland was speedily followed in many other cities, generally under the direction of labor unions, altho in one or two instances labor councils have exprest disapproval, urging that a demand for higher wages be substituted for the boycott. No action has been taken by the Central Federated Union in New York, partly for the reason, it is said, that the Union is attempting to organize the butchers. The method used in Cleveland has been adopted in widely separated parts of the country. A few examples may be cited. In and near Pittsburgh there are 75,000 signers, and several restaurants are offering a special dinner of vegetables. In Baltimore there have been sold 50,000 buttons bearing the words, "I don't buy meat. Do you?" In New Orleans, on the 22d, thirty clergymen, accompanied by labor leaders, visited the restaurants and urged all whom they found in them to abstain from meat. Boston has 60,000 signers, and resolutions addressed to Congress and the Legislature have been adopted at mass meetings there. In New York, where thousands, acting without organization, have followed the Cleveland example, mass meetings are to be held this week. There have been 200,000 applications to the Anti-Food-Trust League for membership. Several persons are promoting the boycott by endless chains of postal cards. A protest against the price of eggs is made by "Thirty Cents a Dozen" clubs.——In several legislatures resolutions providing for investigations as to the cost of living are pending. A national conference to discuss the subject has been planned by the Syracuse Chamber of Commerce, and probably it will be held in March. An inquiry is to be made in Washington by the House Committee on the District of Columbia. Resolutions introduced at Albany ask the Attorney-General of New York and the Attorney-General of the United States to co-operate in the prosecution of the Beef Trust. On the 18th, the Attorney-General of Kansas brought suit against the Armour and Swift companies for violation of the State's Anti-Trust law. Representatives of the beef companies assert that their prices give them only a reasonable profit and that any reduction caused by the boycott will be felt by farmers and stock raisers, rather than by themselves. Of

course, the boycott is not approved by the cattle owners. The Western Stock Association at Denver condemns it in resolutions asserting that stockmen ought to be encouraged to increase their output. These resolutions also say: "The present prices of meat are caused by the increased demand due to the growing population of the country, and the low prices that have heretofore prevailed are responsible for the failure of the producers to keep pace with the increase of population." The Texas Cattle Raisers' Association, whose members own 7,000,000 cattle, makes a loud protest, and it is reported, will ask the Government to proceed in the courts against the boycotters, altho it is not shown how this can be done.——It was announced at Washington on the 21st that the Government had decided to prosecute the Beef Trust, meaning the Armour, Swift and Morris companies, and the National Packing Company, which these three companies control. This action will be taken under the criminal provisions of the Sherman act. It will be the result of an investigation which has been in progress for several months. Evidence will be laid before a grand jury in Chicago this week. At about the same time a grand jury in New York will be asked to consider evidence obtained recently by an investigation made under the direction of the New York Attorney-General concerning what is called the Milk Trust, a combination alleged to have been formed by the companies supplying milk in that city.

The Ballinger Investigation

The joint committee which is to make an investigation concerning all questions involved in the Pinchot-Ballinger controversy is composed of six Senators and six Representatives, as follows:

Republicans: Senators Nelson, of Minnesota; Flint, of California; Sutherland, of Utah; and Root, of New York. Representatives McCall, of Massachusetts; Olmsted, of Pennsylvania; Denby, of Michigan; and Madison, of Wisconsin.

Democrats: Senators Paynter, of Kentucky, and Fletcher, of Florida. Representatives Lloyd, of Missouri, and James, of Kentucky.

Mr. Lloyd is unwilling to serve, and Mr. Graham, of Illinois, will probably be elected in his place. The Senate members were appointed by the Vice-President; the House members were elected after they had been chosen by caucus. Such action had been ordered by a vote in which the Republican insurgents, being foes of Speaker Cannon, stood with the Democrats. By the intervention of the President, these insurgents were induced to enter the caucus at which the members of the committee were named. The Democrats, in their caucus, had chosen Mr. James, of Kentucky, and Mr. Rainey, of Illinois, to represent them in the committee. It is understood that the President objected to both of these, on the ground that they were extreme partisans, who would seek to make political capital out of the inquiry. Mr. Rainey was obnoxious because he had made public in the House the charges alleging that Mr. Taft, his brother, and Mr. Roosevelt were improperly but profitably concerned in the purchase of the Panama Canal property. The Republican caucus rejected Rainey, but retained James by a vote of 94 to 62, naming Lloyd in Rainey's place. In the House, Rainey was excluded by a vote of 192 to 147, and the caucus list was adopted. Only one of the insurgents, Mr. Poindexter, voted against his party, altho several declined to vote on either side. As Mr. Lloyd (chairman of the Democratic Congressional Committee) declined to serve, the Democrats have nominated Mr. Graham in his place. There is much difference of opinion on the Republican side concerning the rejection of members designated by a caucus of the Democratic minority.

A Party Leader Accused

In the New York Legislature, after the recent death of Senator John Raines, Senator Jotham P. Allds was elected by the Republican majority to succeed him as leader of his party (and president pro tempore) in the Senate. Last week he was accused by Mr. Conger, another Republican Senator, of having accepted money, while leader of the House, in 1901, for exerting his influence to prevent consideration of a bill. Mr. Conger has for years been connected with bridge building companies, one of which, he says, paid the money because the bill,

which restricted the power of town officers with respect to bridge contracts, would have affected its business injuriously. His disclosure was made to a group of seven Senators opposed to Allds, and, he says, was made in confidence. The story, however, was promptly published. Mr. Allds at once declared that it was untrue and demanded a public investigation. Such an investigation has been ordered by unanimous vote, and it will be made by the entire Senate, sitting as a committee. The matter excites much interest, because Mr. Allds has for many years been very prominent in the New York Legislature, and for the additional reason that other members, not yet named, are affected by Senator Conger's charges.

The Governors in Conference

The third Conference of the Governors of the States of the Union opened January 18 in Washington, attended by nearly all the Governors. It was called not by the President, as in the case of the two previous, but by Governor Willson, of Kentucky. The President, however, welcomed them to a reception and made an address, in which he said:

"You are here for the purpose of considering those subjects for laws in respect to which the legislation of the States ought to be uniform and to take the course of making up for what some people point out as a defect of the Federal Constitution, in that it does not give jurisdiction to the Federal Government with respect to certain purposes which can only be accomplished by joint action of the States.

"I regard this movement as of the greatest importance. The Federal Constitution has stood the test of more than one hundred years in supplying the powers that have been needed to make the central Government as strong as it ought to be, and with this movement toward uniform legislation and agreement between the States I do not see why the Constitution may not serve our purpose always."

The opening address at the Conference of Governors was made by Governor Hughes, in which he showed the value of such a conference:

"A conference of Governors can be expected to accomplish much more than conferences of legislative committees or of appointed commissioners. Accord between executives upon questions which they have carefully considered together cannot fail to be of enormous influence."

As to the work of such a conference, he added:

"The scope of these conferences may be deemed to embrace at least three groups of questions. The first relates to uniform laws; the second relates to matters of State comity where, if absolute uniformity may not be expected, causes of friction may be avoided and the general welfare may be promoted by accomodating action; the third relates to matters which though of local concern can be better treated in the light of the experience of other States.

"It would not be possible for Governors in conference to undertake the drafting of uniform laws, but their united consideration of their importance and of proposed statutes drafted by the commissioners of their appointment will bring these matters into deserved prominence and supply for the progress of uniform legislation a much needed impetus."

The complete making over of the Constitution he declared to be "an undesirable and unthinkable proposition," and therefore it is only by facilitating mutual intercourse thru the instrumentality of the States that is it possible to make our system of Government answer its intended purpose. This requires "State comity without loss of State prerogative." As topics for consideration he referred to the conservation of natural resources; financial administration, including taxation and appropriations; also the supervision and regulation of banks, insurance companies and public service corporations to secure common action. He also suggested organization, by which committees should be able in the intervals to draw up a program and present topics somewhat developed by correspondence. Seth Low was received as representing the Civic Federation and suggested that they consider uniform laws on divorce, negotiable instruments, warehouse receipts, bills of lading, pure food, the white slave traffic and other subjects.——At sessions on the next day various Governors made addresses, and resolutions presented by Governor Eberhart, of Minnesota, defining the jurisdiction of Federal and State courts in matters involving interstate commerce, were referred to a committee which finally took no action. Governor Willson, of Kentucky, claimed State right of control over water power, as against Federal control; and Governor Fort, of New Jersey, argued that the time had come for the State to assert control of water power and other things

hitherto passed over in silence. With this Governor Draper, of Massachusetts, agreed, but said that in his State nearly all water power had passed finally into private possession. Governors Quinby, of New Hampshire, and Hughes called attention to forests as a priceless possession of the States, as well as water power; and Governors Brooks, of Wyoming, and Shafroth, of Colorado, insisted that the State should hold full control of water power. The latter further contended that, while the Federal Government might own land within a State, it was merely by a proprietary right, like that of an individual, and that political and governmental rights rest with the States. Governor Hadley, of Missouri, spoke of railroad rate legislation, and declared that rates should be controlled by the Government, not the railroads. Governor Draper discussed the regulation of automobiles, favored a speed limit and the licensing of chauffeurs.——The Conference adjourned on the 20th, after hearing a brief plea from Mrs. Harriot Stanton Blatch, of the Equality League, asking that the political position of women be made one of the topics considered by the Governors, and arranging for future meetings. It was agreed that the next meeting shall be held between Thanksgiving and Christmas, 1910; that it shall be held at a State capital and not in Washington; that the committee on arrangements apportion the expenses of the next conference among the States according to population,so that the Governors may recommend to their legislatures the appropriations necessary. Governors Willson, of Kentucky; Hadley, of Missouri, and Ansel, of South Carolina, were named on this committee. A proposition by Governor Hughes that all Governors elected next fall but not inducted into office before the conference be asked to attend was carried.

The Civic Federation

The National Civic Federation opened at Washington a day before the Conference of Governors and adjourned a day earlier, with Seth Low as president. It was largely attended. Mr. Low asked the body to urge that all the States and Territories appoint commissioners for uniform State laws, with a small appropriation of perhaps $500 for all expenses. He desired that committees be appointed to draft laws to be submitted to these commissioners and to the States for uniform legislation. President Taft was introduced and made a strong plea for uniform State legislation on marriage and divorce, child labor, and judicial procedure in which great delay could be secured by wealth. To the great organizations of concentrated wealth that do an interstate traffic he would give Federal incorporation, so as to put them under Federal jurisdiction. Referring to constitutional questions involved, the President said:

"A constitutional lawyer is one who has gotten out of the practice of the law and has gone into politics."

He indicated that there are powers under the Constitution which Congress has never taken, such as the jurisdiction of the Federal courts, bankruptcy legislation and the control of Federal elections, which have been left to State control. The reason why it has been urged that we are getting a more centralized government is not because of a change in the construction of the Constitution, but a change in the importance of the power always given to Congress over interstate commerce. When the Constitution was framed, only a quarter of the home commerce was interstate, while now only a quarter is within the State; and thus the national Government's power seems larger because it covers more business. He urged uniform laws as to those subjects which the Federal Government is excluded from. Judge Alton B. Parker was chairman of the program committee, and spoke in favor of uniformity, with diversity. Ex-Forester Pinchot was received with great enthusiasm, and spoke, showing that forty-two States have appointed conservation commissions, as recommended two years ago. He urged speedy action on the conservation bills recommended by the President, with some needed amendments. He thus specified:

"The leasing of the coal lands instead of virtually giving them away, the prevention of water power monopoly, the conservation of our soils, the repeal of the timber and stone act, the maintenance of the national forests, Government protection of woodlands at the headwaters of navigable streams—these things

are right, and they can be dealt with rightly only in the light of the general welfare. Now is the time for all good men to come to the help of the conservation movement without regard to party or prejudice or any personal consideration whatsoever. The public good comes first."

Ex-Senator Dryden, of New Jersey, deplored the lack of uniformity in insurance laws, and he advocated a uniform system of laws on this subject. The next day was given to addresses on various subjects by Senator Root, August Belmont, John Hays Hammond, Samuel Gompers and others. The Federation adjourned on the 19th, after adopting resolutions favoring uniform laws for the protection of children employed in industries, a uniform insurance code, and uniform legislation as to the gathering of vital statistics, and the conservation of American forests, whether public or private. It asked for a workmen's compensation act in case of injuries, which shall be fair to the employer and employee and just to the State, in place of the present system. A resolution was passed recommending to the respective States consideration of the development of water power and its regulation on non-navigable streams. The conference authorized the appointment of a committee of fifteen on reform in legal procedure for the purpose of co-operating with the committee of the American Bar Association to suggest remedies and formulate proposed laws to prevent unnecessary delay in litigation. A special feature of the meeting was a reception by the President in connection with the reception to the Governors.

Canada's Navy

The bill for Canada's navy, introduced in Parliament by Premier Laurier, provides for the construction of four protected cruisers of the "Bristol" type, one unarmored cruiser of the "Boadicea" type, and six destroyers, at a total cost of about $11,000,000, to which one-third must be added if the ships are built in Canada. There is provision also for a permanent naval corps, a reserve force and a volunteer force, but there is to be neither conscription nor compulsory enrollment. Some weeks ago it was understood that the bill would say that the navy should be placed at the disposal of the British Government in time of war only by vote of the Canadian Parliament. But the plan was changed, the bill now providing that in emergency (meaning war) the navy may be turned over to the British Government for general service by the Governor in Council, "the only restriction being," as the Premier explained, "that Parliament is to be immediately summoned." With respect to this subject, the Opposition is not united, a majority (as represented by Leader Borden) apparently preferring an annual cash contribution to the British Government for naval purposes, while some ask for a plebiscite. Mr. Monk, representing a small group of French Conservatives, opposes any expenditure whatever, on the ground that Canada has no voice in framing the policies or making the alliances which may lead to war. Mr. Borden said the Government's project was "too much for an experiment, and too little for immediate and effective aid." The passage of the bill, of course, is expected.——The Government has introduced an Anti-Trust bill resembling in many respects the Industrial Disputes act. It provides that if six persons show prima facie evidence to a Superior Court judge that a combination exists which has unduly enhanced the price of a manufactured article, limited production or restricted trade, the judge shall order an investigation, to be made by a board of three. One member is to be appointed by the complainants, one by the combination, and the third (the chairman) by the two first chosen, or, if they fail to agree, by the judge. The board is to have the powers of a court of record. If it reports against the combination, the Governor in Council may reduce or remove the tariff protection of the manufacturers. Or a fine of $1,000 a day may be imposed until the abuses are removed. Patents used to restrict trade or to enhance prices may be revoked.

The Revolution in Nicaragua

In the negotiations between President Madriz and the revolutionists, the former proposed that the peace commissioners should meet at Greytown, and General Estrada suggested some place in Costa Rica. This was not ac-

cepted at first, and the revolutionist commander asserted that Madriz was merely seeking delay. Whereupon Madriz said he was willing that the commissioners should meet anywhere. But Estrada insisted that the revolutionists be recognized as a provisional government. Madriz regarded this as an absurd condition, and on the 20th he made the following statement:

"This means on open break in the negotiations for peace and the resumption of military activity. I regret deeply that this is so, as I am sincerely desirous of effecting a reconciliation of all factions. Apparently this is impossible without further bloodshed, and orders have been issued to send more troops to the front. All of our energies will be directed now to administering a swift and decisive blow. It will be better to have one severe battle than an endless season of inconclusive skirmishes."

On the 22d it was expected that the decisive battle would soon be fought. Estrada had 4,000 men, well supplied with food and ammunition. On the same day it became known that a conspiracy against the Madriz Government had been discovered at the capital and in neighboring places, and that Madriz had ordered the arrest of all the leaders of the Conservative party, which is the political Opposition in Nicaragua.—— Four or five days earlier he had ordered the arrest and trial of the members of the court-martial that condemned the two Americans, Cannon and Groce, together with the prosecutor, Salomon Selva, and General Medina, who was in command at the time. On the 20th, Medina and Selva were arraigned in court.

The British Elections

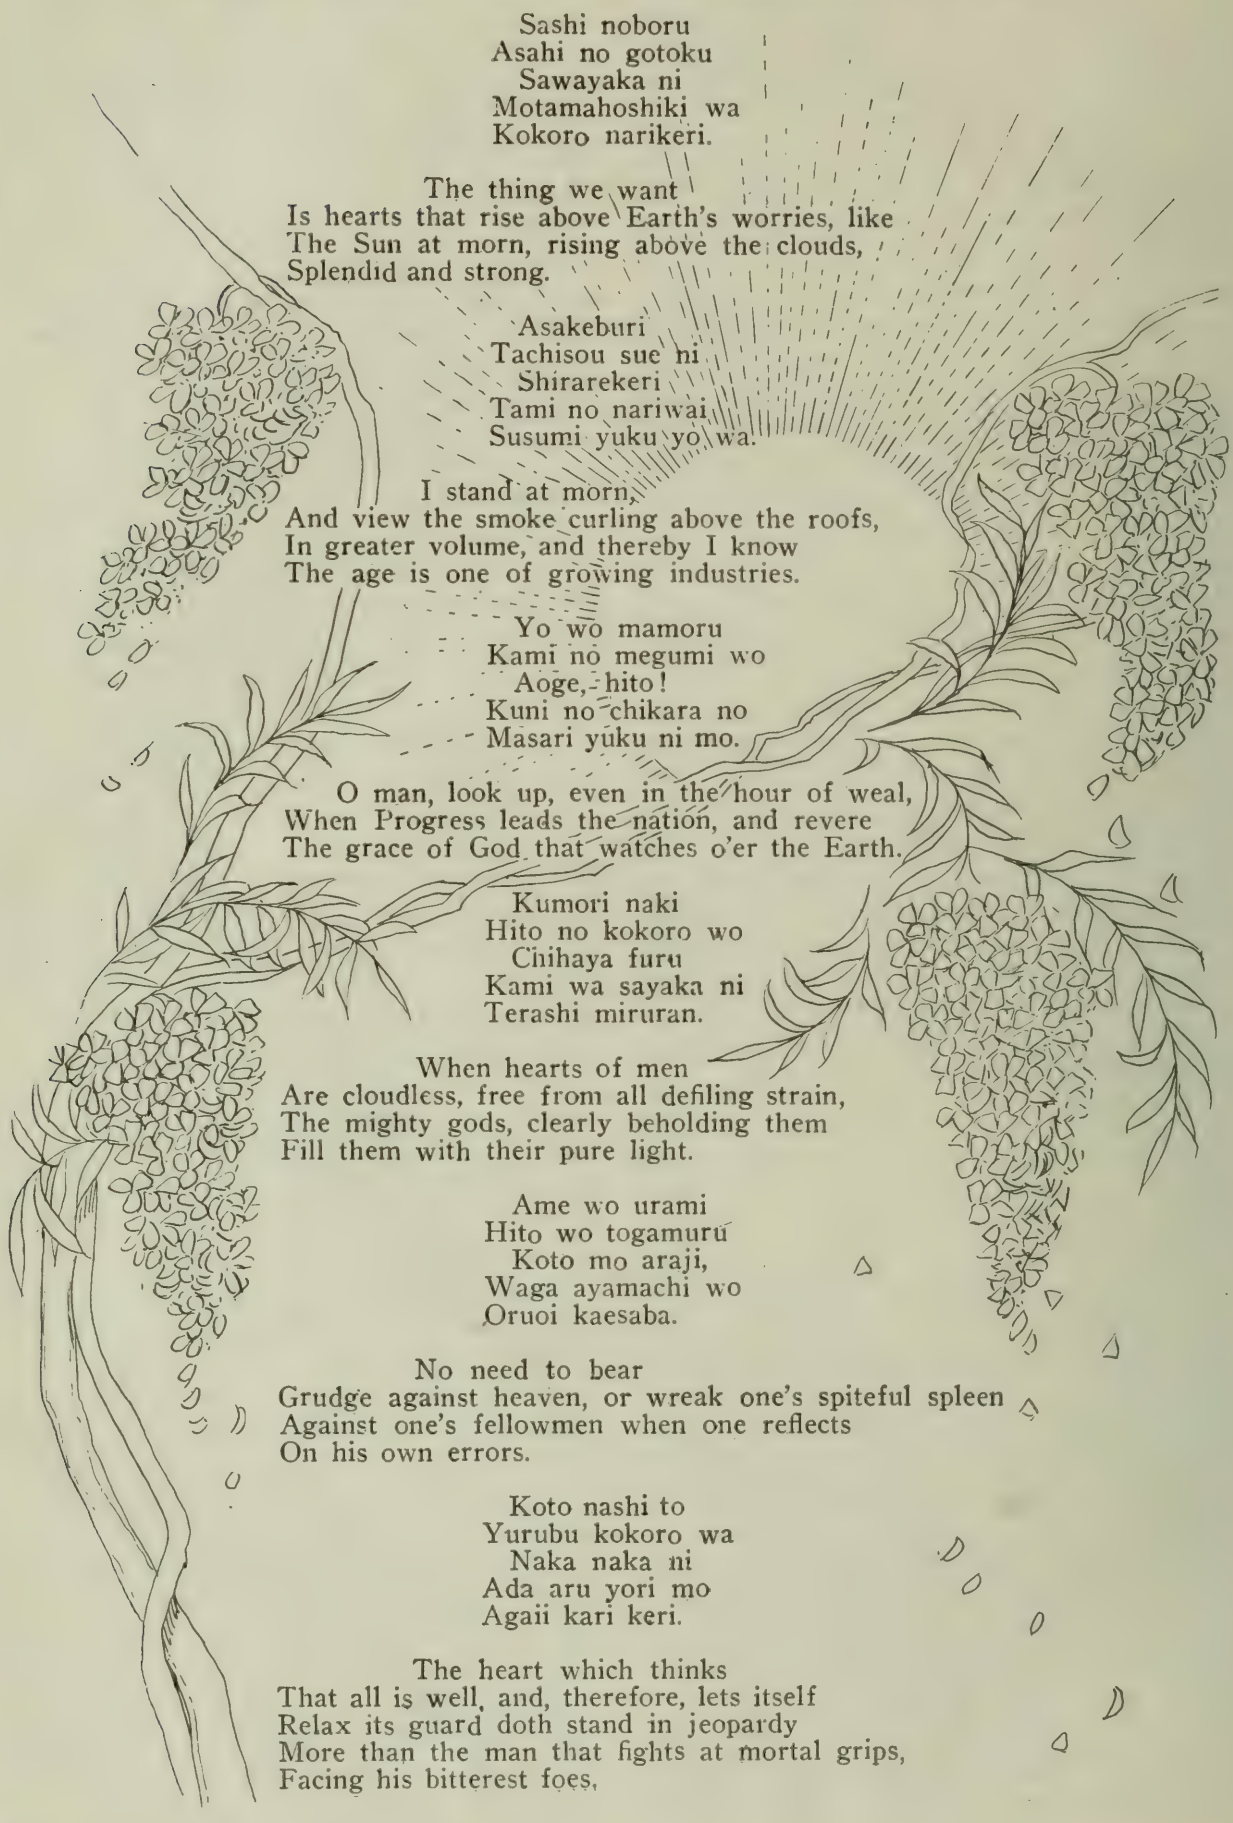
The elections held during the past week have gone more largely against the Liberals than was expected by either party, and the Unionists are jubilant. Scotland and Wales have retained their Liberal allegiance, but the midland counties show a strong reaction toward the Conservative side. Up to the time of going to press the relative standing of the parties is: Unionists, 218; Liberals, 185; Laborites, 33; Irish Nationalists, 67. The Unionists have gained 100 seats, the Liberals 14, the Laborites 1, making the net Unionist gain so far 85 seats. Altho the five days' voting yet to come will probably increase the Liberal representation in Parliament, it does not seem likely that the Government will command a clear majority of its own party, and if the Government has to make terms with either the Labor or Nationalist groups it will have difficulty in doing anything. Even the budget, which was the cause of this election, may not go thru, for the Nationalists did not vote for it before because of its effect on Ireland, especially the manufacture of whisky. It will be difficult for the Government to satisfy the Irish with any measure of home rule which would not alienate a considerable proportion of Liberals. The Irish and many of the Labor members are not absolutely devoted to free trade, as are the orthodox Liberals, and might be willing to bargain with the Unionists. All three parties, however, would probably stand together against the Lords, and this is what gives Premier Asquith the courage to say:

"I promise that no legislation of any kind will be considered by the next Parliament until we have settled conclusions with the House of Lords."

But with an unstable majority the life of the new Parliament may be a brief one. The adoption of a thorogoing home rule measure at the dictation of the Irish or the passage of more radical social legislation at the dictation of the Laborites would give the House of Lords another excuse for an appeal to the country, and very likely a strong campaign on the tariff issue would overthrow the Liberals. The results of the election are of course variously interpreted. The Unionists claim that their increased vote indicates that the country is turning against free trade. The Liberals lay it to the combined coercion of the landlord, the clergyman and the publican. The Labor vote has fallen off even more than the Liberal and the Socialist vote has become insignificant.

Severe Floods in France

The heavy rains in France have raised the rivers to an almost unprecedented hight, and much damage is reported from the flooding of towns and country. In Paris, the Seine has risen about 14 feet above its normal level, higher than it has been for thirty-eight years.



The islands in the Seine are covered and the people have been driven from their homes on the lowlands of the suburban towns along the Seine, such as Charenton, Billancourt, Argenteuil and Meudon. The basements of the public buildings in Ile de la Cité and those of the Louvre are flooded, and much damage has been done to the wines and other goods stored in subterranean warehouses in the lower parts of the city. For some months the inhabitants of Paris have been alarmed at the occasional sinking of buildings or parts of the streets due to the caving in of the roof of the labyrinth or catacombs with which a considerable portion of the city is undermined. These caves are now mostly filled with water, as is shown by the multitude of rats escaping to the surface, and some important buildings are in danger of falling. Even the foundation of the tallest building in the world, the Eiffel Tower, is reported to be threatened. The older bridges, especially the Pont de l'Alma, are being watched with anxiety, as the water has almost reached the top of their arches. The new subway between Place de la Concorde and Passage de la Trinité contains 61 feet of water. A portion of the Boulevard of St. Germain has caved in. Half of the surface and subway transportation lines are out of commission.

The Manchurian Railroads

Notes were handed to the American ambassadors at Tokyo and St. Petersburg, on January 21, notifying this Government that Japan and Russia decline to accept the proposition of Secretary of State Knox for the neutralization of their railroads in Manchuria. The contents of these replies have not been given to the public, but it is understood that both notes are brief and decided in tone. They show no resentment on account of the proposal, but offer no opening for further negotiations on the subject. The simultaneous action of Russia and Japan tends to confirm the suspicion that these two countries have a secret agreement in regard to their Manchurian interests and are now acting in harmony. The Russian Government states its willingness to accept in principle the project for the construction of a railroad under international control connecting Chin-chow with Aigun, but will defer a final answer on this point until detailed information is given regarding the full scope of the American proposal. Russia reserves the right to pass upon all such projects as affecting its political, strategic and economic interests. It is quite probable that the American Department of State had little expectation of an acceptance of the proposal by the two Powers immediately concerned, but put forward the suggestion in order to determine their attitude toward the development of Manchuria. The first section of the proposed railroad, which an Anglo-American syndicate proposes to construct, that running from Chin-Chow to Tsitsihar, where it connects with the Russian railroad, would tend to promote traffic on the Russian line, but would seriously interfere with the Japanese line by taking away its southerly traffic. If, however, the line is continued from Tsitsihar northward to Aigun, which is on the Amur River, only 18 miles from the Russian frontier, it would tap a large area of northern Manchuria, which has hitherto found outlet only thru the Russian railroad and the Amur traffic. It is probable that Russia would object to such a line crossing its Manchurian railroad and approaching so closely to the boundary as to threaten in time of war communication with Vladivostok and the maritime province. The Japanese regard the plan of Mr. Knox as a direct blow to their interests. Viscount Hayashi, ex-Minister of Foreign Affairs, compares the present attitude of America with that of Russia in 1895, which, intervening in behalf of China, compelled Japan to relinquish Port Arthur, the chief fruit of its victory, to be occupied by Russia. The Japanese papers inquire how it is possible to appraise the value of a railroad which had been acquired at the expenditure of a billion dollars and one hundred thousand lives. They ask why it is that the United States made no such proposal for international control at the time when Russia was absorbing Manchuria thru its railroad, and they suggest that to be consistent Secretary Knox should propose also the neutralization of the railroads in the other provinces of China which are controlled by foreign syndicates.

Poems

BY HIS MAJESTY MUTSUHITO, EMPEROR OF JAPAN

Sashi noboru
Asahi no gotoku
Sawayaka ni
Motamahoshiki wa
Kokoro narikeri.

The thing we want
Is hearts that rise above Earth's worries, like
The Sun at morn, rising above the clouds,
Splendid and strong.

So much to think of! And so many cares
Come piling in upon me, one by one!
How can my one poor heart suffice for all.

Henry S. Graves, Chief Forester

BY JAMES W. TOUMEY

[Mr. Toumey is Professor of Forestry and Director of the Botanical Garden at Yale University. He is an associate of Mr. Graves, as well as a personal friend of many years' standing.—EDITOR.]

WE are yet in the midst of forestry development and administration in this country. No one at this time can accurately measure the services that Mr. Pinchot, as former head of the Forest Service, has rendered his country. The great work that he has done has practically all been accomplished since 1898. When he entered the Forest Service he found it a small division of the Department of Agriculture, with an annual expenditure of $28,000 and without a foot of forest land to protect and administer. When he left the Service in January of the present year it had grown under his able administration to be one of the most important bureaus in the Government and one nearest to the hearts of the American people.

The Service has grown until now it has under its care the management of more than 194,000,000 acres of forest land, from which a gross annual income of about $3,000,000 is obtained. More than 1,500 trained foresters, forest rangers and assistants are engaged in protecting, improving and developing this vast area of national forests.

A half century hence, as we look back upon our material and ethical progress as a nation, and are better able to weigh the services of our public men, the name of Gifford Pinchot, because of his services to American forestry, will be found among those of our foremost Americans.

In these days of not over-keen sensibilities on the part of many of our public men as regards statesmanship and the real dangers that beset the republic because of party control by corporate and financial interests, the country can ill afford the loss of the services of men of Mr. Pinchot's stamp; men whose hearts are with the common people and who believe in equal opportunity for all. Altho Mr. Pinchot has found it necessary to sever his connection with the Forest Service, the great bureau which he developed remains as a monument to his efficiency as a public official.

When the news of Mr. Pinchot's retirement became known, the public was much concerned as to the future of the Forest Service. A mistake in the appointment of his successor would work irreparable injury. President Taft has shown good judgment in appointing Henry Solon Graves, director of the Yale Forest School, to this position. By the appointment of a trained forester and a leader in forestry education to the position of Forester, we are assured that the Forest Service is in good hands. The great work in national forestry, so ably conducted by Mr. Pinchot, will continue. Not only is this appointment approved by the people, but it meets with the hearty approval of the entire Forest Service. Mr. Graves will go to Washington having the confidence of the entire Service of which he is the head. By temperament, training and experience he is well fitted for the position. His high sense of justice and right; his sympathy with conservation; the ability which he has shown in working with and handling men; his intimate knowledge of American forestry; his high professional standards; his ideals regarding the management of the national forests; his close connection with the Forest Service during the past decade, and personal acquaintance with many of its members, make him the best fitted man in America for the position.

Physically, Mr. Graves is a small man, but he is a bundle of well-directed energy, a man who does things and does them in the right way. He is in the prime of life, married, and has a keen sense of the responsibility of American citizenship. He is conservative, a rapid but careful worker, and of pleasing personality. The position which he is called upon to fill is a very difficult one, but he will meet the difficulties of his office with a spirit of fairness and solve them in a

manner which will serve the best interests of the American people. He is a man of sound judgment and will not hesitate to act promptly on all matters that fall within his jurisdiction. He is accustomed to work with others and not alone, and will seek the best advice attainable when matters of policy and of large import are at stake.

HENRY S. GRAVES.

Mr. Graves was born at Marietta, Ohio, May 3, 1871. His father, Prof. W. B. Graves, was for many years professor of natural sciences in Phillips Academy, Andover, Mass. He was educated at Yale, graduating in 1892. After deciding to enter forestry, which he did under the advice of Mr. Pinchot, he studied forestry at Harvard and later at Munich, Germany. His first practical forestry work was with Mr. Pinchot, in

1896-1897, when the latter maintained an office in New York. The outcome of a portion of this work was a volume on the white pine, of which Mr. Graves was joint author with Mr. Pinchot.

During a portion of 1897 Mr. Graves was employed by the United States Geological Survey, to examine and report upon the forest growth of the Black Hills Forest Reserve. The result of this work was published by the Geological Survey. The next year, when Mr. Pinchot became Chief of the then Division of Forestry, Mr. Graves became Assistant Chief of the division. He served in this capacity until 1900, when the Yale Forest School was established, under the endowment given to Yale by the Pinchot family for this purpose.

As director of the Yale Forest School Mr. Graves has been largely responsible for the high position which it holds in forest education. Altho a graduate school, in the short space of ten years it has grown from an enrollment of but seven students to that of more than eighty. A large number of the technically trained foresters in the Forest Service received their training at Yale, so that Mr. Graves goes into a service largely made up of men having the same ideals regarding the management of the nation's forests that he entertains.

During his connection with the Forest Service and since, Mr. Graves has contributed largely to the literature of forestry. He is the author of the "Woodsman's Handbook" and of "Practical Forestry in the Adirondacks," two important bulletins published by the Forest Service. He is joint author with R. T. Fisher of the "Woodlot," another bulletin published by the Forest Service. His most important work as an author is a "Manual of Forest Mensuration," for the use of students and foresters, which is the only comprehensive work of the kind published in America. He is at present at work on two important volumes on "American Silviculture."

Altho devoting his best energies to the building up of the Forest School, Mr. Graves is keenly alive to the progress of forestry in this country and abroad. In 1905 he was commissioned by the Forest Service to examine and report upon the forest conditions in the Philippine Islands. He spent a portion of last summer in a personal study of national forests in Washington, Oregon, Idaho and Montana.

A broad interest in national and State forestry is shown in his relation to forest associations and to forestry journals. He is a director of the American Forestry Association and the president of the Connecticut Forestry Association. As a frequent contributor to forestry journals he has added much to the current literature of forestry. He is one of the editors of the *Forestry Quarterly*, the foremost American journal on this subject.

Altho an Eastern man by birth and education, the new Forester has many of the characteristics of a Westerner. He knows the West from personal investigation and travel and is in close touch with Western lumbermen and foresters. The national forests are all in the West, and the point of view of the people of that region must be fully appreciated in order that the Forester may serve the country in the highest degree and maintain the efficiency of the bureau of which he is the official head. Mr. Graves, because of his personal characteristics and experience, will have the full confidence of the West. The fortunate appointment of Mr. A. F. Potter to the position of Associate Forester and chief adviser of the Forester will still further strengthen Mr. Graves in his relations with the West. Mr. Potter is a Californian by birth and education, and has spent the greater part of his life in the West. He has long been identified with the Forest Service and is thoroly familiar with Western conditions.

There is but little doubt that in the near future tremendous pressure will be brought upon the Chief Forester and his Associate, in order to check the progress of national forestry in favor of special interests. We have confidence that, under the new Forester, private interests will not be permitted to infringe upon the rights of the people in the national forests without a protest which will echo from coast to coast.

New Haven, Conn.

The Situation in the Kongo

BY H. DE VERE STACPOOLE

[Dr. Stacpoole is the author of "The Pools of Silence," a book that has attracted much attention to the Kongo atrocities. His novel, "The Blue Lagoon," has gone thru many editions. He is associated with Sir Arthur Conan Doyle in the new Kongo movement.—EDITOR.]

IN the year 1876 King Leopold the Second of Belgium called together a conference of travelers and humanitarians. The conference met at Brussels and had for its object the discussion of certain plans whereby the light of civilization might be cast on the Dark Continent. The direct outcome of this meeting of travelers and humanitarians, headed by a pious king, was the formation of the International African Association, whose professed object was the exploration of the country and "the founding of stations which would be rest houses for travelers and centers of civilization." This International Association was composed almost entirely of Belgians, and its president was Leopold.

I want just to give you the bare bald facts of the Kongo business as a prelude to the question I am going to ask you, a representative American, at the close of this article, so I skip three years from the foundation of the International African Association and pass to the year 1879. In that year we find Stanley busily engaged in the Dark Continent as an agent of our politico-philanthropic society. Stanley acted from the best of motives, passing from tribe to tribe, interviewing chief after chief, and obtaining treaty after treaty. The natives were hungry for trade, which to them was an alchemy by which ivory and palm kernels could be converted into beads and top hats, coats of red cloth with gold facings,

ORIGINAL SITE OF A NATIVE VILLAGE.
It was arbitrarily destroyed to make room for a rubber plantation.

A NATIVE VILLAGE IN THE KONGO.
The chief of this village had his leg broken for attempting to resist a sentry.

red handkerchiefs, rum, and so forth. It was pointed out by Stanley to each chief that to obtain the means of making this delightful magic he would have to sign a treaty giving the International African Association certain rights and privileges. He signed. Dazzled by the bait he signed a document that in the event made his people slaves under a system of slavery the most terrible that the world has ever seen.

Four hundred and fifty chiefs signed these documents—do not let us debase language and sense by calling them treaties—and with these four hundred and fifty documents Stanley returned to Europe and to Leopold.

Leopold was a man of immense personal magnetism; a genius with huge powers of foresight, construction and organization. He went amidst the kings of Europe with these 450 documents, he talked philanthropy and progress, he pointed out trade. He made an after-dinner subject of the matter with the rulers of Europe, he made a personal matter of it, he opened the doors of his spacious mind, and they all came in—even Bismarck.

The result was the Congress of Berlin, whereat Baron Lambermont, by virtue of the 450 pathetic "treaties" gotten by Stanley from the natives, obtained the consent of civilization to the foundation of the Kongo Free State.

In other words, and at one stroke, the land and the freedom of millions of men were placed absolutely under the hand of Leopold. He was the supreme head of the Kongo Free State; the ministers of the State were his creatures chosen by himself.

Nominally the State was to be under the guardianship of civilization, and the signatories of the charter bound themselves before Almighty God to look after the interests and welfare of the natives.

The first act of the ruler of the Kongo Free State was the assertion of the right to issue laws by arbitrary decrees without publishing them in Europe.

The sheep were in the slaughter-house and the master butcher had banged the door. The shepherds who had sworn be-

fore Almighty God to guard the sheep stood outside, and the oath was still hot from their mouths!

Now the Kongo Free State is not a land of broad fields and homesteads where Farmer Hayseed owns five thousand acres and lives by the produce of it. The sites of tiny villages and tiny fields of grain or manioc formed the land actually possessed by the natives, but the wealth of the natives lay not in these spots of earth but in the plains and forests, and in the rubber, the copal, and the ivory that these forests held, and these plains.

In 1887 Leopold followed his arbitrary decree act with an act which declared that "all lands not actually occupied by the natives are the property of the State."

people whom the civilized nations had sworn before Almighty God to protect were now stripped naked. It makes one blush to go on, but the story has to be told.

The ivory of the plains, the rubber and the copal of the forests, the palm produce, all these were great riches in the rough, a gold mine. But who was to work the mine? Who else but the natives stripped naked and ready for the lash?

Leopold and his agents collected two thousand white men—the scum of Europe and Belgium. He collected into one horrid horde the Zappo Zaps and other fighting tribes, armed them with rifles and officered them with the two thousand scum-men of Europe.

This merciless and mercenary horde

NATIVES OF THE KONGO.
It was this type whose resistance was met by the severest cruelty.

(That is, of Leopold.) Never was there in the world before an act of robbery committed so vast, so infamous, and so cruel—and so specious. All the ivory, the rubber, the copal; all the wealth of these poor unfortunates at one stroke fell into the bag of the plunderer. The

were in literal truth his slave-drivers and overseers. All the milder and more kindly tribes of the Kongo he collected into an army of slaves and put them absolutely at the mercy of these myrmidons. When the great army of overseers and slave-drivers were spread all over the Kongo

country the white overseer at each post sent out orders to the natives of his district: "You must produce so many balls of rubber, so much cassava, or so much copal and hand it over to me each month. Into the forest with you and get to work."

He—the white overseer—would sit at his receipt of custom backed by his armed savages, and if the tale of rubber or cassava or copal were short he would know the reason why.

He got a percentage on all profits and a bonus that grew in size with the size of his severity and the extent of his robbery. Away forever with the disgusting hypocrisy of "taxation" and "barter"! His makings for himself and his ruffianly masters were—and are—the products of slave-sweat and robbery. He would give—and does give—a pan of salt or an old cap (in the way of barter) for pounds worth of produce; and he called—and he calls—the millions of pounds worth of produce that pass annually thru his hands and the hands of his brethren taxation, but the cold logic of the proposition is robbery. Robbery in the most vast, the most complicated and the most cruel form that robbery has ever dared to show itself before the face of God or man.

When Leopold, the humanitarian, had arranged his army of overseers and slave-drivers, when the machine got to work and the great forests began to groan and give up their treasure the curtain lifted on a tragedy so appalling that search history as you will you will not find its equal.

AN INSPECTOR'S HOME.
This building of sun dried bricks was constructed by unpaid native labor.

You must at once divorce your mind from the idea of slavery as it obtained in the Southern States of America. There, under the kindly sun, in the open cotton fields the slaves went to work in gangs; the work lay before them and they had to do it under the eye of an overseer. But in the gloom of the great African forests the slaves have to go forth alone; the rubber vine hides and has to be sought for; each collector has to leave his wife and child, take his basket and a supply of food and face the fear and the

darkness and the devils of the forest alone. He is perhaps ten days in this place haunted with evil spirits, haunted with leopards and haunted by rheumatism. Then he takes his basket of rubber to the overseer and pays his tax, spends a few days at home, and is driven forth for another ten days to collect more taxes in the pestiferous gloom. The State has to trust to his initiative.

So for eighteen years millions of men have slaved; gloom, misery and death have been their portion; they have revolted, and torture in the most horrible form, amputation of limbs, crucifixion, has been their punishment. The punishments, the tortures that the fiends of Leopold have meted out to the Kongo slaves are quite beyond print and the imagination of the ordinary man. It is estimated that three million of men, women and little children have gone to their death during the years since that terrible day when in the congress chamber of Berlin the nations of civilization handed them into the keeping of Leopold. Three million human beings brutalized out of life, to say nothing of the millions who have lived in misery, robbed of their heritage and their happiness by the meanest trick that ever disgraced humanity.

Those are the bald facts of the Kongo business. I have given only the salient points of the affair—a nation of savages deluded into signing documents not knowing what they had signed; Europe deluded into signing a document not knowing what she had signed; all these documents joined together by the alchemy of politics into one great plunder charter and the result—three million human beings murdered for the sake of gold and the murderers triumphant and unhanged for the sake of policy.

Add to this that the murder is still going on, that the plunder charter is still alive and protective and that the inheritors of it are promising to tear it up—partly—in three years hence without a word of repentance, without an apology or the faintest sign of a blush, and you have a total result more infamous and astonishing than the infamous and astonishing cause.

Three years more misery for the bulk of these miserable people and indefinite misery for the remainder, no hanging of the miscreants who have mishandled in the name of civilization millions of men for eighteen years, no restitution, no atonement—not even a blush!

Now the question I want to ask you, a representative American, is this: Do you intend to consent to this result without raising a voice? The whole question lies in the hands of America. She was the first to recognize the Kongo flag, and surely in the name of liberty she is most entitled to a word on this matter.

An International Congress to be held for the sake of poetic justice at Berlin, a congress with power to remold the Kongo Free State into some sort of human form, that is the one solution of the question and that is the pressing need of the hour. Will you call for this?

France, Germany, England, Austria, all know the facts of the case, but filled with mutual distrust they dare not speak. America alone, standing outside the stress of European politics, has the voice which this question calls for.

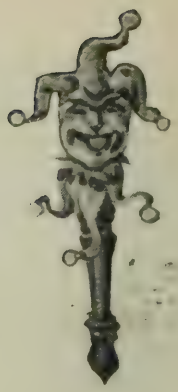
Will she speak?

London, England.

The Shepherd

"Death Shall Be Their Shepherd"

BY MARY A. P. STANSBURY



He blows no pipe along the hill,
None hears him call to mead or rill,
Yet, where he silent leads, all day
The flock must follow, follow still.

But, when night falls on wood and fell,
He smiles, the while he folds them well.
"Sleep sweet," says Shepherd Death, "and wake
To range the fields of asphodel!"

Appleton, Wis.

What a Good Play Really Is

BY BRANDER MATTHEWS

[This article is in anticipation of a chapter in a book on the general subject which Professor Matthews, of the chair of Dramatic Literature in Columbia University, will publish in the spring. His many writings are well known to the public.—EDITOR.]

THERE are two groups of writers whose duty it is continually to discuss the drama and who take up positions in regard to it almost diametrically opposed the one to the other. One group consists of the professed theatrical reviewers of the daily and weekly journals, who consider only those plays which are actually performed in the playhouse and who center their attention upon the purely theatric effectiveness of these plays, more or less scornful of any literary merit. The other group contains the university professors of the several literatures, ancient and modern, who are prone to regard the masterpieces of the drama merely as literature to be studied in the library only. Of course, there are some theatrical reviewers who have literary standards and who are acquainted with the drama in other tongues than their own, just as there are some scholars who never forget that all the great plays of the past were originally composed for actual performance.

It is unfortunate that these two distinct groups cannot interchange points of view. A drama must have theatrical effectiveness, or it fails instantly; and it must have literary merit, or it cannot survive. And the principles of the dramaturgic art are as unchanging as the principles of literature itself. We can find both theatrical effectiveness and literary merit in the "Œdipus" of Sophocles and in the "Ghosts" of Ibsen, in the "Hamlet" of Shakespeare and in the "Tartufe" of Molière, in the "Barber of Seville" of Beaumarchais, and in the "School for Scandal" of Sheridan.

These major dramatists, ancient and modern, may seem very unlike to one another; but their plays are built in accord with the same principles. And they are alike also in another important aspect—they all of them represent an advanced development of the drama as a department of literature in their own language, Greek or Norwegian, English or French. That is to say, they stand out by their own merits; but they were preceded and made possible by countless unknown experimenters. The masterpieces of these accomplished craftsmen are the final achievements of a long effort sustained thru the dim centuries. They are the culmination of an artistic evolution, the beginnings of which must be looked for far back in the history of mankind. They are the final expression in cultivated and self-conscious communities of the primary play-impulse of primitive man. The literary drama, the play in which the finer attributes of structure and style are added to essential effectiveness, is the direct outgrowth of a wholly unliterary drama, which emerges into view very early in the annals of civilization. At first, when man still lingers in the lower levels of savagery and barbarism, the dramatic instinct expresses itself boldly enough but crudely and coarsely. It is only after long years of striving that a more shapely drama at last emerges into view, even if far back in man's progress upward we are able to discover that desire to personate and to get out of himself, which is the foundation of the art of the theater. Very early also can we perceive the allied pleasure of being a passive spectator of this active personation.

Until recently it was the general belief that the drama arrived comparatively late in the history of any literature. This belief is voiced eloquently in Victor Hugo's preface to "Cromwell," in which he asserts that the chronological sequence is first of all the lyric, then the epic, and finally the drama. There is a sense in which this is true; that is to say the literary drama, the play which is also poetic or philosophic, comes into being only after the lyric and the epic have given

flexibility and elevation to the language, and after which they have also invented the stories which the literary dramatist can rehandle. But the researches of the anthropologists have made it indisputable that there is a dramatic element in the very earliest lyrics themselves and that a rude drama is perhaps earlier even than these earliest lyrics.

If we wish to understand the feelings and the actions of primitive peoples we can get great help from a study of the ways of children. It seems now to be generally admitted that in our infancy and childhood we live over again, more or less completely, the slow evolution of humanity from savagery to civilization. We find in children the same tendency to mimicry, the same desire to personate which we discover in primitive peoples. Prof. William James, after noting that "a successful piece of mimicry gives to both bystanders and mimic a peculiar kind of esthetic pleasure," and that "the dramatic impulse, the tendency to pretend one is some one else, contains this pleasure of mimicry as one of its elements" then remarks that "in young children this instinct often knows no bounds." He cites one of his own children who, at the age of three, delighted in playing that he was "a hyena or a horsecar, or whatever the feigned object might be." A hyena or a horsecar!—that is to say, it did not matter to the child whether the object he impersonated was animate or inanimate. This childish attitude is excellently illustrated in the familiar anecdote of the three little boys who explained that they were "playing automobile." The eldest was the chauffeur, the next was the machine itself—while baby ran in the rear, representing the gasoline odor.

A more elaborate illustration of this youthful fondness for assuming another personality can be found in the chapter of the "Adventures of Tom Sawyer," wherein we see Tom about to begin the distasteful task of whitewashing his aunt's fence. Just then his friend, Ben Rogers, hove in sight eating an apple and "giving a long, melodious whoop, at intervals, followed by a deep-toned ding-dong, dong, ding-dong-dong, for he was personating a steamboat. As he drew near, he slackened speed, took the middle of the street, leaned over to starboard and rounded to ponderously and with a laborious pomp and circumstance—for he was personating the Big Missouri, and considered himself to be drawing nine feet of water. He was boat and captain and engine-bells combined, so he had to imagine himself standing on his own hurricane-deck giving the orders and executing them:

"Stop her, sir! Ting-a-ling-ling! The headway ran almost out and he drew up slowly toward the sidewalk.

"Ship up to back! Ting-a-ling-ling! His hands straightened and stiffened down to his sides.

"Set her back on the starboard! Ting-a-ling-ling! Chew! ch-chow-wow! Chow! His right hand, meantime, describing stately circles—for it was representing a forty-foot wheel.

A friendly correspondent in Arizona once sent me an account of a play his two children had performed. They were found in the ruins of an old house; and in a sad voice the boy explained that they were "offering up little Isaac." A broken toy was Isaac. A brick under a bush was the ram. They told how they had built a fire under Isaac, admitting at once that the fire was only make-believe. And when they were asked, "Who was Abraham?" the little girl promptly answered "We was." The girl was four years old and the boy was only three. It is easy to seize the likeness between the scene thus acted by these children and rudimentary dramas which are performed by savages. Underlying both is the desire to personate, the impulse to take part in any action, and the abundant willingness to make believe.

The real difference between the little play of these children and the rudimentary drama of savages lies in the fact that the children are acting as individuals, whereas the savages are playing in large groups. In the rudimentary drama of savages there is likely to be a communal element. At certain seasons of the year, especially at spring-time and at harvest, at midsummer and at midwinter, the whole community takes part in the performance—or if not the whole community a representative group which expresses the sentiment of all. In the primitive stages of poetry, so Professor

Gummere tells us, there is seen "a throng of people without skill to read or write, without ability to project themselves into the future, or to compare themselves with the past, or even to range their experience with the experience of other communities, gathered in festal mood, and by loud song, perfect rhythm and energetic dance, expressing their feelings over an event of quite local origin, present appeal and common interest. Here, in point of evolution, is the human basis of poetry, the foundation courses of the pyramid; in point of poetic process here is the social as opposed to the individual element."

As we study these evolutions of dramatic form, we see that what was at first more or less communal becomes more or less individual, and what was at first more or less spontaneous becomes more or less traditional. In time custom crystallizes; and then out of the established habit there is a new departure, another step forward. There comes into existence an accepted way of telling a story in action, a formula satisfactory to actors and spectators alike; and this formula tends constantly to become more effective theatrically as the casual performers more and more take on the aspect of professionals, conscious that they are exercising an art. The plays they present may still be rude and crude; their art may be rather elementary as yet, but it is alive and it contains the possibility of progress. At this moment the drama is still unliterary; there is little skill of structure, little polish of style, little insight into human nature. But the dramatic formula is slowly getting into shape, ready for the hand of the literary artist whenever he shall happen along.

As the earlier unliterary efforts have not been preserved, no one can now declare with any certainty the exact moment when the Greek drama began to lift itself into literature. Only literature is permanent; and the unliterary drama is never cherished and guarded. At any period of the development of the drama, the same framework, the same external form, the same method of handling his material, characterizes both the literary play and the unliterary play. They are always very much alike in outward appearance; it is in the inner soul that they differ. Kyd's "Spanish Tragedy" belongs to the strange type of piece now known as the tragedy-of-blood, and so does Shakespeare's "Hamlet." So Victor Hugo's "Ruy Blas" is melodrama, distinguishable only by its lyrical affluence from the contemporary pieces of Ducange and Pixérécourt, on which it was modeled. So today the social dramas of Ibsen and Hervieu, the comedies of Barrie and Shaw, are composed in accord with the very formula which serves also for the hack-playwrights who write uninspired pieces to order. The difference between the play which is literature and the play which is not literature, which is, in fact, only a form of journalism, sufficient unto the day and no longer—this difference is not external but internal. It is to be felt far more easily than it is to be declared. And the play which we gladly hail as literature succeeds in the theater, pleases its many audiences, delights a succession of spectators, year after year, and century after century, because of its possession of qualities not in themselves literary, because it has the intangible but essential something which makes a story interesting to the multitude when it is set forth in action on the stage.

When we undertake to consider whether a play deserves to be considered as literature or not, we need to clear our minds of a current misconception as to the constituents of literary merit, so called. True literary merit is not a matter of fine writing, of pretty phrases, of style only. The real literary merit of a play does not reside so much in its mere wording as in its solid structure, in the logic of the plot, in the sincerity of its character-drawing. Fine writing has never yet made a good play; and the good play is a good play independent of all its phrases, however glowing and gorgeous these may be. The skeleton of a good play is always a pantomime. That is to say, the story must be so strong and so clear that it can stand by itself, whether well or ill written, whether the audience can or cannot appreciate its added poetry or philosophy. We may see many things in "Hamlet," we may acclaim it as the absolute masterpiece of the poetic drama; but it would move the majority of the spectators if it should be

acted before the inmates of a deaf-and-dumb asylum, unable to seize the beauties which delight us, but quite capable of being carried away by the sheer power of the splendidly theatric plot.

In other words, the literary quality is something that may be added to a drama, but which is not essential to its value as a play in the theater itself. And while we cannot have a great play unless it is lifted into literature by skill of structure, by veracity of character, by felicity of dialog, it does not attract the public by its possession of these qualities alone. Joseph Jefferson, speaking out of his long experience on the stage, declared that "you may have all the good literature you wish in a play—if it does not interfere with the play's action." He added that the absence of fine writing in a play will not injure it if the story and construction are right. "Literary merit will enhance the chances of success if it be subservient to the action." This is a hard saying for the merely literary critic, and yet it needs to be taken to heart by all who seek to penetrate to a real knowledge of the drama. The merely literary critic is competent only to perceive the less important of the merely literary qualities of a drama. He can appreciate the external poetry with which the action of the play may be clothed; but this action itself is not easy for him to estimate at its true value. He studies the play in the library, where the quality of style is most obvious, and not in the theater, where story and structure are more important. The merely literary critic tends to neglect, and perhaps even to despise, the purely theatrical qualities which must always sustain a vital play; and he does not care to consider the contemporary unliterary pieces which would often help him to a better understanding of these purely theatrical qualities, which are revealed at once where the piece is acted on the stage.

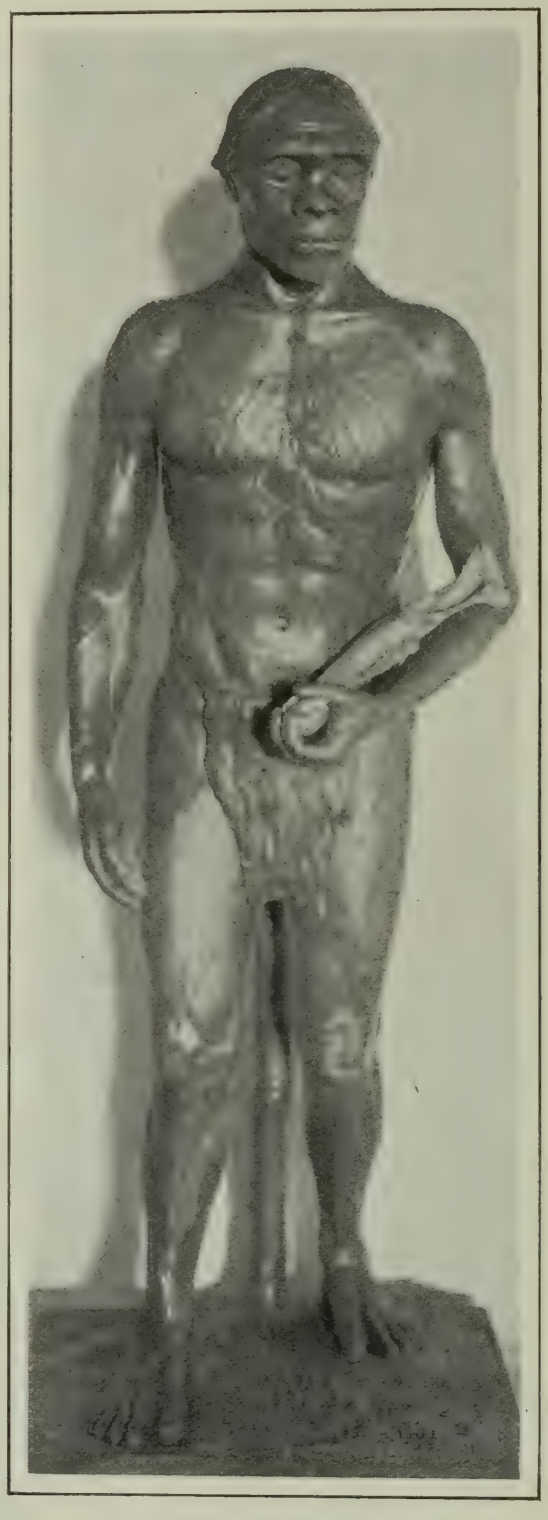
Red Cloud

(1824—1909)

BY ELAINE GOODALE EASTMAN

Prince of the open and unconquered plain,
  Bare as its heaving breast—free as the wind
  That breathes its ample spirit unconfined,
Sweeping with giant broom the grassy main—
How didst thou marshal forth thy shining train
  Of matchless warriors! with what constant mind
  Oppose the alien laws that chafe and bind,
And bid th' invading ocean halt—in vain!
  The swarthy patriot sinks beneath its waves;
  The wheat is growing on his fathers' graves.

Unwilling beggar at the white man's gate,
  High heart brought low, yet scornful in defeat,
  Never to thee his bitter bread was sweet,
Nor in thy soul didst bow the neck to fate!
Rather thou saw'st with inward eye elate
  His lordly senates cringing to thy nod,
  His armies scourged from off thy blood-stained sod
In that past day when the dark chief was great.
  Aye, for all time that gallant day is past,
  Since Red Cloud sleeps—of his proud line the last!



Amherst, Mass.

Restoration of the Paleolithic Man

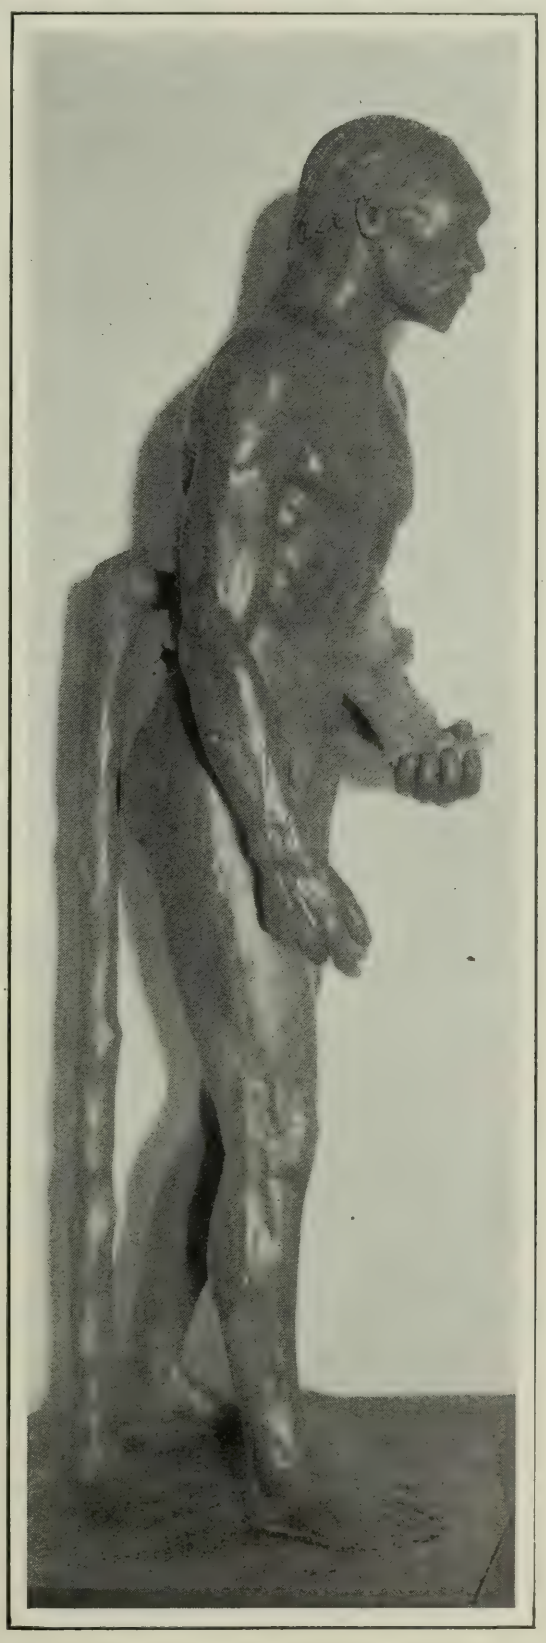
BY RICHARD S. LULL, Ph.D.

[Dr. Lull is Assistant Professor of Vertebrate Paleontology at Yale University, and is also an Associate Curator of the Peabody Museum. His recent restoration of the prehistoric man has created wide comment and discussion.—EDITOR.]

The modern paleontologist is no longer content with the mere description of the bones which are found preserved in the rocks, but seeks to know the mechanical structure of the animal as a whole from the standpoint of the skeleton. The more ambitious strive still further to consider the animals of bygone days as living creatures; to clothe the dry bones with flesh, and, metaphorically speaking, to breathe into them once more the breath of life. The old popular conception begun during the time of the great French anatomist Cuvier, that, being given a tooth or a claw, the entire animal could be reconstructed, no longer prevails among scientific men, and the restorer of today seeks most painstakingly for the utmost vestiges of his subject, reconstructing it piece by piece, and then considers his work merely as an expression of the present state of our knowledge, subject, perhaps, to more or less radical change as further discoveries come to light.

THE PREHISTORIC MAN.
Front view.

Owing to the rapid increase of our knowledge concerning prehistoric man in Europe during the last few years, the writer has been emboldened to attempt such a restoration in the form of a statue showing his conception of the type of mankind of the earlier paleolithic period. Other restorations have been made, among the best known being those by Prof. H. Schaafhausen, M. Emile Bin, Mrs. H. Hyatt Mayer and Mr. Charles R. Knight, the last under the direction of Prof. Henry F. Osborn. Group models of paleolithic man were also exhibited at the Paris Exposition of 1889.



The earliest known authentic remains of this type were found in 1856 in a cave known as the "Feldhofer Grotte," in the Neanderthal Valley, in Germany. They consisted of a calvarium, both thigh bones, both upper arm bones, those of the right fore arm and one of the bones of the left, the left hip bone, a fragment of the right shoulder blade, five pieces of rib and the right collar bone. The bones were thrown out of the cave with the loam, in which they lay, and were afterward collected, so that the original condition of

the skeleton, together with its position, is not surely known.

The cranium of the Neanderthal man Huxley regarded as "the most ape-like of human crania yet discovered." "Its capacity may be estimated at about 75 cubic inches, which is the average capacity given by Morton for Polynesian and Hottentot skulls." "So large a mass of brain as this," Huxley says, "would alone suggest that the ape-like tendencies indicated by this skull did not extend deep into the organization; and this conclusion is borne out by the dimensions of the other bones of the skeleton given by Professor Schaafhausen, which show that the absolute hight and relative proportions of the limbs were quite those of a European of middle stature. The bones are indeed stouter, but this and the great development of the muscular ridges, noted by Dr. Schaafhausen, are characters to be expected in savages."

The Neanderthal man gave rise to a storm of protest and was held by some to be but an idiotic waif of humanity, and not the representative of a type. In 1886, however, all doubt was put at rest by the discovery by two savants, at the mouth of a cave in the commune of Spy, in Belgium, of two skeletons of the Neanderthal type, under conditions which left no question of their genuineness and antiquity, as they were evidently contemporaries of the quaternary fauna, the remains of which were found embedded with them.

Huxley's description of the men of Spy is classic: "The anatomical characters of the skeletons bear out conclusions which are not flattering to the appearance of their owners. They were short of stature but powerfully built, with strong, curiously curved thigh bones, the lower ends of which are so fashioned that they must have walked with a bend at the knees. Their long, depressed skulls had very strong brow ridges; their lower jaws of brutal strength and solidity sloped away from the teeth downward and backward in consequence of the absence of that especially characteristic feature of the higher type of man, the chin prominence."

THE PREHISTORIC MAN.
Side view.

Remains have also been found in Krapina, in Croatia, where in an undisturbed layer fragments representing skulls, a large number of teeth and many other portions of the skeleton were found associated with a hot climate fauna and crude implements of the Mousterine plane of culture. Curiously enough, some of the bone fragments show the calcining effects of fire.

Other important localities, some of them of later age than the typical men of Spy and Neanderthal, where remains of this race have been found, are at Le Moustier and La-Chapelle-aux-Saints. A skull of a relatively old man found very recently in the last named locality inspired a restoration which appeared in the London *Illustrated News* for February 27, 1909.

The main basis for the present restoration is the man of Spy, No. 1, the remains of which, now preserved in the museum at Bonn, in Germany, are represented in the Yale Museum by casts of the calvarium and of a thigh and shin bone. Measurements of other bones were considered and some knowledge was gained by reference to an elaborate work upon the Krapina man by Professor Gorjanovic-Kramberger. The total hight is much less than that of the average Caucasian of today, being for this adult man but 5 feet 3 inches. The muscles are clean cut, powerful, but displaying no superfluous flesh, for I imagine the struggle for existence against climatic inclemency, scarcity of food, and enemies of the brute creation as well as the shrewder foes of his own kind, was bitter to an extreme. The torso is also clean cut and athletic in my conception—like that of a North American Indian in his prime as a hunter, for the conditions of life were probably quite similar on either hand.

Our popular conception of the prehistoric man is largely colored by the supposed relationship with the modern great apes, which are no more ancestral to the primitive man than is a present-day European. The great apes are mainly vegetarians, and as such have somewhat shapeless bodies, for such a diet requires a much greater quantity of food for the maintenance of strength, and a consequently larger body to contain it. That paleolithic man was carnivorous in his habits is known from the remains of animals which are found with his own relics and which he used for food. The hands and feet are not very large, but the former, with their toil-worn fingers, must have been in themselves implements of considerable power to compensate their owner for a lack of efficient weapons. The feet show a curious offsetting of the great toe; not, however, a thumb-like opposability to the other digits; that had long since been lost, for this man's race descended from the ancestral trees thousands of years before. This offsetting of the great toe is seen today in occasional individuals among certain savage races which are innocent of a restraining foot covering.

The development of the calf is in inverse proportion to that of the heel, for the longer the heel the greater the leverage, and, as a consequence, less potential strength is required, the well-developed calf with its short heel being an eminently Caucasian thing. The apes have none at all, the negroes relatively little, and it is somewhat questionable whether the prehistoric man was as well endowed as the model would indicate. The "curiously curved thigh bone" should, I am now convinced, be more apparent; for while the bone itself could find ample lodgment in the indicated flesh of the thigh, the curvature implies more than that, as it indicates an actual change in the direction of stress, so that a bent knee naturally follows as the habitual posture. Possibly the man could stand as erect as I have shown him, and I strove to imply alertness, as tho the individual in question had been disturbed at his not very arduous task of scraping the jaw of an old cave-bear with his flint implement and had arisen to learn the cause.

The wide, powerful shoulders are indicated by the long and sharply curved collar bone, and there is evidence for the belief that the back lacked somewhat the inward curves so eminently characteristic of modern man. This ape-like convexity of the spine, when viewed from the rear, shows itself in present-day infancy and again generally in extreme old age—stages in the individual career which often reflect characters long since lost by man in the fullness of his powers.

The head, poised upon a neck which is indeed "a pillar of strength," droops somewhat forward, thus concealing to a certain degree the brutality of type which a more aggressive pose would serve to accentuate. Nevertheless, the beetling penthouse of the brows, over-

hanging the deep-set eyes, marks the beginning of the flat, receding forehead. The summit of the head is somewhat higher in the man of Spy than in that of Neanderthal. The nasal bridge is very wide and concave, and the prominent, wide open nostrils tell of the keenness of the sense of smell, which, together with that of hearing more than of sight, is so essential to a forest dwelling type. The jaws are powerful, with muscles again clean cut, tho of great strength. I have had difficulty because of the imperfect condition of the articulations of the older jaws and skulls in arriving at an unquestionable result, so that the face may show too great a refinement as compared with the low degree of evolution of the calvarium itself.

I imagine the prehistoric man was more hairy than the model would indicate, as the loss of hair is a specialization on the part of humanity, and may have gone hand in hand with the development of artificial clothing. Our man, however, had already harnessed fire, as traces of crude hearths are found in his cave dwellings; but whether he wore clothing is a matter of considerable doubt.

Mentally the primitive man may have been at least on a par with the modern Australian savages, who, aside from the invention of the boomerang, have done little or nothing in the perfection of weapons. He had, however, a much subtler brute creation to combat, for the animals of Australia are largely pouch-bearing forms, on a much lower plane of mentality than were the quaternary denizens of Europe. Our records seem to point to a long career of upward of a hundred thousand years for this type of man. Whether any of his blood flows today thru the veins of mankind we are not certain. As a race he has been extinct at least fifty millenniums, but whether the type was destroyed or whether it was absorbed by the invading horde of the higher men, which had evidently come into Europe in turn from the southeast, we have no means of knowing. Certain animal features, distinctive of primigenius, occasionally appear in individuals of today, notably among the Australians and Melanesians, which are explained as possible reversions to ancient type. Such they may be, and only imply a common ancestry on the part of all three races from a still more remote stock, for the idea of a high geological antiquity for mankind is steadily gaining ground. When the "Neanderthaloid" characters appear in Europeans, as they did in St. Mausberg, a medieval Bishop of Toul, and in Lykke, a scientific Dane of the eighteenth century — presumably men of some intellectual attainment—they certainly lend color to the belief that, buried deep within the bodies of the dominant Caucasian type, the diluted blood of this ancient race still flows.

NEW HAVEN, CONN.

Should the Presidential Electoral System Be Abolished?

BY JAMES WILFORD GARNER, Ph.D.,

PROFESSOR OF POLITICAL SCIENCE IN THE UNIVERSITY OF ILLINOIS.

IT is almost a commonplace to say that the original electoral scheme extravagantly eulogized by Hamilton as "excellent if not perfect" and praised by a great jurist of his day as "the best that the world has yet seen" has broken down in practice; and in its stead has grown up by custom the very method of choice which the fathers sought to avoid and against the "mischief" of which Hamilton declared "precautions have been so happily concerted." The rise of political parties reduced the elector who was expected to be a man "capable of analyzing the qualities adapted" to the presidential office, to

an automaton, a mere party puppet with no more independence than a push bell, which rings only when it is touched and registers when it is made to do. The growth and spread of democracy took the appointment of the electors away from the legislatures where it was originally vested, and "returned it to the people," with the result that the "heats and ferments," the "tumults and disorders" which Hamilton prophesied would "convulse the community" to the danger point had come to be a regular feature of the Presidential election before the last of the framers of the Constitution had past away.

But, unfortunately, while the metamorphosis of the electoral scheme brought the substance of popular election, it did not bring the form. The old mechanism, with its complications, its uncertainties, its unfairness and its positive dangers to the peace and safety of the country, has been retained as a legal part of the electoral machinery, and altho useless as the appendix in the human anatomy, it must be put thru all the complex motions for which it was originally designed, in order to give legal validity to the popular vote. The assembling of the electoral colleges in the State capitals, the transmission by several different agencies of carefully authenticated returns to Washington and the "august ceremony" of opening the mahogany boxes and counting the votes on the second Wednesday of February, in the presence of both houses of Congress and of galleries crowded with spectators, is ordinarily nothing but an empty form. Yet the whole drama must be carried out from first to last in accordance with the strict letter of the law, otherwise some State will lose its vote or have it counted for another candidate than the people's choice. But the difference between the methods of choice by electors and that by popular vote is not merely the difference between legal theory and actual fact. The distinction is much deeper than that. The interposition of the electoral office between the voter and the object of his choice prevents a faithful and accurate expression of the popular will and, indeed, sometimes results in the defeat of the presidential candidate who has received a majority of the popular vote. This, as is well known, has happened time and again, the popular vote polled by the successful candidate having ranged as low as 40 per cent. of the total, and in at least one case the variation between the electoral vote and the popular vote of the successful candidate amounting to 35 per cent.

This, however, is not so serious an objection as the rule which gives the entire electoral vote of the State to one of the candidates, altho his majority may be insignificant, as was the case, for example, in New York in 1884 and in Ohio in 1892, where the plurality of the successful candidate in both cases barely exceeded 1,000 votes, and in Maryland in 1904, where it was only 51 votes. The effect of this denial of minority representation in the electoral college of the State is virtually to suppress minority sentiment, to destroy the chief incentive to organization and effort on the part of the minority party in those States where the predominance of one party is conceded by the other, and to remove one of the most valuable and effective restraints upon the tyranny of the majority.

Moreover, and this objection is more serious than is commonly supposed, the general ticket method of choosing electors leads each party to concentrate its principal efforts in the large "pivotal" States for the obvious reason that by so doing the election is made to turn upon the vote in those States. The best example of this is New York, which has gone with the minority party in presidential contests only twice during the last half century. The temptation to resort to corrupt methods to carry such States is manifestly great, and we need feel little surprise that they are sometimes carried by dividing the voters into "blocks of five" and putting in charge of each a "trusted man supplied with ample funds." In these States the contests become a life and death struggle and the public virtue is subjected to a strain which it is not always able to withstand. In this connection it must also be remembered that in order to appreciate the extent of the mischief wrought by a vote cast at a presidential election we must multiply it by the number of electors for whom the ballot is cast. In Rhode Island every fraudulent vote cast in the presidential election affects four

electors; in New York, thirty-nine. The vote of a single individual may determine the choice of the entire electoral college of a State. If, as has been claimed by some, the fraudulent McKane votes cast for Mr. Cleveland in New York in 1884 enabled him to win the Presidency, it was because each vote so cast contributed to the election of not one elector alone, but of the whole thirty-six to which the State was then entitled.

The electoral system in its present form not only induces and increases the temptation to fraud in the close States having large electoral colleges, and not only destroys in a large measure the incentive to wholesome political rivalry in those States in which the superior strength of one party is acknowledged, but in the very modes of its operation it works mischief and injustice, and is a perpetual menace to the public tranquillity. The electoral ballot of the present day is so complex (purposely made so in some States) that it cannot be voted correctly by a large number of voters. Thus in Florida in a recent presidential election the electoral candidates of the several parties were printed in a single column with no separating line or space between them and no emblem to indicate the party to which each candidate belonged. As a result a large proportion of the voters failed to vote for all the electors. In Boston in 1900 over 6,000 voters cast their ballots for one electoral candidate without marking the others. The same thing happened in Ohio in 1892, where more than 1,000 voters cast ballots for a Cleveland elector whose name stood at the top of the ballot, without voting for the others, believing that they were casting a ballot for the whole ticket. The result was the success of one Cleveland elector, the Republicans winning the rest. Had the 1,000 Democratic voters in question registered their votes correctly Cleveland instead of Harrison would have carried the State. In Maryland in 1900 over 2,500 voters committed a similar blunder, and as a consequence seven Democratic electors and one Republican were chosen, tho apparently a majority of the voters tried to vote the Republican ticket. Substantially the same thing happened in Maryland in the recent election, six Bryan and two Taft electors being successful. The abolition of the office of elector, and the resulting simplification of the ballot by the removal of the names of electoral candidates, would do away with the possibility of such miscarriages of the popular will.

The procedure of the electoral choice from first to last is so complicated that at no point is it free from the possibility of irregularities which may result in the nullification of the popular will. In the first place, the electors may be prevented by accident from meeting at the State capital and casting their ballots on the day prescribed by law. Thus in 1857 the Wisconsin electors were prevented by a violent snow storm from assembling at Madison on the day fixed by law, and they met the following day and cast the vote of the State for Frémont. As the vote of Wisconsin was not decisive, a decision of the embarrassing question as to the legality of the vote was avoided, otherwise a very serious and dangerous situation would have confronted the country. It would be quite possible for the entire electoral college of the State to perish in a common disaster or otherwise be prevented by act of God from casting the vote of the State according to the requirement of the Constitution. In this case the vote would have to be thrown out or counted for one of the candidates in violation of the letter of the law. In either case, if it were essential to elect a candidate, the peace and safety of the republic would be imperiled.

So long as the electoral college is retained there will always be the possibility of dual returns from a State, involving contests to be settled by a partisan Congress. An elector may die, or resign, and the State may have made no provision for filling the vacancy. Or an ineligible person may be chosen as an elector and the question of the validity of the State's vote will have to be determined by Congress. This is not merely a theoretical possibility. In the election of 1837 six persons who lacked the constitutional qualifications were chosen as electors and their votes were counted on the theory that the act of a *de facto* officer must be treated as valid. Had the issue of the presidential contest turned upon these votes there is

little doubt that serious trouble would have been precipitated. If the electoral return is not authenticated and certified in strict accord with the procedure prescribed by law it must be rejected, however plain may have been the verdict of the popular vote. When we reflect that the decision of the important question as to the "regularity" of an electoral return is by the act of 1887 conferred upon the two houses of Congress always a partisan body, acting concurrently, we can easily appreciate the opportunity afforded to subserve party ends and defeat the popular will of a State. Sometimes the vote of a State is thrown out upon grounds which seem almost frivolous. Thus in 1873 the electoral vote of Arkansas was rejected by Congress and the State disfranchised because the return certificate bore the seal of the Secretary of State instead of the Great Seal an article which the State did not happen to possess.

It has been well said that the weakest point in the electoral system is the provision relating to the counting of the votes. So long as the count involved nothing more than a simple process of enumeration and addition the President of the Senate was permitted to ascertain and declare the result. This was probably in accordance with the intention of the framers of the Constitution, who apparently did not foresee the possibility of irregular, fraudulent or dual returns. But in the course of time the count came to involve the process of canvassing, that is, the determination of what shall be counted. Then Congress asserted its right to be more than a mere witness and assumed the important *rôle* of canvassing authority, notwithstanding the evident intention of the framers to make the choice entirely independent of the legislative department except where the electoral colleges should fail to elect. The act of 1887 provides an elaborate and cumbersome method for settling contests over disputed returns, but according to some high authorities the danger has been intensified rather than diminished. It attempts to place the burden of settling contests where it was probably intended to be, namely, on the States. But in not a single instance, I believe, has any State yet created a tribunal for determining such contests according to the procedure prescribed by the act. Consequently, Congress, sometimes the two chambers being under the control of different parties, remains still the canvassing authority. In the past it has shown its unfitness for this delicate task by its readiness to subserve party ends in the settlement of election disputes, and we have no reason to believe that it will in the future be any the less free from the thraldom of party spirit when so great a prize as the presidency is at stake. The provision which disfranchises a State when the two houses, acting separately, are unable to agree upon the "regularity" of a return is enough in itself to condemn the whole electoral scheme, because it involves the sacrifice at the whim of either house of one of the most fundamental of the constitutional rights of the States.

The electoral system ought to be so simplified that the electoral count at Washington will be what the fathers intended it should be, namely, a simple process of enumeration and addition, which any ministerial officer could perform without the possibility of State disfranchisement or the prostitution of the count for party purposes. This can be done effectually only by abolishing the office of presidential elector and allowing the voter to cast his ballot directly for the presidential candidate of his choice. In order to preserve the juristic equality and dignity of the States and avoid the obvious objections to an *en masse* vote without regard to State lines, each State should be allowed as many presidential votes as it has Senators and Representatives in Congress, each presidential candidate being given such a proportion of those votes in each State as the popular vote cast for him bears to the total popular vote cast for all the candidates in the State. Under this rule Cleveland and Blaine in 1884 would each have received seventeen of the thirty-six electoral votes of New York and Butler and St. John one each, instead of Cleveland, receiving them all. This reform would do away with practically all the evils of the present system as they have been pointed out in this paper. It would eliminate the "pivotal" State, with the powerful temptation to fraud to which it

gives rise, for then the election would not turn upon the result in any one State and a fraudulent vote cast would of course work only a limited amount of mischief. It would give representation to minority parties in the electoral college of each State, enable them to exercise their due influence in the election and thereby stimulate wholesome political activity in many States where it is now lacking. It would do away with the "solid South" and give representation to the large Democratic minorities in the Northern States. It would render impossible the election of a President by a minority of the popular vote, would simplify the process of voting by the elimination of the names of electoral candidates from the ballot, and would prevent such perversions of the popular will as have recently occurred in Maryland and in other States. It would remove all possibility of the loss of a State's vote wholly or in part by accident or act of God, such as happened in Wisconsin in 1857; or by the appointment of ineligible electors; or by occurrence of vacancies in the electoral college; or by failure to properly authenticate the electoral certificate; or by any of the other possible irregularities, serious or frivolous, which may occur in the operation of the electoral machine. It would eliminate the danger of the double return and make the count at Washington nothing more than a simple mathematical computation, for all contests would be settled in the States. This would render the choice of the President entirely independent of the will of a partisan Congress, as the fathers intended. It would remove every arbitrary obstacle between the voter and the result, give to each vote its proportionate share in the determination of the result, increase the interest of the voter by placing him on a footing of equality with every other voter in the land, and render impossible the defeat of the popular choice by the disagreement of the two houses of Congress on the question of the regularity of the return from any State.

The announcement in the press that an effort will be made at the present session of Congress to secure favorable action on a proposed amendment to the Constitution to remove some of the defects of the existing method will meet the approval of all persons who desire the abolition of the electoral "rubbish" that encumbers the present system, most of which is obsolete and useless, a good deal of which is unjust and undemocratic in its operation, and some of which is pregnant with the possibility of peril to the peace and tranquillity of the Republic.

URBANA, ILL.

Rugby Football on the Pacific Coast

BY PROFESSOR FRANK ANGELL

[Professor Angell is a member of the Faculty Committee on Athletics at Leland Stanford Junior University. He has been a leader is substituting Rugby for the old style of football in California, and is particularly well qualified to tell of the success with which the new game has met.—EDITOR.]

FOR fourteen years the universities of California and Stanford played the old game of football. They were taught the game by the best Yale and Princeton coaches—Camp, Butterworth, Heffelfinger, McClung and Cochran—and developed it farther with their own graduates. The game was the sporting event of the year, and drew throngs of 15,000 to 16,000 people. It seemed as if it had become as fixt among university functions as the Commencement exercises. In the first five or six years of the game the faculties favored it; they considered it a manly, vigorous sport, and among the spectators on the side line at the afternoon practice there was always a goodly sprinkling of professors. But as the game developed and became more and more "scientific" it began to become more and more dangerous and objectionable, and four years

ago it was abolished at both universities. It was evident that the game had ceased to be a sport in any sense of the word; it was never played for fun; it was played only by a chosen few, and the few selected were necessarily big and muscular. In addition, a play which was repulsive to sportsmanlike feeling had become part of the recognized tactics of the game, and that was to batter down a player in the opposing line with momentum plays until he was pounded out of all power of resistance and then gain distance thru him or over him. Accordingly the administrations of the two universities abolished the old game and suggested the straight English Rugby as a substitute.

FORMATION AFTER A DOWN.

From the very first the Stanford students' objection to the new game was surprisingly small. There were several reasons for the smooth launching of Rugby, but chief among them was the fact that the game was enjoyable—there was fun in the practice and there was fun in the matches. The old hard, grinding, exhausting mass and momentum play had given place to swift and exhilarating passing, and the wearisome drill on signals had yielded to rapid changes of play where quick thinking and ready agility had to play their part. A few of the best of the old players found themselves not among the Rugby elect, mostly from inability to think and act with instantaneous quickness. "They can learn signals and carry them out," said the coach, who was also our most successful coach in the old game, "but they're too slow in the head for Rugby." Curiously enough, the game called for better condition than "battle ball," as our British Columbia friends call it, but this is easily understood when one finds that the running is incessant and that wind and speed endurance are indispensable. The slow and stupid disentangling of a piled up mass of players which gives the winded man a chance to recuperate are rare occurrences in good Rugby. But the main points in the game which make it a real sport are that it is poor playing to be downed with the ball and that it is foul playing to interfere. The first leads to the spectacular passing rushes and the second rules out mass or momentum plays. Both make for a rapid, brilliant contest. It is a hard game, however, and it is a rough game. We have had plenty of injuries, bruises, sprains and dislocations—more than we shall have when we can always play on turf instead of dirt and when we have done with the holding of the ball and the unnecessary

PASSING BACK THE BALL FROM THE LINE.

tackling brought over from the old game. The allusions to the game as a "pink tea," once current, have not been heard for three years. A glance at the photograph of the "drop out" shows as well set up a team of athletes as often delights the eye. There is nothing beefy about them; they are all quick and most of them fast. And they represent all branches of university sport; on the Stanford team this year were four from the crew, five from track and field, and two from baseball.

The increase in football skill has been remarkable; for every man who could punt 45 yards four years ago we now have ten, and the number of good drop kickers is increasing rapidly. The whole team have to do these things; this makes the game football. But how many players have any sort of football skill on most American elevens? Perhaps two or three, and they are exceedingly limited in their accomplishments. Last year when Harvard wanted to kick a goal they took a player from the side lines to do the trick. Nothing could show better how little there was of the spirit of true sport in the game than this very businesslike proceeding.

A hardly irrelevant question to ask about a sport is: "Do the players enjoy it? Do they play it for fun?" If there was any enjoyment in the old game during its last four years of existence here, it was thoroly concealed. After the big game in November the football field with its barren bleachers was the lonesomest part of the Stanford campus. The university and second teams wouldn't play and the rest of the college couldn't play a game founded on an intricate signal drill. A game which depends on a monotonous and time robbing drill in signals can never become a general college sport. But this is far from being the case with Rugby; from the day after the big game up to examination week, the football field is the scene of all manner of volunteer games—inter-class, fraternity, department and club matches, so that a majority of the men on the campus have hard, exhilarating exercise without any harmful results. It was the

TACKLED PLAYER PREPARING TO PASS THE BALL.

KICKING THE BALL FROM THE TWENTY-FIVE-YARD LINE.

hope of bringing about this condition that influenced the athletic committees in recommending Rugby.

We have also found Rugby better for the student. Even the driving drill of practice for an intercollegiate match does not take away from the game its recreative character. After a hard preliminary match the players can go to their books and do good work. This was assuredly very far from being the case with the old game; the piling up in the dirt and mud, the grinding of the momentum plays and the heavy defensive uniform seemed to exhaust the players, and if they had any energy left for study in the evening it was usually commandeered for signal practice.

But how about the spectator? Frankly speaking, we did not care about the spectator. Our object was to provide a game which the students would enjoy, and which if rough did not have formations which invited broken necks and concussion of the brain. If the results were diminished gate receipts, that was something we could bear with mitigated grief. The first year the outside public, naturally enough, not understanding the game, were only mildly enthusiastic, but the last two years have given us a record attendance of most enthusiastic audiences.

And so after four years of Rugby the students like and enjoy the game; they find the old football slow and stupid, so far as they have seen it, and they would object strongly to any attempt to bring it back. The faculty are satisfied with Rugby, and they have laid down a law that no football permitting interference will be sanctioned as a university sport. The game is also played by constantly increasing numbers in the smaller colleges and in many of the high schools thruout the State.

STANFORD UNIVERSITY, CAL.

Her Game of Fate

BY WALTER LINCOLN COLBY

I DROVE a golf ball into air;
It fell to earth, I knew not where,
But in the search for it, I gave
My heart to Ralph, the artful knave;
Who now confesses he led me
Away from where the ball might be,
And, ere we parted, made me think
That our two hearts were but one Link.

Six years went by with rapid pace,
When, with a rosy, shining face,
Our little four-year old, named Paul,
Brought in his hand the missing ball;
Which, in the hollow of a tree,
He'd found, instead of on the tee.
And so, altho he's somewhat late,
A Caddy shared our "game of fate."

NEWTON HIGHLANDS, MASS.

Literature

John Bigelow's Retrospections

Born in Bristol (now Malden), N. Y., in 1817, Mr. Bigelow is able to look back over ninety-two years of notable living. This life, from the gentle days when a boy "doesn't take up much room," as he says, in a wagon, and so can steal a ride without attracting notice, is traced up to the middle point in the journey, when the boy has been long facing kings and attracting considerable notice. Three thick and handsome volumes tell the story,* and then the venerable diplomatist, still a boy at heart, lays down the pen with a sigh because he can only "promise" to add the rest of the story if Nature is "willin'." Between the dates, 1817-1909, the world has taken such prodigious leaps that even Mars and the new comet wake up and rub their eyes. The vagrancy of the child during that period was analogous in some degree to that of the world. He had traveled from Galen to Hahnemann in medicine; from blue Presbyterianism with its Hell spelled with a capital to the seven heavens of Swedenborg; from the Democracy of Jefferson as interpreted by Mr. Calhoun to a Democracy that was glad when the shackles fell from the feet of 4,000,000 of slaves—a Democracy better interpreted by Abraham Lincoln—that larger, freer sort fought for in the Colonial struggle, and never by any means acceptable in the inner circles that prevailed in the ante-bellum councils of the Democratic party. The Free Soil Democracy stood firm on its feet.

Stealing a ride in a wagon at Malden at an age when he "didn't take up much room," at seven or eight; driving the cows to pasture, our Malden boy had an experience which he was destined to repeat in many forms. He had a near sight of "an enormous copperhead snake all coiled up with his head arched and perfectly ready for business." Naturally, being barefooted, he ran away from the snake, but never from the more dangerous creatures of the kind whom he afterward encountered. A hundred letters running thru the better part of six hundred pages tell the story. Knights of the largest renown are in the fight—Sumner with his battle axe; O'Connor with his Damascus blade; Bryant behind his armor of triple steel. The jousts are wonderfully lighted up by this Nestor of the third generation, who still, once a month, lays down his pen to "moderate a meeting" of the men of highest distinction in what has already become the fighting center of the world of business. For eight years he was with these men in the fight. Of its later episodes the world knows much; of the attack on Sumner by the snake; of the Burlingame challenge to the snake to come out and "fight in the open," and its failure to come: of what Sumner calls "Douglas and his brass band," loud-sounding all along the "50's." Much new and welcome light is, however, thrown on all these episodes. But a new band was approaching, heard in the far distance. Less drum and a more musical fife and a distant bugle. By that time the younger owner of the *Evening Post* was a man of wealth, able to build his country house and establish his own vine and fig tree and arbor, and sit thereby, "sinking patriotism in philosophy, homeopathy, buttermilk and domestic joys," as his correspondent, Russell, the war writer of the London *Times* tells him. But even while he sat there, the last "Front face! Guide right! March!" of battle had come. August 14, 1861, was the date when he was selected to make the flank attack on the Feudal System abroad as it had been revived in its Napoleonic form. The attack began when Captain Wilkes, by arresting Mason and Slidell, gave the snake an outing, and General Scott, then in Paris, sent a rather famous letter among the various European capitals and caused a stay in the proceedings of the beast, leaving it for a time in the bush. That

*Retrospections of an Active Life. *By John Bigelow.* 3 volumes. New York: The Baker & Taylor Co. $12.

letter was prompted, devised and prepared in the consul's office by the young knight of the virgin spear. The offices of the consul, chargé d'affaires and minister were for six years to be his various field of operations, while the Macchiavellian contest went on abroad. The firing was less noisy but the passions were quite as furious as those on the picket lines, in front of the rebel capital. We in our inland country towns were listening to the guns and drums, but in the Cabinets of Europe they were straining their ears to catch the thinking of the diplomats. As the first news at the consulate had been of Bull Run, so at the legation almost the first news was of the assassination of Lincoln. For the snake was far from dead; the rattle in the tail was feeble, but the sting in the jaw was still forcible and malignant. We now get the true inwardness of French diplomacy of the serpent order. Exactly what it was we learn more fully by a resorting and republication of the secret correspondence of Mason, Slidell and company, and furthermore by the intricate windings of the Napoleonic withdrawal from Mexico and the last sad wailings of a mad queen of a deserted royalty. Here the story follows the snake into the dark recesses of palaces, where it is refreshing its fangs with venom for a new thrust. Even the French Cabinet hardly see what is going on there, as we now know; for beyond the inner doors diplomacy carried only a Lucifer match, and Lucifer was not then a "son of the morning." The tale as now fully told for the first time is interesting, illuminative in the highest degree. The reader who loves history in its cryptogramous cells will follow Mr. Bigelow thru these 1,900-odd pages, and rejoice in his promise to continue the task if Nature permits; and Nature may be expected to do much for a child of her own, so kindly, so moderate, so equable of temperament as these volumes show him to be. As in all his public life his associates have been of the kind entitled to large type, it is well and characteristic of the man that the agents of the serpent should be left to crawl thru his published work in small type.

In his ninety-second year Mr. Bigelow is firm in the principles of early Democracy; still holds, one must think, to an equality of States' rights—little Rhody still a fair mate for eight-fold Texas, and Uncle Sam still polygamous in his union with innumerable and sometimes unconscionable partners; is faithful still to the Democratic idea of a tariff for revenue only, to an equality of privilege for all, and an extra share of the dividends only as such share is fairly earned; faithful also in medicine to the small pellets in ample supplies, and, in religious leaning, to all the seven heavens of Swedenborg.

The Leakage from Rome*

THIS book is an honest, conscientious effort. Its purport is to show that the Church of Rome is losing ground. The author's conclusion is that Rome lost, during the nineteenth century, 80,000,000. Thruout the volume he cites in the main Catholics—Catholics recognized as sound and orthodox; he also uses official statistics of various states. For the sake of convenience he divides the world into the Latin, the English-speaking, the German and the Russian. The first embraces France, Italy, Spain, Portugal and Spanish America. The third is made up of Germany, Austria, Hungary, Switzerland and Belgium. These two worlds we may pass by. The second world, consisting of Great Britain, the British Colonies and the United States, touches us more closely. Its increase of Catholics was merely a transplanting. Catholics from Catholic lands flocked to those countries. In the general census of Catholics, that could not mean an increase. Ireland, for instance, once numbered eight millions; today it has less than four. The other four millions, chiefly Catholics, scattered to the English-speaking world, where the Church did not hold them. She lost and lost heavily. In Great Britain and her possessions the loss was 3,500,000 "without claiming any diminution in Ireland" (p. 170).

But the story of the leakage in the United States is thus stated:

"The 10,000,000 or so Catholics of the United States do not represent a miraculous addition to the Vatican. They come from

*THE DECAY OF THE CHURCH OF ROME. *By Joseph McCabe.* New York: E. P. Dutton & Co. $2.50.

Ireland, Austria, Italy, Germany, Poland. France, Canada, and Mexico. . . . They are but the salvage from one of the most appalling wrecks that Catholicism has suffered during the fatal nineteenth century. . . . In fact, they do not represent *one-half* of the descendants of Catholic immigrants into the United States." (p. 172.)

Now this conclusion rests on Catholic authorities. In 1836 Bishop England, of Charleston, in an official report written in Rome itself, put the loss at 3.750,000, and in his own diocese of the two Carolinas and Georgia he registered the backsliders at 40,000. Their descendants during the past seventy odd years increased three-, perhaps fourfold. In 1852 a Father Mullen, an Irish priest, put the loss at 2,000,000. In 1891 the "Lucerne Memorial," of Cahensly, and his German followers, addressed to Leo XIII, submits that there were 26,000,000 descendants of Catholic emigrants in the United States, of whom 16,000,000 had left the Church. In 1898, when Brunetière reported in the *Revue des Deux Mondes* the remarkable progress of the Catholic Church in the United States, the *Verité,* of Quebec, declared that according to Catholic authorities there had been a leakage of 15,000,000 to 17,000,000. On December 3, 1898, the New York *Freeman's Journal* quotes a Roman prelate to the effect that the number of Catholics in the United States ought to be double what it is today. The *Freeman's Journal* claimed that there were 40,000,000 people of Catholic extraction in the United States and that 20,000,000 of them had gone over to Protestantism.

Nine years before (1889) a German priest of Cincinnati, Walburg by name, put the loss among the Germans alone at 3,500,000. He figured out that there should be in our country 18,000,000 Irish Catholics, 5,000,000 German, and 2,000,000 Catholics of other races. In all 25,000,000, and yet the Catholic Directory for that year gives only 8,157,678. Walburg puts the entire loss at about 17,000,000. In 1901 an Irish priest named Shinnors, with some fellow Oblates of Mary, to which congregation he belonged, made a tour of missions—revivals, that is, in Methodist phraseology. He made a study of the Catholic population. He computed that it should be 20,000,000 but he found it less than 10,000,000.

"Here, then, we have sincere Roman Catholics estimating the loss of their Church in the United States at 10,000,000, 15,000,000, 17,000,000, and even 20,000,000 in the course of the nineteenth century." (p. 180.)

The author next takes the census in order to verify the foregoing, and concludes:

"Probably if these lines of inquiry could be carried out in America, the 14,000,000 (leakage according to Census) would rise to 16,000,000 or 17,000,000. This enormous leakage, we say, is not a matter of past history, but goes on very heavily still. A million, at least, were lost in the last decade of the nineteenth century." (p. 193.)

Amurru. The Home of the Northern Semites. A Study Showing that the Religion and Culture of Israel are Not of Babylonian Origin. By Albert T. Clay, Ph. D. 12mo, pp. 217. Philadelphia: Sunday School Times Company.

Of all the publications — German, English and American—in opposition to what has been called Pan-Babylonism, none is more radical or based on a more thoro knowledge of the two sides of the "Babel - Bibel" controversy than this book by the professor of Semitic Philology and Archeology in the University of Pennsylvania. His contention is that the biblical elements in the early stories of Palestine are not drawn from Babylonia, but are indigenous to the Syrian or Amorite region. Indeed, he argues and proves, that Western influences and Western gods came with Western conquests into Babylonia. The first portion of the volume considers the Creation story, the Sabbath, the Antediluvian Patriarchs and the Deluge story, while the latter portion is more technical and presents arguments which will meet some contradiction, tho strongly supported, to prove the author's discoveries as to the prevalence of the great Western god Uru, not hitherto sufficiently recognized, and who was an early Semitic sun-god, worshipped in both the East and the West. To the biblical scholar the proof of the worship of Yahwe outside Palestine is of special interest. He does not accept the prevalent Kenite theory of the origin of the Israelite Deity.

Trespass. By Mrs. Henry Dudeney. Boston: Small, Maynard & Co. $1.50.

Most women who write books write as much, if not more, from their hearts than from their minds. Mrs. Dudeney is an exception. This novel is mind-made, and the charm and nobility of her characters are hopelessly dissolved in the keen acidity of her literary style. She has presented the modern triumvirate in fiction—two men and one woman, the woman bound to one man by the laws of marriage, to the other by the laws of love. And, according to the foreword, which is an analytical reading of certain love epigrams, these laws are never identical. Indeed, the author calls matrimony "the tomb of Love." One gathers from this introduction that the problem of the book is to be love versus something else, and when an author spells Love with a capital letter it is apt to be versus respectability. Such proves to be true here. The scene is laid in the tradesman circle of a village near London. The hero is a thrifty little tavern-keeper who is in the difficult position of being a hero in spite of his author. She incapacitates him physically for the part by giving him a trivial, monkeyish body, but he retrieves himself with his eyes, which shine out upon and comfort the outraged reader. Even Mrs. Dudeney concedes him the beauty of his eyes. She gives him an unusual nature and spirit for one of his station, but the reader sees only the humiliating comedy of a mind instinctively commercial thinking beyond its depth. If it were not for the romance of love he would never win us, but as it is, it adds a cubit to the reader's mental stature of him that he wears the gray robe of renunciation so heroically. Julia Wing, the woman, is the ruthless character in the book. She moves destructively thru the lives of two men with no eye either for the past or the future. She would never within the narrow circle into which she had been born have violated the proprieties, but once in the grip of a desire to be a "gentlewoman," she loses her sense of moral proportion and never regains it. The tavern-keeper comes to her in the drab days of her disgrace, saves her by marrying her, and she to all appearances becomes a sleek, respectable housewife. But the fact remains that she never recovers from the mental glamor her lover has thrown over her. During the short time her life was grafted to his she gained a pseudo breadth of mind which makes her see not the reckless generosity of protection which the little tavern-keeper has given with his name, but rather the pitiful heroics with which he attempts to peacock his way into her affections. She remains thruout a potential wanton, and at the first word from her lover she is ready to break the guard of respectability and go to him. In the end respectability prevails, but it serves only as a dramatic finale to the book. It is not characteristic of the woman.

A Book of Operas. Their Histories, Their Plots and Their Music. By Henry Edward Krehbiel. New York: The Macmillan Company. $1.75 net.

Any real music lover, whether an operagoer or not, can hardly fail to find delights in this latest book from the indefatigable pen of the veteran music critic of the New York *Tribune*. Mr. Krehbiel is a scholar as well as a critic, and, while he never parades his learning for its own sake, the combination and nice adjustment of scholarship with anecdote and criticism make this volume the most authoritative there is in English on the seventeen masterpieces of Italian, French and German opera which he has chosen for exposition. Moreover, he is master of an ingratiatingly easy and pleasant style which makes his book as readable, as entertaining, as it is authoritative. The outlining of the plot is always the smallest part of his narrative, and this is carefully and most sensibly differentiated from the composer's work in every case where the musician was not his own librettist. The excellent treatise is unfortunately marred by occasional evidences of careless proofreading (as "maternity" for "modernity," on page 163); and Mr. Krehbiel himself is guilty of a curious slip of the pen, for him, in writing (page 249) that Otto Wesendonck had given Wagner "an idyllic home at Triebschen, on the shore of Lake Lucerne." The idyllic home provided by that noble benefactor, which Wagner called his "Asyl" and where the greater part of "Tristan and Isolde"

was composed in 1857 and 1858, was not at Triebschen, but at "Green Hill," just outside of Zurich. Wesendonck never owned any home at Triebschen. That estate belonged to the Am Rhyn family, and Wagner made his home there from 1866 to 1872, thanks to the munificence of Ludwig of Bavaria.

The Approach to the Social Question. By Francis Greenwood Peabody. The Macmillan Company. $1.50.

Professor Peabody somewhat vaguely defines the social question as "the question of adjustment between the individual and the social whole; how to be a person and at the same time an efficient member of the social body." Social science and economics are essential to a solution of this problem, but not sufficient, because "the social question is not merely a collection of facts to be scientifically observed, but a human appeal for justice, pity, fraternity or sacrifice, which must be not only heard, but felt and obeyed." Therefore ethics is involved. Each bit of the social problem —the question of the family, the relation of employer and employee, poverty and riches, charity and sweatshops—is properly a moral problem. Family relations cannot be stable and happy, contends the author, if entered upon either for materialistic, selfish reasons or only from prudential motives. Only by self-sacrifice in the family, only by losing life to win it, are found the happiness and self-development which put divorce out of consideration. Similarly every social relation is an ethical opportunity. It is "the part of religion to spiritualize the social question and the social question is called to socialize the religious life"; tho "the religion of the individual remains the permanent center of spiritual experience." On the other hand, "the religion of the individual is not individualism." Only by social service can men "know of the doctrine, whether it be of God," and save their own souls alive. Those who protest against such teaching that it destroys the ancient landmarks and merges into one religion, politics, industry and philanthropy, are compared by the author with Lord Melbourne, who objected that "Things are coming to a pretty pass when religion is allowed to invade the sphere of private life." The writer does not prove that to label social questions "religious" procures their solution. What do justice, pity, fraternity demand in a certain set of circumstances? That is the puzzle. Husband and wife in the divorce court, master and workmen during a strike, advocates and opponents of a land tax—all declare they want only justice. Slaveholders were often genuinely pious. North and South, French and German, Boer and Briton, all besought aid from the same God of Battles in their bloody struggles against each other. A devout churchman will underpay and overwork his girl employees without conscious inconsistency. A church will exclude negroes from its communion or own disreputable tenements and yet be full of zeal. Such contradictions still remain to be reconciled after social problems have been put in the religious category.

The Christian Ministry and the Social Order. Edited by Charles S. MacFarland. New Haven, Conn.: Yale University Press. $1.25.

The Yale Divinity School has a course in Pastoral Functions, in which men of experience in different types of religious and social work contribute instruction in their several fields. A recent course included addresses by Henry Sterling and John Mitchell as representatives of organized labor; by Rev. Ozora S. Davis, on religious effort among non-English-speaking peoples; by Rev. Wilbert L. Anderson, on the minister in the rural community, and by Rev. Frederick Lynch, on the ministry and international movements. These and other lectures on similar topics form the present volume. The practical duties of the modern clergyman are set forth with clearness and persuasion. One who contrasts these addresses with the excellent "Parish Problems" edited by Rev. Washington Gladden some twenty years ago will be convinced that the Church has made rapid progress in meeting the conditions of modern society, and will be inclined to an optimistic view as to the character of preparation for the ministry in our theological seminaries.

Literary Notes

....Ex-President Eliot's address on *The Religion of the Future,* which we discussed editorially in our issue of September 30, is published in book form by the Ball Publishing Company, Boston, at 50 cents.

....*Illuminated Manuscripts,* by John W. Bradley, and *The Arts of Japan,* by Edward Dillon, are two new volumes in the dainty "Little Books on Art" series imported by A. C. McClurg & Co. ($1 each), which summarize in interesting fashion a vast deal of information from authoritative sources and whet the appetite for more extensive knowledge of their respective subjects. This purpose is further served by selected biographies. The illustrations are good.

....The versatile Miss Carolyn Wells comes to the aid of parents with a volume of *Pleasant Day Diversions,* which is filled with good suggestions. Having exhausted for the moment the possibilities of games and dolls, the making of gifts for Christmas and other appropriate occasions, and the arrangement of parties, she supplies, further, a monologue, a musical farce, and an operetta for production, the music being familiar airs from various sources. It is a difficult task to keep one's own children entertained, still more difficult to teach them to entertain themselves without getting into mischief, most difficult of all to entertain other people's children, the guests of one's own. Miss Wells offers first aid, and more. (Moffat, Yard. $1 net.)

....The filing of a brief in a labor case is seldom a matter of public concern or recognition. But it is not surprising that widespread interest has followed the publication of the 610 page brief filed by Louis D. Brandeis, of Boston, in the case now pending before the Illinois Supreme Court which is to decide the constitutionality of the new Illinois ten-hour law for women in factories and laundries. This brief is a unique document, unparalleled by any previous publication. It contains only three pages of law. In more than 600 pages it presents to the judges, coherently and logically, the world's experience upon which the limitation of women's working hours is based. Besides the medical sections on health, the brief contains evidence and opinions from all the civilized nations of the world, showing the effects of excessive working hours of women upon their efficiency and output, upon morals and the welfare of society. The unanimity of the evidence is impressive, beginning with England in the early thirties and coming in historical sequence from each nation as it has advanced to great industrial activity and met the attendant evils of overwork and exploitation. The material on which the substance of the brief is based was collected and classified for the National Consumers' League (one of whose objects is the defense of labor laws for women and children) by the publication secretary, Miss Josephine Goldmark, who devoted more than a year to an exhaustive investigation of European and American sources of information. Miss Goldmark's full study, of which this brief is a part, deals also with other industrial problems, and will be brought out in book form later in the winter.

Pebbles

APROPOS of That Bust.—Motto for Dr. Bode: "Veni, vidi, da Vinci."—*Punch.*

SHE—Some day I want to show you our family tree.

He (looking at her admiringly)—I should like to see it. I am sure it must be a peach.—*Somerville Journal.*

"I WANT a license to marry the best girl in the world," said the young man.

"Sure," commented the clerk, "that makes thirteen hundred licenses for that girl this season."—*The Mystic Times.*

A LAWYER having offices in a Philadelphia building wherein there are some hundreds of tenants recently lost a cuff link, one of a pair that he greatly prized. Being absolutely certain that he had dropped the link somewhere in the building, he caused a notice to be posted in the following terms:

"Lost—A gold cuff link. The owner, William Ward, will deeply appreciate its immediate return."

That afternoon on passing the door whereon this notice was posted what were the feelings of the lawyer to observe that appended thereto were these lines:

"The finder of the missing cuff link would deem it a great favor if the owner would kindly lose the other link."—*Harper's Weekly.*

THE PASTOR RETURNS THANKS.

DEAR EDITOR—Please allow me a space in your momentous gazette to reciprocate my gratitude to the indefatigable workers of the Second Baptist Church. While sitting in my studio last evening intensely absorbed in the monotonous problem, so-called negro problem, I were interposed by the anthem, "The Lord Will Provide," which rendered me surprisingly elated. Immediately there was a rap on my door; of course I hurriedly responded; the anticipation of many blessings in store for me accelerated my steps. Many valuable and useful presents were presented adequate to satiate any gastromical desire, viz.: Money, chickens, lard, sugar, beans, potatoes, flour, fruit, preserves and eggs. Space will not permit me to speak synoptically. Sister Ida B. Shield, who led the parishioners, added superior grace to the occasion. After a general parlance I was devinely impressed to descant on the altrinsic spirit that characterize the Christiandom; an exquisite response by Sister Virginia Johnson, Sisters Watson, Doyle, Patterson, Gardener, jr., and sr., and Baxter won many laurels by their uninimical disposition. Mr. Elder and company with their musical skill added much to the occasion, indeed the occasion was a celestial symposium. Rev. F. Ball, A. B. D. D.—*Altoona Pa., Morning Tribune.*

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $3.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

The House of Governors

THE United States has a written constitution; Great Britain has none. The United States has a definite prescribed way for amending its Constitution, but it does not use it. In Great Britain the unwritten constitution is amended at any time as desired. It is being amended now by the re-election of a Liberal Parliament.

And yet we do amend our Constitution in much the same way they amend theirs in Great Britain. We make laws, and the Supreme Court declares them to be justified by the implied powers of the Constitution. And we are amending it by such a new and extraordinary ultra-constitutional Congress as the House of Governors.

It has no authority to exist, and it did not exist until President Roosevelt called it into existence by his invitation. Now it has met a third time in Washington, and hereafter it is to meet annually. Having no prescriptive claim to exist, meeting merely by the initiative choice of its members, it has no authority to do anything. It can only consult and then give advice. But advice in the form of recommendations is one of the principal privileges and powers of the President, and he has found ways to make his advice effective. Presidents have been known to wield a "big club" and to rule Congress. President Roosevelt made no bones of almost compelling Congress to follow his will, and President Taft is beginning to tighten the reins of his power.

Governors have the same right of recommendation to their Legislatures, and sometimes they put a good deal of pressure on a reluctant Legislature. Governor Hughes has done it, and any good and wise Governor ought to do it. Now a House of Governors will add a great force to a Governor's recommendations. If, after mutual consultation, the House of Governors agree to any scheme of uniform legislation, not only will the Governor of any State be pledged to it and interested in it, but he will find it a very great argument in favor of it that the Governors of all the States, in council assembled, have agreed to advise it. Their meeting together, and their agreement on legislation, adds both dignity and power to the Governors.

The main advantage will be in support of uniform State legislation. Hitherto we have depended for this on bar associations and on societies established to press a single measure, such as divorce laws or prison reform, or control of child labor. Now we shall have a national organization of men of the highest official position in the States who will make uniform legislation a chief purpose of their administration. It will correct many infelicities in our system of government; it will be a bar against the necessity of encroachments of centralization, and in this way it will amend our Constitution while defending it. This subject of uniform legislation came up in the simultaneous meeting in Washington of the Civic Federation, and it made recommendations for the protection of children engaged in industries, for uniform insurance legislation, the collection of vital statistics, the conservation of forests, workmen's compensation acts, and the development and regulation of water power. There is a multitude of such subjects that need attending and are of the utmost importance, matters that have come up thru newly discovered

forms of industry and transportation never thought of when the Constitution was adopted, and which are thus left within the control of the States, but on which there ought to be uniformity thruout the country, and in which there will be by Congressional usurpation and judicial interpretation unless some unifying force can be created such as may be found in the House of Governors.

Very wisely the meeting of the Governors has decided that henceforth they will meet late in the year, so that their recommendations can be presented to their respective Legislatures in January; and with equal wisdom it has been agreed that henceforth they will meet not in Washington, but at the State capitals. This removes the appearance of influence from the White House or from Congress. We expect a great and growing influence from the House of Governors, helping to make over our country. We may also learn from it that to reach public opinion by advice amounts to about as much as does the power to compel obedience by law.

A Boycott on Meat

It began in Ohio. Ohio is a leading and very ambitious State. It has almost as many wise plans for saving the country as has Kansas or Nebraska, altho it falls behind Boston in devices for saving the body by saving the soul. It has given us a rich supply of Presidents, also Coxey, and also the new boycott against meat. The boycott spreads as if disseminated by wireless telegraph. One day there were ten thousand pledged boycotters in Ohio; the next day there were twenty-five thousand; and the day after there were phalanxes of them in Baltimore, Richmond, Pittsburg, Milwaukee, St. Louis, Kansas City and Omaha, and the epidemic seems likely to spread over the country.

The purpose is to bring down the price of meat. It is no vegetarian campaign, for the boycotters love their meat. They are not convinced that meat is bad for health or morals, as the growing numbers who boycott whisky hold alcohol to be a root of all evil. They simply believe that they are being robbed by the barons of the slaughterhouses, and they will punish them by denying themselves. They will force down the price, and will then return to their muttons.

We are glad for the boycott, for our people eat too much meat. For aught we know the price of meat may have followed the laws of production and trade, and the prices, now approaching the prohibitive, may be due less to monopoly than to the necessary interval between the breaking up of the great open cattle pastures of the West, and the fencing of them for a farming population. Small farmers will raise more cattle than can be raised on an unfenced open prairie, just as on the divided plantations of the South more cotton is raised than was raised under the old system. But it takes some time to make the change from one system to the other, and meanwhile we have to suffer. The increase in the supply of gold adds its effect on price, while doubtless the great packing companies add to the price all that the market will bear. Just what is the relation of the several contributing causes to the increased price of meat a Congressional investigation may tell us.

But we eat too much meat, and this new boycott will do good in teaching many thousands of people how well they can live on a mainly vegetable diet. A purely vegetable diet nobody wants. We must have milk and eggs, while even honey comes to us thru the animal economy. We require nitrogenous food, which we get mainly from our animal diet, altho it can be had from vegetable food, or how do cows and sheep get nitrogen into their flesh? If the starchy element in wheat and maize is all carbonaceous, the glutinous portion is nitrogenous; while the legumes have a special way of secreting nitrogen and are about as good as meat to make muscle and blood. The Japanese eat very little meat, but they supplement their rice with the free use of beans, and a little fish. Health can be well maintained with a purely vegetable diet of wheat, maize and other grains, with the root crops, potatoes, yams, etc., and with fruits and nuts —with legumes added.

Yet a large number of these boycotters have no idea of living on a purely vegetable diet. If they have a cow they will drink milk. If they have chickens

they will eat eggs, and probably chickens also. This is really not a boycott against meat or animal food, but against butchers. When the butchers come down they will go back to their old diet, except in so far as they have learned that with less meat they have fewer pimples and boils and more strength.

Boycotts do not usually last long. The Chinese boycott against Japanese products was temporary. We do not take it that the swadeshi boycott of British products in India can be maintained long; it seems to be losing strength. Our Revolutionary forefathers returned to tea after the Boston boycott. This boycott will have to grow to be much more extensive than at present to have much more than a local effect on the price of beef and mutton. Its main advantage will be to teach some people that they spend quite too much money on expensive food, which is no more nourishing than that which grows out of the ground, and that their health is better than when they sat by the fleshpots.

Compensation for Injuries

A CONSTANTLY increasing attention is given to labor legislation in all industrial countries. Just now in the United States attention is centering about methods of compensating workmen for injuries. The American Association of Labor Legislation, a branch of the International Association, is devoting much of its work to this cause, and in this State the Wainwright Commission is taking testimony preparatory to the formulation of a compensation bill. Similar commissions are at work in Minnesota and in Wisconsin.

The United States is far behind other industrial countries in providing relief for injured workmen. Tho there is a Federal measure for the benefit of Government artisans and laborers, there is not a single State measure. Maryland had one, which was passed in 1902—a crude law somewhat on the lines of the German law—but after less than two years' operation it was declared unconstitutional. Austria, Belgium, British Columbia, the Cape of Good Hope, Denmark, Finland, France, Germany, Great Britain, Greece, Hungary, Italy, Luxemburg, the Netherlands, New Zealand, Norway, Queensland, Russia, South Australia, Spain, Sweden and Western Australia all have such laws in operation.

Of these measures, those of Great Britain, France and Belgium are, in general, the most advanced. In all countries except Austria, Germany, Hungary and Luxemburg the entire burden of compensation rests upon the employers. All of the laws fix the amount of compensation to be paid. The kinds of employment coming under the provisions of these acts are in many countries limited, but in Great Britain, France and Belgium virtually all employments are included.

The British law is the most comprehensive and thorogoing of all. It compensates for all injuries which cause death or which disable a workman for more than one week. It includes as injuries certain occupational diseases, such as lead, mercury, arsenic and phosphorus poisoning, anthrax and the parasitic ailment suffered by underground workers, ankylostomiasis. It includes all workmen receiving less than $1,216.63 yearly wages. It does not, as do the French and Belgian acts, guarantee payment to the workman thru State security, but it makes a compensation award a preferred claim against a bankrupt employer.

The compensation for death in the British act is a sum equal to three years' earnings, but not to be less than $729.98 nor more than $1,459.95. This rate is for persons entirely dependent on the deceased's earnings—a smaller sum, to be agreed upon by arbitration, being provided for in the case of partial dependents. The disability compensation requires 50 per cent. of the employee's average weekly earnings, though not to exceed $4.87 weekly. For partial disability, resulting in impaired earning power, a compensation making up the difference between the employee's earnings before and after the injury is required. Life annuities are provided for, and so is a substitution of insurance for legal compensation when desired by the employee.

The demand by workmen for the passage of compensation acts by the States of the Union is steadily increasing. The accident rate in America is greater than

elsewhere, and the legal redress for injuries is meager. Hardly more than half of the States have employer's liability laws of any comprehensiveness or scope, and even under these the costs of litigation and the common-law defenses of assumption of risk, contributory negligence and fellow-employment generally prove a bar to the recovery of damages. The men who risk their limbs and lives in the nation's industries believe that the time has come for the substitution of the present costly and uncertain mode of obtaining damages for injuries by a scheme of fixt compensation similar to what has been ordained in other countries.

In a review of Dr. Thomas Oliver's monumental work, "Dangerous Trades," in our issue of January 15, 1903, we gave some of the data of occupational diseases in England. There is no reason for supposing that like industries in America are any less pathogenic. In an editorial in our issue of April 13, 1905, we gave the figures for the American death roll in industry, comparing it with the losses in pitched battles of the Civil War. Industrial casualties have not declined in number since then. The subject is one which presses home with ever increasing insistence, and it is not to be doubted that our many legislatures will soon find it incumbent upon them to find remedies, both preventive and compensatory.

An Editor's Temptations

THE editor, like every man, believes that the temptations which come to him in the exercise of his duties are more numerous and difficult to resist than those which beset other professions. Accordingly, the editor, like every man, takes a peculiar pride in maintaining his integrity and incorruptibility and in saying "Get thee behind me, Satan" whenever he can. Unfortunately he does not always have the opportunity, for the attempts made to divert him from the path of rectitude and impartiality are usually so insidiously disguised in plausible pretense that it is hard to detect them and impossible to rebuke them. It is quite unprecedented in our sixty-two years of experience in resisting temptation to receive a letter so naïvely regardless of the elementary principles of morality as the following:

D. M. Farson, Pres. Mrs. E. L. Harvey, Treas.
E. L. Harvey, Sec.

METROPOLITAN CHURCH ASSOCIATION.

(Incorporated)

Metropolitan Holiness Bible School. A Training Home for Home and Foreign Missionaries.

Publishers of *The Burning Bush*, a Weekly Paper Devoted to the Interests of the Sanctified Life.

Fountain Spring House Waukesha, Wisconsin.

January 5, 1910.

Review Editor:

DEAR SIR—Find enclosed descriptions of several of our recent books. If enclosed reviews are satisfactory to you, please insert one of them in the paper for which you write, and upon receipt of marked copy of paper containing said notice, we shall be pleased to forward to you free one copy of book thus mentioned. Review each of the books, and copy of each will be sent to you upon receipt of marked copy of your paper containing review of each.

If you prefer to examine one of the books before using any of the descriptions, please name your choice and we will take pleasure in forwarding to you one copy of the book thus selected, upon receipt of your agreement to make some favorable mention of the book in your paper and to send marked copy of same to us at your earliest convenience.

Yours truly,
METROPOLITAN CHURCH ASSOCIATION,
Per F.

In reply to this devilish proposal of the sanctified brethren we take the opportunity to say that copies of new books are sent in unsolicited by the publishers in the expectation that they will be given a fair examination, and an independent opinion exprest as to their merits. The acceptance of a volume on these conditions does not obligate the periodical to review or even to mention the publication. If THE INDEPENDENT should notice all the books sent to it there would be no space for the critical consideration of any of them. Like all decent periodicals, THE INDEPENDENT decides which books it shall notice and what shall be said of them, without dictation from the publishers.

In view of the general acceptance of the saying "Every man has his price," it might be unbecoming in us to boast that a favorable book review in THE INDEPENDENT cannot be purchased, but we will say that the bribe must be greater than that here offered. Space in our advertising pages is for sale and there the space equivalent to one of the shorter book reviews would cost about $25. Of

course space in the book review department, if purchasable at all, would come at a higher rate. How much higher we cannot say because we have never made any quotations on this space, and would not know how to go about it. We do not know how much the publishers value a favorable review in THE INDEPENDENT, or even whether they value a favorable one more than an unfavorable.

In this case the four books offered to us in exchange for a favorable review, contracted for in advance, are Harvey's "Sermons on Bible Character" (50 cents), of which we are assured "Every page is freighted with spiritual food and instruction and sparkles with sanctified wit"; Henry's "History of the Jumpers" ($1), which is "an extraordinary book"; "Martyrs in All Ages" ($1), "a book of thrilling interest; and "Bible Lessons" (50 cents), which "contains clear and conclusive arguments against popular errors and heresies that Satan has foisted upon the world to deceive and ruin souls." We give these quotations from "the inclosed reviews" which we were requested to publish, but we protest that we do it freely and not with any expectation of receiving the volumes as a reward.

It is important to observe in this connection that the reason why a letter like this seems absurd is because literary criticism has maintained its high traditions of independence and so resisted more successfully than other departments of journalistic work the encroachments of commercialism. The literary editor has really a freer hand than his colleagues. If, for example, THE INDEPENDENT should be favored by a full-page advertisement of say, La Vitesse automobile, and the editor should take occasion to point out specifically in the same issue that La Vitesse was too dangerous to be allowed at large, that its brakes did not work, that it balked at every hill, and that its shape and color offended every person of good taste, the manufacturer would be quite likely to write an indignant letter to the publisher of THE INDEPENDENT and threaten legal proceedings, or at least the withdrawal of advertising. And if the editor had received from the manufacturer a free gift of the automobile for him to try out before it was put on the market, he himself might think it hardly fair to "roast it" in his most fiery phrases. Yet we do that sort of thing right along in reviewing books, and no reputable publisher thinks of complaining of it. If our periodicals were as frank and thoro in their criticisms of other merchandise as they are of books and pictures, they would rise to a position of usefulness and power hitherto unattained. But at present neither law nor public opinion would permit such an extension of the field of criticism. The reason why the editor is given a comparatively free hand in regard to objects of art and politicians is perhaps because these are regarded by the public as unimportant, so it does not matter much what is said about them.

What Is a University Professor?

THE reception accorded to THE INDEPENDENT'S articles on American universities has shown that a large public is glad to obtain information about our greater educational institutions. A university, in a proper sense of the word, is a relatively new thing in America. Practically only the present generation has seen anything of university life on this side of the Atlantic. The American college, one of our oldest, is one of our most respected institutions. Its function has always been to teach and to discipline. It has never to any great extent been concerned with the advancement of knowledge. One of the chief purposes of a university is to train men for research and discovery, and, in many varying ways, to encourage the exploration of the unknown.

We are glad to believe that an intelligent part of the American public has obtained from Dr. Slosson's articles an enlarged and corrected notion of what a university is, and of the part that it ought to play in our national life. We should be glad also if our readers could find time to enlarge their conceptions of the university function yet further by looking thru one or more of the available books on German and English universities, and comparing the essential traits of those Old World institutions with the aims and achievements of our

own universities, as they have been set forth in these columns. We wish this because we think that Americans yet fail to understand just what manner of human being a high grade university professor is, and just what he is good for. We are sorry to have to believe that, notwithstanding all the honest pride that we begin to feel in the rapid growth and the present excellence of our universities, the average intelligent American does not yet quite comprehend a professor's work, or know how he ought to be treated in order to obtain from him the utmost service that he is qualified to render to his fellowmen.

American ideas and American standards are, we suppose, more largely derived from business activities than from any other one source, and we suppose that in no other great nation are the habits of thought which are fostered by business so influential and pervading. If this generalization is not quite accurate, the necessary correction is to make a large allowance for habits of thought drawn from our practical politics. Ninety-nine men in every hundred Americans, it is safe to say, think in terms of business profit and loss, or in terms of more or less honest "graft."

Now, it happens that our new universities, like our older colleges, are financed and controlled by boards of trustees made up largely of business men, or they are maintained out of State revenues, and controlled by the appointees of politicians. In either case, the professors and the instructors of lower grade are engaged to perform certain duties for stipulated salaries. It is inevitable that, under these circumstances, trustees, and not only trustees, but also the business and political men with whom they associate, should look upon a professor as a kind of hired man. As gentlemen they refrain from using the term, and they treat the professor as a person entitled to consideration and respect, but in their innermost consciousness they can no more help thinking of him in terms of the business relations in which their whole scheme of thought and life has been molded than they can help comparing income and expenditure.

But because these ideas and conditions are the real elements entering into university control in America we have here an ignorance that is nearly absolute of the precise kind of service that a high grade professor in Germany or in England is expected to render to his nation and the world. By way of substantiating this statement, it is necessary only to ask how any American board of university trustees would react to the proposition that their professors of highest rank, and most highly paid, should be left entirely free to offer instruction to students or not; or to instruct hundreds, or scores, or only two or three especially qualified students, without dictation or even suggestion in the matter from the university "authorities."

With few exceptions American trustees would pronounce such an arrangement preposterous. Yet in the English universities, and everywhere on the Continent of Europe, professors enjoying such freedom are a matter of course. And the arrangement, so far from being preposterous, has justified itself by fruits of productive scholarship and scientific discovery which Americans can only envy.

It all goes back to a difference of fundamental assumptions. The American assumption is that any professor is a hired man set to do a prescribed task. The European assumption is that a university professor worthy of his appointment is a responsible man fit to be entrusted with serious responsibility. The European university says in effect, in appointing a man to a high professional rank: "You, sir, have demonstrated your fitness to work in this particular domain of human knowledge. Here are an appointment and a salary. Take them, and, as a responsible man, in whom a trust is reposed, work in this domain according to your own best judgment. Teach, if you choose. Work in your laboratory, if you choose. Write books, if you have something to say. We leave all that to you, expecting you to make the most of the opportunity which this appointment affords you."

American universities have done well. We expect them to do better. But they will not do all that the public should require of them until they change their fundamental assumption as to what a university professor is and what he is for.

King Leopold's Marriage

THE echoes of the "Te Deum" had but barely died out in the vaulted tracery of St. Gudule's, Brussels, which followed the coronation of Albert I, when in it and in every other church in Belgium it was announced from the pulpit that Leopold and his mistress, whom he had created Baronne de Vaughan, had been married in church fashion. This fact was the subject matter of a joint pastoral letter signed by Cardinal Mercier, of Mechlin, and all the other Belgian bishops, which was read publicly in every temple of God on the first Sunday of 1910. Surely a strange New Year's salutation!

Now, such a religious marriage has no legal standing in that tight little country; only civil marriages are recognized by law. But there is one curious and pertinent exception, created by a royal decree so late as August 3, 1909. In it King Leopold announced that the Belgian Chambers allowed a person in danger of death to be married religiously and legally. When an amendment was proposed that every minister of religion who should witness such a marriage must report to the civil authorities within three days, it was voted down. Leopold enjoyed this exception. The full decree is published in *La Matin*, January 6, and is commented on in *L'Independence Belge*, of Brussels, of the same date.

The result is a new pretender to the throne of Belgium. As far as the Church or the State is concerned, the son of Leopold and the Baroness Vaughan is the legal heir. It is a pretty mess into which this legitimized morganatic marriage has brought the Belgian people. Perhaps they may escape, for the present, by lack of documentary proof of the marriage, whose purpose was purely ecclesiastical. No proof is given of the marriage; no time, no place, no witness appears in the document. If the prelates of the "Low Country" have handed over to the Chambers and the people a pretty hard nut to crack, they at the same time opened the way for the solemn requiēm mass before the Pope in the Sixtine Chapel, which tradition grants to a Catholic monarch dying in the peace of the Church.

American Education in Syria

THE magnificent bequest to Robert College, Constantinople, by the will of Mr. Kennedy calls attention to the work and needs of the corresponding American institution, the Syrian Protestant College at Beirut. The outbreak of the Turkish revolution, which might be supposed to be greatly to its advantage and which was so enthusiastically welcomed, happened to create a crisis, inasmuch as the Moslem and Jewish students, finding religious liberty proclaimed by the Government, presumed it gave all sorts of liberty even in an institution privately supported, and made a rebellion, refusing to attend the daily prayers. The faculty yielded for the term, but insisted that with the new year the usual religious exercises would be required. This has worked well, and there are this year nearly as many Moslems as before—over a hundred—and more Jewish students than ever before.

So far from having lost prestige, the college seems to have gained. There have been visits on the college platform from the Member of Parliament from Baghdad, who attended prayers and gave an admirable speech addressed to the students upon the advantages of education in the college, and also from a famous poet of Baghdad, who wrote a poem in honor of the college.

The problems there are numerous and important and of far-reaching interest. They touch politics and religion; they are concerned with the great race question which is the coming question all over the world. They have to do with curricula suited to the needs of an Oriental people, whose desires and impulses are a strange mingling of Europe and Asia. At the bottom there is more of Asia in them than they suspect. They include peoples who see more or less clearly the advantages of many of the results of civilization, but have not passed thru the processes of civilization; whose desires and whose needs are not always the same; whose sense of a corporate responsibility is only beginning to be vaguely felt, and whose individualism is growing less distinct.

The stock of the people in its various forms is good stock, which makes the problem hopeful and difficult. Aspira-

tion is unbounded; ability to evaluate the forces of life that are worth while is still very moderate. One constantly feels certain resemblances between the age in Turkey today and the age in France one hundred and twenty years ago. The people in Syria believe in France and look to France for many of their ideals. The Jesuits have done good work, but have been rowing in rather hard water recently, so far as their relationships with the French Government are concerned, but are picking up courage to the extent of urging the French Government to strengthen their efforts to improve certain features of their large university. Meanwhile a flourishing school or college has been established here by the Mission Laique, much to the disgust of the Jesuits and the Frères Crétiens, who regard it as a stab in the back.

The new enterprises long ago planned await the proper pecuniary assistance. They include law, engineering and agriculture, and while a great deal of money will be required for them, it is not too much to hope or expect. The missionary enterprise is so widely recognized today as belonging to the decencies of Christianity, if nothing else, that it is not too optimistic to hope that gifts in large figures will yet come to this and other similar missionary institutions.

The British Elections

It is settled that the Liberal Government will not be able to command a majority in the House of Commons independently of its Irish and Laborite allies. It has lost much in the elections by the failure to unite against the Unionists in many contests. This will be a great disappointment to the supporters of the Government, but it can give no great jubilation to the Opposition, for they are in a minority of toward one hundred in the House of Commons, and the Laborite and Socialist members are quite as hot for the Budget which the Lords rejected as are the Liberals. The Lords insisted on an appeal to the people, against the advice of Lord Rosebery, and the people have spoken against them. The new Commons will re-enact the Budget bill, and the Lords will do a more revolutionary act than before if they again refuse their assent to it. Their claim will be that the total Unionist vote is as large as the total Government vote, but that is not yet clear. The Government majority is not so overwhelming as to make it easy to reform the House of Lords, but this will be attempted. The Irish contingent will insist on a measure for self-government for Ireland, and it ought to be granted and may be; but why not self-government also by local parliaments for England, Ireland and Wales? The policy of protection is again defeated.

Secretary Knox Rebuffed

Both Russia and Japan refuse to give their consent to Secretary Knox's proposal that the railroads owned by Russia and Japan in Manchuria be put under international control. We can hardly believe that the Secretary anticipated that they would consent. On the face of it they would wish to keep their hands on all they got out of the war between them. Secretary Knox could hardly have got any assurance from either of the two Powers that they would welcome the proposition. He must have had some serious reason, under these circumstances, for making a proposition that might be regarded as intermeddling and unwelcome, and which might strain the good relations of Japan, at least, with the United States. The advantage of the proposal, on the face of it, was to secure a genuine open door in Manchuria, but that implies a distrust of Japan's adherence to its promise to Secretary Hay, since repeated. It may well be that it was friendship for China that induced Secretary Knox's proposal, for only China could benefit directly by it, except as Europe might benefit with us in the maintenance of the open door to commerce. It looks very much as if both Russia and Japan are looking to a possible future war with each other or with China, and that they wish to hold any strategical advantages they now possess in such an eventuality. We hear of both Japan and Russia strengthening their defenses along their several borders in Korea and Manchuria. The refusal of the two Powers is not reassuring.

Forestation and Floods

The report made by Prof. Willis L. Moore, Chief of the United States Weather Bureau, on forestation and rainfall, is not so wholly revolutionary in its conclusions as has been represented. He says that the cutting away of forests has nothing to do with creating or augmenting droughts. So we have understood. Rain is affected by quite other causes, such as the meeting of hot and cold currents of air, and the passage of warm currents over mountain ranges. Accordingly, Professor Moore is substantially right when he says that precipitation controls forestation, and not the reverse. When Professor Moore adds that spring floods come oftener from the forests than from the open, this will occasion more surprise and doubt. It has been naturally supposed that forests would hold the water longer than would open ground, by providing more swampy conditions, out of which the water will more slowly pass into rivers and streams; while there would be less to delay the escape of the water in the open ground. Perhaps we are more familiar with destructive freshets in the populous open country, of which we have just now a remarkable example in the terrible freshet which overflows the streets of Paris along the Seine. Forest regions are, in this country, mostly mountain regions, where the water flows down more rapidly than on level, cultivated ground, thus helping freshets. We do not take this report from the Weather bureau as an attack on the Forestry Service, for the chief argument for forestation is the need of lumber.

Fresh Modernist Cleansing

During the midsummer vacations of 1909, Roman reactionaries required Archbishop Farley, himself then in the Eternal City, to clean out the Modernists from his seminary at Dunwoodie. He did so to some extent by removing its head, but he left the other suspects in their chairs. Now during the Christmas holidays the Catholic Institute of Paris has had its cleansing, this also at Roman hints, conveyed for some time beforehand by the *Corrispondenza Romana,* the paper of the benign *Benigni* and Cardinal Del Val's mouthpiece. Two of the professors at Paris have been removed—the Abbé Hemmer and a layman, Professor Burreau. The former was also obliged to give up his chair at the school of Higher Social Study (L'Ecole des hautes Etudes Sociales), altho it was known that his chair would be taken by the Protestant pastor, Roberty. Hemmer is the translator of the Church History of Funk of Tübingen—the standard Catholic Church history of Germany. He is also the author of as able a defense of the Church on the question of separation as could be expected from the Church's standpoint. Besides, in collaboration with the Abbé Lejay, whose professional head has thus far escaped the Roman ax, Hemmer has been editing the Early Fathers. Again, M. Burreau is a thoroly good man, a devout Catholic and a clever scholar. He is quite at home on all subjects affecting the working classes, the children and the submerged tenth. He is also a lecturer in the School for Higher Social Study. In these two removals, as well as that of the Abbé Klein last October, it is hard to find any great anxiety about faith and morals. They seem to point rather to the aim of the Jesuits to get control of the leading Catholic school of France, where even now they hold a few chairs.

A Brave Rebuke

Missouri chooses to be called a Western State, altho it was once a slaveholding State. The free Western spirit of human rights speaks in an utterance which we greatly admire of the St. Louis *Western Watchman,* altho perhaps we ought to credit as much to a certain sense of Christian democracy in the Catholic Church, of which that journal is an organ. It had been speaking strongly of certain brutal lynchings of negroes, and it turned to injustice nearer home.

"The people in certain sections of St. Louis are devising means to protect themselves against negro invasion. The whole West End is up in arms, and associations of mutual protection are being formed by the whites. We notice that priests are favoring this movement in an effort to protect their parishes. We sympathize with owners of real estate in the fashionable sections of the city who are forced to witness the exodus of desirable tenants in

the face of the inroads of colored people. It is a matter of dollars and cents and oftentimes a life's income is at stake. Priests build costly churches and incur heavy debts and they behold with consternation the departure of their best people, driven to more desirable quarters by the presence of black families in their block. But what can be done? These negroes have as much right to own property and live in exclusive neighborhoods as white people. Must they be made to suffer for the race prejudice of their white neighbors? Priests must remember that the Church does not draw the color line, and will not permit it to be drawn by Catholics. . . .

"The souls of these negroes are paramount and their color goes not below their epidermis. The time may not be far distant when we shall find it difficult to explain or justify in the face of indignant negroes the attitude of priests in the agitations of today. We must not antagonize the negro race, and it is not Catholic to draw the line on their color. They are not obtrusive and if treated fairly will extend considerate treatment to their white objectors. Fair play for the blacks."

This is good Christian sense which we are glad to pass on to not a few Protestant ministers and churches.

Religious Statistics of Germany

Recently the result of the last census of the Churches in Germany has been published. They are as follows: Evangelicals, 37,646,852; Roman Catholics, 22,094,492; Orthodox Russian, 1,991; Greek and Oriental, 13,161; other Christians, 259,517; Jews, 607,862; non-Christians, 909; without religion, 4,270. Of the Evangelicals there are forty-nine sects. Of course the two dominant are Lutheranism and the Reformed Churches. It must first be noted that the Catholics are a big minority. Their increase is helped very much by immigration of Poles, Italians and Catholic Swiss. Their party, the Centrum, would be considerably less if universal suffrage based on the most recent census were in force. The paucity of Hebrews is remarkable. In Germany there are less Jews, by 100,000 at least, than in Greater New York. Finally it is curious that the land of Strauss, Lassalle, Engel, Krautsky, Nietzsche, should have only 4,270 freethinkers.

Chinese Opium

There can be no question that the Chinese Government has been very much in earnest in its war against opium. There is one provision of the law which we commend to the attention of those engaged in the war against intoxicants here. It is the requirement that not only must shops for the sale of opium be licensed, but the buyer must be licensed also, the license renewable every three months. The British Minister at Peking reports that eight-tenths of the officials and three-tenths of the people have stopped smoking, while in the army the habit has been entirely abandoned. We observe that in our navy the use of alcoholics has not been abandoned, for several students of the Naval Academy have just been dropped for drunkenness. Another parallel between the Chinese and the American vice we observe in the fact that a good deal of opium is consumed as an ingredient of anti-opium pills. We provide medicines largely made up of whisky. The order has gone forth that no more poppy should be sown, and it will be interesting to observe how fully the order is carried out in the interior provinces. It would be like the absolute prohibition of distilleries and breweries in this country.

What other country can show such a magnificent list of public benefactions for the year as does the United States? They include bequests and gifts and amount to $135,000,000, against $60,000,000 the previous year. Of course, Mr. Kennedy's bequests of $30,000,000 greatly swell the total, but this is followed by $13,700,000 from Mr. Rockefeller; nearly $6,400,000 from Mr. Carnegie; $5,000,000 from the estate of Christopher L. Magee for a woman's hospital in Pittsburgh; a bequest of $2,400,000 from James Milliken for institutions in Decatur, Ill.; nearly $2,000,000 from Mrs. Russell Sage for various good objects, and besides these a multitude of smaller and yet all large gifts. We are an altruistic people, and wealth recognizes its obligations, aided so notably by religious enforcement.

It is an old experience which French Catholics are learning that it is better for the Church to have even the hostility of the civil government than its financial support and control. They will learn in France, what those who had tried it have told them, that the hated law of separa-

tion is their greatest blessing. The Paris correspondent of *America*, the new and able Catholic journal of this city, says:

"Freed as they are now from the fetters laid upon them by the Concordat, the French bishops are better able to resist its unjust demands, and since they have ceased to be paid by the State, they have gained in independence and dignity what they lost in material advantages. . . . We cannot but recognize the bracing effect of their new-found liberty upon the bishops of France."

It was natural and to be expected that Mr. Robert Underwood Johnson should be appointed to succeed the late Mr. Gilder as editor of *The Century Magazine*. He has been for many years associated with Mr. Gilder as associate editor and fully understands the ideas and methods which have put that magazine to the top of its class. He is himself an author and poet. Another member of the editorial staff, Mr. Clarence Clough Bull, will become associate editor.

We have another explanation of the election of Mr. Fitzgerald as Mayor of Boston. The negroes voted for him as well as the Irish Catholics. Two years ago the Republican candidate, Mr. Hibbard, posed as their friend, made good promises, got their votes and was elected. But when in office he forgot them and gave them no representation. They were angry, and so this year they turned from the Good Government candidate, supported by the Republicans, and gave Mr. Fitzgerald votes enough to elect him.

In an address of fine spirit and sound conclusions and advice several times delivered by Charles W. Dabney before Southern college audiences on "The Meaning of the 'Solid South,'" we find just one statement the truth of which we very much doubt. It is that "nine-tenths of the money used to educate the negroes comes from the pockets of the white taxpayers." That statement has been often challenged, and evidence presented that negroes pay very nearly, and in some sections quite all, their share to support their schools.

The Astronomical and Astrophysical Society of America is sincerely hoping that the tail, not the head, of the comet will next May come into collision with the earth; and they have no fear of the result. The most complete plans have been made for photographic, spectroscopic and photometric observations, and a special commission will go to Hawaii (in an American vessel, otherwise $200 fine each) to take photographs, and all amateur astronomers are asked to help.

We have observed for some months a growing disposition on the part of the negro papers to make much of Jack Johnson, their bruiser champion. This is not strange, but it is regrettable. He is not a reputable character. His business is not a reputable one. We have passed out of the brutal age of Polydeuces, and such contests are banned by law and should not be gloried in by a race that is "rising."

New Mexico and Arizona refused to be admitted to the Union as a single State, and Congress will properly yield and with little doubt will admit them both as States at this session. That ends for a long time the succession of new States, for there will be no Territories left, Alaska not yet being a Territory and not likely to be a State for a generation. Even Porto Rico may come in first.

We should be glad to see ex-President Roosevelt elected to the House of Representatives. Ex-President John Quincy Adams died the most honored and vituperated member of Congress. The talk about making him Speaker is gabble. He has not had the experience required for that, but he may come to it, as he may again be President.

Conditions are more hopeful in Congress. The leading members are more ready to pass the Taft measures, and it really looks as if the postal banks measure would become a law, notwithstanding opposition from the savings banks of the East.

Peculiar weather they have in Europe this winter. Venice has gone dry, so the gondolas have to keep to the Grand Canal. Paris has gone wet, so boats have to be used in the streets.

Insurance

A New Life Insurance President

BURTON H. WRIGHT was last week elected president of the State Mutual Life Assurance Company, of Worcester, Mass., in place of A. George Bullock, who declined re-election after a service of twenty-seven years as president. Mr. Bullock was elected vice-president and chairman of the board of directors and finance committee. Mr. Wright was born at Killingworth, Conn., in 1859, and after attending the Morgan School, at Clinton, Conn., entered the service of the Clinton National Bank. In 1879 he came to Worcester as clerk for the State Mutual and later became cashier. In 1897 he was appointed superintendent of agencies and in 1908 became secretary. Mr. Wright's long experience in the State Mutual, his intimate acquaintance with the agents and his knowledge of the business of life insurance make his selection as president most fitting. The retiring president, Mr. Bullock, says of the new president: "Mr. Wright, my successor, brings to the office every requisite of success: high character, ability and the wisdom that comes of long experience." The State Mutual was organized sixty-four years ago and has always been regarded as one of the solid financial institutions of the State of Massachusetts. The financial condition of the company is explained in the annual report, published on another page.

BURTON H. WRIGHT,
The new president of the State Mutual Life Assurance Company.

THE Association of Life Insurance Presidents, which has been holding a meeting in Washington, was addressed by President Taft on January 20. The President in his remarks took occasion to assure the association that he should be very glad to use any power belonging to him to encourage the efforts on the part of the association to secure uniformity in insurance legislation thruout the country. President Taft was followed by George E. Ide, president of the Home Life Insurance Company of New York; Dr. E. W. Dwight, medical director of the New England Mutual Life Insurance Company of Boston, and other well-known speakers.

AN order has been issued by the superintendent of the Newark Department of Combustibles and Fire Risks, which is said to be unprecedented, and which absolutely prohibits the use of the ordinary celluloid films in the moving picture business as now conducted in the city of Newark. The order became effective on January 11, since which time only the new non-inflammable kind has been used. The Newark superintendent is reported to have stated that he has been watching the films that have come into his home town for the past six months and as he finds that they are of the new and safe class he does not think his order will work any hardship whatsoever to the owners of such shows.

Commemorative Dinner of the Metropolitan Life Insurance Company

THE Metropolitan Life Insurance Company, of which John R. Hegeman is president, gave a dinner at the Hotel Astor on Saturday evening, January 22. The dinner was commemorative of thirty years of industrial insurance, of the completion of the company's home office building, and in honor of Messrs. Pierre Le Brun and Michael Le Brun, its architects. The banquet was also held in connection with the annual convention of the company's field superintendents. Covers were laid for 1,000 persons. It was indeed a festive occasion. It was made memorable by the announcement that an anonymous friend of the company had given 100 acres of land adjacent to New York, as well as $100,000 in cash, for the erection of a sanitarium for the consumptive clerks and agents of the company. The company will accordingly have two sanitariums in its pioneer work in combating tuberculosis. A high tribute was paid to Superintendent Hotchkiss by President Hegeman. The growth and usefulness of the Metropolitan Life is a notable example of the beneficent work performed by life insurance companies of the United States.

Copyright, 1908, by R. W. Tebbs.
THE METROPOLITAN'S TOWER.

THE Mutual Life Insurance Company, of which Charles A. Peabody is president, in its observance of the law, has already cleared $11,000,000 in the way of profit. This total arose because of the sale announced last week of the last of its holdings of American Exchange National Bank stock. The Mutual still retains blocks of stock in several financial institutions which could now be sold at figures which would add still further to this gain. The Mutual has disposed of large holdings in the Guaranty Trust Company, the United States Mortgage and Trust Company, the Central Trust Company, the Girard Trust Company of Philadelphia, the Title Guarantee and Trust Company, the Lawyers Title Insurance Company and the Union Trust Company.

THE New Jersey State Board of Equalization of Taxes reached a decision last week in favor of the Prudential Insurance Company of America, of which John F. Dryden is president, in its appeal against the city of Newark. The assessors of the city of Newark levied for the first time this year a tax of $721,191 upon the company's surplus set aside for the payment of deferred dividends, holding that such a surplus was but a contingent liability, and taxable as an asset. Further litigation may be expected.

FINANCIAL

Manipulation on the Stock Exchange

By flagrant manipulation the price of the shares of the Columbus and Hocking Coal and Iron Company were marked up on the Stock Exchange in 1909 from 21⅜ to 91½. The company, capitalized at about $7,000,000 and owning certain coal, iron and clay property, had paid no dividend, and in the fifteen years preceding 1909 the price of its stock had never risen above 31. At the opening of business on the 19th inst. the price was 88½. Then the props were pulled out. The price declined rapidly in a few hours to 25. At the end of the week it was only 23. Three brokerage firms had gone into bankruptcy with liabilities of about $8,000,000, and the entire market had been greatly disturbed.

It was notorious that this stock had for nearly a year been subjected to manipulation. Indeed, the attention of the Exchange authorities was directed to the thimble-rigging by formal complaint a few months ago. Unfortunately, their official inquiry ended with what was virtually approval of what the manipulators were doing. Now there is to be another investigation, and it may be that some one will be punished.

This case closely follows the Rock Island incident. Those who direct the affairs of the Exchange should realize that by permitting such an abuse of the Exchange's facilities they not only bring the great institution into disrepute but also invite severely restrictive legislation. Governor Hughes's commission in its report exprest its conviction that the evils due to manipulation could be prevented by the Exchange if it should exercise its influence and authority over its members with this purpose in view. The commission refrained from advising that the Exchange be incorporated and from recommending legislation for the regulation of it, "in the expectation" that it would use its powers "to prevent such wrongdoing as has occurred in the past":

"If, however, wrongdoing recurs, and it should appear to the public at large that the Exchange has been derelict in exerting its powers and authority to prevent it, we believe that the public will insist upon the incorporation of the Exchange and its subjection to State authority and supervision."

The Exchange authorities ought to see that the history of this Hocking manipulation gives to the public much evidence by which a demand for such supervision may be supported.

Railroad Earnings

The annual report of the Interstate Commerce Commission, published recently, shows how the net earnings of the railroads have been growing. The figures are for the year which ended on June 30 last. While the increase of gross receipts was only $23,800,000, the net earnings exceeded those of the previous year by $93,400,000. The totals are shown below:

Gross revenue, 1908	$2,421,542,004
" " 1909	2,443,312,232
Increase	$21,770,228
Net earnings, 1908	$734,397,029
" " 1909	827,814,999
Increase	$93,417,970

While a part of the reduction of operating expenses was due to smaller appropriations for maintenance of way and equipment, the saving was mainly in the cost of transportation. This points to the economies suggested or caused by the panic.

....The new statement of the Lawyers' Title Insurance and Trust Company shows a capital of $4,000,000 and surplus of $5,500,000. The company has made 17 per cent. on its capital during the past year, and its undivided profits now amount to $413,202, an increase of $189,943. The total assets, which a year ago were $21,880,239, now amount to $22,630,112, an increase of $749,873. The deposits are a million dollars more than they were a year ago, and on December 31 were $12,495,503. The statement containing the above figures is certified to by Haskins & Sells, the well-known auditors. New interests have bought a large number of shares of the stock and will give added strength to the company. The officers are Edwin W. Coggeshall, president; Louis V. Bright and Thorwald Stallknecht, vice-presidents; Archibald Forbes, treasurer; Herbert E. Jackson, comptroller, and Walter N. Vail, secretary.

Survey of the World

The Ballinger-Pinchot Investigation

At the beginning, on the 26th ult., of the Ballinger-Pinchot investigation, the first witness was Louis R. Glavis, the field agent of the Land Office, whose dismissal was ordered by the President after an examination of his charges against Secretary Ballinger. Mr. Glavis was on the stand for three days, and was assisted by his counsel, Louis D. Brandeis, of Boston. Much of the testimony was a reading of official documents, letters and telegrams. Mr. Brandeis said his client would attempt to show:

"That prior to entering the Government service in any capacity R. A. Ballinger acted as attorney in drawing up an agreement in escrow and deeds in the Wilson Coal Company cases in Lewis County, Washington, these cases being an alleged fraud upon the Land laws. Mr. Ballinger's name did not appear in the court records of the case.

"That Mr. Ballinger, as Commissioner of the Land Office, in 1907, did not show due diligence in investigating the alleged frauds connected with the Cunningham coal land claims in Alaska; that he had knowledge of all the circumstances surrounding these claims, and in spite of this entered the employ of one of the claimants after leaving the Land Office and before becoming Secretary of the Interior; that he ordered these claims to be 'clear listed' for patent without due investigation and that they would have gone to patent if Glavis and others had not intervened."

The evidence would relate, he added, not to one act, but to a series of acts and circumstances. What was said about the Wilson cases caused some surprise, for no reference to them had been made in the controversy. Mr. Ballinger, it is asserted, was counsel for the Wilson claimants before he became Land Commissioner. It was an interesting coincidence that on this first day of the investigation, the Federal court at Seattle virtually pronounced the Wilson claims fraudulent and directed that the property in question, 1,024 acres of valuable coal land, be restored to the Government. In the course of his testimony, Glavis, who is only twenty-six years old, by means of telegrams, letters and reports, gave a history of his connection with the land service and with the inquiry concerning the Cunningham group of coal claims in Alaska. His purpose was to show that Mr. Ballinger had been culpably negligent, at least; had made rulings favorable to the claimants in the face of the information procured and given to him by the witness; had improperly communicated this information to the claimants, and, in short, had been prevented from placing the lands in the possession of the claimants only by the witness's persistent intervention. In October, 1908, Glavis said, Ballinger told him that he was unable to obtain campaign contributions from two of the claimants, they being angry because the coal lands were withheld from them. He urged Glavis to hold up the investigation until after election, and Glavis did so, having much other work to do. To show that those really behind the Cunningham claims were the Guggenheims, of the great smelting and mining company, Glavis produced Cunningham's notebook, containing explanations written by Cunningham and attached to items of the expense account, to the effect that the money for work relating to the claims had been paid by Daniel Guggenheim. In December,

1907, the witness said, Ballinger (then Commissioner) told him to say publicly in Seattle, where claimants lived who were friends and business associates of Ballinger, that he had been ordered to make a thoro investigation, without regard to persons affected. But less than one month later, while he was engaged in the work, he was surprised by the news that the claims had been "clear listed" for patent. His prompt protest sent them back for further inquiry. Cunningham's journal contained an entry to the effect that an agreement had been made with Senator Heyburn to carry for him one Alaska claim of 160 acres in payment for his legal services. The Senator declined, however, to have any interest in the property or to be concerned in the acquisition of public land, altho he was willing to do for a constituent anything that he could do with propriety. Glavis's testimony showed that one of the persons in the Green group of Alaska claimants was Congressman McLachlan, of California, and that another was Congressman Kinkaid, of Nebraska, for whom Ballinger was counsel before entering the public service. He did not assert that either of these claims was improperly held, but the fact that Ballinger had been counsel for the Kinkaid claim and had dissuaded him from applying to McLachlan for information was regarded by him as indicating Ballinger's knowledge of the questions involved in the Alaska inquiry. At one time, Glavis said, Ballinger admitted to him that he was counsel for the Cunningham claims, said these claims were in a bad way, and asked him how their position could be improved. After Ballinger entered the Cabinet, Glavis asserted, his nephew took up the work of acting as counsel for the same interests. The Attorney General was in error, he said, in reporting that he, Glavis, had not brought these Alaska claims before a grand jury. He had endeavored to do this, but his efforts had been thwarted by the District Attorney, whom he consulted and who had caused delay by various excuses, finally producing an opinion from Land Commissioner Dennett that the loss of the coal land would be sufficient punishment for those who had sought to obtain it fraudulently. A letter was read which had been addressed by Mr. Schwartz, Chief of the Field Division, to the law office of the Interior Department, making inquiries about the interpretation of certain land laws. Part of it was as follows:

> "I feel that we need every ounce of power to prevent Alaska frauds which will by comparison make past frauds appear as petit larceny. We have pending about 500 coal entries; every man on the coast who knows anything knows the Guggenheims do and will control the coal situation unless at once forestalled; the act of May 28, 1908, limits its consolidation benefits to entries already made (Guggenheim and two or three other corporations), and so shuts out future competition. Exhibits show coal in from 20 to 80 feet width blankets of clear coal. The 500 entries have, say 80,000 acres. At 10 cents a ton on 20-foot vein the royalty alone is $160,000,000. Suppose in five or ten years Guggenheim shall have acquired control of these lands? Will it be charged to Secretary Garfield and Commissioner Dennett?"

After the Pierce decision, Glavis said, he was disheartened and thought he would resign. He appealed to Mr. Hoyt (now Attorney-General of Porto Rico) and the latter at first said he would confer with the President's brother. Later he decided to talk with Attorney-General Wickersham, and the result was that Ballinger was asked to refer the question to the Department of Justice for a new opinion. There was introduced a copy of a long telegram sent from Washington by Schwartz in August last to a special agent in Denver, urging him to procure at once the publication there (and elsewhere by the Associated Press, if possible) of an article "with scare heads," saying that proof of great frauds in coal lands had been found, and that Ballinger was energetically moving for the prosecution of the guilty, altho powerful corporation interests were trying to restrain him. All this, the telegram explained, was to "forestall a coming attack" upon the Department relating to the Alaska coal claims.——John E. Ballaine, of Seattle, a capitalist owning much property in Alaska, has written to a Senate committee, offering to pay a royalty of 50 cents a ton on coal mined, if the Government will lease to him 5,000 acres in Alaska. He estimates the royalty receipts from the tract in question at $2,000,000 for every 100 acres, and he says that a lobby is now

at work in support of a bill which would dispose of the tract at $10 an acre. He agrees to give a bond of $1,000,000 and to submit to all the regulations and restrictions for which provision is made in the conservation bills recently commended by the President.——A statement issued last week by the Land Office says that in the last eight years 50,000 acres of coal land, worth not less than $10,000,000, have been taken from the public domain by fraud.——Gifford Pinchot, recently removed from the office of Chief Forester, has been elected president of the National Conservation Association, to succeed Dr. Eliot, formerly president of Harvard University. This was done at the suggestion of Dr. Eliot, who will be honorary president of the association.

Failure of the Panama Libel Suit

The libel suit of the United States against the corporation that publishes the New York *World,* relating to news articles concerning the purchase of the Panama Canal Company's property, was brought to trial on the 24th ult., before Judge Hough in the United States Circuit Court at New York. In the indictment the corporation was accused of criminally libeling, on October 3, 1908, Theodore Roosevelt (then President); Douglas Robinson, his brother-in-law; William H. Taft (then a candidate for the Presidency); his brother, Charles P. Taft, and William Nelson Cromwell. The substance of the published assertions or insinuations was that early information from the President and Secretary Taft as to the Government's intention to purchase the canal property enabled Mr. Robinson and Charles P. Taft to make a profit of $36,000,000 by quietly buying for about $4,000,000 the stock of the company, for which the Government subsequently paid $40,000,000. Defendants' counsel moved that the indictment be dismissed, and, on the 26th, after hearing arguments, Judge Hough directed that it be quashed, on the ground that it was not sufficiently authorized by the statute on which it rested. This is an old law making penal codes of States applicable for the punishment of offenses committed on Federal reservations within their boundaries. The offense in this case was the circulation of the newspaper article on the West Point reservation and in the Post Office Building in New York City. Judge Hough held that no such use of the old law had been intended by Congress. As the question could be settled by appeal to the Supreme Court, he thought this course should be taken before a trial of the suit. It is not yet known whether the Government will appeal, but an impression prevails that the end of the proceedings has been reached. The similar suit, upon a District of Columbia indictment, against the proprietors of the Indianapolis *News,* came to nothing in October last, when Judge Anderson in that city denied the Government's application for the extradition of the defendants for trial in Washington.

Cuba and Porto Rico

President Gomez has sent to the Cuban Congress a message recommending that certain tariff duties be increased to protect Cuban manufactured goods, especially cigars, cigarettes, matches and shoes. He also suggests that banks for savings be established and that funds be set apart for the sick and aged in the laboring classes.——One of the Havana newspapers is alarmed because the Nipe Bay Company, which is said to be controlled by the American Sugar Trust, has expended about $200,000 upon machinery to be used in compressing raw sugar cane for transportation. It predicts that if the experiment is successful all the Cuban sugar cane will eventually be sent to the United States for grinding.——The Porto Rican House of Delegates unexpectedly passed the budget on the 29th, which was the fourteenth day of the session. It has recently been the custom of the dominant party to delay action on the budget, and a refusal to act upon it caused the enactment of the Olmsted law at Washington last year. The present budget was in accord with Governor Colton's views, and it was promptly approved, without amendment, by the Executive Council. ——There has been submitted to the House, at Washington, by the President, a bill making important changes in the organic act of Porto Rico. It provides

that instead of the Executive Council there shall be a Senate of thirteen members (eight appointed by the President, and five elected by the people); that two new executive departments shall be created, one of Agriculture, Commerce and Labor, and the other of Health; and that any native, twenty-one years old, may become a citizen of the United States by applying to a court. It also limits to 5,000 acres the land holdings of an individual or a corporation. This project of legislation is due to Secretary Dickinson's recent visit to the island, and it satisfies in part some of the demands of the dominant party. At his suggestion Congress is asked to appropriate $200,000, to be expended in the treatment of Porto Ricans suffering with anemia. There are said to be 400,000 of them.

The Situation in Nicaragua

General Medina, Prosecutor Selva, and the members of the court-martial who, by direction of President Madriz, were arrested and tried for illegally convicting the two Americans, Cannon and Groce, and unlawfully putting them to death, were acquitted on the 28th ult. General Medina produced the originals of the telegrams in which President Zelaya had given instructions as to the court-martial and the execution of sentence. Altho the accused men were acquitted upon the ground that Zelaya was responsible for what was done, the trial court did not accuse him. The Government will appeal to the Supreme Court. Madriz says that if the lower court's decision is confirmed, the matter will be laid before the Nicaraguan Congress, which, if Zelaya's responsibility be established, can ask that he be extradited and tried. Zelaya recently gave notice of his approaching journey from Mexico to Belgium. It is asserted that the prisons in Managua are full of political opponents of Madriz whom he has recently deprived of their liberty; also that he has levied a war tax upon a few men, the forced contribution from each ranging from $10,000 to $1,000,000. Americans owning plantations complained last week that he was drafting all their laborers into the army. Whereupon he promised to leave enough men to harvest the crops.——At the end of last week the revolutionists' army was within three days' march of the capital. News came to Bluefields on the 29th that in a battle near La Libertad Estrada had won a decided victory and that the army was moving upon Managua. General Chamorro, who commands in the field, was wounded while leading an attack upon a battery of machine guns operated by English gunners.——The American Collector of Customs in Santo Domingo reports that the revolution there has come to an end.——President Cabrera, of Guatemala, has issued an order that English shall be taught hereafter in all the public schools of his country and has made the study compulsory. He believes, it is said, that English is to be the language of commerce thruout the world.

The Paris Floods

It was good news from Paris to hear that the streets were no longer navigable. On January 29th, the waters began to subside, the highest point reached being 31 feet 4 inches above the normal level at the Pont Royal. This is nearly a foot higher than the worst flood recorded in the history of Paris, that of 1615. The Seine is now carrying about 30 times its usual volume and at a speed about 20 times the ordinary. It will be more than two weeks before the river recedes to its normal level. The cause of this flood is explained by the fact that the basin of the Seine had become saturated during the mild winter, in which there has been much rain and little evaporation. The waters of the Seine have flooded the lower parts of the city to the extent of half a mile or a mile on each side. Besides this the chief damage has been caused by the backing up of the water in the sewers, flooding the cellars and bursting up thru the pavement. The sewer system of Paris includes several hundred miles of underground galleries, in which some people make their homes, and they have been counted one of the sights of the city ever since Hugo's "Les Miserables" gave them romantic interest. The fears that were entertained during the early part of the week, that the bridges

and monumental buildings of Paris would be overthrown, have fortunately proved groundless. Eight of the twenty-four bridges across the Seine have been closed, but none carried away. The quays have been washed away in many places and the basements of the public buildings in the Isle de la Cité and the adjoining shores have been filled with water. Some of the storerooms of the Louvre were flooded, but none of the art treasures had to be removed. The Venus de Milo, which is on the lower floor, was still six feet above the level of the flood. The Cathedral of Notre Dame stood like an island in the midst of the yellow torrent. The Sainte Chapelle and the prison of the Conciergerie were invaded by the water. The Chamber of Deputies did not suspend its sessions, altho the cellar was flooded and members had to be transported across the flooded square on gun carriages. Part of the old Latin Quarter and the Champ de Mars were submerged. On the other side of the river the flooding of the subways and sewers caved in portions of the Rue Royale in front of the Madeleine and of the Boulevard Haussmann. Here the water spouting up thru crevices in the streets and places made artificial lakes, one or two feet deep, into which the street lamps fell. The Place de la Concorde and the lower part of the Champs Elysées is under water. Suburban traffic was cut off, and of the railroad stations only the Gare du Nord was unaffected. Of the stations that of St. Lazare suffered most severely. The Place de l'Opera was caved in chiefly from the undermining of the subways. The department stores, Printemps, Bon Marché and Lafayette Gallery, were obliged to close on account of the water. A large part of the city was in darkness except for such of the old gas lamps as could be made available and the fires that were built by the soldiers in the streets. The Theatre Français resorted to candles as in the days of Molière. Fortunately the catacombs of Paris do not seem to have been flooded. Altho the damage to property has been immense comparatively few lives have been lost. The rising of the flood has been gradual, so that people have been rescued from their homes in the lower levels without much difficulty, tho often in extreme destitution and misery. The most distressing scenes were the carrying away of the sick and dying from the hospitals. Three persons have been reported as having lost their lives by being swallowed up by chasms in the pavement. The apaches have taken advantage of the darkness and chaos to plunder the houses, even invading the hospitals. The soldiers have shot persons discovered robbing, and in some instances the infuriated populace have taken matters in their own hands and hanged the looter. There have been also some riots on account of the attempts of provision dealers to charge famine prices for their food in stock. Premier Briand has arranged for special trains to bring food into the city rapidly and continuously in order to prevent destitution or excessive prices. The police of Paris, under the efficient management of M. Lépine, have done excellent work in the rescuing and the maintenance of order, and the soldiers have been utilized as guards and rescuers in all parts of the city and the inundated region. Parliament has appropriated $400,000 for relief and public subscription will bring in much more. Edmond Rostand will contribute the receipts of the first night's performance of his long expected bird drama "Chantecler" to the relief fund. The suburban towns on low ground, above and below the city, have been devastated, Gennevilliers suffering most. for here the breaking of the dyke inundated the entire town to a depth of seven to ten feet and drove out its population of 10,000 persons. The chief danger of the city is now pestilence from the stagnant water containing dead animals and other debris. A systematic plan for disinfection of the houses has been worked out with the assistance of the Pasteur Institute.——Heavy rains and high water are reported from many places in Italy. The Arno at Florence and the Tiber at Rome are flooding the banks and washing out buildings.

The British Election As was expected, the Liberals have lost less in the elections of the past week than earlier, and will probably break even with the Unionists without counting in their Labor and Nationalist allies.

There are seven districts yet to poll, but their attitude is pretty certainly known, so it is expected that the new Parliament will stand: Unionists, 274; Liberals, 274; Laborites, 40; Nationalists, 73; Independent Anti-Budget Nationalists, 9. There have been net Unionist gains of 106, which reduces the coalition majority from 334 to 122. The King will open Parliament on February 15, and it is thought will recommend in his speech the passage of the Budget, the restriction of the powers of the House of Lords, the disestablishment of the Welsh Church and the adoption of a system of insurance against unemployment. The reform of the Upper House will probably be first undertaken, but which of the many plans that have been suggested will be adopted by the Government has not been disclosed. The peers themselves in their speeches before the elections have freely admitted the necessity of the reorganization of the House of Lords, and it would be possible to secure their support for a moderate measure. Premier Asquith has gone to the Continent for a holiday and the maturing of his plans. In view of the unstable constitution of the Government majority, it is not likely that he will long remain in power, and the next session will be devoted more largely to laying the lines for the next campaign than to legislation. The Labor party has lost 14 seats since the last session. It is commonly prophesied that Mr. Asquith will not undertake any radical measures, and that the young and ardent members of his Cabinet, Mr. Lloyd-George and Mr. Churchill, will be either dropped or kept more in the background.

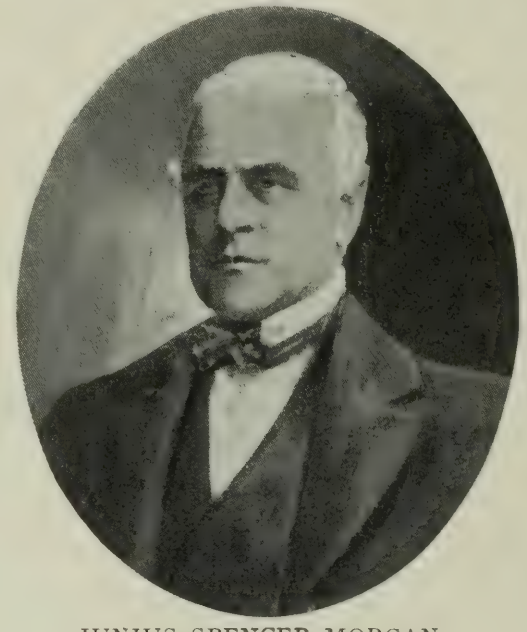
Various Parliaments

The Norwegian Cabinet, under the premiership of Gunnar Knudson, has resigned in consequence of defeat of the Left in the November elections. The Ministerialists in the Storthing have only 47 seats and the Socialists 11, while the Opposition, composed of a coalition of the parties on the Right, have 63. President Beatlie, of the Storthing, will probably be called upon to form a new Cabinet.——The Military League which has been virtually ruling Greece has agreed to disband if a national assembly is called to revise the Constitution. The King has consented to this program on condition that the revision be confined to certain predetermined sections of the Constitution and that the royal prerogatives be not impaired.——Hungarian affairs are again in a turmoil and it seems impossible to secure a settled government. Dr. de Lukacs had been Premier only a short time when he was forced to resign on January 11, and Count Khuen Hedervary, who succeeded him, was defeated by a large majority in the Chamber on January 28. He thereupon produced from his pocket an imperial rescript adjourning Parliament until March 4. He stated to the Deputies that he had not decided whether to resign or to appeal to the country. The Chamber greeted his resignation with riotous manifestations of delight. Count Hedervary is an old parliamentarian, and took office as Premier in 1903, following de Szell, but was overthrown four months later by the Kossuthists, who are doubtless responsible for his present defeat.——The opposition of the Socialists in the German Reichstag to the army budget aroused the Conservatives to extreme statements in support of absolutism. Herr von Oldenberg, an ex-cavalry officer, said that it was essential for the safety of the empire that the Kaiser should be able, at any moment, to give the order: "Take ten men and shut up the Reichstag." This remark was received with jeers and laughter. The Socialists joined in a chorus of "Down with absolutism!" tables and chairs were upset, and it was a quarter of an hour before order could be restored.——The petition of representatives of the provincial assemblies, now gathered at Pekin, for the establishment of a parliament in 1911, has been denied by the Prince Regent. He adheres to the original program for a gradual development of the constitutional system, culminating in a parliament nine years hence.——At a trial of one of the Indians arrested for sedition at Lahore a plot was disclosed for the overthrow of British rule and the establishment of an independent monarchy, with a capital at

Delhi and parliament composed of a House of Princes and a House of Commons.

The French School Question

The controversy between the Catholic Church and the State schools is now being carried on both in Parliament and in the courts. The letter issued by the episcopate warning parents against the public schools as teachers of atheism was met by legal action against the bishops by the association of public school teachers on the ground that this letter was calculated to destroy the authority of the teachers and was an attack upon the state thru its officials. The Archbishop of Reims, Cardinal Ludovic Henry Lucon, appeared before the court and denied that the action of the bishops was intended as an interference in political affairs or a personal attack upon the teachers. The Church had a right to defend itself against its enemies and it was his duty by virtue of his office to denounce immorality and atheism wherever it appeared. Referring to the letter of the bishops, he said:



"Its sole purpose was to warn Catholic parents of the danger to the faith and the morals of their children incurred in the use of certain textbooks and the method of instruction in the public schools. To complain that the public schools are becoming an instrument of dechristianization does not constitute an attack upon the political *régime* of France."

——Premier Briand, taking part in the discussion of the school question in the Chamber of Deputies, laid the blame for the unfortunate situation entirely upon the leaders of the Church, who had deliberately incited the pupils to revolt and caused untold hardships among the poor by forcing the removal of their children from the school. The public school system, he said, was the great achievement of the republic and gave the children a broad preparation for real life, leaving the matter of religious teaching to the Church and the home. The Government, he said, would protect the public school teachers who had been condemned by the pastoral letter, but would not seek to monopolize public instruction. The Government, however, has introduced a bill to extend the control of the state over the private schools. M. Briand said that the bishops, instead of making a sweeping attack upon the books used in the public schools, should have brought their objections directly to the Minister, and he gave some instances where this procedure had been followed and the objectionable passages altered. M. Dessoye, defending the public schools in the discussion in the Chamber, called attention to the fact that many of the books condemned by the bishops had been used for a considerable time in the Catholic schools. The State, he thought, should exercise more supervision over the private schools and he read extracts from the books used in them condemning divorces, glorifying the Index and declaring that to believe all religion to be good was quite as dangerous as to believe that there had never been any such thing as counterfeit money. M. Piou, leader of the Liberal Catholics, retorted that the public school teachers taught that a man had a right to choose his religion or make no religious profession whatever. This, he declared, no one was justified in teaching a child. ——The Clericals lay much stress upon the argument that public morality in France has deteriorated under the *régime* of the secular schools, and in support of this they refer to the epidemic of crimes of violence which France is now suffering. The criminal classes in Paris, known as the Apaches, are becoming yearly more insolent and unruly. In order to arouse public opinion to a support of local authority, a Paris policeman who was killed by one of the Apaches was given a civil funeral by the Paris municipality. His hearse was followed to the Cathedral of Notre Dame by a large number of distinguished persons, among them the Prefect of Police, the presidents of the Senate and of the Chamber, the Prime Minister, M. Briand, the President of the Court of Cassation, the Prefect of the Seine, the Grand Chancellor of the Legion of Honor, the Military Governor of Paris, members of the Paris bar and municipal councillors. M. Lépine, Prefect of Police, in his address at the cemetery, declared that Paris had become the refuge of bandits on account of the leniency of the laws, and that it was the duty of society to rise and protect itself against its internal enemies.

The Morgan Memorial Building at Hartford, Conn.

Mr. Morgan's Latest Gift to Art

At the presentation of the Morgan Memorial Building, erected at Hartford, Conn., by J. Pierpont Morgan in memory of his father, Junius Spencer Morgan, to the trustees of the Wadsworth Atheneum, which recently took place, Mr. Morgan, the donor, and his invited guests, were present. The dedication ceremonies were simple. There was a prayer by Rt. Rev. Chauncey B. Brewster, Bishop of the Diocese of Connecticut. This was followed by a statement on the part of the architect, Benjamin W. Morris, of this city, certifying that the building had been constructed substantially in accordance with Mr. Morgan's instructions. Mr. Morgan was then introduced. In his address he said:

JUNIUS SPENCER MORGAN.

"Ladies and gentlemen, you can hardly expect me on an occasion like this to say much, and I do not propose to. The associations surrounding this building, the city of Hartford and its people I cannot tell, even tho I were able. I therefore simply say what is necessary to turn over the property to the board of trustees. It is my desire that the building may contribute to the pleasure and education and profit of the people of Hartford, and that students of art may come here and find, for purposes of study, those things which they desire.

"I hope the trustees will proceed as rapidly as possible to the completion of the building, as it is not yet completed. This I shall probably not see completed, but I want to see a little of it, and I make of them that request, that it be done as early as possible.

"In this connection I want to say something else, concerning the piece of property immediately to the south, and I want to make a request of the people of Hartford. I cannot dictate, of course, to his honor the Mayor, but I hope that this piece of property will be put to some use for public buildings or structures of that character, in order that the beauties of the site and of the present site may not be marred by unsightly buildings erected close to it on the south.

"I have been talking with the chairman of the board of trustees, and with a pencil and paper have estimated with him what the probable cost of maintenance of the building will be, when it is completed. Of course not all of it will be needed now, but in addition to the key which I now turn over to the chairman—here is the key—I hand him herewith securities for $250,000, the income of which will be about $15,000, for the maintenance of the property."

Mr. Morgan's gift was accepted on behalf of the trustees by the Rev. Dr. Francis Goodwin, president of the board. In his speech of acceptance Dr. Goodwin spoke in part as follows:

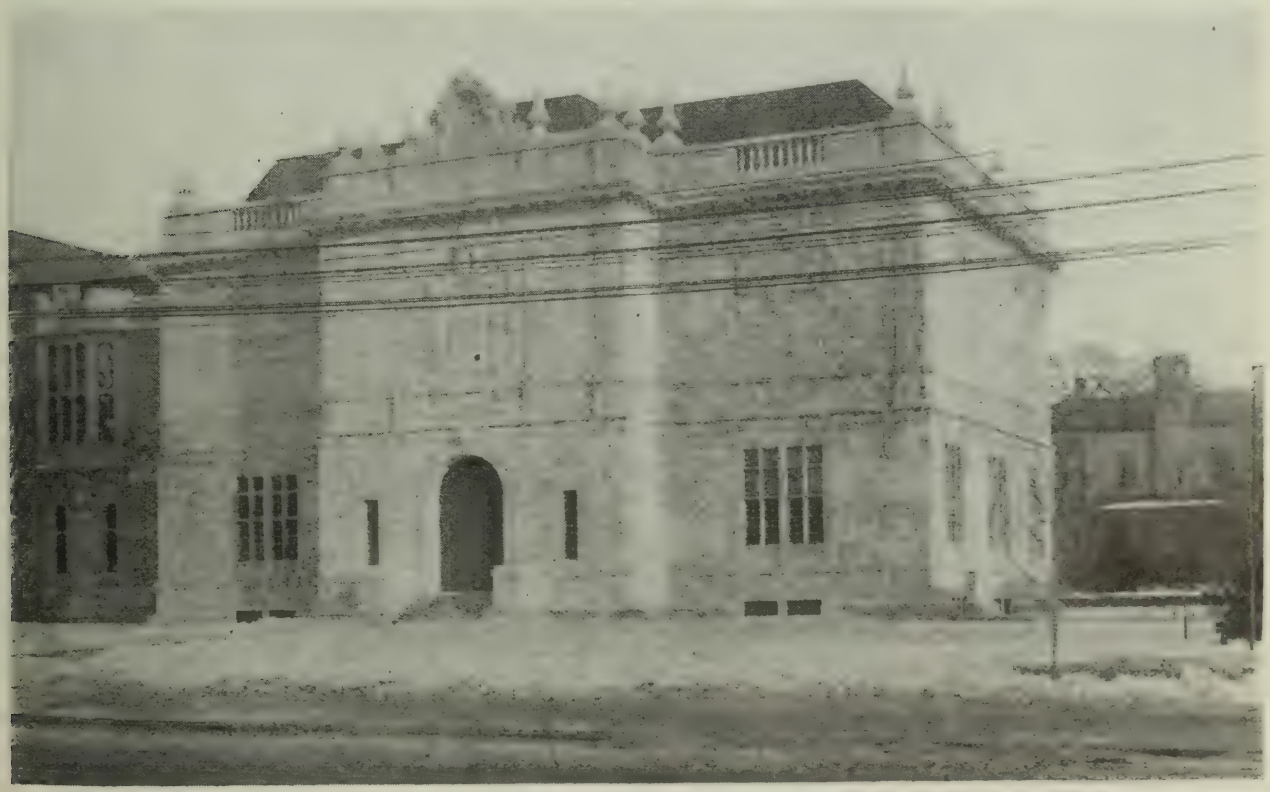
"In receiving from Mr. Morgan this token of the formal conveyance of the first completed part of the memorial which he has erected to the memory of his distinguished father, the trustees of Wadsworth Atheneum cannot but recognize that this is only the culmination of a long and remarkable series of benefactions. It is the crowning evidence of his constant interest, of his wise direction, and almost unexampled generosity.

"It is now more than twenty years since—at his suggestion—in his father's library in London, that the extremely critical situation of the Atheneum was brought to his father's attention. The art gallery had been closed for want of the necessary funds to keep it open; the accommodations for the growing libraries were both inconvenient and increasingly inadequate; the structure itself was much out of repair and almost falling into decay. Under these discouraging conditions there was naturally cause for great apprehension as to the future. The trustees had devised a plan to raise by subscription an amount sufficient first to reconstruct and enlarge the building, and, secondly, to create a permanent fund, the income of which should be used for its maintenance.

"Mr. Morgan's father gave this matter, as it was presented to him, careful and sympathetic consideration. He offered, if the plan should be carried into effect, to make a con-

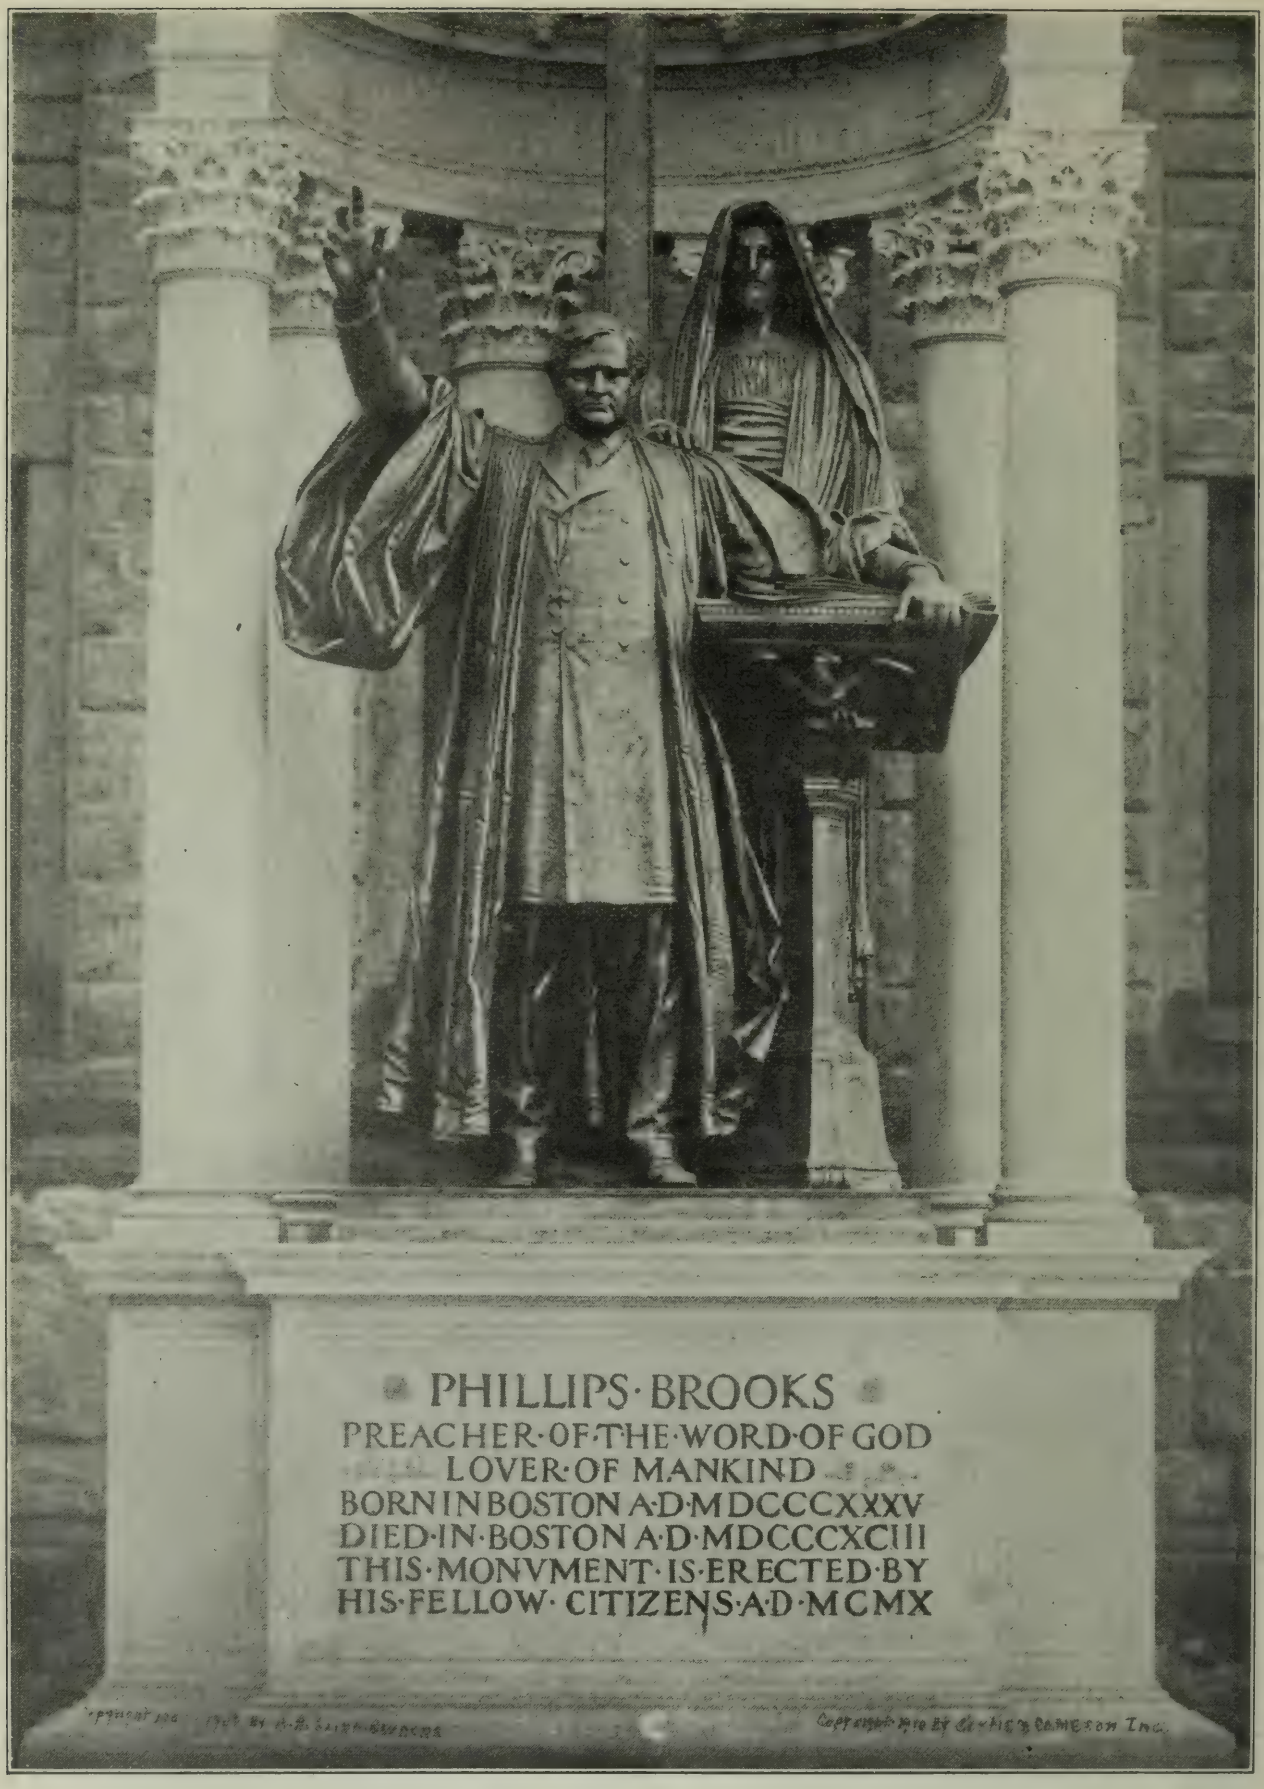
tribution of $100,000—on the condition that the total amount secured should be sufficient to provide for an adequate endowment. Immediately thereupon, and without the least solicitation—Mr. Morgan offered to add to his father's subscription a further personal contribution of $50,000. These two large subscriptions insured the ultimate success of the plan, and a fund exceeding the limit of $400,000 was secured. It is in large measure due to these first contributions that this community has for all these years enjoyed the benefits and advantages resulting from an adequate endowment and improved structural conditions.

"This was, however, only the beginning of such manifestations of Mr. Morgan's generous interest.



"And when on this splendid site he proposed to erect a memorial to his father, and for the occupancy of the Atheneum, he made as a condition of his gift, not only that the structure should be beautiful in design and that the best materials attainable should be used in its construction, but he further required that the work should be carried out by contractors in whom he personally had reason to have the greatest confidence.

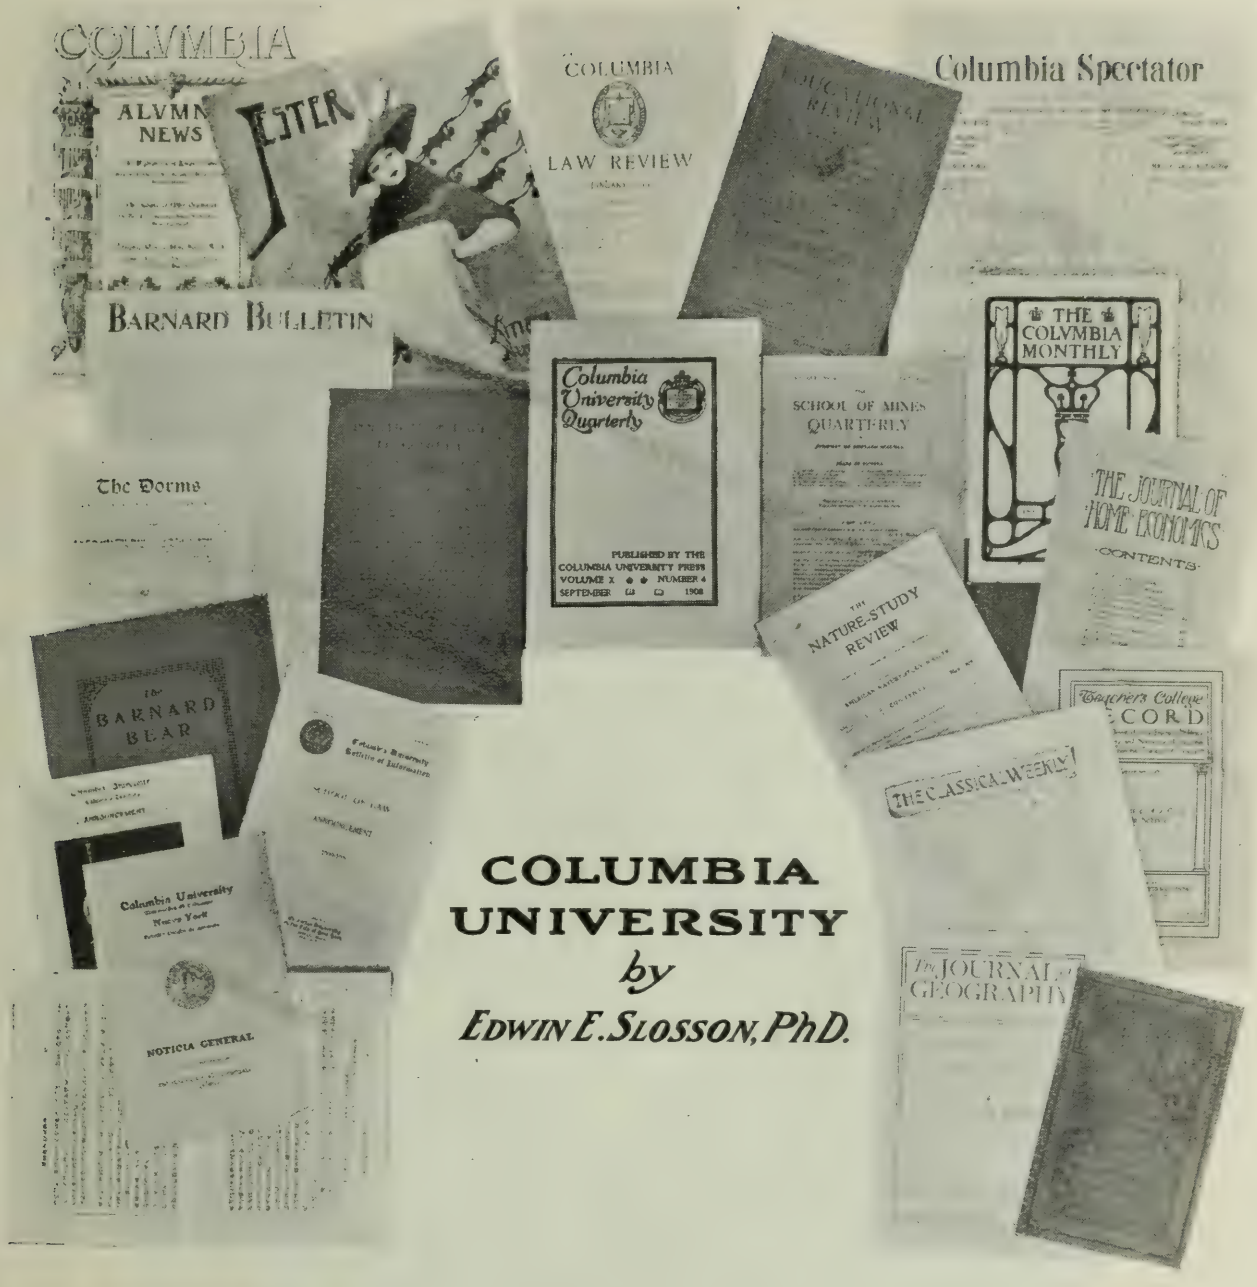
"Nor would it be right on this occasion to omit reference to those other gifts of great value which from time to time Mr. Morgan has made, of sumptuous volumes, the number of which is too great to mention in detail. Suffice it to say that we count them to be among our chief treasures. These facts and others of which I cannot now speak, make it evident that the trustees of Wadsworth Atheneum, the city of Hartford, and in certain respects the State of Connecticut, owe to Mr. Morgan a debt of gratitude for which no expression of thanks which could be framed in words would be an adequate acknowledgement.



"It is, of course, obvious that a museum and art gallery in a smaller town cannot hope to rival or even to approach in size and importance those of metropolitan rank, but this fact does not prove that there cannot be maintained here such a standard of excellence as will command the respect of those whose knowledge makes their good opinion to be of real value.

"This ancient town has sent forth many sons who have achieved marked success in various walks of life; many who have greatly honored her, and whom it is her pride and joy to honor. Among these, in his particular field of service, no name stands before that of Junius Spencer Morgan. Beginning here a boy with no special advantages other than those which he possessed in his own character and person, he became one of the world's greatest merchants. His most active years were spent in a foreign land, during a period in which his native country was passing thru the most strenuous crisis in her history, and yet in the darkest of those hours his loyal patriotism never wavered and his faith in her ultimate triumphs never failed.

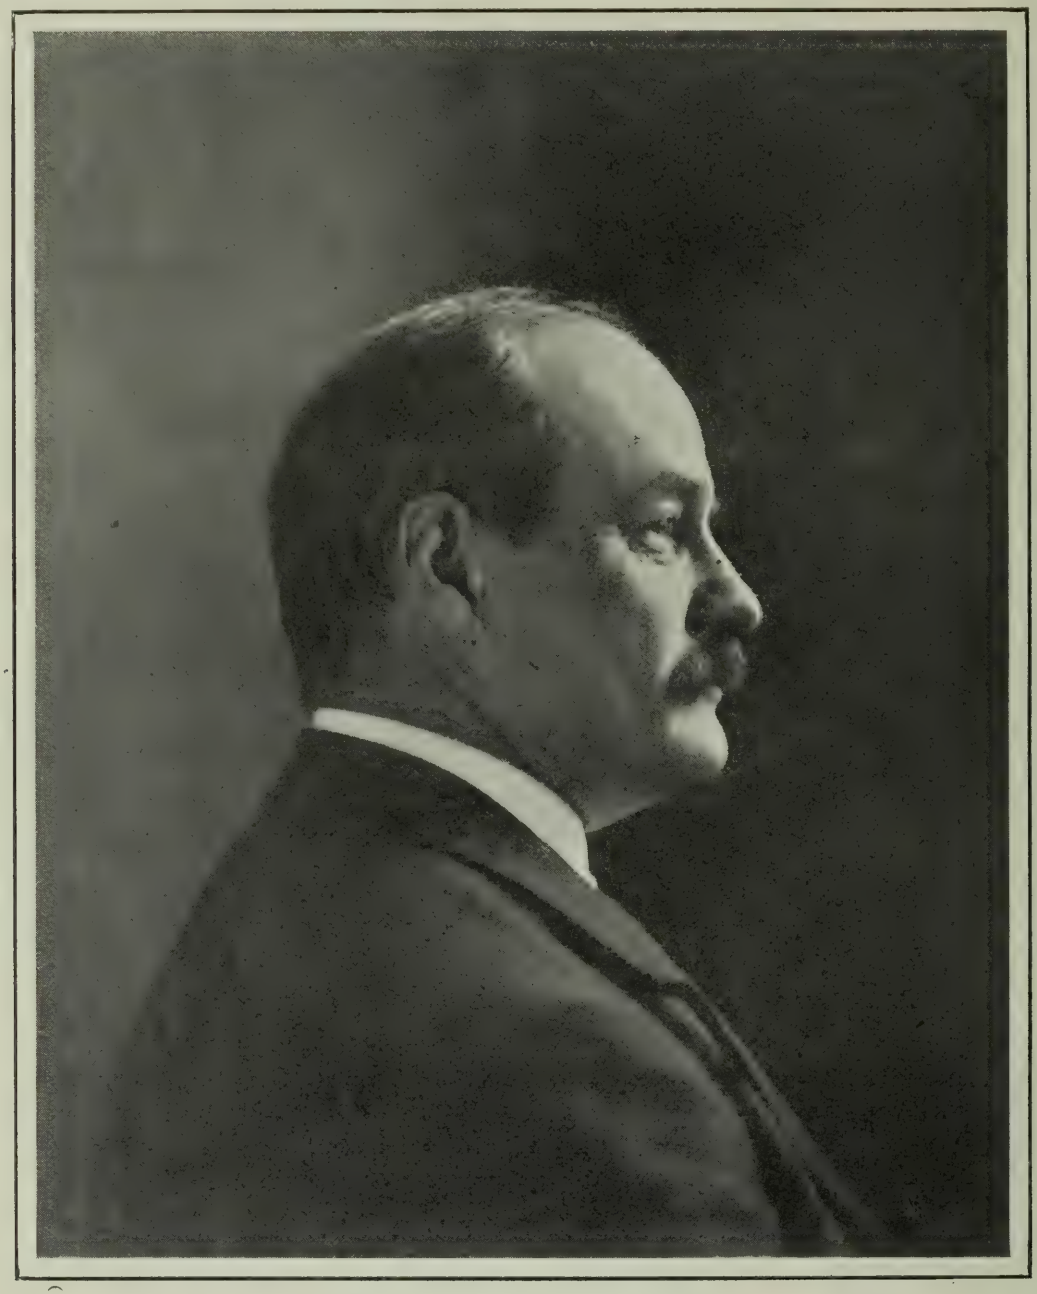
"Altho much of Junius Spencer Morgan's life was passed elsewhere, yet it seems eminently fitting that his chief memorial should be here in Hartford, for it was here that he was brought as a little child and it was here that the years of his childhood and youth were passed; it was here that he had his first married home and here all of his children were born; it was here that he began to take that personal interest in public and philanthropic matters which he continued to do thru life."



THE MORGAN MEMORIAL BUILDING AT HARTFORD, CONN.
From a photograph furnished by the architect, Benjamin W. Morris,, of LaFarge & Morris, New York City.

THE PHILLIPS BROOKS MEMORIAL BY AUGUSTUS SAINT-GAUDENS.

(Copyright, 1907 and 1908, by A. H. Saint- Gaudens. From a Copley print, copyright, 1910, by Curtis & Cameron, Inc.)



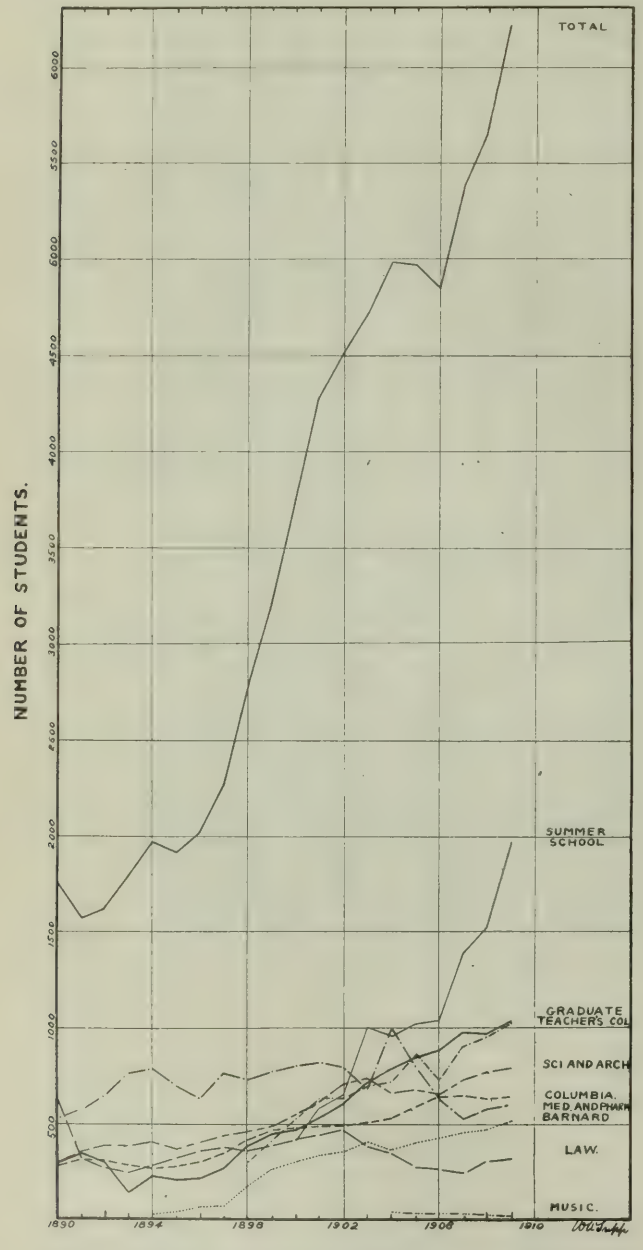
This memorial in bronze of Phillips Brooks was recently unveiled at Trinity Church, Boston. Heroic in size, the memorial is one of the posthumous works of Augustus Saint-Gaudens. The granite canopy was designed by the late Charles F. McKim, of McKim, Mead & White, New York.

THE first thing that the visitor sees as he approaches Columbia University is the great gilded statue of Alma Mater, a modern interpretation by Daniel C. French of the figure on the seal. An old, old book is spread open upon her lap, but her eyes are not directed down upon it. She is looking straight before her into the heart of the big buzzing city to the southward, while her open-handed gesture suggests that she regards knowledge not as something to be hoarded and hidden but as something to be scattered as freely as possible to the world. The building to which this figure welcomes the visitor is the low-domed, ten-pillared library, a storehouse and workshop combined, dominating by its position and beauty all the other buildings of the group. If the visitor, keeping to externals, skirts the library instead of entering it he will find on one side St. Paul's chapel bearing as its sole decoration the sculptured forms of cherubim. As he passes on thru the campus past the gymnasium he comes finally to the statue of Pan, by George

Barnard, stretching out his gigantic limbs behind the trees and bushes. Here is nothing of the clear-eyed intellectuality of Alma Mater, nothing of the unworldly innocence of the cherubs, nothing but sheer animality, the love of outdoors, the delight in tough sinews and thick thews, a fondness for aimless movement and senseless sensation. So the visitor, forming his opinion after the manner of his kind, from casual first impressions, comes to the conclusion that at Columbia University all the three elements of man's nature are recognized as essential, but intellectual culture is in the foreground, religious culture at the side and physical culture in the background. In this he would not be so far out of the way as those who judge by superficialities are apt to be. Columbia, unlike most of the old universities, inherited no theological department, but to correct the deficiency it has welcomed the association of several theological seminaries. The Great God Pan, far from being dead, now rules many a college and robs Athena of her worshipers. But Columbia is not one of those institutions where the stadium is larger and more frequented than the library. In fact, there

NICHOLAS MURRAY BUTLER,
President of Columbia University.

is no stadium at Columbia, tho there is promise of one in the future to be built out into the Hudson from Riverside Park giving unequalled opportunity for witnessing land, water and air sports.



It would be well if the promoters of the Neo-Pagan revival would show better judgment in what classical customs they introduce. For example, our colleges could with advantage adopt the original Spartan rule that no man be allowed on the athletic field except those taking part in the exercises. But we are more Roman than Spartan nowadays and the only thing to do is to make the best of it. If we cannot eliminate the spectacular element in our athletics we can control it. Most university authorities think we cannot but Columbia has demonstrated that we can by abolishing its most extravagant manifestation, inter-collegiate football. None of the other great universities has yet followed this example, but I have learned in many of them that President Eliot's words and President Butler's action have strengthened and encouraged those who are striving to maintain a proper balance between the intellectual and the physical life of the students, and to put Pan in his proper place.

When this country gets settled up and settled down the cities will find that they cannot all be metropolises and the universities will cease to aspire to preeminence in all things. How many universities of the highest grade the country can then support and where they will be situated cannot be foretold. I have heard the theory advanced that there will ultimately be four universities in the front rank and they will be Harvard, Columbia, Chicago and California, if these universities improve their advantages of position and prestige. This would certainly be a symmetrical distribution, but the theory ignores the recent developments of the State universities of the Mississippi Valley and the possibility of a national university at Washington which the State universities are anxious to see established. It is, however, apparent that the universities in large cities have a decided advantage over the others. The balance of power among German universities has been disturbed by the rise of Berlin, while in France it is found difficult to prevent the University of Paris from getting a monopoly of higher education. London University, young and chaotic as it is, seems likely to go ahead of Oxford in the near future. The pull of the city is as irresistible in educational circles as on the country population as a whole.

All colleges draw about half their undergraduate students from their immediate environment, from within a radius of a hundred miles, so the city college has the primary advantage of a large tributary population well supplied with preparatory schools. As wealth becomes concentrated in the cities the institutions there located have the best chance at catching the crumbs which fall from the rich man's table, including sometimes a generous tidbit. The more highly specialized the work of the university and the more closely it is connected with the work of the world, the more necessary are the urban facilities. The medical men need hospitals and sanitary establishments. The students in architecture, art and music require museums and operas. Lawyers, economists, sociologists, all who are studying that branch of zoölogy dealing with the habits of the political animal, seek the localities where they find the greatest abundance of specimens. It is easier in the cities to get men of eminence in the several professions to devote at least a part of their time to academic duties. An engineer who is good for anything can make more than his salary by utilizing odd hours and vacations. His literary colleague finds it advantageous to be in close touch with editors and publishers. Still more important perhaps is the opportunity of association with men who are concerned with art, letters and science in other than a pedagogical way. In a small college town a professor finds his cultured associates almost exclusively in the faculty clique and they, being absorbed in diverse lines of study, have nothing in common to talk about except shop. Naturally he comes to think that all the world's a school and all the men and women merely teachers.

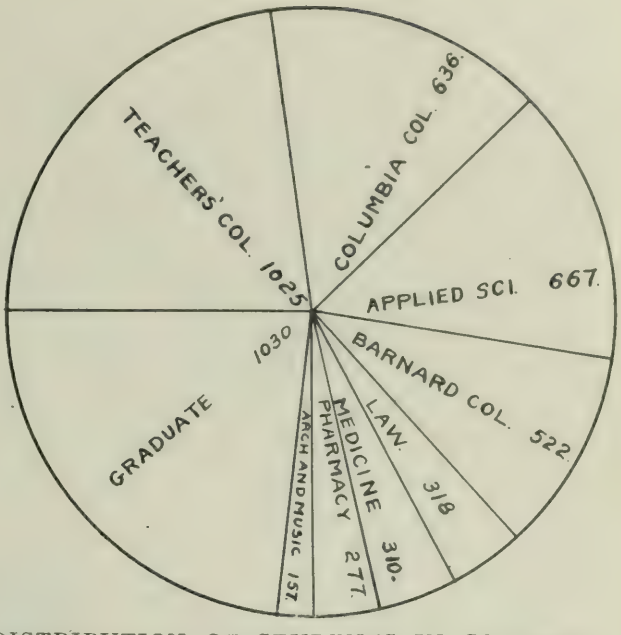
It may be argued in favor of the country college that living is cheaper, that the buildings are less crowded, that the

opportunities for outdoor exercise are greater, that the life of the students is more unified, and under closer moral control, and that there is less to distract the attention and dissipate the energies than in the city. All of which is true tho the value of these arguments, especially of the last, is being questioned. There is probably more hard and continuous thinking and that, too, on recondite subjects, going on now in the cities than in the country. A man who will decline a box at the Metropolitan Opera, a free ticket to a Hotel Astor dinner or a chance to speak to a Carnegie Hall audience in order that he may devote another evening to his study of the dative case in the third declension, has thereby demonstrated the possession of the first qualification for successful research, concentration of purpose. At any rate the trend now is toward the city and while it is likely that undergraduate work of two years or more will be carried on chiefly in local colleges and high schools, the higher grades of professional training and of research will be done in universities in or close to the great centers of population.

ENROLLMENT OF STUDENTS IN COLUMBIA UNIVERSITY, 1890-1910.

Columbia, situated in the largest city, has the best chance to become the greatest of American universities—and it is improving the chance. It is distinctly a city university and distinctly a New York City university. As the University of Wisconsin has blurred its outlines by dissolving itself in the State, so Columbia University is willing to lose somewhat of its identity and distinctiveness thru merging itself in the city in order that it may most fully share its life. It is as impossible to trace the boundaries of Columbia as it is to define the limits of the metropolis. Its influence permeates the city thru thousands of unofficial channels, too numerous and too delicate to follow.

The University of Chicago is different. Altho it is about the same distance from the center and from the edge of the city as Columbia, it is not so much a part of it. It has little of Chicago about it except its name. Its buildings by their architecture and arrangement seem contrived to give the effect of a cloister in a city. It draws close the skirt of its academic gown, as tho to avoid getting it into the Chicago mud. A stranger passing along the Midway Plaisance would at once be struck by the group of buildings and inquire what it was and where it came from. On the other hand, the tourists who come up Amsterdam avenue on the sight-seeing automobiles have to ask, "Which is it?" when the guide with the megaphone announces they are passing Columbia University. The buildings do not differ markedly from the new apartment houses surrounding them except in being somewhat more solid and rather less attractive in appearance. The University of Chicago might be anywhere; might, indeed, be expected to be anywhere rather than in Chicago, but Co-



lumbia, body and soul, is so thoroly characteristic of New York City as to be quite inconceivable elsewhere.

Columbia, like Stanford and Chicago, has the advantage of all new buildings. When we get a little more civilized we will realize that permanence is not in itself a desirable quality in architecture any more than it is in clothes. Substantial buildings have many advantages,

DISTRIBUTION OF STUDENTS IN COLUMBIA UNIVERSITY, 1909-1910.

but endurance is not one of them. New York has the proper spirit in this matter. It is now proposed to tear down a fifteen-story office building on Nassau street, erected only a few years ago, and put up a new one of thirty stories. The new building will certainly be more convenient to more people and probably be more beautiful, for there has been a great improvement of late in the architecture of sky-scrapers. To erect a church or schoolhouse with the design that it shall last several hundred years is a very conceited thing to do. It implies that we consider our forms of worship and methods of instruction so perfect that they will prove adequate and satisfactory to future generations. It is to be hoped that this expectation will be disappointed. Some departments of university work are developing so that buildings put up for their accommodation twenty years ago have already become inconvenient. In the older inherited universities the dormitories force upon the students of today the domestic habits of their ancestors. But there is one thing worse than to live in old buildings, and that is to love them.

One of the reasons why Columbia has made such rapid strides in overtaking its chief rival, Harvard, is because in moving from its down-town home on Forty-ninth street to the new site on Morningside Heights in 1897 it left its

old buildings behind and could start anew. In occupying the new campus a systematic plan of construction has been followed, as shown by the architects' models reproduced in this article. The new buildings are large, commodious and stately in appearance, tho the effect of the whole is rather monotonous owing to an over-strict insistence on uniformity. It is not necessary and perhaps not desirable that, for example, a School of Mines should look like a law school or a dormitory. The new mining buildings of California and Yale, constructed to fit the machinery they house and accommodate its operation, seem to me to make a better impression upon the visitor as well as to set a better example to the mining engineers than that of the Columbia building.

The reason why I am criticising the architecture of Columbia is because it has some architecture to criticise. The State universities as a rule have not. No other university has any building to compare with the Columbia library, constructed from plans of McKim, Mead & White, at a cost of a million dollars, the gift of President Seth Low. It is accounted one of the ten most beautiful buildings in the United States.* Considered as a library, however, instead as an architectural monument, it has certain defects; for instance, there is no place to put the books. It is already overcrowded. The books cannot be stacked together, but have to be stored in many separate rooms, from basement to dome, and in halls and archways, sometimes remaining in the packing boxes. Because of this congestion it is necessary to change the location of at least 200,000 volumes a year. The removal of the seminar rooms and their departmental libraries to Kent Hall upon its completion will give more room, but the awkward arrangement of the building will always cause expense, delay and inconvenience in the handling of books. The simplest solution of the problem would be to put the book-stack in the central reading room, under the dome, which is better adapted to this purpose than for reading. The design of this room was probably suggested by the reading room in the British Museum, but there the catalog and call desk is in the center and the aisles naturally radiate from it, but in the Columbia library the delivery room is at one side and across a hall, so the circular form of the room has no advantage. The Columbia reading room also has to serve as a passageway between the class rooms, and the big dome placed over it carefully collects all sounds and focuses them upon the readers below. From a purely esthetic point of view this reading room

INTERIOR OF ST. PAUL'S CHAPEL, COLUMBIA.

*The "Brochure Series of Architectural Illustration," January, 1900, reported, as the result of a voting contest of architects, the following ten buildings, named in the order of preference: (1) National Capitol, Washington; (2) Public Library, Boston; (3) Trinity Church, Boston; (4) Congressional Library, Washington; (5) Columbia University Library, New York; (6) Trinity Church, New York; (7) Madison Square Garden, New York; (8) St. Patrick's Cathedral, New York; (9) Biltmore House, Biltmore, N. C.; (10) City Hall, New York.

is deserving of the highest praise. Its sixteen huge columns of polished serpentine, the white arches above them, the statues of ancient worthies standing on the balustrade and looking down on those who are toiling to emulate them, the dark blue dome, the great white moon suspended in the middle of it with uncharted craters on its surface, the stately entrance from the colonnade, all these combine to produce an effect of spaciousness and nobility. But one wonders whether architectural beauty and convenience are necessarily incompatible.

The same question arises in connection with St. Paul's Chapel. This is interesting from its frank and skilful use of brickwork, and the interior, in varied shades of brown and yellow, is a delight to the eye. It is not a delight to the ear. The speaker's words get lost in the alcoves, and, after wandering about in there for a time, come out again to heckle him. Why the building was constructed in this way it is hard to surmise. It is not allowable to suppose that it was unintentional, for the university is exceptionally strong in its departments of architecture and physics and has plenty of men capable of calculating the reflection of sound from hard curved surfaces. The only reason for the design that I can think of is its value in the liturgical service. In accordance with the provisions of the original charter of King's College morning prayers are read daily. The attendance of students is not always satisfactory, but this does not matter. The chaplain reads the service and the walls give the responses. To conclude, St. Paul's Chapel is a work of art which any city would be proud to possess. It is very beautiful, and it is also useful, not for preaching, but for the Foucaultian experiment. Architecture receives more attention at Columbia than at other universities, but it is practised there as one of the fine arts rather than as one of the applied arts.

The movement of Columbia to Morningside Heights and the erection of some twenty large and expensive buildings, the change of name from College to University, the growth in numbers from 2,018 to 6,232, are but the external signs of the astonishing vigor which is characteristic of the university. No other university, West or East, has been so completely transformed in the last fifteen years, or is now developing so rapidly. Princeton College changed its designation at the same time as Columbia, but otherwise remained essentially unaltered. The expansion of Columbia under the administrations of Presidents Low and Butler has been in university rather than collegiate lines, in the growth of higher graduate and professional work, the incorporation or alliance of various institutions, and the extension of instruction to a wider constituency.*

It would be hopeless for an outsider to attempt to analyze and explain the structure and administrative system of Columbia University and its connection with other cultural agencies in New York. It is like the British constitution; it ought not to work, but it does. It is a complex congeries of provinces, allies, crown colonies, protectorates, residencies and native states. If a herald with tabard and trumpet were to call out at commencement all of the president's official positions—the growth of ritualism may bring us to that in time—the list would sound like the heralding of a Holy Roman Emperor. There are schools and faculties and divisions and departments and committees; all sorts of organizations and groupings, official and unofficial, which, contrary to what one might think, does not result in either endless wrangling or stagnation. There is a volume of Columbia Statutes and unwritten laws to the amount of several or more volumes, but these are not sufficient to check the development of the university. So far as I can find out the growth of Columbia is due to the spirit of initiative in the individuals and the spirit of liberality in the university as a whole. Each school or department just goes ahead and does whatever it thinks best. The president just goes ahead and does whatever he thinks best. In this way things get done and all live together very happily. The professors

*The best account of all this is to be found in the "History of Columbia University, 1754-1904," by Prof. Munroe Smith and others, published by the University Press on the hundred and fiftieth anniversary of the founding of King's College.

do not worry themselves or worry each other, as they are apt to do in smaller faculty communities. The university is so big and complex that nobody feels responsible for all that is done and undone in it, not even President Butler. He runs the university with the nonchalance and efficiency of the head of a railroad system or a department store, combined with the ideals of a philosopher.

Of course the danger, or rather the inevitable defect, of a university immersed in a great city is that its numbers have such scattered interests that they lose the sense of unity. There are 735 officers of instruction and administration, and Greater New York does not contain all their homes. In order to promote fellowship and mutual understanding various groupings and meetings, more or less spontaneous and informal, are arranged. There is, for example, the Faculty Club, housed in one of the old insane asylum buildings left on the campus and now fitted up for lunching and lounging. The Teachers College people have substituted dinners for faculty meetings, thus disembarrassing themselves of parliamentary law and securing a greater unanimity of opinion. I found in the University of Minnesota a similar custom and I suggest that it might be adopted to advantage of health and temper in many universities. The symposium, if that is not too academic or journalistic a word to use, seems to be especially adapted to the prevailing mode of thought of today, which gives greater recognition to personality and puts less confidence in logical exposition than formerly. Discussions of social, philosophical and religious questions in Europe and America are recently taking this form. I have in mind particularly the dialogs of Mallock, Dickinson, Frederic Manning, Schiller, Dewey, the plays of Shaw, and the numerous pseudo-novels devoted to serious themes. Conversation and letter writing are not lost arts and any one who says they are is to be pitied. One series of Columbia conversations has been published, "Talks on Religion," under the leadership and editorship of Prof. H. B. Mitchell, of the department of mathematics, interesting as a frank expression of the various ways that religious questions are regarded by educated men of today. A more formal exchange of views was the series of twenty-one addresses delivered in 1907-8 and afterward published by the university.* This unique experiment was a great success. The lectures were well attended, not only by the students and outside public, but by the officers of the university, and had such a good effect that other colleges, large or small, might well have a similar series. It does a man good to have to stand up before a roomful of his colleagues and fellow townsmen for an hour and tell in plain language what he is devoting his life to and why he thinks it worth while. It does the rest good to hear him, for ordinarily, even in small institutions, professors are grossly ignorant of the recent progress and the dominant tendencies of departments of research remote from their own. Ideas are generally carried from one class room to another, if at all, subterraneously, by the students, as the plague is carried between houses by rats. This series of Columbia lectures was started off by an unexpectedly eloquent and inspiring address on mathematics by Professor Keyser. It set such a high key-note that some of the later men strained their voices trying to reach the pitch. Some did not try. But they all were remarkably successful in putting into brief space and comprehensible form the principles and methods of their respective sciences.

Altho these were formal lectures and not a debate, it was easy to detect in them echoes of current controversies. President Butler found time not only for an admirable survey of the history of his subject from Thales to Kant, but also for an earnest plea for the thoro study of the philosophical classics and a witty warning against modern inventions such

*The contents of this volume of "Lectures on Science, Philosophy and Art" are worth noting as indicating the range of the discussion: Mathematics by Cassius Jackson Keyser; Physics by Ernest Fox Nichols; Astronomy by Harold Jacoby; Geology by James Furman Kemp; Biology by Edmund B. Wilson; Physiology by Frederic S. Lee; Botany by Herbert Maule Richards; Zoology by Henry E. Crampton; Anthropology by Franz Boas; Archeology by James Rignall Wheeler; History by James Harvel Robinson; Economics by Henry Rogers Seager; Politics by Charles A. Beard; Jurisprudence by Munroe Smith; Sociology by Franklin Henry Giddings; Philosophy by Nicholas Murray Butler; Psychology by Robert S. Woodworth; Metaphysics by Frederick J. E. Woodbridge; Ethics by John Dewey; Philology by A. V. W. Jackson; Literature by Harry Thurston Peck.

as pragmatism, "which, when unfolded to the man in the street, makes him howl with delight because he at last understands things." Then Professor Dewey, when his turn came, gave quite a different version of the history of philosophy and of the consequences of the adoption of pragmatism, or, as he prefers to call it, "the applied and experimental habit of mind." When Professor James in 1907 expounded his pragmatic philosophy at Columbia it gave rise to many social discussions, and as a token of appreciation of his stimulating visit nineteen members of the philosophical and psychological departments contributed to a volume of "Essays in Honor of William James," a notable evidence of the interest taken in fundamental problems in Columbia.

I have given prominence to this matter of a faculty exchange of views, because I believe it to be more important than another building or a new degree, and because all our universities, it seems to me, are deficient on this point. Even in small and isolated colleges each man works in his separate star and descends to meet his colleagues, talking trivialities with them instead of giving them the best of his thought. The confusion of Babel has lasted long enough. It is time for those who are working side by side in the erection of the Temple of Wisdom to learn each others' language.

There are few, if any, universities where an interchange of opinions is more useful than at Columbia, because there are few, if any, where more diverse opinions are held. There are institutions where to talk to a colleague on politics, religion or other topic of common interest is no more exciting a pastime than looking into a mirror. A city university is deficient in unity, but it has the advantage that its members do not have to see so much of each other that they get bored by it. They are packed like shot, not like dates. Each man has a tangential acquaintance with a dozen of his colleagues, but his self-sphered individuality is not destroyed by the presence of too great intimacy. In Columbia one sees all varieties of costume, from the most punctilious to the most unconventional, but not worn in superciliousness in the one case, or bravado in the other, but in unaffected freedom in both. So of opinion; conservative and radical, orthodox and heterodox, commingle without self-consciousness, and each man views the eccentricities of his colleagues with a tolerant or indifferent eye. If one feels it necessary to criticise the ideas or actions of another he does not resort to a whisper or a roar, but uses the same tone of voice as tho he were expressing an unfavorable opinion about the weather. There is a spirit of liberality about the university, as a whole, that protects even the narrow minded from condemnation and ostracism. The modern symposia have the advantage over the ancient that no one is obliged to drink hemlock afterward, no matter however unpopular may be the views he has expressed. Some of the Columbia men dream of reforming education, some finance, some society, some philosophy, some spelling. But, of course, there must be limits to freedom of speculation and deviation from accepted standards by men in official positions, so it is quite to be expected that the most daring of these innovators, those who attack the orthodoxy of orthography, should be looked upon with a certain amount of reprobation and distrust by their fellow academicians. One Columbia professor not long ago refused to accept the dissertation of a candidate because he had used the simplified spelling advocated by another professor.

Columbia is a big university and a small college. Its graduate school is by far the largest in the country. It has approximately twice as many graduate students and half as many undergraduates as Harvard. Johns Hopkins is the only university besides Columbia where the graduates outnumber the undergraduates, and Johns Hopkins has hardly more than a tenth as many students altogether as Columbia. Since Columbia lays most stress upon its graduate and professional schools, it was most concerned with the solution of the problem of the relation of these schools to the college or undergraduate department. On the one hand, those interested in professional education complained that four years spent in college delayed unduly the time when the student entered

upon his specific training and indeed unfitted him for undertaking it. On the other hand, those interested in cultural education complained that early and complete absorption in vocational work produced a narrow minded and indeed incompetent man. Both parties obviously had some grounds for their complaints, so Columbia settled the question by the simplest of compromises, splitting the difference. It proposed the "combined course" of six years, by which the student, after two or three years of college work, is allowed to take professional studies, receiving his bachelor's degree at the end of four years from the time of matriculation in the college. The Columbia plan swept like wildfire over the country, and has been adopted, more or less openly, by practically all universities except Harvard and Johns Hopkins. These insist upon a bachelor's degree for entrance to their medical and other professional schools, tho they permit capable young men to obtain this degree in three years. The combined course is not so revolutionary a movement as it appears to be. It is in large part merely a way of evading a legal fiction. Educators are apt to get tangled up in a web of their own spinning and then to make a big buzzing getting out. The distinction between cultural and professional studies as drawn was largely fictitious, for it was determined not by the nature of the subject or how it was taught, but by whether the student did or did not use his knowledge of it for pecuniary advantage in after life, a question which, from the nature of the case, could not be determined until he was dead. It was akin to that other question which has equally agitated academic circles, whether a student could play on the team if he had made money by his skill. It is not worth while discussing whether A. B. or B. S. can be given with propriety for a semi-professional course, because these degrees convey in general no information as to the kind of studies taken, sometimes not even when the college is known. Take, for example, the case of Columbia College. A boy entering with four years of Latin to his credit, but not wishing to take a fifth, is debarred from receiving the degree of A. B. He gets B. S., even tho he may spend his four years mostly in literary studies. But if he takes Freshman Latin he is sure of getting A. B., even tho he may take more scientific than classical studies in the first two years and go into Medicine or Mines for the next two years. That is to say, the faculty of Columbia University stands committed to the theory that the sole essential difference between a humanistic and a scientific education is the reading of Horace and Livy in the original and that this difference is so important that it must be marked by different degrees. This represents the unanimous opinion of the

College Faculty after devoting two years to the discussion of the question.*

The combined course naturally tends to promote migration at the end of two years or thereabouts from the small college to the professional school of some great university. But this leaves the college with few graduates and these not of the best quality. In order to appease the college and to prevent it from losing the allegiance (and benefactions) of the students who depart before the completion of their course, the *renvoi* system has been devised. For example, the student who leaves the college at the end of his Sophomore year to go to a university medical school may at the completion of two years of the medical course be sent back to his proper alma mater for his bachelor's degree, as tho he had remained in residence. A few colleges without professional schools have adopted this plan. Others doubtless will, for the university obviously has it in its power virtually to enforce it by reversing the proposition. If a college should refuse to accept the two years spent in the professional school as the equivalent of its own final years, the university may return good for evil, and, accepting the two years of college work as equivalent to its own earlier collegiate years, grant the bachelor's degree.† Since the bachelor's degree from the university would presumably carry greater prestige than that from the small college, migration would be more common than under the *renvoi* system. Apparently the small colleges are not yet ready to say "Let us have the first two years of a boy's life and we care not who has the rest." But if they do not adopt some sort of combination or affiliation they are likely to find themselves crowded out by a coming race of super high schools. It is an open secret that the high average age of students entering college is not because of severe entrance requirements, but because parents are, with reason, unwilling to subject their boys to the influences of college life at an earlier age. That is, the college itself acts as a deterrent instead of an accelerator. It may not be possible to educate the average boy so that he gives lectures on the fourth dimension at the age of thirteen, but it is quite practicable to give him a working comprehension of the three dimensions that are in common use.

Columbia College has hitherto stood with Yale, Harvard and Princeton in insisting that the examination is the only proper test of fitness for entrance, in opposition to the theory of the State universities that the candidate's school record as shown by his certificate gives better evidence of his ability to do college work, than the dreaded ordeal of the examination room. In practice, however, the rigidity of the examination requirement has been considerably modified, as the investigations of the Carnegie Foundation have shown* by the large proportion of admissions on condition. That this liberal policy was, on the whole, justified was shown in the case of Columbia by a study of the collegiate records of the conditioned men, from which it appeared that 80 per cent. of them proved wholly acceptable students. This year Columbia University took an important step toward making this necessary flexibility just and rational by appointing a professor whose chief duty is to familiarize himself with the effectiveness of the preparatory schools and to pass upon doubtful cases of candidates for admission by taking into consideration their school records and personal characteristics. This is something of a concession to the State university theory, but has the advantage of retaining the entrance examination, which undeniably has a great educational value, and of avoiding the dependence upon the bare certificate of graduation from the high school, which is the weakness of the State university system.

Undergraduate instruction for women is provided in Barnard College, which is a quasi-independent organization, ostensibly on an equality with Columbia College, the same standards of admission and graduation being required and many of the professors dividing their time between the two institutions. In this matter Columbia University stands intermediate between such institutions as

*Dean's Report, 1905, p. 69.
†See reports of the Dean of the College of Physicians and Surgeons, 1908 and 1909.

*See College Entrance Requirements in Theory and Practice, by J. G. Bowman, of the Carnegie Foundation, in THE INDEPENDENT, January 21, 1909.

Princeton and Yale, which make no provision for college women, and such institutions as Cornell, Chicago and the State universities which admit them to all classes. Barnard has a more honorable standing than Radcliffe, and is more frankly recognized as a legitimate member of the university community, altho it had a hard struggle to secure such recognition. Even the most ardent coeducationalist must acknowledge that the extent and manner in which young people of opposite sex are allowed to associate is not primarily an educational question, but is dependent upon the social conventions of the particular locality, and he cannot object to segregation on the ground of injustice if equal facilities are accorded to both. This is the case, with some exceptions, in Columbia University. The course of Barnard College does not offer so wide a range of electives as Columbia College, but it has a liberal curriculum. Women are admitted to the non-professional graduate schools and to the schools of pharmacy, architecture, music and design, but are debarred from the schools of law, medicine and applied science. This is an unwarranted exclusion, because there are exceptional women who have done good work in some of these professions. Women who come to Columbia after graduating from coeducational colleges find it exasperating to be shut out from some advanced courses that they need and are qualified to take, simply because these courses happen to be classified as undergraduate or professional. But thru the growth of the summer school, of Teachers College and of the extension courses these artificial barriers are being gradually and unobtrusively broken down.

The form of women's education most needed today is vocational training, sufficiently thoro and dignified to check their aimless craving for a vacuous culture. Two fields of employment are now customarily assigned to women, domestic arts by inheritance and teaching by recent conquest. In providing training for these professions Columbia University has done more than any of the State universities and more than all the women's colleges. The latest building erected on the Teachers College campus has a militant look. One would

Main Building. New Domestic Arts Building. Whittier Hall. (Women's dormitory.)

think that its battlemented tower was to be manned by Amazons or suffragets. But, on the contrary, it is the stronghold of what the most conservative regard as proper for women, the household arts. These have been woman's rights from the Stone Age to the present. Now, however, she is in danger of losing them. It is a question whether cooking, dressmaking, millinery, laundering and the like can maintain their amateur status in the face of professional competition. Whenever it appears that a household craft can be made profitable, interesting and honorable, the men take it away from the women. Elevating a trade generally means putting it above the reach of women. *Chef* is a masculine noun for which there is no corresponding feminine form. None has so far been needed.

But whether the domestic arts stay in the home or go to the factory and the hotel, the women have here the best of opportunities to learn how to hold them or follow them. The new building, costing over half a million dollars, is five stories high and occupies an acre of ground, a bewildering succession of studios, shops, kitchens, class rooms and laboratories. Training is provided to meet the needs of three different classes; those who aspire to the management of a single household, those who expect to teach domestic science and art in the numerous schools and colleges now demanding it, and those who will enter the professional branches. The most original and important of these lines of work is the third, the facilities afforded for carrying commercial operations on a large scale and according to modern methods. The cooking utensils range in size from a chafing dish to a soup kettle big enough to supply the wants of the hundreds of young women who live in Whittier Hall, the Teachers College dormitory. Menus are planned for two persons or for the charitable institutions of an entire city, always according to the double requirements of making both ends meet and keeping the proper ratio between proteins and carbohydrates. The looms, dyeing vats and laundry machinery are not playthings, but big enough to command respect. In fact, we have here the beginnings of new branches of engineering, and it is a mere Columbian idiosyncrasy that they should be developed entirely independent of the School of Applied Science, which includes the more conventional courses.

Side by side with the industries go science and art. For each shop room there is a laboratory for research and an atelier for design. Dean Russell sends his dressmakers to Europe to learn the secret of Parisian supremacy and puts

ARCHITECT'S MODEL OF THE COLUMBIA CAMPUS.

them into New York department stores to get American practice. Dean Russell seems to differ from other educators in having a shorter reaction time. He seizes an idea and puts it into effect at once, which is disconcerting to those who have been advocating that idea for a dozen years in vain and were willing to go on advocating it in vain for another dozen. He has been struck with the impracticality and futility of much of what is done under the name of "manual training," and he is now trying out in the Speyer School a new curriculum based upon a threefold division of studies, humanistic, scientific and industrial. By having the pupils in the elementary grade take up in successive years the industries concerned with foods, textiles, woods, metals and clays, he expects to keep their interest and provide them with practical information and training, while giving them an opportunity to apply their scientific knowledge and artistic skill to the work in hand.

Beside the Speyer School for practice and experimentation, Teachers' College has the Horace Mann School, containing kindergarten, elementary and high school, which is run in a more conservative way and utilized for observation.

Teachers College is the Cinderella of Columbia. Her elder sisters have been inclined to look down upon her in spite of her undeniable usefulness in a humble capacity. But now with an independent annual budget of $635,000, and with an attendance of 1,544 students, who have had on an average five years' experience in teaching, besides 1,796 extension students and 1,269 pupils in its schools, with seven large and well equipt buildings and with its graduates in strategic positions all over the country, Teachers College is in a position to command respect and confer favors. There are indications that universities are likely to prosper in the future in proportion as they take an interest in school teachers. Teachers College is a unique feature of Columbia University. Its only rival in this field is the School of Education of the University of Chicago and Teachers College has recently gone far ahead of the Chicago institution in numbers, plant and the extent and variety of its work.

The oldest and most renowned of the Schools of Applied Science is the School of Mines, established in 1863. To this have been added Schools of Chemistry, and of Civil, Mechanical, Electrical and Sanitary Engineering. The combined course plan has not yet been extended to these schools, which still admit directly from the high schools, but an increased number of students are voluntarily taking one or more years of collegiate course before devoting themselves to technical work. The engineering students nowadays associate more freely with the College students than formerly, and on terms of equality. In the past year the engineering schools of Columbia have gained 15 per cent. in numbers, which is nearly twice the gain made by any other engineering school, East or West. Dean Goetze is an expansionist and has his eye on two additional fields of applied science, agriculture and forestry. That a city university should enter upon such work is surprising in view of the fact that every State has an

agricultural college and experiment station receiving funds from the national treasury. Yet here this new profession of forestry, in which the agricultural colleges had the best chance, has been lost to them thru their lack of foresight and enterprise, and is now being taken up energetically by three endowed universities, Yale, Harvard and Columbia, which are likely to get so far ahead as to have no competitors, at least in the East. The opening for Columbia in agriculture is not so clear, at least to me. Cornell has dropped forestry, so Columbia has an opportunity to make itself useful in the State forest reserves, now being extended. But in agriculture Cornell will be hard to beat so long as it has at the head of the department a man of such initiative as Professor Bailey. Columbia plans, as I understand it, to attack a neglected problem, that of feeding a city from the waste land in its immediate vicinity. A thousand acre farm within easy reach is to be opened soon, half of it to be used for experimentation and half of it for demonstration of the practical results established.

The medical school of Columbia University, the College of Physicians and Surgeons, was established in 1807 and has been in the process of annexation ever since. Theoretically the process was completed under the administration of President Low in 1891. Practically it remained a separate institution, for it is located on Fifty-ninth street, nearly three miles away. Within a few weeks, however, a site has been purchased for it on Morningside Heights adjoining the other University buildings, so the students and officials may enjoy a common life. Three million dollars will be expended here in buildings and equipment. Its new resources and facilities will be devoted, it may be surmised, not so much to the making of more doctors but to the making of doctors more unnecessary.* Research into the causes of disease is now the thing most needful, then, on the basis of assured knowledge, will come the working out of plans for preserving the health of the community. The attack will first be made on the most mysterious and irresistible of mankind's enemies, cancer. The late George Crocker made a bequest of $1,500,000 to $2,000,000 to Columbia University to be devoted exclusively to the investigation of cancer until a cure for it is discovered. The University is especially fitted to undertake the task of popularizing and utilizing the knowledge of preventive medicine because many of its professors are actively engaged in philanthropic and charitable organizations and in various forms of public service and settlement work. Sociology is an applied science at Columbia, or, if it is not, it is not the fault of its professors. In this connection I should refer to the recent gift of $150,000 to Teachers College for the training of women for a new group of professions, school nurses, sanitary inspectors, teachers of hygiene and settlement workers. If, now, Columbia would follow the example of London University and establish a research laboratory of eugenics with the combined force of its biological, medical and sociological departments and its theological allies, it would be in a position of undeniable leadership. The motion would probably be seconded from the Pacific Coast by Stanford University, for President Jordan has long been preaching the importance of improving the quality of "the human harvest."

The first professorship of law in the United States was founded by Columbia in 1773, and this profession has always attracted a larger number of Columbia men than any other. A new building, Kent Hall, is now being completed on the corner of Amsterdam avenue near the library for the accommodation of the Law School and the graduate Faculties of Political Science and Philosophy.

The adjoining site has been assigned to the School of Journalism for which Mr. Pulitzer, of the *World*, gave a million dollars some years ago. The skepticism and ridicule which the attempts of some universities to enter this field have aroused seem to me to be based on an inadequate idea of its extent and importance. If a school of journalism is to teach merely how to buy white paper cheap and sell smudged paper dear or to give training in the arts of painless interviewing and of composing headlines of twenty-five letters always containing

*The supplement to the Columbia University Quarterly, June, 1908, contains an elaborate program for a school of sanitary science and public health.

a verb, it is indeed not worth while. But journalism properly covers the whole art of effective presentation in print, and as such it should have as prominent a place in the modern curriculum as oratory did in the ancient. The sophists and rhetoricians of today have audiences of millions thru newspapers and magazines, and the universities are largely to blame that they lack the training and responsibility of the established professions. The preparation of a series of "feature-stories" for a magazine on a financial, political, sociological or industrial subject often involves as long and arduous research as a doctor's dissertation and it requires in addition something the doctor is apt to be painfully deficient in, the ability to make his points clear and his argumentation readable.

More than most universities Columbia is already engaged in journalism, as the sample copies at the head of this article show. I have in hand a list of the publications of the Columbia University Press occupying twenty pages, volumes on protozoa, Chinese, roguery, taxation, Weltschmerz, Zoroaster, Sumerians, ants and other things of the same kind. The latest president's report names forty-five periodicals with which officers of the University are editorially concerned. The students who have charge of the *Spectator* have their own linotype and press in one of the University buildings, and some of them sit up every night until the paper is "put to bed," be it late or early. I mention this for the benefit of the student editors in some of the other universities who shove off on the foreman this inconvenient responsibility. Two literary periodicals are published by the undergraduates, the *Columbia Monthly* by the men, and the *Barnard Bear*, by the women. The latter is larger but I would not venture to say. from the few copies I have compared. which has the greater literary merit.

Like all the universities Columbia is deficient on the esthetic side. But unlike others the University is aware of the deficiency and is taken energetic steps to remove it. There is a four-year-old Faculty of Fine Arts, embracing architecture, music and design, but of these architecture is the only one effectively organized. This has the advantage of the largest architectural library in the country, the Avery collection, and of three ateliers, one at Columbia and two down town under the direction of prominent architects. The School of Music has only six matriculated students, and the School of Design none. But the National Academy of Design has become associated with the University and it is expected will eventually have a new building on the Heights. A similar relationship may be established with the Institute of Musical Arts, which is building on an adjoining block.

A striking instance of the drawing power of a great university is the removal of the Union Theological Seminary from its down town home to a site just across Broadway from the Columbia campus, where it is erecting a magnificent block of buildings, chapel, library, classrooms and residences for faculty and students all combined. The University and the Seminary exchange students freely. There are now sixty-five Union students taking part of their work in Columbia, mostly in some branch of sociology. It is curious to observe that altho Columbia is by tradition an Episcopalian institution, the General Theological Seminary, which belongs to that denomination, sends only thirteen students to the University. The Roman Catholic archbishop of New York has recently forbidden the seminarians of Dunwoodie to attend lectures at Columbia. Both the Union and the General have representatives on the University Council.

If the visitor to Columbia wishes to make a favorable impression he will take occasion to allude to Morningside Heights as "the Acropolis of America." This ridge between the Hudson River and the Harlem Valley, the scene of Washington's victory, will contain many imposing buildings and educational institutions. Besides those belonging to Columbia there are the Cathedral of St. John the Divine, to be one of the largest churches in the world; St. Luke's Hospital, the Academy of Design, the Institute of Musical Art, Union Theological Seminary, Jewish Theological Seminary, and Grant's Tomb, while on the next hill to the north are the new buildings belonging to the College of the City of

New York, and beyond is a group composed of the Hispanic Museum, the Geographical Society, the Spanish Church and other monumental structures.

To give a list of all of the cultural institutions with which Columbia is associated would be to name almost all there are in New York, and these are more than is generally supposed. But mention must be made of the Metropolitan Museum of Art and the American Museum of Natural History in Central Park, and of the Botanical and Zoölogical Gardens in Bronx Park, because these are so closely connected with Columbia by interchange of officers as to be for all practical purposes research departments of the University. Columbia students also have access to valuable private libraries and museums such as the Morgan collection of manuscripts and archeological specimens and the Plimpton collection of school books.

Besides affording facilities for the prosecution of research Columbia University makes itself useful to the city in thousands of unostentatious ways. Last year there were given over three hundred lectures and recitals opened freely to the public. The extension work is developing rapidly in directions most needed or most desired by the people of the community; languages, nursing, photography, stenography, farming, Bible, drama, kindergarten, politics, Persian poetry and bookbinding; two hundred and fifty such courses, including many things that lesser institutions would find it beneath their dignity and out of their power to give. The lecture rooms, laboratories, ateliers and shops seem to be busy every day and much of the night. The great library is open nearly as many hours in a day and days in a year as a New York saloon. If kilowatt-hours is any measure of intellectual activity Columbia must stand at the head.

Copyright, 1907, by A. Fowler, New York.

NEW COLUMBIA COLLEGE BUILDINGS.

Hamilton Hall (recitations). Hartley Hall (dormitories).

There is no closed season in Columbia University, scarcely a dull season. The summer session, tho short—only six weeks—is exceedingly busy and is now drawing students from a wider range every year, very largely of late from the South as does the University of Chicago. About a third of the summer students

have college degrees. It is becoming more customary also for the undergraduate students to take advantage of the summer school to shorten their course. Last summer at Columbia a fifth of the students of the College and a fourth of those in the Schools of Mines, Engineering and Chemistry registered for summer work. In my last article I discussed at some length the advantages an institution derives from a summer session and what was said there applies almost equally to Columbia which, tho starting later in summer work and not yet providing for it so satisfactorily as the University of Chicago, has come to recognize its real value. A summer session has somewhat the same good effect on a university as a camping trip on a city man; it shows how many of the necessities of life one can get along without. Entrance examinations, restrictions, classifications, regulations, segregation, conformity, traditions, customs and the like tend to lose their importance to one who has served thru a summer session or two.

But while reaching out in new directions Columbia University is not neglecting its nucleus, the College. Especial attention has been given to undergraduate problems in recent years, and efforts have been particularly directed toward bringing the students together and bringing them more under the personal influence of the instructors. The two new residence halls on South Field have developed a social life of their own. They publish an illustrated paper, *The Dorms,* to chronicle its doings and gossip, the only periodical of its kind in existence. Barnard also has a new residence hall. The undergraduates of Columbia do not own the University as they do in some places, but they seem to have as many irons in the fire in the way of athletic, dramatic, debating and fraternal organizations as students have elsewhere, judging by the lists in the annual *Columbian.* The block opposite the library will be devoted to Columbia College, a chain of residence and recitation halls surrounding it and commons and club rooms in the center.

Columbia University has the essential qualities for success, initiative, adaptability and opportunity. It seems to have no difficulty in getting the men and the money it needs. During the last eight years it has received over $11,000,000 in gifts and this next year will be above the average. The late J. S. Kennedy, who gave $500,000 anonymously for the construction of Hamilton Hall, the collegiate recitation building, left to Columbia in his will a bequest which will amount to two and a half or three millions, to be freely used. Columbia University, as I have shown, is mindful of needs of the surrounding population, and is at the same time becoming more attractive to ambitious young people from a distance and foreign countries. It is promoting migration both of students and professors. It supports a chair in Berlin University, the Kaiser Wilhelm professorship, and in return Berlin sends every year to Columbia the Theodore Roosevelt professor. Two decades ago Columbia was a small college with three loosely attached professional schools, crowded in old buildings down town, and regarded by the outside world as local, sectarian and unpromising. Now it is metropolitan and cosmopolitan, and if it continues to progress as it has in recent years it is likely to take a position among the universities of the country similar to that of New York among the cities.

NEW YORK CITY.

GREAT AMERICAN UNIVERSITIES.—The articles of this series have appeared on the following dates:

1	Harvard University	Jan. 7th, 1909	8	University of Minnesota	Aug. 5th, 1909
2	Yale University	Feb. 4th, 1909	9	University of Illinois	Sept. 2d, 1909
3	Princeton University	March 4th, 1909	10	Cornell University	Oct. 7th, 1909
4	Stanford University	April 1st, 1909	11	University of Pennsylvania	Nov. 4th, 1909
5	University of California	May 6th, 1909	12	Johns Hopkins University	Dec. 2d, 1909
6	University of Michigan	May 27th, 1909	13	University of Chicago	Jan. 6th, 1910
7	University of Wisconsin	July 1st, 1909	14	Columbia University	Feb. 3d, 1910

The first four issues are entirely out of print, but any of the remaining numbers will be mailed for ten cents a copy.

THE INDEPENDENT of March 3, 1910, will contain a final article comparing these fourteen institutions and giving the general results of this investigation of university conditions and problems.

Symptomatic Germany

BY POULTNEY BIGELOW

[Mr. Bigelow is now engaged in a trip around the world to observe conditions and men. He is to write occasional letters to THE INDEPENDENT, of which this is the first.—EDITOR.]

WHEN the wise man notes an eruption on your skin he suspects impurity of blood, and looks to the stomach as its source; when you travel to the Far East with a full complement of English-speaking passengers and note that the signs and warnings are in German—then are we disposed to look deeper than the surface for so strange a symptom.

A lady rushes wildly to find somewhere to write a letter, and is sent to a room over the door of which is the word *Gesellschaftssalon*. There are thirteen consonants in that horribly hissing and sputtering word and only four deprecating vowels, acting as tho ashamed of their company. A newly arrived family hurries to find their cabin entrance, but they read the signs in vain; finally one of the initiated conducts them to the companionway over which is inscribed, "*Zu den Kammern.*" And so on thru other confusing notices, *e. g.*, "*Zutritt verboten,*" etc., etc. All this is idle comment so far as it is an isolated instance—but it is, on the contrary, symptomatic of a disease, like the pimple, whose source is not on the surface—it is far back in the bureaus of the Berlin Government. This disease is politico-pathologically known as *Teutonitis,* and is one which commercial Germany fights in vain, for the disease is propagated in the home nursery, where the whole army and navy and civil administration labors in its cause.

It is now more than a quarter of a century since Germany assumed the rôle of colonial expander in its least lovely form, and the manifestation of this spirit is writ large in hideous jargon over the doors of her subsidized steamships, as it is also thruout her colonial stations, whether in China, in Africa or on the borders of Australia. Let me hasten to say that I know of no steamship lines in the Far East superior to those of the North German Lloyd. These lines are written on board the "Prinz Eitel Friedrich," which needs no compliment from me after my statement that she is filled with people of English speech, who would gladly patronize ships with an English flag, were there any of equal merit.

The Berlin Government, from the outset of its colonial manifestations, based its claim for popular support upon the false premises that German colonies would attract Germans; and that in this way the German tongue would be spread abroad and ultimately supplant that of Shakespeare.

The German, however, persistently refuses to go to his own colonies; he prefers those where English is the speech and where law is colored by more of personal liberty.

The German tongue fails to spread for a variety of reasons, the discussion of which might weary you at present.

These two statements of mine, which I venture to make as the result of personal observation in several German colonies, would be stigmatized by official Germany not only as false, but as indicating a bias of mind caused by British gold. Official Germany persists in telling the people at home that the vast financial losses entailed by her *Furor Teutonicus* are balanced by a splendid spread of German ideas and German goods and German speech, and a corresponding discouragement of English-speaking expansion.

To this end German subsidized steamship lines are compelled to irritate their passengers by signs and notices that might as well be in Arabic, so far as practical service goes.

On my last visit to Kiao-Chau the Governor boasted to me that the Chinese population was compelled to learn German; and there, too, German signs were painfully abundant. Yet even at the officers' mess I noticed that the Chinese waiters spoke only English, and that no German officer could relieve his feelings or his thirst without recourse to the tongue of the enemy.

And thruout German New Guinea I found that official Germany was fathering a monstrous lie by pretending that

German missionaries and German officials were Germanizing the natives. On the contrary, I found that the natives were teaching English to Germans, with results that must impress Berlin autocrats more painfully even than the fact that all efforts to spread German speech in Poland have so far failed.

This little sermon may be read by some of my German and British friends. and to them let me draw the moral: In your colonies build good roads, drain your swamps, dredge your harbors and canals, but, as you value the future, do not meddle with the mother tongue.

PORT SAID, EGYPT.

Buddhism on the Warpath

BY REV. FRANCIS E. CLARK, LL.D.

PRESIDENT OF THE UNITED SOCIETY OF CHRISTIAN ENDEAVOR.

BUDDHISM is no longer taking a a complacent view of Christianity. It is showing its teeth and claws.

Heretofore, in many parts of the world, it has been content to act as its countless images of Gautama Buddha look. Placidly and calmly, with dreamy indifference, Buddhism has looked on while Christian churches have been erected in its domain and Christian schools have been opened, and while Young Men's Christian Associations have been established right at the doors of its temples. Still Buddha has smiled benignly, and gazed out thru his unwinking, almond eyes upon these innovations of the West, as tho his repose in Nirvana could never be disturbed by any such transient ephemera.

But today his spirit is stirred, or, at least, the spirit of his priests and disciples, and they are carrying the war into the enemy's country with a vengeance. They have established "Young Men's Buddhist Associations" and

A BATHING GHAT AT BENARES.
It was here that Buddha first preached his doctrines.

"Buddhist Endeavor Societies," and a "Buddist Tract Society" is sending out its books and leaflets by the million.

The Shwe Dagon Pagoda of Rangoon is the greatest show place in all Burma, and the most celebrated shrine in the Buddhist world. Three hundred and seventeen feet above the ground towers this magnificent golden pagoda, the like of which is not found in the heavens above or the earth beneath.

Burma, for centuries, has been lavishing her wealth on this greatest of all pagodas. Much of the pagoda is covered with plates of gold, and the crown of gems on the topmost spire is alone worth half a million dollars. About the great central pagoda are scores of shrines covered with gold and encrusted with jewels, each one worth a king's ransom, and each with a sitting or recumbent figure of the placid Gautama Buddha, looking out, sometimes, it must be confest, with a self-satisfied smirk upon the prostrate worshipers mumbling their monotonous prayers.

Here, too, on the great platform from which the golden pagoda rises, are vendors of sweetmeats and toys and gongs and huge cigarets or cheroots nearly a foot long and an inch in diameter. This busy combination of mart and temple the Buddhist Tract Society has chosen as a rare strategic spot from which to disseminate its doctrines, and here is a stall filled with its literature.

THE PAGODAS OF RANGOON.
The headquarters of the Buddha Tract Society are located here.

"The Bible God Disproved by Nature" is the title of one of its tracts, which may serve as a sample of all its literature. It is a booklet of forty-eight pages bound in pink paper and sold for only one anna, or 3 cents, and is printed in English, evidently to counteract the baleful teachings of the missionaries from America and Great Britain.

It starts out with the modest statement:

"No person of any philosophical acumen or clear perception of the nature of things can ever subscribe to such a palpable absurdity as the anthropomorphic monstrosity ycleped the Christian God of the Bible. Hence the Rational, Philosophical Freethinkers and Buddhists entirely ignore his existence, relying solely upon the eternal principles of mind and matter inherent in the universe." (The capitals are his.)

Our author thus having disposed of all the Christian philosophers and thinkers of the ages, proceeds to demolish the Bible "from the standpoints of Cosmogony, Astronomy, Geology, Paleontology, Anthropology, Ethnology, Archælogy, Chronology, Ornithology, **Biology**, Physiology, Botany, Zoölogy, Philology, Geography, Mathematics, Meteorology,

Optics, Acoustics, Pneumatics, Hydrostatics, Mechanics, Chemistry, Mineralogy, Psychology and Military Science." Was the Bible ever so pulverized before?

Our Admirable Crichton, who is acquainted with all sciences, and to whom not only "all print" but all knowledge is equally "open," is like Silas Wegg in another respect, for he "drops into poetry" at times, and turns his rhythmical guns against the "sky pilots," as he facetiously calls the missionaries.

The author, who appears to be "Rev. (?) U. Dhammaloka, president of the Buddhist Tract Society," shows considerable superficial knowledge of the Christian Scriptures, and in his slang-whanging, "Smart Aleck" style, will doubtless be considered very convincing by his fellow Buddhists in America and Burma who are equally enraged against Christianity.

No ancient divine ever took the Scriptures more literally than does Mr. U. Dhammaloka. The six days of Genesis are six days to him and nothing more, and he waxes merry over the alleged Bible statement:

"The earth was created in six days, while all other worlds, suns and moons were created in one day. Thus our earth, altho in comparison with the rest of the universe less than the millionth part of a grain of sand, required six times as long for its creation as the whole universe besides."

He grows sarcastic as he thinks of the absurdities of our Western faith, and declares:

"The Christian Bible God reports the creation of the sun four days after the earth was created, an absolute impossibility and self-evident absurdity, equivalent to saying that a man's father was born four years after his son. Just as sensible; just as true. O wise Christian God! O intelligent Christian God! O truthful Christian God! O, the hight and depth and length and breadth of the unsearchable wisdom (?) of God!—the Christian Bible God! Verily, a ten-year old schoolboy knows more in a minute than Jehovah knew from the time of Adam to that of John."

The vision in the Apocalypse of the stars falling from heaven to earth raises the gorge of this disciple of Buddha, and after demolishing John's vision at considerable length and to his own evident satisfaction, he concludes:

"There would not be room for more than one star on the earth, and not too much for that one, owing to the preponderance in size of the falling body. So you see this Baron Munchausen story about stars falling to the earth is all bosh, the worst kind of bosh, as are all the other astronomical statements to which I have alluded."

Thus he goes thru the Bible. He calls poor Samson a liar, and takes Jonah severely to task, and hauls Joshua over the coals for claiming that the walls of Jericho fell down thru the blowing of rams' horns, assuring us that

"Military science declares the story utterly baseless, since the walls of any city can only be made to fall by being battered down with the requisite projectiles, by being undermined, or by the shock of an earthquake. Hence once more and for the last time have I demonstrated, thru nature, the non-existence of the God under consideration."

Once more, goading his reeking literary steed to its utmost exertions, he declares:

"Of all the cruel, bloodthirsty, sanguinary, malignant, ferocious, diabolical, and infernal fiends and monsters of which the human mind ever conceived, the Bible God is the most devilish and diabolical. . . . Were it possible for such a despicable fiend to exist, no language would be capable of depicting the utter loathing and contempt such a wretch would necessarily inspire in all men and women of kindly sympathies and generous impulses."

Such Buddhistic billingsgate would not be worthy of attention, with its crudities and its falsehoods, were it not that it is significant of an aroused Buddhism. This ancient religion is mending its fences. It is bestirring itself to maintain its hold on its own people. It is building new temples, carving new Buddhas, making new converts.

In one sense this outbreak is distinctly encouraging to Christian workers, for it shows that the followers of Buddha are no longer so complacent as the images of their great patron saint appear. Buddhism is ruffled, ill at ease, uncertain of its own future, in view of the advance of Christianity.

In the second place, it shows that education is not always an ally of Christianity in missionary lands. Mr. Dhammaloka's excellent English education has only made it possible for him to be more vituperative in his abuse of Christ and Christianity, for I have not quoted his most blasphemous words about Christ Himself.

At the recent great World's Convention of Christian Endeavor at Agra, the greatest representative Christian gathering ever held in India, the only pessimis-

tic address was by an eminent missionary of the Church of England, who declared unequivocally that educated India was further away from Christianity than it was a generation ago, and that, as a rule, the more education a native had, the more averse he was to the religion of the West. While it is hoped that this is only a passing phase in the education of India, it is sufficiently pronounced to be thoroly disquieting.

Another evident inference is the utter irreconcilability of Buddhism and Christianity. They cannot mingle. One or the other must conquer the East. A personal God is an abhorrence to a strict Buddhist. The Bible is a tissue of absurdities. Christ is worthy only of blasphemous ridicule.

Let those who say, and they are not a few, that Buddhism is quite good enough for the East, and not a bad thing for the West, consider the opinions of Rev. U. Dhammaloka, the president of the Buddhist Tract Society.

RANGOON, BURMA.

Ode to a Fossil Bird

(Archeopteryx Macrura)

BY HARRY H. KEMP

WHENE'ER I hear a leaf-hid oriole sing,
Or dream of moonlight and the nightingale,
I think of your toothed bill, and batlike wing,
And vertebrated tail,

Fragile reptilian bird, which, long ago,
Haunted Cretaceous forests strange and dim,
Where, ere the glaciers came with clouds of snow,
You clutched the Cycad limb!

Crushed in relentless rock they found your form,
For there the delicate bones had left their shape—
Beaten to death by some mad, bitter storm
From which was no escape.

Perhaps, with draggled gray torn plumage, lay
Your body, as a living sacrifice
To save your young; and then the settled clay
Hid you from sullen skies.

Who would have guessed that after your wild shriek
Would come the thrush's note, the blackbird's song,
The mocking bird with his mimetic beak
Japing the feathered throng!

Who would have guessed that after your dull plume
The Heavenly Weaver dwelling in the sky
Would shoot such web from his world-shuttling loom
Steeped in such gorgeous dye!

It seems God, like an artist, doth create
And clothe in gradual beauty what was bare
Of grace at first; He loves the Purple State,
He glories in the Fair!

Thru all eternity, for beauty's sake,
Toward some high model doth His hand aspire;
Each age sees less-of-imperfection take
More of perfection's fire.

A passion for perfection haunts the Whole,
And, tho the final touch be lost afar,
God upward leads the universal soul
From star to dizzy star.

LAWRENCE, KAN.

Building Your Own Concrete House

BY GEORGE ETHELBERT WALSH

HOME building is something more than the creation of a shelter for ourselves and our household gods, and the personality of our natures which we express in it is a visible embodiment of our ideas and mental aspirations. Most of us build but once in a lifetime, and in it we put the accumulated knowledge of our own experience and that of many advisers and well wishers. Not always do we achieve the highest results of our planning, but if we approximately reach them we have left something of value for those coming after us to judge our tastes and aspirations.

A SMALL CONCRETE HOUSE COSTING ABOUT $5,000.

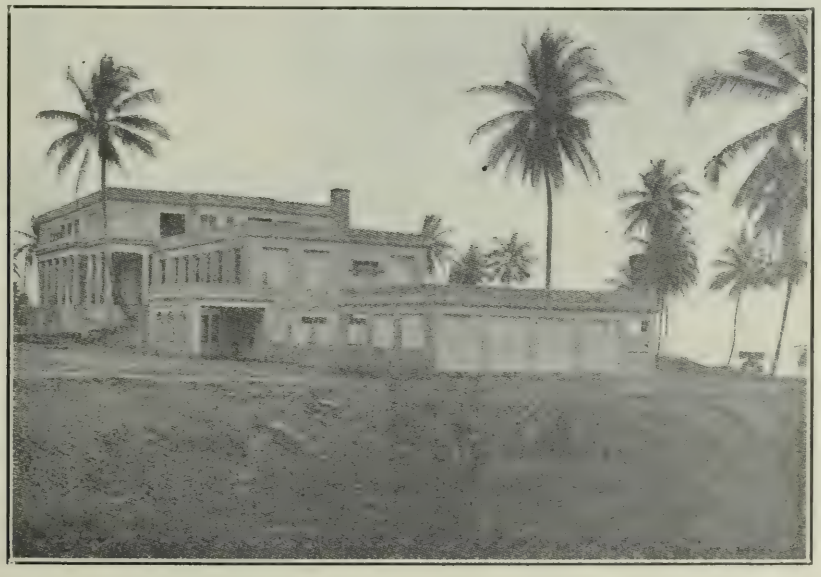
Building by proxy is not nearly so fascinating as building with your own hands and by the sweat of your brow. Architects are willing to plan and design for you and contractors to carry out these ideas; but if you want a real experience in house building take the time and opportunity to plan, design and construct your own edifice. Not possible or practical? It was not for the average person a few years ago, and may not be so today for the great majority. But if you have a little initiative, a little energy, and a firm trust in your capabilities, you can build a home of concrete and enjoy the fruits of your own effort for the rest of your days. The how and where are matters of detail which can be worked out at your leisure.

There are two methods that builders and contractors employ in making the first rough estimate of the cost of erecting a house. They figure on a certain rate per square foot or on the rate per cubic foot. By computing the number of square feet on the ground the house will occupy, and multiplying this by the rate in any given locality, they reach a snap estimate. This rate per square foot ranges from $2 to $5 for wooden or frame houses; from $4 to $8 for brick or brick veneer, and from $3 to $6 for concrete block houses.

The other method is to compute the cubic foot contents of the house by multiplying the number of square feet by the height from the bottom of the cellar to a little more than the top of the roof so as to include any overhang and porches. The usual rate per cubic foot ranges from 10 to 18 cents for frame houses; from 15 to 25 cents for brick and brick veneer, and from 12 to 20 cents for concrete. Any one can on this basis make a fairly accurate snap estimate of a proposed new house of any size and of any material.

The invention of the concrete block-making machines have greatly simplified building operations, and one can make his own plans and proceed to build with fair promise of success. If one has the time and inclination he can do much of the work without calling upon the experts for aid. Concrete blocks are comparatively light and easily laid in the walls by one man. The blocks may be purchased from stock or they can be made on the site of the new home by the owner and builder.

Concrete block-making machines cost all the way from $25 up to almost any figure one wishes to pay; but the larger and more intricate machines are for contractors and builders who make blocks to sell. A great many amateurs work with concrete today, and show very acceptable and durable work. Scores of houses have been erected by them, and many others are in the course of construction.



But there are some very important points to remember before attempting to build your own house. Do not be in too much of a hurry, and do not put the cart before the horse. Concrete is a chemical combination of sand, water and cement, and it requires time for the mixture to set and harden. It is a great mistake to imagine that blocks can be turned out of the machines daily and put in the walls nearly as fast as they are made. The result of this are cracked walls, sagging edges, and in some cases collapses. Concrete blocks should stand at least thirty days before going into the wall, and sixty days are better. Up to a period of six months concrete continues to harden, and when used in great masses it requires even a year to dry thoroly.

The proper method is to get your concrete, your sand, and your machine first, and begin making the blocks before any attempt at building is made. The cellar may be excavated, and if the sand is suitable for mixing with the cement this can be piled up and screened. Clean, sharp, well screened sand alone must be used, and the best grades of cement mixt with it. You cannot be too particular about getting the best of both.

A good proportion for blocks is one part of cement to three or four of sand, mixed thoroly with water until the whole mass is soft, homogeneous and easily poured into the molds. When the mixture is perfect it is poured into the block machines, tamped down, and compressed into shape by closing and locking the machine. There it must stand until the blocks are hard enough to be removed without fracturing them, which may be several days to a week.

Each day a few blocks can be made and placed on boards to dry and harden further. They should be protected from rain by a canvas covering or boards for the first two weeks. Meanwhile the foundations of the house can be built. These are made of broken stone laid up in cement by a laborer or mason or by the owner. It is not difficult to build foundations, if one stretches straight lines from corner to corner and keeps well within them. When the foundation is two feet above the soil line, a perfectly level bed of cement is spread out on the top to receive the first layer of blocks. Openings for the cellar windows are left by inserting stock window frames and running the foundation walls around and over them.

Before the blocks are put into the walls the plumbers should run their soil and closet pipes in the cellar, and also gas and water pipes. This work is best done by experts, altho not a few men have built their houses complete, only employing day laborers to help with the hard work.

A TYPE OF CONCRETE HOUSE SUITABLE FOR WARM CLIMATES.

Meanwhile, orders for lumber should be given, and the floor beams should be delivered and laid across the foundation walls before the blocks are laid up. The floor beams are set up on end and

A CONCRETE ITALIAN VILLA, WITH TERRA COTTA TILE ROOFS.

spaced about 8 or 10 inches apart, or even 12 inches, deepnding upon how strong a floor is desired. The beams are nailed together with small pieces of studding.

All this preliminary work can be going on while concrete blocks are being made, and by the time the preliminaries are finished there will be enough hollow blocks to begin operations on the wall. The blocks first made are laid on the bed of cement topping off the foundation walls and cemented there carefully. All surplus cement is cut away with the trowel. The layers of blocks are laid with broken joints, and with air spaces running from top to bottom between them.

The cost of concrete blocks may be figured as follows: With a one to four mixture you can get about 15 cubic feet of concrete from a barrel of cement. This material, at a cost of $2.25, will make 15 cents per cubic foot for the concrete. This is for solid concrete in the wall, but nearly all the modern houses not built of re-enforced concrete have hollow blocks in the wall. Blocks having an air space of one-third of their volume will, therefore, cost about 10 cents per cubic foot, or those having an air space of one-half their volume will cost 7½ cents per cubic foot.

Variety is essential to house building, and one of the charges brought against concrete block houses is the uniformity and monotony of outside walls. This is remedied today in two ways. Machines are made which give rock faced and rough surfaces to the walls, and the sizes of the blocks are changed to prevent monotony. Another method is to tool the face of the blocks before they have thoroly hardened. This is done by hand with a piece of wood or metal, and irregular surfaces thus obtained. One with an artistic touch can impress upon his building effects which will enhance the value and beauty of the house.

Variation in the coloring of the concrete is obtained by changing the sand. Thus white sand will give almost a perfect imitation of white stone when mixt with cement, and red sand will deepen the color to a semblance of red sandstone. There are many coloring matters of a chemical nature which can be mixt with the concrete to produce variety of effects, but for ordinary purposes those colors obtained from different sands should suffice.

Concrete laid solid in the wall makes a firm monolithic structure, and it is as simple to make such walls as with the blocks. Molds of the right size are made of wood like oblong boxes with no bottom or head, and into these molds the concrete is poured and allowed to harden. Then the molds are removed and used over again. The cost of making the molds is slight, for second-hand

A MODERN PRETENTIOUS TYPE OF CONCRETE HOUSE.

boards can be used for the purpose. A more satisfactory way than this is to build a stone or frame stucco house. In the former case rough field stones broken into appropriate sizes are mixt with cement and put into the wooden molds for the wall. The whole mass is pressed down solid and allowed to harden. When the molds are removed the walls will have a very rough, unpleasant appearance, with the ends and edges of the stones sticking out thru the cement. But this rough wall is for the purpose of receiving the stucco exterior. The cement stucco is applied to this surface in one, two or three coats, smoothed off even, and then stippled or grained as needed. Stucco houses are very popular and attractive, and when the walls of one are built with stone and cement a very durable affair is obtained.

The ordinary frame stucco house is also easy of construction. The framework is covered on the outside either by rough, unmatched boards or by heavy mesh wire, to hold the cement. The stucco is applied direct to this and allowed to dry. The interior can be plastered in the ordinary way. Thus cement in its various forms can be easily applied by one who will make a little study of its chemical properties and methods of application. In estimating the cost of a concrete house by the cubic contents or by the square area, the cost includes labor, and consequently if one builds his own structure this important item can be reduced. A house that would ordinarily cost 15 cents per cubic foot could in this way be reduced to 10 cents. Expert labor is high—carpenters, $3 to $5 a day; masons, $4 to $6, and plumbers at similar rates. Much of the work these experts do can be performed by an ordinary laborer, but there will be technical work that needs the expert's knowledge. Consequently, in building your own house, it is wise to call in the expert for advice and cooperation when in a tight place.

Before building plan for everything and have everything down in black and white. Draw plans and measurements for everything, and then build according to scale. This will save many mistakes and heartburnings. The architect and builder never overlook any detail, and each small item is carefully measured and fitted in before work begins. The finishing of the interior may be left to the last and changed somewhat when the house is inclosed and almost ready for occupancy. Mills supply nearly everything in stock for the builder to order as needed. These include window frames, sash, door frames, doors, mantelpieces, stairs, newel posts, cornice pieces and dados, ceiling beams for dining-rooms, grill work and similar articles. Indeed, the man who builds his house can make measurements of all the different parts of the wood interior and send his order to the mills for the whole lot. These will be delivered sawed and cut to fit.

A CALIFORNIA TYPE OF CONCRETE HOUSE, COSTING ABOUT $15,000.

Housebuilding was never so easy as today, and now that concrete walls can be built on the site of the home by any one with a little skill, the whole job is rendered simple. The saving effected in this way varies from 10 to 40 per cent. From $500 to a thousand or two may thus be saved by building your own home. The work may be done at intervals and on off days, if there is no great hurry, and the house that thus goes up slowly under one's efforts has more sentiment and loveliness in the eyes of the builder than one made by contract.

New York City.

The Flight of Birds

BY B. S. BOWDISH

[Mr. Bowdish is chief clerk of the National Association of Audubon Societies and is a special inspector of wild birds and animals in the United States Department of Agriculture. He has made bird-study a life work.—EDITOR.]

FOR almost as long as intelligible history records the ambitions, aspirations and achievements of man, the baffling desire to conquer the air and emulate the flight of the noble eagle has, like a wicked will-o'-the-wisp, led him thru the sunlit glades of hope and the clouded depths of despair.

It was natural that from the flying and soaring creatures — pre-eminently birds—whose powerful and graceful dominance of the ethereal domain originally inspired his desires man should draw his first crude ideas respecting the methods for its fulfillment. We find the development of these ideas in rude, windmill-like wings and mechanism, with which these early experimenters equipped themselves. They failed to consider a most important fundamental fact, namely, that nature had provided the creatures whose domain they sought to enter with a structure whose every detail was primarily subservient to a conquest of the air. As an inevitable consequence, bitter disappointment was the invariable result. It is interesting to note, however, that now, after all

ROYAL TERNS ABOUT TO TAKE FLIGHT.

This gives an idea of the enormous wing surface that sustains these birds when performing their beautiful and powerful aerial evolutions.

these generations of effort, the attempt that seems about to be crowned with a generous measure of success, has been made more closely in conformity to the soaring flight of birds than preceding attempts.

The main principles involved in the power of birds to fly are and have been for many years fairly well understood. In the first place it is necessary to bear well in mind the fundamental point before alluded to; the manner in which bird structure is especially adapted to flight. The skeleton of a bird is particularly light, the larger bones hollow and correspondingly more thinly walled than those of mammals, and the parts of the skeleton are particularly adapted to the requirements of flight, notably the deep keel of the sternum or breastbone in birds of especially strong flight, affording the necessary fulcrum for the attachment of the powerful muscles operating the wings; the flesh, so disposed as to give greatest effectiveness with least weight; the skin, the under surface of which is well provided with air sacks, adding greatly to the bird's buoyancy; the feather covering, extremely light and nearly waterproof, as well as a poor conductor of heat and cold, protecting the wearer from sudden extreme changes in temperature to which its aerial life subjects it.

An understanding of this structural adaptability to flight explains the greatest handicap with which the human would-be imitators of birds have had to contend. The bird in its make-up is supplied with the substance least heavier than air which will serve its purpose; it supplies its own motor power, as much superior, both as to weight and serviceability, to man's motors as all of nature's works are superior to those of man; it carries its own provision and fuel supply, in that form best adapted to its habits of life and principal method of locomotion; its permanent raiment is that which most nearly perfectly meets

ROYAL TERNS AT THEIR NESTING GROUND

Tho thickly clustered, they alight and find their individual eggs with very little disturbance. The wings and tail act both as a brake and a parachute.

the demands imposed by extreme heat and cold and abrupt changes of temperature; finally, the mental control which guides and directs this whole wonderful mechanism is primarily instinctive and voluntary, and developed thru generations for this special purpose. Here, then, is no lack of materials best suited to requirements, nor danger of error on the part of pilot or engineer.

ROYAL TERNS IN FLIGHT.
A fleet of avian airships, illustrating the various positions of wings in flight.

Structurally, birds of comparatively great power of flight range thru all the degrees which find their extremes in birds like the hummingbirds and those like the man-o'-war birds. The former sustain their really marvelous flight and hold themselves poised before the flowers by the very acme of immensely developed physical energy and power, vastly heavier, proportionately, than their great opposites, and with incomparably less wing area to the weight per grain, their tiny bodies are provided with highly developed wing muscles and a remarkably deep keel for their attachment; altogether wonderful engines for driving the insignificant wings at a rate whose speed baffles not only the eye, but the best photographic apparatus man's ingenuity has yet produced. On the other hand, the relatively small body of the man-o'-war bird is supplied with a comparatively small keel, but with an immense wing area. The total average length of this bird is 40 inches, of the wing 25 inches, but as the measurement of the wing is taken from the bend to the end of the longest primary, it does not take into account the long joint next the body, giving the bird a spread of wing of 6 or 7 feet. With this immense area of resistance to the air to give it buoyancy, the man-o'-war bird takes place in the very front rank of birds capable of prolonged, easy but powerful

A FLOCK OF BLACK SKIMMERS IN FLIGHT.
These birds are appropriately named, for they gather their food by skimming the surface of the ocean, often with the lower mandible submerged, catching the floating aquatic life on which they feed.

flight, and it is able to float in wide circles on motionless pinions for an almost indefinite period.

All of the sea birds are possessed of well-developed powers of flight, and are mostly strong and graceful on the wing. The numerous species of gulls roam over immense areas of tossing, foam-flecked waves with tireless energy, and the terns have been styled "sea swallows," because of their strong and graceful flight, embracing light poise and beautiful evolutions. These birds may almost be said to live in the air, and the breeding season is the only time in the year when some wild, unsettled bit of land, usually an ocean island, claims them as semi-permanent denizens. For the rest of their time they are rovers, care free, save for the insatiable demands of appetite, imposed to keep up the boiler fires of those powerful engines. As an example of typical, strong, graceful and easily sustained flight, such large species as the royal terns furnish an interesting study. For the initial impulse the bird springs into the air, the start being given by the leg muscles and quickly reinforced by powerful downward and backward strokes of the wings. If hawking for prey, taking observations, or merely flying for the pure love of flight, which seems sometimes to be the case, the bird often sets its wings as soon as the proper altitude is attained, and soars with as little effort as tho it had flung aside the bonds of gravity.

In the various forms of flight it is interesting to note the manner in which various functions of the bird's mechanism are called into play. When rushing thru the air on set wings, by a straight or circular course, and on a slightly descending plane, or when flying with rapid wing beats, and having occasion to suddenly arrest its course, the wings are frequently thrown up in such a position as to bring their under surfaces at right angles to the course the bird is taking,

thus presenting the entire wing area in resistance to the air, as a powerful brake to arrest the forward movement. This is often further supplemented by the tail, full spread, being deprest so as to add its under surface area to the air-brake afforded by the wings. In ordinary flight the tail performs, in great measure, the functions of a rudder, to some extent in turning from one direction to another, but especially in rising to a higher level or dipping to a lower one. This latter function is one of the features of bird flight that has been most nearly copied in successful types of aeroplanes.

Up to the present time the only form of bird flight that man has made anything like a successful attempt to imitate is the gliding or soaring flight. Nothing in a mechanical contrivance approximates in any way the flapping pinions of birds, nor in the nature of our present understanding of such mechanics, is there any likelihood of such approximation. The principles involved in the purely soaring flight of birds, therefore, are what most interest us in comparing such flight with that of man's devices. Most of the initial energy of rising flight in birds is derived from flapping, so that to a certain extent the alternate soaring and flapping flight common to many birds is comparable to the movement of a boat, given a forward impetus by a few powerful strokes of the oars and allowed to drift forward on that impetus till again accelerated by a few more strokes. There are, however, instances of prolonged flight in certain birds nearly or wholly without wing-beats. Such flight is but imperfectly understood at best. It finds exemplification among the raptores or birds of prey and certain of the sea-fowl, to the most marked degree, and two particularly typical examples of it are the turkey vulture or buzzard and the man-o'-war bird.

The writer has, for hours at a time, watched the aerial evolutions of the former species, in an endeavor to gather some data respecting the principles of the sustained soaring. One fact was apparent. The birds, sailing in spiral course, drifted off before the wind in a long, very gradually descending semi-circle, and came up against the wind in a very much more abruptly rising incline, as well as describing a much smaller semi-circle. It was possible to conceive an explanation of the principles of their flight. The long semi-circle down the wind, being a much more gradual down grade than the short up-wind semi-circle was up grade, the average altitude maintained remained fairly constant for the entire spiral, while the impetus acquired in the long, *gradually descending* flight *with* the wind, was sufficient to provide motive force for the *short* and abruptly rising flight against the wind, the lifting power of the latter directed against the upward inclined wing and body surfaces of the bird, serving to raise it again to the maximum altitude. The portion of the spiral performed with the wind being longer than that performed against it, the eventual result was that the birds at last disappeared to the leeward.

The mode of flight of certain birds is characteristic; so much so in some cases that it is possible to identify birds by the flight alone. Woodpeckers have what is called a bounding flight, performed by an alternate strong stroke, followed by a short glide with the wings apparently closed. It is somewhat undulating, due to a slight rise on the stroke and a falling off on the unsupported glide. The goldfinch performs a somewhat similar flight, with much more accentuated undulations, extremely characteristic. The meadowlark rises by a succession of quick, short wing strokes to a hight of 6 to 8 feet, then sails away on set wings, whose points bend slightly down, and on a gradually descending plane, often alighting at the end of the sail, but sometimes flapping up to the former hight for another sail.

Birds have been credited with ability, in some instances without food or water, to fly hundreds of miles. It is absolutely certain that very often such journeys are performed by them. With this ability, furnished in themselves with all the necessary supplies and power, combining the minimum of weight with the maximum of motive force, they have a handicap over man in the conquest of the air which it seems reasonable to believe will forever render futile all attempts on his part to successfully compete with them in this field.

DEMOREST, N. J.

Americanize Hawaii

BY DOREMUS SCUDDER

[Dr. Scudder is a graduate of Yale University and the Union Theological Seminary. He was for a time a missionary in Japan, and is now pastor of the Great Central Union Church of Honolulu. He is well known as an author and as a leading Hawaiian citizen. —EDITOR.]

PRESIDENT ROOSEVELT'S slogan for our mid-sea Territory was "Americanize Hawaii." So far as permeating with American ideals our 55 per cent. Asiatic, 20 per cent. Polynesian, 20 per cent. European, and 5 per cent. mainland American population is concerned, this is being slowly done. But Mr. Roosevelt did not mean this. He desired to see the bulk of the newcomers to Hawaii Americans and the large, uncultivated acreage here dotted with prosperous American homes.

His ideal is perfectly realizable. There is plenty of room here. Our soil can support a million or more people in comfort, the island products can be varied and increased indefinitely. Hawaii is fitted to be a paradise of small farmers. Its climate holds a charm known nowhere else on earth. Yet Americans do not come, and the reason is not far to seek. The islands are held in the grip of a virtual shipping monopoly.

Freedom of travel between here and the Pacific Coast is a misnomer. All who come to live in Hawaii are virtually marooned. If one desires to go to the mainland by a first-class steamer, during a large part of the year he must apply months ahead. The writer expects to journey eastward in June, 1910. He made application in May, 1909. If a man wishes to travel from New York to Boston, he may walk, ride in a carriage, go via automobile, speed on a train, journey more leisurely by trolley, or take a steamboat. To be forbidden passage in any but an American built vessel is therefore no hardship. But here in Hawaii we are restricted to but one means of transportation. This is irregular and occasional. To compel Americans under such circumstances to take American owned craft when others are at hand, and to shut them out for months from traveling by first-class steamer to the mainland States, is a tyranny that no community able to voice its sentiments at the ballot box would for a moment endure. But Hawaii has no vote.

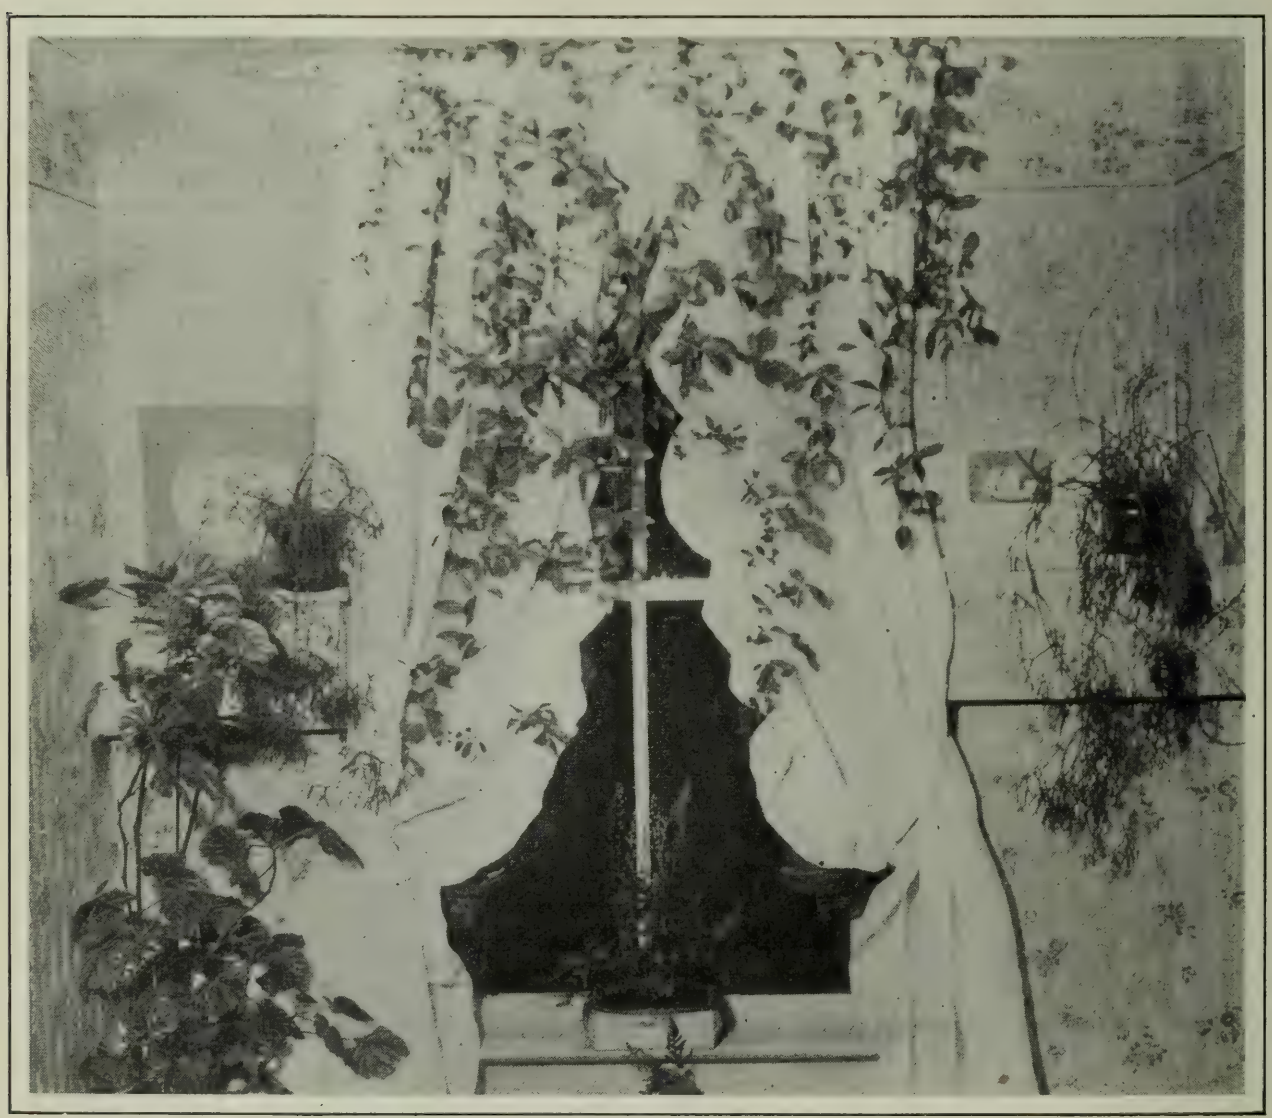
Furthermore, if Americans are to be encouraged to settle here, every inducement to establish homes and every promise of making agriculture (our only industry) pay should be given. The single possible hope for successful agriculture in this Territory is in export of products. There will, of course, be some demand for truck farming as the community grows, but the population of farmers will increase only as profitable export trade enlarges. But our coastwise shipping laws forbid all thought of this. The freight monopoly has no idea of relaxing its grip upon all there is in sight. Ship subsidies will only serve to tighten this hold. There is just one thing which will so reduce freight charges that there will be some hope of successful American family farming in Hawaii, and that is freedom to transport products in any vessel that offers.

Much is made of the rapidly growing production of pineapples, sisal, tobacco, rubber and the like, but these offer no inducements to bona fide American farmers, because where they succeed it is on the capitalistic basis and with alien labor. Open the islands to competition in freights and the various lines will bid for trade, thus providing the farmer with the certainty of a market for what he grows.

The amount of benefit accruing to the United States from the application of the coastwise shipping laws to Hawaii is infinitesimal. In fact, the entire policy of the Union in dealing with Hawaii is niggardly. On the one hand, we are not allowed to bring here Asiatic labor, which will rapidly develop our resources, and, on the other hand, we cannot get Americans to come and do the work because the Government denies to their persons the right to free travel and to the goods they may produce here a profitable mar-

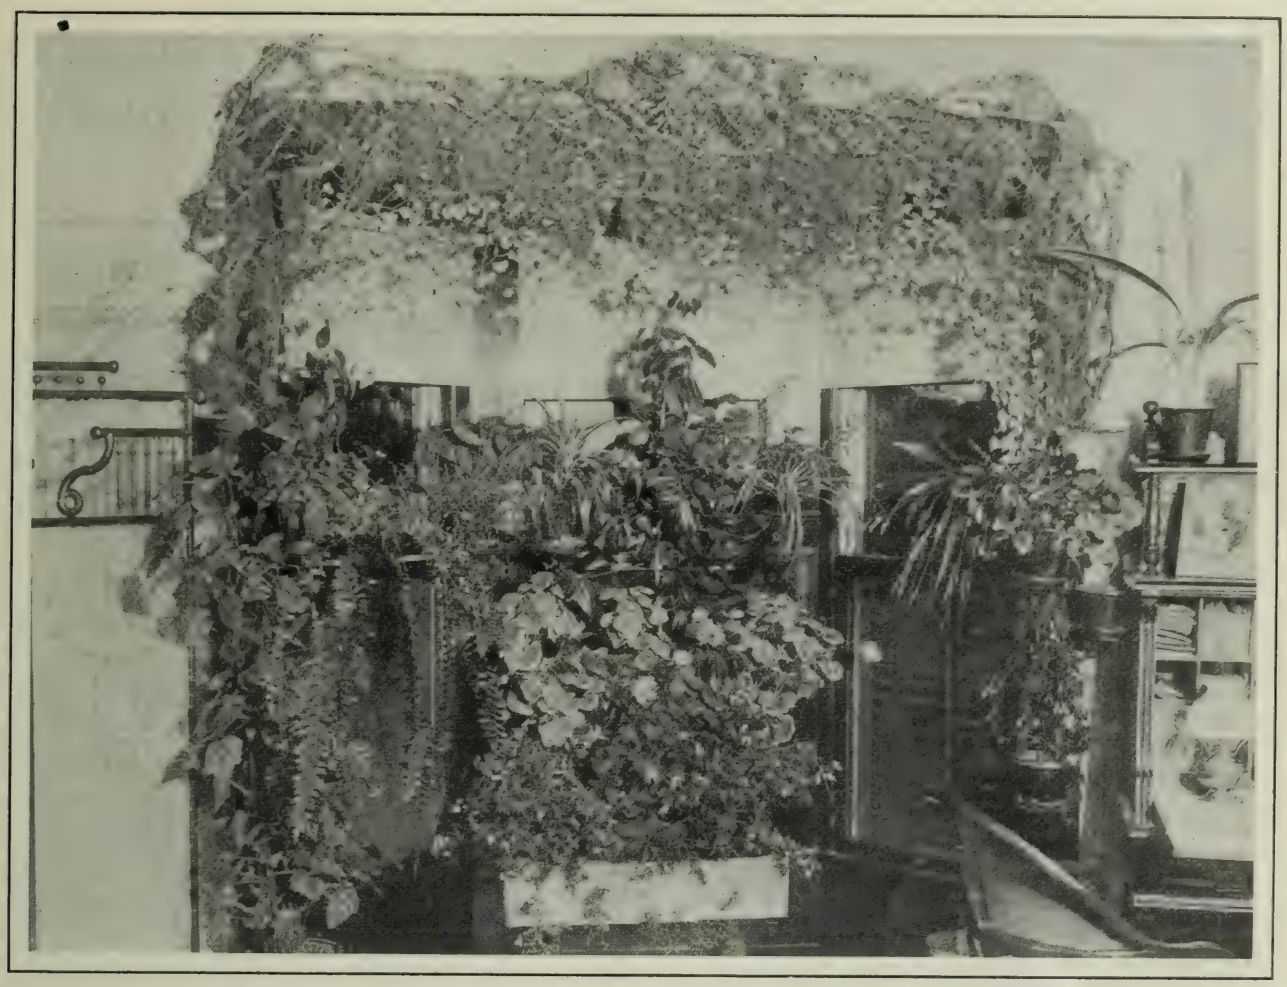
ket. Meantime, by refusing Hawaii any opportunity of effecting her own destiny by granting her voting power in Congress, the nation practically applies the gag to this dependency. It should be remembered that Hawaii was not acquired by war or purchase, but came freely into the Union. She deserves better treatment.

HONOLULU, H. I.



Attractive Winter Windows

BY G. A. WOOLSON



[This article may give some valuable suggestions to our readers. The writer is a well-known botanist and author.—EDITOR.]

THE house beautiful is incomplete without the softening touch of Nature here and there, hence the world today counts growing plants among the necessities of home life. To so dispose these plants that they have their share, but not a monopoly of winter light and sunshine, that they do not shut off the outside world unless we so desire, but enable us to look thru and beyond a bower of beauty, is the aim of all artistic growers who create wonderful pictures with material straight from Nature's hand.

A conservatory may afford ideal conditions for a winter garden, but the

A WINTER WINDOW DECORATED WITH VINES.

A BAY WINDOW WITH ARTISTIC FLORAL DECORATION.

majority have to be content with the bay window, which may become a thing of beauty or the reverse, according to the point of view of the presiding genius. A whole south window full of sunshine without a single thing growing in or about it is preferable to one given entirely over to rows of shelves crowded with pots, crowned with a latticework of stiff, ungainly stems stretching their growing tips toward the glass, bestowing their best efforts on the traveling public, regardless of home needs. Fewer and better developed plants, so arranged as not to cover all the glass space in any window, are much more satisfactory. The attractive window given in the illustration has an opening of only six feet, with proportionate depth. The end windows are of twenty-inch glass and the middle twenty-two.

Especial warmth was secured in the construction of the floor; seasoned stock only was used, and mortar filled in between the lining and lower floor boards, and heavy building paper laid under the matched boards above. As further precaution against insidious drafts, incidental in modern carpentry, the inner seams of the outer walls were also covered with mortar.

No shelves bar or mar the windows. Triple and double bracket are the best the market affords; these stand well out, each swinging from its own socket and all from the casing; therefore they are easily adjusted to the convenience of screens, shade and sunlight. A few single wire brackets are also used, but are not recommended, as they are easily upset. In front of the middle window is a rustic box constructed to fit the place assigned; this is zinc lined. As the plants are growing in pots they can be shifted at will. Strong bloomers take the brunt of the sunshine, which delicate ferns and begonias do not want.

Most pictures look best framed. Given a choice 'twixt muslin and vines we accept Nature's drapery as an appropriate setting. This feature is by far the most attractive part of the window.

"Bog-trotters" in tamarack swamps know the beauty of its dead trees with branches fringed with long, pale-green "moss," studded with other wonderful lichens. A better trellis for vines to run over could not be found. Consequently, small branches from such trees are artistically arranged over the top and down the sides of the opening of this bay window. In the construction of such an arch, branches must be selected from opposite sides of a tree to insure natural curves each way from the center of the opening, where a plumy branch drops lowest and curves away on either side, drooping again across the corners. Unique and beautiful in itself, it is doubly so draped with vines. Tendril clinging vines only can be used on such a trellis. The vine photographed is known to the trade as *Pilogyne suavis.* It is a neat, "brainy" little plant, which attends strictly to business and always seems to know just where to catch on next.

Now, in and about this window are perhaps sixteen bracketed pots of plants besides the rustic box, and yet, from the windows and from almost any point half the distance across the room, sky, mountains, hills, valley, neighboring and distant houses, the highway and the traveling public are visible, enough surely for busy people to rest their eyes on, with the sunlight over all.

The genus *Salix* makes an equally artistic window possible. Who does not look and long for the pussy willows—a beloved harbinger of spring? If the branches are gathered when the catkins are in the right stage of development their staying qualities may be counted on for two years regardless of the invasions of the feather duster. The skeleton of the unique canopy of vines is of these willows, with the side branches inserted in the pots in which the vine is growing. The fanlike trellis overhead is held in place by screw-hooks in the ceiling. The *Pilogyne* shows no favoritism, but disports itself as luxuriously on willow as on tamarack. The birch bark offers a "woodsy" suggestion while hiding the galvanized iron window-box, which is filled with native ferns and wildlings.

"Twigs and sticks and vines," we are told, "may do in some places, but not in all." But if we must submit to the inevitable muslin, why not make it beautiful along decorative lines? With all due respect to "art needlework," so called, it seems a sinful waste of time and strength to stitch by stitch work in a cheap imitation when Nature is ready to furnish the real thing. Given a "dollar muslin" curtain, two potted plants of *Cobœa scandens,* and turn them loose, and "shadow" or "laid work" and all the latest kinks of needlework are yours for a song.

Best of all—looking out into the night from the white birch is the dainty mitrewort (*Mitella diphylla*) with ferns. What they see does not matter; but looking thru this bit of the woods we ourselves look on

"a forest glade,
Where birches tall and tremulous a tender twilight made."

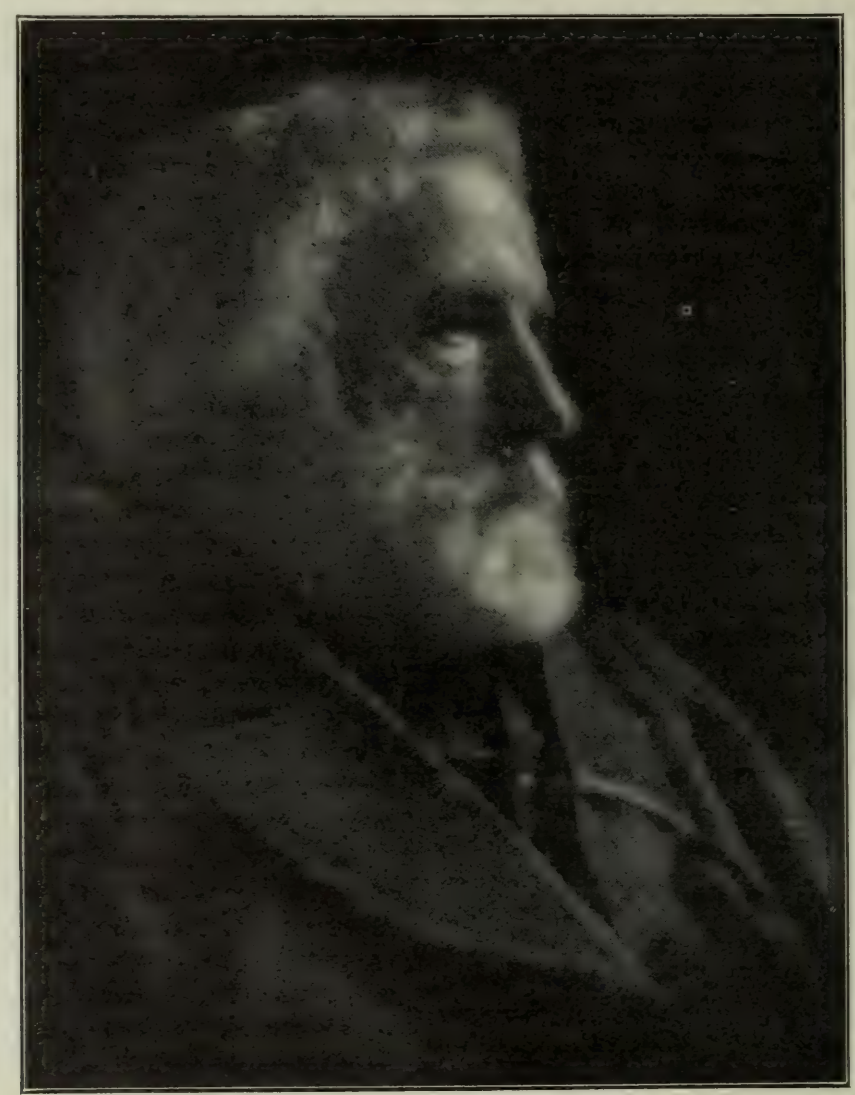
Literature



Emerson's Journals*

WHILE the lover of Emerson who has read with some care his works and the admirable life of him by Mr. Cabot will find little in these two handsome volumes from the wise man's earliest journals—that is, in biographical details—new, yet no lover of the sort can afford to lose the privilege of dwelling for a while in the sweet atmosphere which the originals breathe. There is the fragrance of good wheat there. The journals were indeed the bins into which Emerson very early began to store the newly gathered grain of a fine tillage. He is seventeen years old when the first extant entries are found. The notes show a young fellow of studious build sowing the only "wild oats" he will ever sow, except in heavenly fields, where bloom "pansies, violets and asphodel," where the drink is nectar, and ambrosia the food. In fact, he has become a member of a small club of a dozen juniors, "mildly convivial," whenever fines have accumulated sufficiently. At the club they subscribe for the *North American* and some of the English reviews; buy new poems and fiction, especially Scott's novels. The entries in the journal include verses playful and serious, and comment on poetry. He was not afraid of Byron and Moore. Shakespeare tantalized him by his perfection and his open house to all the vices. The writer spreads his opinions at full length on his pages—opinions that were tentative enough, often boyishly imperfect, yet sometimes of a philosophic shrewdness that one may half suspect of being only the unconscious echo of foregone thinkers. For morning, noon and evening he was with the thinkers. "From childhood," he says, "the names of the great have ever sounded in my ear." Of their phrases his notebooks are full. Pearls they are, as pure and clear as are the more substantial "finds" for which the oysterman keeps an eye always open, when he is "togging" and "culling" along the coast waters of New England. Into the journal go scraps intellectual: verse, original and in his own translations; attempts at dramatic composition, and essays after the manner of Addison; addresses in the style of Everett, all confessedly imitations, rather to see how the trick is done than with any purpose of forming his own style on them, for he is to have a style of his own. Most of all, there are bold hazards over the deeps of theology, ethics, morals and manners. There is no topic in the line of these four that he does not touch on and persistently return to, as his mind settles down to the work set for him by ancestry, by necessity, and, as he tries to think, by his own choice.

Every page of the journals, however, shows him to be conscious of the fact that he is to use the pen. Might it not be in poetry of a high order? Possibly in the drama? But surely in the pulpit! For imagination has largest sway in the pulpit, and he is certain that he possesses imagination. Never can he be a philosopher, he confesses to himself; he does not "possess a logical mode of thinking and speaking." That much he has found out at twenty. His critics who have since ascertained as much are only unconscious plagiarists in saying so. Some charges he has to make against himself on the score of manners. They are too stiff, too reserved. He doesn't bend enough. He wants to bend. Sometimes he would almost sacrifice his own identity, if only he could bend and show how sympathetic he really is. He has worshiped an ideal man or woman once or twice, but has never found the choice moment in which to say so, and the time passes by. Again and again he boldly accuses himself of "a cold being." "What is called a warm heart I have not." "Heart?" he says again in summing up his qualifications for the ministry—"A blank, my lord. I have not the kind affections of a pigeon. Ungenerous

*JOURNALS OF RALPH WALDO EMERSON. With Annotations. Edited by *Edward Waldo Emerson* and *Waldo Emerson Forbes*. 1820-32. Boston: Houghton, Mifflin Company. 2 Vols. $1.75 each.

and selfish, cautious and cold, I wish to be romantic; have not sufficient feeling to speak a natural, hearty welcome to a friend or stranger, and yet send abroad wishes and fancies of a friendship with a man I never knew." Who that is shy and proud and bookish, engaged in thoughts that he may not yet express even among dairy-maids, but is ready enough to make such charges against himself? Let him by effort find the language spoken by men and women of his own age and condition, and there will be heart enough. Meanwhile he was picking and culling words with care; standing up boldly with philosophers of the dead past, and disputing with them. "You may measure gravestones and see which is the tallest," he quotes; and he measures them with growing interest. His Puritan mind opens slowly on its south side. Things at first had a curious look. The drama, for instance, is vile, even in Shakespeare. He will restate its proper aims, and accept it. Again, slavery may be a possible good, under Providence. But what is Providence? He must be redefined. Possibly at some im-

FROM A PHOTOGRAPH OF GEORGE MEREDITH.
By Alvin Langdon Coburn. Taken October, 1904. From the "Memorial Edition of the Works of George Meredith."

possible future moment he may be justified; but, can we wait? Definition thus everywhere breaks up; its fences fall, and the sheep straggle. By 1832 he has grown tired of trying to keep them in the fold, and he leaves the pulpit. Here the two volumes of the journal end, with a promise, however, on the part of the editors, that more shall follow. The man is not yet quite at the end of his twenties. He has had his college and Divinity School, his brief period at the

schoolmaster's desk. He has been married to a beautiful girl of seventeen, and has lost her; but we know that time will bring again the joys of home, and that an income, sufficient for modest wants, will free him for work on the immaterial, and that the lumber of a desk will no longer press on him. He is almost ready for a stand-up fight with Andrews Norton, of the Harvard Divinity School.

Memorial Edition of the Works of George Meredith. Vol. I, "The Shaving of Shagpat"; Vol. II, "The Ordeal of Richard Feverel." New York: Charles Scribner's Sons. $2 each. (Sold only by subscription and in sets).

These two early favorites among the tales of the master English novelist of his time, doubly welcome in their handsome new raiment, signalize the beginning of what the publishers justifiably call "an important literary undertaking"—no less than "the definitive edition of Meredith," to be completed (according to present plans) in twenty-seven volumes and to contain besides the novels, stories, poems and essays of former editions a considerable amount of hitherto unpublished material. Among this new material, of which it will be a pleasure as well as a duty to speak when it appears, there are promised to us a new novel, "Celt and Saxon"; an unfinished comedy, "The Sentimentalists"; some new essays or sketches and some unpublished poetry from old notebooks. George Meredith left a rich legacy to English letters. Ordinarily after an old author has quitted his fields the gleanings make but a sorry sheaf, to the judicious; but with Meredith the case is different. His rightful place as a poet he does not yet occupy in the world's estimation. But as a novelist, no matter how the critics may wrangle among themselves over his art or his various phases as a story-teller, there is now almost universal recognition of his intellectual pre-eminence; and because of his amazing fertility in ideas whatever he left unpublished, even tho also unfinished, can hardly fail to be both interesting and valuable. Another promised volume that will be acceptable to all lovers of his work is to show the various changes and deletions in his writings made by the author from time to time (he was an uncompromising self-critic) and to contain a complete bibliography. This memorial edition is published by arrangement with Meredith's literary executors, his son, Mr. William M. Meredith, and Lord Morley. The illustrations are to include photographs taken for this edition by Mr. Frederick Evans, showing scenes associated by the author with many of his novels and poems; a series of portraits of Meredith at different periods of his life, and reproductions of many of the drawings made by Du Maurier. Millais, H. K. Browne and other artists for the original publications. The clear and readable type, the specially-made paper and the neat binding in dark green silk are of the same degree of excellence the Messrs. Scribner have established by the publication of such other standard sets as the Outward Bound Kipling, the Thistle Stevenson and the New York Henry James. Altogether this new edition promises to be worthy of the master mind it commemorates. These first volumes, certainly, are a delight to read, to study and to own.

The Conquest of the Isthmus. By Hugh C. Weir. New York: G. P. Putnam's Sons. $2.50.

An alert man can find much that will stir his admiration and imagination on the Isthmus. It is a dramatic struggle of man against nature. Mr. Weir seems to have caught the spirit of the Isthmus, even if he escaped being caught by the many dangers he relates. It is possible in places that he has carried his dramatic efforts too far, but his book will be read with interest both by those who know nothing of the Isthmus and by those who have experienced living under the actual conditions so rosily painted. It is true, as Mr. Weir says, that where one would expect to find an untraveled jungle, one finds the conventional American Y. M. C. A., with a basketball game in progress and the melody of the latest popular hit issuing from the music room. But to visit and live in a place is very different. After a few years on the Isthmus the strain of the unvarying heat begins to have its effect on the Americans. Mr. Weir falls into the common error of quoting the low death rate, in comparison to other communities, failing to take into account the comparatively small number

of children and aged people in the Canal Zone, and the physical examination that all the men have to pass before being sent there. The volume is excellently illustrated by figures and diagrams, including a folding cross section of the Canal in colors. The author's praise of Police Captain Shanton is well deserved. His influence and work in the early unsettled days of American occupation merit great credit. Mr. Weir is an enthusiast. He believes the $400,000,000 investment will yield an annual income of $24,000,000, or twice the revenue of Suez. The Canal is undoubtedly a very creditable undertaking for patriotic American citizens to contemplate, but it is well not to be too sanguine in prophesying a financial success.

THE PROMENADE ON THE SEA WALL, OLD FORT, PANAMA.
Weir's "The Conquest of the Isthmus." (Putnam's.)

Jeanne of the Marshes. By E. Phillips Oppenheim. Boston: Little, Brown & Co. Price, $1.50.

This is a book without a problem. It is a romance pure and simple and in the spirit of its adventure deserves to be classed with the McCutcheon stories. The scene is laid partly in London and partly at a lonely country place surrounded by marshes. The heroine is an heiress who is under the control of a scheming stepmother who, in her turn, is the victim of a card-sharp. No matter how sophisticated and epicurean our tastes have become there remains a yellow side to our imaginations that responds involuntarily to such a plunging story of possible murder, strange noises, half-hidden tragedy and a lover in disguise, especially when all ends happily with good triumphant and evil cowed and groveling.

The Story of Dutch Painting. By Charles H. Coffin. New York: The Century Company. $1.20 net.

Seizing upon the opportunity of the new interest in Dutch painting aroused in New York by the Metropolitan Museum's loan exhibition for the Hudson-Fulton Celebration, Mr. Coffin has hastened to produce another of those facile and entertaining art "stories" which seem to come from his hand with an almost mechanical regularity. Again he provides a deal of interesting biographical and historical information, tells us many things about the artists and about

the times in which they lived and worked, but tells comparatively little, except in the most general way, about any specific paintings themselves. He writes in an easy style—tho it is one without distinction, and he has not yet learned the proper uses of "shall" and "will." He has his enthusiasms and his efforts toward the popularizing of good art are commendable. His judgments and classifications, however, are not always trustworthy. His new book has no critical value for those who are interested in the art of painting for itself; yet it is worth while, perhaps, as a sort of primer for beginners in the love of art, and for such its thirty-two half-tone reproductions of masterpieces mostly from European galleries enhance its usefulness.

Moore's History of the States, United and Otherwise. By Charles F. Moore. New York: The Neale Publishing Company. $1.50.

Judge Moore writes in a jaunty way of the United States from the time of its settlement to the present time. The narrative is humorous, but not too humorous; the fate of the messenger who carried Oliver Wendell Holmes's funny poem will hardly befall the reader of this volume. It is historical, too, in a way, but not overburdened with data. Rather, it is a running comment, some-

what after the style of a certain brand of after-dinner oratory, on history, politics and things in general.

"It [the United States] is an exceedingly fertile country, yielding its products in great variety and abundance. Some localities produce politicians and confusion; in other sections the natives devote much of their time to raising corn, rye, and mint, and the rest of the time to raising cain. Fish and oysters are abundantly supplied to epicures, and lobsters to manicures, peaches frequent the cafés and fashionable resorts, and lemons are distributed with marked generosity."

RICHARD SACKVILLE, EARL OF DORSET.
After the miniature by Isaac Oliver, in the Victoria and Albert Museum.
From Armstrong's "Art in Great Britain and Ireland." (Scribner's.)

Art in Great Britain and Ireland. By Sir Walter Armstrong. New York: Charles Scribner's Sons. $1.50 net.

A remarkably successful achievement is this first volume of a projected series on the "General History of Art." Besides being the foremost authority on his subject, Sir Walter Armstrong, the director of the National Gallery of Ireland, has the rare gift of being able to present that subject attractively, to make every page he writes about it interesting. Not only painting, sculpture and architecture, but also such minor arts as ironwork, enamels, stained glass, needlework and tapestry, ivories, illuminated manuscripts, etching, engraving and mezzotints are reviewed—briefly, to be sure, but with fairness to all and with keen insight and good judgment, in his 312 pages. The little book is altogether the best summary that has ever been published of the history of art in the British Isles, fittingly characterized by Sir Walter as "a frequently arrested and frequently diverted development." Necessarily, in so small a book on so large a subject much of the story must be told by the illustrations, and these, of which there are more than 600, mostly very small half-tone blocks, are surprisingly good. They frequently give some idea of the quality as well as the superficial appearance of the art work reproduced; and the good taste shown in their selection is unimpeachable. The four pictures in colors are also unusually good.

Fifty Years in Constantinople and Recollections of Robert College. By George Washburn. Boston: Houghton-Mifflin Co. $3.

The bequest of a million and a half dollars to Robert College, thru the will of the late Mr. John S. Kennedy, has directed attention and congratulations to that institution, but the writing of such a history of the college as is this *Fifty Years in Constantinople* by the former president, after his long term of service, is an equal cause of congratulation. Dr. Washburn is known in Turkey, Bulgaria, England and America as a thoughtful, statesman-like student of Eastern affairs, a writer of clear, direct, forceful English whose knowledge of Eastern politics and whose influence in molding thought have worked for much good to more than one nation in Eastern Europe. It is well that such a man should be called upon to expound the changes and outlook in Turkey at the Lowell Institute this winter. In these recollections Dr. Washburn shows how favored the college was in its founders. Dr. Cyrus Hamlin, a missionary genius, and Mr. Christopher R. Robert, a far-seeing philanthropist, never a millionaire, who practically supported the college during a decade and a half, at a cost of not less than two hundred and fifty thousand dollars—the first man of means in America to foresee what a Christian college might accomplish on missionary ground in the elevation of a people. The reader will not readily forget the author's delightful description of Dr. Hamlin, enthusiast and universal genius, without architect or builder, overcoming untold obstacles, and putting up his first college building at Hissar. Others whose work in developing the college as professors or benefactors is specially acknowledged, are: Professors Long, Grosvenor, Djedjizian, Panaretoff and Van Millengen; Messrs. Kennedy, William E. Dodge and son, Remington, Nicolaki Bey, Menassian, Mrs. Frederick F. Thomson and Miss Stokes; and he notes gratefully the friendly aid of American Ministers at Constantinople and of Mr. Hay in the State Department at Washington. Political crises in Turkey, the Russo-Turkish War, the Bulgarian upheaval and the influence of the college in the formative period of that nation, Armenian and Bulgarian troubles, cholera epidemics and cruel massacres are all treated with the authority of personal knowledge, but always from a humanitarian and a Christian standpoint.

The Last King of Poland, and His Contemporaries. By K. Nisbet Bain. With 16 Illustrations. New York: G. P. Putnam's Sons. $3.

Poland was a little late in exposing to the world that dry rot which seems always to begin in the state when the social orders become distinctly separate, and when the cumbrous rich lie heavily on the prostrate poor. In the Middle Ages, when Western Europe felt the process of decay, the barons were at least a military folk, with some of the military virtues left; but the Poland which Mr. Bain deals with, as late as the eighteenth century, had doffed the harsh helmet of the warrior caste and put on the silk-lined dressing-gown of slippered ease. The author pictures, evidently from ample material, the demoralized society among the upper classes, "where wealth accumulates and men decay," where the luxurious family life of the masters in the state "ripens and ripens and then it rots." Thru the muck of such a social condition, when Catharine of Russia lived, and the Pompadour in France ruled, and Frederick the Great caned his grenadiers, the last King of Poland made his way as best he could to the throne, and for thirty years or more held state among his unruly nobles, on borrowed money. As one of Catharine's numerous lovers, he was no better in spirit than his times. Tho discarded as a lover, his debts as a King continued to be good-naturedly paid by the Muscovite lady, who all thru her early life was engaged in an amorous by-play with kings, and in her wicked later years, more deeply engaged with the moving pieces on the political chess-board of Europe. The author tells the story well, but with an unsteady pen as to the political moralities. There was little in Stanislaus Poniatowski out of which to construct a hero, and the author apologises often for trying to make him one. It is a hard job, he admits, but he will do his best; and so he puts the King's views into a basket, duly marked and ticketed, and "naught set down in malice."

Literary Notes

....A rather curious survival from the mesozoic age of musical biographical writing comes to us in the new translation from the fifteenth German edition of Elise Polko's *Musical Sketches* (Sturgis & Walton Company, $1.25 net). Despite their age, there is vitality yet in these old-fashioned sketches of Bach, Paganini, Gretry, Schumann and others, and, notwithstanding their unrelieved sentimentality, some of them possess the lasting value that attaches to acquaintance with genius.

....The Columbia University Press announces an important publication to be issued under the editorship of Prof. W. P. Trent, being the complete works of John Milton, prose and poetry, whether in English, Italian or Latin. No such complete edition has ever been issued, and it will be of very great value. Professor Trent has given long study to the great poet and the history of his times. There will be at least eight volumes, large octavo, and will be illustrated by portraits, scenes of Milton's life and facsimiles of manuscripts and title pages of the first edition.

....Mr. Judge has given us in his *Chemistry for Young People* (Stokes, $1.50) a popular work that is at once readable and interesting and unusually accurate for a book of its kind. His style is clear and simple, but he has treated his subject in such a way as to make his book even more suitable for the average non-technical reader of mature years than for strictly "young" people. For instance, the author devotes so much attention to the rarer metals and to recent chemical theories advanced since the discovery of radium, that a reader who had never studied chemistry might get a wrong idea of the relative importance of different parts of the subject and think very dubious theories to be ascertained facts. Too much space is also given to the history of the science, but this is easily offset by the full and valuable information contained in the notes and tables at the back of the book.

....It is a motley collection of loves and hates and near-passions of the great and nearly great that Lionel Strachey and Walter Littlefield set us down to in *Love Letters of Royalties and Commanders* (New York: John McBride Co., $2). The fare ranges all the way from the beef-and-kraut love-making of von Moltke and Mary Burt to the honeyed confections of French cavaliers and dames and from the love-in-death epistles of Walter Raleigh or de Favras to the stupidity and hypocrisy of English royal George in search of female prey. A page or two of chat and a few random letters taken from each of these score or more affairs produce an effect similar to those New York table d'hôtes where an American soup, a French relish, an Italian entrée, an English roast, a Swiss cheese and a German sweetmeat combine to baffle appetite and upset digestion. Let the reader dip into the book here and there, now and again. He will rue it if he does as we did—begin at the beginning and try to discuss the whole motley feast.

Pebbles

LITTLE grains of powder,
Little dabs of paint,
Make a girl's complexion
Look like what it ain't!

"TOMMY," said the father to his small son, who was following him round the course, "what makes the grass grow?"

"The grass has blades, and with these it cuts its way thru the ground."—*Golfing.*

GILLIS—Great Scott, man! What do you call that thing?

Willis—We decided at our house this year that we would give only useful presents, and this is the beautiful, embroidered, hand-painted snow-shovel that my wife gave me.—*Puck.*

HE has learned to love Reporters, and is willing to confess
The Safeguard of our Freedom is a brave, Unmuzzled Press;
Yet finds it quite convenient in a Time of Storm and Stress
To buy a few Independent Publications, just to insure getting a clear, Unbiased Statement of the Case before a Misled Public.—*Arthur Guiterman.*

WHILE Senator Hanna, as chairman of the National Republican Committee, was conducting the campaign in 1900 he was greatly annoyed by a man who applied for the position of messenger at the national headquarters. This man had called to see the Senator four days in succession to present his application.

After the fourth visit Senator Hanna sent for the man who was then serving as messenger.

"You saw that man who was here just now?" inquired Hanna.

"Yes, sir," said the messenger.

"Do you know what he wants?"

"No, sir."

"Well, he want your place, and if I see him again he will get it."

Senator Hanna never saw the applicant again.—*Boston Herald.*

BOTH WERE COLLECTORS.

A local newspaper artist got a letter one day from a man over in Indiana who said he was making a collection of sketches. "I have drawings from well-known newspaper artists in nearly every State in the Union," the Indiana man wrote, "but I have none from Ohio. I have seen some of your work, and I think it is good. If you will send me some little sketch for my collection I shall have it framed."

The artist noticed from the letterhead that the Indiana man was connected with a bank in one of the small towns over in the State of literature. That gave him a hunch, and he wrote back as follows:

"I am making a collection of ten-dollar bills. I haven't secured specimens from every State of the Union, but I have several tens and a few twenties, and I am particularly anxious to have a ten-dollar bill from Indiana. I notice that you are employed in a place where ten-dollar bills are kept, and if you send me one for my collection I shall be glad to have it framed."—*Cleveland Plain Dealer.*

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $3.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

The British Elections

THE British elections are concluded, and the Liberals have won a moderate, but not a fully conclusive victory. They have done better than was feared, perhaps as well as they expected. The Liberals and the Conservatives, who now call themselves Unionists, have won the same number of seats, but the Liberals can count as their allies for most purposes also the Laborites and the Irish Nationalists, who, together, count 122, making that the support in which Premier Asquith must depend to carry any measure. They will all be against the Lords, so that we may expect that the new Budget bill will be past, and very much as it past the last Parliament. The Lords appealed to the people, and the people have decided against them.

They cannot but yield, but more is in store for them. The House of Lords must be reformed and its power limited. A new rule must reduce its right of veto. To this more than to anything else the entire Liberal Ministry is pledged. Further than that, the Unionists believe it should be reformed, and so do the leading members of the Lords themselves. For many years the Scotch nobility have chosen the restricted number who shall represent them. A similar method for England will hardly be satisfactory. Earl Grey says the hereditary principle must go, but that is very radical for Great Britain. It will be a most serious task to decide on a principle of appointment to the Upper House. At present the Lord Bishops are the only members not serving by birthright. Some such method as that by which the bishops take rank is likely to be chosen; representatives of interests and institutions appointed with selected members of the present nobility. A certain number might be appointed annually by the Ministry, and ex-Ministers, or Governors of colonies might be given the privilege and duty. Anything would be better than mere birthright.

But they say that Mr. Asquith may refuse to remain in office, with no more compact and trustworthy a following. We cannot believe him so pusillanimous. He will take his little rest in France and return with new courage and force. He will not fail without first fighting. He has his task set for him—to reform the House of Lords—one that will give him endless honor if he succeeds, and he must attempt it, and we do not see how he can fail. The reform must come from one who fully believes in it, who will do it as thoroly as possible, and not from a Unionist like Mr. Balfour, who depends on the present House of Lords to maintain his policy.

But after the reform of the Lords, what then? The Budget will have been enacted before the reform; but after it there is a considerable body of legislation to which the Liberal party is pledged. What hope is there of it?

One measure is the disestablishment of the Church in Wales. Three-fourths of the Welsh people demand it, but it is denied by outsiders. Mr. Asquith ought to be able to get a majority for it, for the Irish Nationalists and the Laborites may be depended on for it. The reform is just. It has worked well in Ireland. It ought to be applied to England and Scotland also.

The demand of the Nationalists for a special Irish Legislature to act on local affairs ought to be granted. Mr. Asquith has promised to include it in his program if he is given a sufficient majority. He can have the majority

if he will present the bill. There will be 73 Nationalists to support it, and probably nearly all the 40 Laborites, and a large majority of the Liberals, altho some will refuse. It may make trouble even within the Cabinet itself, but a bill ought to be presented and enacted, and it would bring an end to Irish discontent. We will then find the Irish, in a few years, as loyal and content as the Scotch or the Boers.

Then there is the school reform. Of that there is less hope. Mr. Asquith could have put his bill thru the last Parliament, for he had an overwhelming majority of Liberals alone, not counting the smaller parties. But not the Anglicans alone, but the Catholics also will oppose, and there are Catholics among the Laborites, and nearly all the Nationalists are Catholics. Even the American Catholic journals are warning the Nationalist members of Parliament that their duty to the Church comes before any duty to party, and they must stand for State-aided Catholic schools, and must make no bargains, even for Home Rule. We fear this just measure will fail.

And so also will fail the newly proposed and promised scheme for the insurance of non-employment. It would take some millions of money, when money is scarce, and it sounds to many like Socialism. We fear there would not be found a majority for it.

The present Parliament may be a short one; so the prophets tell us. But it is likely to be a notable one, which will very considerably amend the British Constitution. If it forces the passage of the Budget, and then limits the veto of the House of Lords, and then fixes a plan for reforming the Upper House; and if it further disestablishes the Church in Wales, it will be one of the greatest Parliaments in English history. It can then remit its trust back to the people whose faithful servant it has been.

The Meat Trust

THAT there is a Meat Trust there can be no question, but to find it puzzles the lawyers of the Attorney-General's office. There are half a dozen firms, with a plenty of subsidiary organizations over the country, which almost wholly control the nation's meat supply. They are individually the Meat Trust. But there is no such general inclusive corporation as the Meat Trust that can be reached. It has no legal existence. And yet the six companies act with extraordinary harmony. They buy in the same territory and always all at the same prices. They sell all over the United States, and their prices are the same. It is curious that it happens so, but it does; they raise prices or lower them with absolute unanimity.

How do they do this? Not, we say, by any holding company, but, we might guess, by a gentlemen's unwritten agreement. There are no documents to prove any collusion, only the result. It has been found impossible to convict them of any breach of the law, for there are no documents to prove collusion—only independent companies which happen to do the same thing at the same time. So while other combinations have been indicted and convicted, nothing has been done to the Meat Trust. It cannot be reached; it is intangible.

This admirable method of stifling competition and controlling prices pays. The other day one of these half dozen companies made a dividend of 62 per cent. For that the public paid. The public does not like it. The public is angry and in an ignorant way shows its anger by refusing to eat meat. The President does not like it, and he is determined to test the present laws to the utmost, and if that fails to get better legislation. Somehow if a written corporate trust to prevent competition is against public interest and should be illegal, as it now is, an unwritten trust ought to be equally illegal, and there ought to be some way devised to prove its existence. The old rule *"Probat ambulando"* may be applied, the walking proves the walker, the combined result proves the combining power.

The representatives of the Trust say they are innocent; that they buy the beeves at 7½ cents on the hoof, sell the drest carcass for 9 cents; and that they are not responsible if the retailers sell it for an average of 20 cents a pound. Before we accept their plea for mercy we will await the Congressional investigation of prices.

For a multitude of city people who de-

pend on city markets the best relief is to go back to the land. As we have said before, we do not produce enough. We do not depend enough on what we raise on our farms and gardens. We ought to buy less and raise more. The most independent man in the world is the farmer, and the happiest. He has to work hard seven months in the year, but he has liberty, to be his own master, to rest on rainy days, to take a winter vacation. He is not tied all day, all the year round, to a shop or a desk. It is almost a holiday to the man tied for years to a shop to be his own master on his own farm. He will make blunders; his first year or two may be hard; but if he has intelligence and enterprise and is willing to work, the farm will give profit and delight. It is healthy for him and his children. But it is no life for drones or for stupid derelicts. It takes brains to be a good farmer. And such a one has no fear of rising prices. He gets the profit of them in what he sells, and he depends very slightly on the meat market. His food supply he brings from his own fields and barns into his own cellars. The time will come again when he who delves will be the gentleman.

Palladino's Feat

EUSAPIA PALLADINO, "the despair of science," as her manager, Mr. C. Hereward Carrington, calls her, has met her match. The Italian medium, who came to this country a few months ago with a reputation for having baffled or converted many prominent European scientists, among them Lombroso, Morselli and Schiaparelli of Italy, Richet and Flammarion of France, and Lodge of England, has fallen a victim to Professor Münsterberg. In the February *Metropolitan Magazine* he gives an account of a seance he attended, at which a most striking exposure was made of the means she uses in producing some of her miracles. Undeterred by the presence of the Harvard psychologist, the spirits began their work in the usual way. Raps were heard, the table rose, the curtain bulged out and Professor Münsterberg felt the touch of uncanny digits on his arm. All this time her hands were held by two well-known scientists and her feet rested upon theirs. Finally the table, three feet behind her in the cabinet, made by a curtain stretched across the corner back of the chair of Madame Palladino, began to move forward. Then a thrilling scream was heard, for a man had crept under the curtain and had seized her foot when she had slipped it from her shoe and was feeling for the table with it.

It was, then, Eusapia's toes, and not the fingers of "John," her ghostly control, which had tickled the ribs and plucked the sleeves of distinguished professors of European and American universities. The extra and extended limbs which have been described in so many learned papers and volumes have now indeed materialized. Her pseudopodia turn out to be real feet.

It is scarcely to be hoped, however, that this exposure of Eusapia's tricks will destroy the faith of all those who have believed in her. She has been exposed too often before to fear it. Professor Münsterberg has, after all, not added much to the public's knowledge of her methods. She has been caught several times in the act of using a hand or foot that she had freed from the sitters who thought they had hold of it, and using a hair to pull down a balance by the motion of her hands on either side of it. Professor James, of Harvard, had this in mind when, in his presidential address before the Society for Psychical Research in 1896, he referred to the

> "phenomena of the dark-sitting and rat-hole type with their tragic-comic suggestion that the whole order of nature might possibly be overturned in one's own head by the way one imagined oneself, on a certain occasion, to be holding a tricky peasant woman's feet."

Nevertheless Professor James still holds to the probable genuineness of some of her manifestations as well as to the supernormal powers of his "white crow," Mrs. Piper. Professor Münsterberg, on the contrary, takes about the same view of these phenomena as we did in our editorial of November 25 on "The New Necromancy." He does not assume to explain all the queer happenings of Euscapia's seance room. Neither could one explain all the things done in an evening by a clever and original con-

juror. Those who prefer to believe that she is genuine whenever she is not caught cheating cannot be deprived of that option by any logical process known to mankind. Professor Lombroso has provided in advance against any such exposure as this when he said that Eusapia was a being of such extreme sensitiveness and suggestibility that the presence in the room of a strong-minded skeptic would set her cheating. So, according to the spiritualists, Professor Münsterberg is himself responsible for instigating this adroit use of her tricksy toes.

A still more ingenious defense was put forward by the theosophists when the tricks of Madame Blavatsky were exposed by a Dr. Hodgson, who was sent by the Society of Psychical Research to India for that purpose. They explained that all previous founders of religions, Buddha, Jesus, Mohammed, had had their doctrines perverted and obscured because their followers had persisted in worshiping them as gods, so Madame Blavatsky, to avoid this tendency, deliberately sacrificed her personal reputation to save theosophy. She, therefore, performed some clumsy tricks and allowed the fraud to be disclosed. But in this she does not seem to have acted with her usual foreknowledge, for such superhuman self-sacrifice, surpassing that of the Buddha who fed himself to the famished lioness, has naturally increased the devotion of her followers and encouraged their belief in her divine nature.

"Jam Satis Terris"

Every college man or woman who read Latin, as they all did in the olden days and all ought to now, will recall with fond reminiscence the words above this article as the beginning of his labors in Horatian Sapphic meter. In this ode Flaccus laments the extraordinary flood of the Tiber, the work of the red right hand of angry Jove, whose bolts had smit the sacred citadels and frighted the city, lest Deucalion's Deluge should return, when the sea-monsters invaded the lofty mountains, and fishes were entangled in the topmost boughs of the elms. It was such a flood then visiting Rome as Paris is now experiencing, for he says: "We have seen the waves of the yellow Tiber, violently turned back along the Etruscan bank, proceed to overthrow the royal monuments and the temple of Vesta."

Rome never saw such a destructive flood as that which now devastates the most beautiful city in the world. Any inland city on the river banks is liable to the catastrophe of an unusual freshet. New York is safe, for on both sides she is on tide water, altho we have seen the ferry slips and the western border street overflowed by an abnormal tide pushed by an eastern storm. Paris has no such protective ocean which can easily swallow up the hugest overflow of the sky. Paris has not felt the need of high artificial banks to retain the floods, for in nearly three centuries no such disaster has been known. It has come with appalling destructiveness, reaching the most fashionable streets of the city, endangering the Louvre, invading the palace of the President of the Republic, and that occupied by the Chamber of Deputies, and a hundred other famous and well known buildings. Business is stopped; the French Academy closes its doors; subway traffic is suspended; great railway stations close their gates; business is paralyzed; the water system and the sewerage system are disorganized; the market gardeners can bring no food into the city, and famine is feared almost as much as typhoid pestilence.

The disaster is tremendous. No one knows how much it may exceed the $200,000,000 of loss now indicated. Tens of thousands have to be fed and will lose everything, while those driven out of employment by the cruel river will be counted by the hundred thousand. Fortunately France is thrifty and rich and proud, and will ask no foreign aid. But this is such a fearful disaster, comparable with a fire or an earthquake which destroys a city, that one hastens to offer help, glad to express concrete sympathy by friendly international gifts. Already more than one call has been made for subscriptions of aid, and we trust they will be generous. France is a country which our own especially loves. From her we had help in our opening struggle for national existence. From France we acquired the richest portion of our national estate. It was France that first

adopted our republican creed under the banner of Liberty, Equality and Fraternity; and France is now the great Republic of Europe. To France our artists have gone for instruction, and Paris is the Mecca equally of the rich or the poor American traveler. We owe much to Paris, and we would have some little part of the debt paid in these days of her distress.

The Whitman Controversy

Two correspondents, one living in Washington and one in Oregon, criticise the review of Dr. Myron Eells's "Marcus Whitman," which appeared in these columns in the issue of November 25. One of the writers wishes his name withheld; the other, Mr. Joseph Schafer, the author of "A History of the Pacific Northwest," is willing to be quoted.

"The essence of the 'controversy,'" writes Mr. Schafer, "is the question, 'Did Whitman save Oregon?'" We do not believe that is the essence of the controversy. It once was, but the issue has been shifted. In one camp are a number of extreme partisans who take their historical method and at least some of their data from Mr. William I. Marshall and the late Prof. Edward Gaylord Bourne. These are the ultra-anti-Whitmanites. They deny to poor Marcus pretty much everything except the fact that he was murdered by Indians on November 29, 1847. There is another, and a very small camp, centered about Whitman College, who ascribe to the missionary a sole or a determining influence in the saving or Oregon. These are the ultra-Whitmanites. And then, finally, there is a much larger camp of persons who, paying small attention to the myth-builders on the one hand or the iconoclasts on the other, are determined that Whitman shall be judged fairly by the records. A fair judgment for Whitman is the present issue.

The review of Mr. Eells's book took this middle ground. It declared that Whitman's main purpose in going East is proved by the evidence. But it also said, "What his influence may have been in saving Oregon is a less certain matter," and that "at least he did all that he could toward an end that was achieved." It did not praise Mr. Eells's book for historical excellence. The faults of that book are quite as evident as are those of Professor Bourne's book. The review gave the attitude of the extreme anti-Whitmanites and then sought to show what the records really indicate. The review concluded: "The case for Whitman grows stronger with the years." This sentence did not mean that more is now claimed for Whitman or attributed to him than even the earlier ultra-Whitmanites had claimed, but that the extreme anti-Whitman attitude, which a few years ago seemed to hold the field, had lost ground under the plain readings of the evidence.

This reaction toward a fairer judgment appears to be decided. We have not the space to deal with the matter adequately at this time. In passing, however, it seems advisable to say that a good deal of unnecessary passion has been displayed in this controversy. There are certain sectarian ramifications to it, and sectarian bitterness has been aroused. The earlier anti-Whitman attacks were Roman Catholic, and the later ones have not been wholly free from intra-Protestant sectarianism. No doubt there are many excellent persons who have reached their conclusions in the matter uninfluenced by sectarian promptings; but this influence has at all times been notable.

The point is not, Did Whitman save Oregon? It is, rather: Was not Whitman apprehensive of the fate of Oregon; did he not believe that American settlement was the solution; did he not brave the terrors of the winter and the wilderness in making his Eastern journey; did he not visit Washington; did he not, with voice and pen, plead for American occupation; did he not lead back an emigrant train of 875 souls safely to the Willamette; was he not the most conspicuous figure in the whole epoch? Tho Mr. Marshall denies the influence of the immigration of 1843, Mr. Schafer has declared it "crucial," and Mr. Hulbert, in his "Pilots of the Republic," takes a like stand. Is it not a fact that that immigration, tho its causes were many, was in part due to Whitman? Is it likely that any one should have known better what was in his mind than his companions, A.

L. Lovejoy and his nephew, P. B. Whitman? Did he not himself know what was in his mind? Are not his letters from November 1, 1843, to October 18, 1847, a proof of his motives and of the importance which he attached to American settlement? In these letters, according to Mr. Marshall, he "made very extravagant and wholly unwarranted claims of great services rendered to the national Government." Maybe his claims were unwarranted and extravagant, but the fact that he made the claims is enough for a non-partisan jury to determine his motives and his attitude. If the Whitman "myth" is a curious freak of history, the anti-Whitman crusade is a yet more curious anomaly.

The New Farming Generation

An encouraging note for the future of the farming sections comes out of the Middle West where there has been reached a stage of development that includes something more than the counting of bushels and acres. It is the report that a larger number of young men each year are choosing farming for their life occupation. The agricultural colleges are expanding their facilities to accommodate increased attendance and the demand for "institutes" which shall instruct the agricultural communities is insistent. This means that the position of the farmer as a business man is being established, and his sons, instead of hurrying to the city to seek another occupation, are realizing that there is a field for their best endeavor on the old homestead—tho that term has almost passed into the realm of melodrama.

The new generation of farmers is something of a surprise to the student familiar with that of early days. It comes with something of an awakening to hear the man in overalls, milk pail or pitchfork in hand, talk in clear English of "balanced nutrition," "economy of production," and "scientific breeding." He discusses the quality of soil ingredients and moralizes on the benefits of crop rotation. He has learned farming from books, which was a method that our fathers scorned; but the fact that he is able to produce more bushels to the acre and more profit from the year's work is earning him respect. He stands for a new era on the farm and in its management.

Not alone in the better management of the fields is the new generation of farmers making advancement. That is but a part of the accomplishment of an agricultural education. The fact that the young men have been out in the world and have learned how others do things gives them ideas in accomplishment of farm duties with less exertion. The bane of the farmer's life has been that he was compelled to rise with the sun and work until long after its setting. He found it difficult to obtain farm help because the days were so long and the relaxation so limited. The new generation is changing this, partly thru the more systematic management of farm work and more by the introduction of new methods.

Milking cows is at best a wearisome task and the farm boy who spent two or three hours of early morning and of late evening at that task looks back upon it as a nightmare in his home life. Nowadays the educated young farmer equips the dairy with milking machines which enables him to milk faster than three expert men could do it and have no labor except that of overseeing the process. Following the plow day after day wears out the most willing youth. Even the sulky-plow did not entirely remove the burden, for the tired horses always called for sympathy. The modern farmer places in the field a gasoline engine to which is attached a half dozen plows and the plowboy becomes a field chauffeur, getting thru the task with little weariness and much satisfaction. Water pipes thru the barns and water pressure thru the house means comfort to the farmer and his family; motor cars diminish distance and give pleasure, amply paid for by the increase of health and economy of time.

These and many other things that relieve the farmer's life from dreariness have come thru the enterprise and advancement of the new generation. Where the boy has been sent to college and then allowed to carry into effect the lessons he learned there is little for commissions and economists to do—the farmer's problem is taking care of itself.

Not much can be expected of the older generation. The man who has farmed in

the old way for forty years is going to keep on in his accustomed path. In no profession or avocation is there more unyielding adherence to habit and tradition than on the farm. If this be doubted, visit a rural community in one of the older States and note the processes to which older farmers yet cling.

In contrast inspect a farm in the Middle West where the spirit of progress and advancement is manifest. The modern machinery, the new methods and the larger grasp of the possibilities in making farming a business speak for themselves. The attitude of the worker toward his task takes on a new aspect; he considers his land as so much equipment, the factory against which are placed fixt charges and from which are to be derived legitimate profits. This viewpoint marks the real reason for the modern farmer's success, for out of it is evolved the planning and calculation that result in a steady measure of prosperity, the source of a farmer's happiness.

Given a conviction that he can obtain from the soil a regular income and do it with no greater exertion than is required to succeed in any other business, the attraction of the farm for the young man will be ample—what he has objected to has been the intense labor and uncertainty of results.

This is exactly the object of the education given by the agricultural schools and as they turn out their hundreds of educated farmer youth there should be a change in the farming community commensurate with the infusion of scientific methods and a more intelligent comprehension of possibilities. This must come from the young generation, and the father will do well to give his sons opportunity to test their theories and to put into practice their new ideas, instead of insisting that old ways be followed simply because they are old.

The Church in Tuberculosis Medicine

We have just received the report of the Tuberculosis Class of St. George's Church, New York City, for the seventeen months from October 1907, the time of its foundation, to April, 1909. We wish to call particular attention to it because it represents a type of medical work with regard to which there can be no possible question that Christian churches would not only make no mistake in taking it up, but in which they would surely be doing a much needed Christian charity With regard to many other forms of Church invasion of medicine there are not only serious doubts, but, as every one admits, grave dangers. Self-deception is extremely easy, and with the best of will in the world a churchman may glide easily into what proves to be rank charlatanry. In providing, however, for the nutrition of consumptives, so that they shall have better food and better oxygen and more of both, for both are nutritional processes which increase resistive vitality, there can be no possible objection and the most absolute assurance of accomplishing a great humanitarian purpose. How great the need of such effort is only those who are familiar with the difficulties of the poor whenever they contract tuberculosis can properly appreciate. Usually the outlook is despairing. With such aid the prospect at once brightens and even cure is not out of the question.

The problem of tuberculosis is much larger than most people imagine, in spite of the particular attention that has been called to it in recent years. One in eight of our city populations die of it in spite of all the reduction in mortality from the disease that has been secured in the last decade or two. Ordinarily people assume that these figures represent also the numbers who are sufferers from the disease. Any such impression, however, is entirely away from the truth. It is probable that at least one in four of the population have their lives at some time or other seriously threatened by tuberculous processes. All of the so-called pleurisies are now looked upon as tuberculous in origin and character. They used to be considered more or less passing events, in which men suffered from a stitch in the side for a time, with some shortness of breath, and were confined to bed for a few days to a few weeks. Nearly all of the slow-running pneumonias are of a tuberculous nature, or at least have a tuberculous complication. Most of the colds

that hang on, yet are supposed to be nothing more than colds, are really manifestations of a tuberculous process in the bronchi, either recent or an old focus of tuberculosis lighted up by the infectious disease that is familiarly called a cold.

At the recent international congress of tuberculosis, the general impression exprest by physicians, many of them authorities on the subject, was that every person who lives to the age of thirty has or has had tubercle bacilli active in his tissues. In five out of every six of us these are effectually walled off by natural resistance to the disease, tho this walling off constitutes no guarantee that the bacilli may not become active if their host should run down in weight, or should he have his resistive vitality or natural immunity lessened by intercurrent disease, unfortunate sanitary surroundings, or overwork on low nutrition. This gives one an idea of how large the tuberculosis problem is. It is quite impossible to expect that we shall ever be able to furnish sufficient sanatorium accommodations for all the tuberculous of our cities. It would probably also be quite inadvisable that we should furnish such accommodation. Opportunities would be abused, patients would get used to doing nothing and would find it difficult to revert to their active lives, and then would become the victims of nervous depression for lack of occupation. Besides, the question of aid for their families would greatly complicate the problem. Any help in the solution of this, especially if it promises to be diffusive, cannot fail of a hearty welcome.

At St. George's twenty cases of tuberculosis have been under observation in the church class. Every person admitted to the class is required to keep an accurate and complete record of his own daily *régime* and condition in a book supplied for this purpose. This book is carefully inspected each week by the physician in charge, and errors of diet and hygiene are corrected. Symptoms are carefully noted and improvements in the mode of living suggested. On class days, as the patients have to spend some time in the class room, they are served with a rather liberal meal. They are taught how to live outside as much as possible, to air their rooms thoroly, and, above all, to eat properly of nutritious food as abundantly as possible. The most interesting feature of the report is that nineteen of the twenty patients gained in weight, the gains ranging from 1 to 20 pounds. Among those who were in the class more than three months the average gain was 10 pounds. It is no wonder with this before us that we learn from another portion of the report that out of the twenty members suffering from tuberculosis, two cases are "apparently cured," four cases are "arrested" and five cases "improved." In a word, more than one-half the patients have been greatly benefited according to the standards adopted by all sanatoria.

Suppose every one of the thousand churches, more or less, in Greater New York, were to be able to report at the end of each year that it had quietly and inexpensively—the nutritious class day meals cost but 15 cents each—cared for twenty tuberculous patients and brought about an improvement in more than half of them, what a magnificent factor in the crusade against tuberculosis this movement would be. At the same time those associated with the work would themselves be magnificently trained in the hygiene and sanitation of right living, and many of them doubtless be provided with opportunities for absorbing occupation of mind in care for others that would do away with the causative factors of many nervous diseases. There is in this class system for tuberculosis a better opportunity for the Church to do good medical work without any danger of giving occasion for abuses than in any other phase of modern medicine.

Work for Roosevelt

The Hearst newspapers know how to catch a taking idea and exploit it. THE INDEPENDENT published an article by Henry G. Granger last April in which he proposed that President Taft should summon ex-President Roosevelt to be the head of a commission to be sent out from this country to the leading nations of the world urging them to agree on some system of reduction of armaments, or, rather, the dispensing with them except

for police purposes. The job of persuading say the five leading nations of the world, the United States, Great Britain, France, Germany and Japan, to unite in a federation to put an end to war, a union which all the rest of the world would have to join, he would put on Mr. Roosevelt. It is a service, if he can be persuaded to take it up, that would be worthy of him and might be a large enough ambition for a man of his boundless energy and enthusiasm. That would give us the federation of the world, the international congress we all want. We are glad that so large a circle of journals will popularize the plan, and we hope it may be made effective.

Justice at Last for Porto Rico

The President in a special message asks Congress to adopt a new code of laws for Porto Rico. First and foremost it allows voluntary citizenship, and provides that only citizens can hold office. That is as it should be, and as it ought to have been much earlier. The people of Porto Rico have been too long like Mohammed's coffin, and how could they be expected to be particularly loyal to a country in which they had no right except to be ruled? Another provision of the proposed law is the establishment in place of the present Executive Council, all appointed, of a Senate in which five out of the thirteen members shall be elected, while the present House of Delegates shall be called the House of Representatives. We are likely to have in future more harmony between the elected representatives of the people and the Executive, and it begins to appear in the readiness with which, under the new Governor, the House of Delegates has accepted the annual budget.

Hope for the Penitent King

This passage, from a Joint Pastoral of the Belgian bishops to their people on the accession of King Albert, deserves the attention of readers this side the Atlantic:

"You have religiously taken part in the country's recent mourning. Our priests have offered the Holy Sacrifice, our faithful have prayed and received Communion for the repose of the soul of the great King whom Belgium has just lost, and whose renown, contrary to the lot usually reserved to human glory, will, we doubt not, go on increasing, as the lapse of years shall permit a truer appreciation of the immense services rendered by his great and persevering initiative to Christian civilization. The religious marriage of the King and his so manifestly Christian death give us a firm hope that God has been merciful to him, remembering only the higher merits of his royal career. 'Condemn not and you shall not be condemned.' Let us rather repeat the charitable prayer which the Church recites over the grave of all her children who die in union with her."

There is a recognition of the criticisms which have condemned him, with the declaration that before he died he made peace with the Church by his marriage and confession. There is the hope that God has been merciful to one who has offended, which it is only right to indulge. There is the confidence that his Kongo scheme will work ultimately for civilization. Doubtless it will; but his purpose therefor is not clear, and his crime therein is public to the world. No king would wish such a faint eulogy as the best that can be uttered over a late penitent.

Lafcadio Hearn on the Japanese

There are portions of Lafcadio Hearn's private letters from Japan, published in *The Atlantic,* that never ought to have seen the light. The writer was for years a teacher of boys in Japan, and married a Japanese girl. He had written with enthusiasm of Japan and the Japanese. But his views of them changed—or was it his mood? What is here printed—it is too late to suppress it—could not but give offense, and in Japan change the pleasant memory of him to aversion. He says:

"The people have no souls. The Japanese officials have none. Imagine people having no sentiment of light—of blue—of infinity! And they cannot feel possibly the beauty of their own day as you and I do. . . . They have lost the child-hearts that the gods gave them, which were beautiful, and in place of them have something like the legendary apples of Sodom—full of bitterness and dust only."

Now all that is the vaporing of his own jaded soul. He is worn and exhausted, and the change is in himself, and it jaundices all he sees. Nothing less than a confession of the quenching of his own

orbs into spiritual blindness is this conclusion of his correspondence:

"The *finale* of my long correspondence with you on Japanese character is frankly this (I know it is unjust; I know it is small. But I suppose it is natural—and I am not superior to nature,—besides I see no reason why I should not be in all things frank with you):—

"*I hate and detest the Japanese.*

"I refused even to attend a banquet given by a European merchant the other day because there were Japanese present. I wish to make no more Japanese acquaintances. I shall never again be interested in any Japanese of the educated generation. I shall never again receive any of my former pupils. I simply *abominate* the Japanese. . . .

"Excepting, of course, the women of Japan, who are—well, who are not Japanese. They remain angels."

We quote what ought never, for sweet charity's sake, to have seen print, not to denounce it, but to excuse it as we excuse the obliquities of a disordered mind. Sane men do not talk so. Imagine Dr. DeForest writing such brutality to an intimate friend!

Religious Liberty in Madagascar

We hear much of the hostility of the Government to Christian churches in France, but very little of the same wrong in the French colonies. In France the churches at least are not shut up, and those can go who wish, but religious liberty does not exist in Madagascar. After nine years of war General Gallieni made the complete conquest of the island, during which the missions suffered severely and were under suspicion as English, but the loyal conduct of the missionaries secured his confidence at last so that at his withdrawal in 1905 the college, schools and dispensaries were doing good work. But his successor, M. Augagneur, was a pronounced agnostic and entered with a campaign to destroy the Christian religion there. He immediately suppress the Y. M. C. A., forbade any school to be taught in a church, thus shutting up three-fourths of the schools, which the Government schools provide for but a very small part of the pupils. These Government schools require the children to attend Sunday morning, so that they cannot go to church, and there are given talks to the children telling them that there is no God, that the story of Christ is a myth, and that this life is all they have to think of. In some districts out of fifty churches not one is allowed to have a school, and a missionary's wife has been forbidden to teach children on the veranda of her own house. In the villages no cottage meetings are allowed. The revival of heathen practices is encouraged, and efforts are made to make Sunday a day of public sports. In many places the churches have been closed, the crosses removed and the furniture thrown out of doors, while missions to the heathen are prevented. In South Africa and India the British Government gives subsidies to French mission schools, and it would seem as if the British Government might offer effective friendly intervention. This may have been done, for we learn that the hostile Governor has been recalled, and in his place one has been sent whose dealings in Tahiti have given no such offense.

If there is an editor of longer standing on the religious press than I. M. Atwood, D. D., we do not recall his name. Dr. Atwood has been for almost forty-three years connected with *The Universalist Leader,* either as editor, associate editor or the writer, for thirty-three years, of a page of editorial "briefs." During thirty years of this time he has been either president of the Universalist Theological Seminary, at Canton, N. Y., or general superintendent of the churches of the country. We doubt if any better educational work could be done in these positions than he has done by his weekly "briefs." They are short notes discussing any subject that might come up, religious or secular, and have been written with intelligence and sanity, and with a constant purpose to influence rather than amuse. His has been a conservatively evangelical force, and we are sorry to see him lay down his pen.

It is a curious fact that under the postal regulations the publications of fraternal societies, educational institutions, trades unions, lodges, etc., pass thru the mails as second class matter, tho they have no subscribers, but not the publications of churches. This is strange, and an amendment ought to be added to the effect that all publications of religious denominations whether of denominational organizations and agen-

cies, or of particular congregations and religious societies, issued annually or at shorter intervals of time, shall be admitted to the mails as second class mail matter, provided that such publications shall be published only for religious purposes and shall not contain any advertising matter of any kind. There are no organized bodies of men and women in our country that are so earnestly and generally engaged in benevolent and charitable work, and in advancing the moral welfare of individuals and the nation as the Churches, whether Protestant, Catholic or Jewish.

One of the many services which the late Spencer Trask, who was killed in a railway wreck on the last day of the year, and which will otherwise escape the knowledge of the press, was his presidency of the board which cares for the Armenian orphans of the Turkish massacres and the orphans of the famines of India. At the Church of the Ascension last Sunday many of the lines of public activity to which the deceased banker was devoted were recounted by Governor Hughes, ex-Mayor Low, Dr. Henry Van Dyke, and others. Twenty-seven different religious, benevolent, educational and social organizations were represented of which he was an active member, and we do not know of how many of these he was president, as he was of the National Arts Club. In all these lines he was as generous as he was active and useful.

San Francisco has the kind of a Mayor its people want. They want to gamble, and the Mayor says they may, white men or Chinese, all they wish to, if they only keep within the law. He is quoted as saying:

"I believe that any one has a right to gamble in his home or place of business, as well as those who gamble in clubs. I gambled the other day on the train coming up from Monterey. I played poker. Poker is a legal game, as I understand it, except when the house takes a percentage.

"The Chinese may gamble their heads off, so that they keep within the law. They will not have to give up a cent for it, and if I find that any man has taken a cent from them or attempted to make them give up he will get the full penalty of the law, if I have the power to give it to him."

We suppose the Mayor would let them start up the lottery again, if the United States Government would only let them use the mails.

It becomes pretty plain that Head Forester Pinchot was glad to be removed from office, and anticipated it when he wrote his letter to Senator Dolliver. He knew there was to be an investigation by Congress, and he wanted to be free to take part in it. He has been made president of the Forestry Association, and will give all his energy to conservation, while his successor in office will carry out his policy, and Secretary Ballinger, who is under fire, must needs move with the procession. The investigation begins in a very interesting way, and the probe is likely to go deep.

In the quarrel between the Government wireless operators and the high school boys who make and work their own amateur appliances we are with the boys. Of course, there may be rules to govern the business, but they should be very liberal. There need be no interference, and these boys are the hope of future invention. It is magnificent that hundreds of them have left football for electricity, and hundreds of others for aviation.

We do not quite approve of the penalty imposed by an Indianapolis magistrate of requiring offending saloon keepers to go to church for a Sunday and get a certificate of it from the minister as a condition of renewing a suspended license. It makes a spectacle of the man, and it does not make him love the church to be sent to it as to a penitentiary. On the public it has the appearance of a joke, in a place where a joke is not befitting.

The American people want no tariff war with Germany. We appreciate that the German farmers want to supply their own meat for their own people, and to keep the price up, for they believe in protection and high tariff for themselves just as we do. With them it is beef and pork; with us it is iron and lumber. So both countries continue to help their own producers and squeeze their own consumers.

Financial

Mr. Taft and the Trusts

PRICES on the Stock Exchange were affected at the beginning of last week by sensational reports from Washington that the President was planning a sharp attack upon Trust combinations. The general tendency of the market had been downward, and the Hocking manipulation incident had promoted the decline. The reports from Washington appeared in some papers on the afternoon of the 24th, and in many on the following morning. Prices fell on the 24th, and there were further losses on the 25th, until a statement from the White House caused a rally. Extreme declines in the most active stocks were as follows: Union Pacific, 9⅝; Reading, 8½; Amalgamated Copper, 6; Southern Pacific, 6; Steel, 5¾. Recovery on the 26th was succeeded by another break on the 27th, but at the end of the week more than half of the loss had been made good, the net declines ranging from 1¼ for Amalgamated and 2½ for Steel to 5 for Union Pacific. Among the favorable incidents was the declaration by the Steel directors of an extra dividend of ¾ of 1 per cent., which makes 4 per cent. for the full year 1909. Net earnings in the December quarter were $40,971,309, against $38,246,907 in the quarter immediately preceding.

The sensational reports mentioned above seemed to have a common origin, but were not identical in form. They appeared in journals of a conservative character, as well as in journals of the other kind, and professed to have the warrant of "high authority." All agreed in saying that the President was waiting only for the final decision in the Standard Oil and Tobacco cases, and a majority asserted that one of the first combinations to be prosecuted would be the Steel Corporation. At noon on the 25th, the stock market then showing considerable losses, the following was given out by the President:

"No statement was issued, either from the Attorney General's office or the White House, indicating that the purpose of the Administration with reference to prosecutions under the Anti Trust law is other than as set forth in the message of the President of January 7, 1910. Sensational statements, as if there were to be a new departure and an indiscriminate prosecution of important industries, have no foundation. The purpose of the Administration is exactly as already stated in the President's message."

Those who are responsible for the publication of the sensational reports insist, however, that the message itself fully warrants the predictions which they made on the 24th. And it is true that the message foreshadowed many prosecutions. It was his purpose, Mr. Taft said, to have investigation made, "thru the grand jury or otherwise," of all combinations suspected of doing business in violation of the Sherman act. Also it was his duty and purpose to enforce the law. He deplored the effect of such an investigation, and proposed national incorporation as something by which the "business danger" might be avoided. But Congress does not like the proposition, and the great companies or combinations oppose it.

The Guaranty Trust Company

FOLLOWING the acquisition of control of the Guaranty Trust Company by the banking house of J. P. Morgan & Co. and those associated with it, a merger of the Morton Trust Company and the Fifth Avenue Trust Company with the Guaranty was proposed. On January 5 the merger was approved by the three boards of directors, and the consolidation became effective last week. Nearly 100 per cent. of the stock of each of the three companies had voted for it, and there was not one share in opposition. Officers of the enlarged institution have been elected. Alexander J. Hemphill, president of the old Guaranty and for a long time its senior vice president, is the president of the enlarged Guaranty. Mr. Hemphill was born, in 1856, in Philadelphia, where he was educated and at the age of nineteen entered the service of the Pennsylvania road in the accounting department, where he steadily rose. In 1883 he became secretary of the Nor-

folk & Western Railroad, and at that time was probably the youngest officer of any railroad in the United States. He entered the service of the Guaranty Trust Company in 1905. Ex-Governor Levi P. Morton, formerly president of both the Morton Trust Company and the Fifth Avenue, has been elected chairman of the new board. The old officers of the Guaranty have been re-elected, and with them two new vice-presidents—Charles H. Allen, formerly vice-president of the Morton Trust Company, and H. M. Francis, who was secretary of the same company. The enlarged Guaranty begins its work with a capital of $5,000,000, a surplus of $18,000,000, undivided profits amounting to $3,000,000, and deposits of $130,000,000, which make it the largest institution of its kind in the world.

A New President of an Old Bank

Lewis L. Clarke, who was recently elected president of the American Exchange National Bank (having been vice-president), was born in 1871 and was educated at the Berkeley School and at Packard's Business College in this city. When he entered the service of the bank as office boy in 1889, he was eighteen years old. In 1897 he became secretary to the president, who was his father, Dumont Clarke, and in 1901 was appointed assistant cashier. Two years ago he was elected vice-president. He is a member of the Lotos, Union League, New York Athletic and Englewood Golf Clubs, and of the New England Society, and last week he was elected a member of the board of directors of the United States Mortgage & Trust Company. The other officers are: Edward Burns, vice-president; Walter H. Bennett, cashier, and A. K. deGuiscard, assistant cashier. The directors are: W. Bayard Cutting, John T. Terry, J. Rogers Maxwell, John Claflin, William P. Dixon, Levi C. Weir, Samuel Rea, William L. Bull, Clarence H. Mackay, Edwin Hawley, Pliny Fisk, Edward Burns, Lewis L. Clarke and Basil W. Rowe. The American Exchange National Bank was organized in 1838 with a capital of $1,155,400, and it became a national bank in 1865. The capital now is $5,000,000 and its surplus is $2,250,000. Its undivided profits are more than $2,850,000, and its total resources exceed $52,400,000. Its presidents, with the years of their election, have been: Nathaniel Wood, 1838; David Leavitt, 1839; Samuel Willets, 1853; William A. Booth, 1855; George S. Coe, 1860, and Dumont Clarke, 1894.

LEWIS L. CLARKE,
The new president of the American Exchange National Bank.

....According to the *Railroad Age-Gazette*, 3,748 miles of railroad were built in this country in 1909. In 1908 the number of miles was 3,214, but there were more than 5,000 in each of the two years immediately preceding.

....The Rock Island Railroad Company has established a pension system for its employees. It has also adopted a rule that hereafter no inexperienced person over thirty-five years of age, nor any experienced person over forty-five, shall be taken into the company's service.

INSURANCE

Addresses Before the Washington Meet of the Association of Life Insurance Presidents

In his address before the annual meeting of the Association of Life Insurance Presidents, held at Washington, D. C., on January 19, Charles E. Hughes, Governor of New York, declared his faith in life insurance as an American institution. He said that no life insurance organization which is honest and economical need fear State control or expect to suffer from legislation. On the subject of legislative corruption he said:

"I hope the time has gone by when it will be thought necessary to protect the interests of life insurance policyholders by efforts to corrupt legislators. Publicity, discussion, fair understanding of what you have in view, and what is essential to the proper conduct of this business—those are your guarantees, and those are the securities of the policyholders you represent.

"You are not handling your own moneys, but the savings of the people. You are not responsible for legislation, and you have no duty in any way, by any method which will not stand full and public discussion, to thwart any attack upon the interests committed to your care. You can much better trust the people, if they understand the situation, than you can trust those who are purchasable and run the risk in the future of reaping the harvest which is inevitable if there be sown in our legislative halls the seed of bribery and corruption.

"We must have the efforts of our insurance departments of supervision supported in public opinion, and I believe that I am addressing men here every one of whom wants to see the laws faithfully enforced, without favoritism or partiality, without covering anything up, and with a desire that those that are honest and economical in their management should have the benefit that should accrue from such honesty and such economy, and those that are guilty of improper practices should be exposed at the earliest possible moment."

Governor Hughes was followed by L. G. Fouse, president of the Fidelity Mutual Life Insurance Company, of Philadelphia, Pa., whose theme was "Problems Arising from Conflicting State Laws and Departmental Rulings Relating to Life Insurance." Mr. Fouse said that:

"From fifteen to twenty million dollars a year is the toll paid by the life insurance policyholders of the country as a result of the lack of uniformity in State insurance laws and practices. This is at least 5 per cent. of the yearly payments to policyholders and beneficiaries, he figures. He said that it was of great importance that waste and unnecessary taxation be stopped."

John A. Hartigan, Commissioner of Insurance for the State of Minnesota, in his address, which followed, said:

"The present great dissimilarity of State supervisory laws imposed heavy expense on insurance companies. This lack of uniformity is exasperating both to the departments and the companies. The work of the department is increased and the result of this work diminished on account of the diverse demands of different States. A company complying strictly with the law of one Commonwealth may find itself on that account a lawbreaker in another. The result to the policyholder is increased cost of supervision, which increase he must bear."

Federal Supervision of Insurance

George F. Seward, president of the Fidelity and Casualty Company of New York, has embodied his paper on "Federal Supervision of Insurance," read at the Washington Conference on Uniform Legislation, on January 17 last, in a pamphlet, which he has just issued, and which also contains the draft of a model law for the District of Columbia. Mr. Seward has likewise included the general provisions relating to stock companies and specific provisions for casualty insurance companies, bearing date of 1906.

The Massachusetts Accident Company has discovered a hazard in the flat foot or broken down arch. This is a condition well known to chiropodists and which has frequently been diagnosed as rheumatism or rheumatic gout. The company has warned its agents against assuming risks on prospects suffering from this cause as follows:

Cases of "flat foot" and "broken arches" are becoming very frequent, and often complicate cases of sprained ankles, and are, no doubt, the immediate cause of many sprained ankles. It should be remembered, when securing applications, that any deformity or disease that complicates an accident reduces the indemnity or places the claim under the sickness provisions of the policy. It would be a good plan to inquire about the conditions of the applicant's feet as well as other parts of his body, and it would probably save a great deal of trouble and bad feeling later on.

The Independent

VOL. LXVIII NEW YORK, THURSDAY, FEBRUARY 10, 1910 No. 3193

Survey of the World

The Ballinger-Pinchot Investigation

When the Ballinger-Pinchot investigation was resumed, last week, the committee cross-examined Louis R. Glavis, the dismissed agent of the Land Office. Donald McKenzie, of Seattle, prominent among the Alaska coal claimants, he said, had boasted in conversation with himself and Special Agent Jones that the influence of these claimants had been sufficient to prevent the reappointment of Secretary Garfield to the Cabinet. This influence had been exerted through members of Congress, who protested against the retention of Mr. Garfield. Jones and himself had preserved a report of McKenzie's remarks in an affidavit. This was before his own dismissal. In answer to questions from Senator Root he said he had not intended to use the affidavit against President Taft. He thought the latter would like to see it, and it had been his purpose to show it to him, and also to Mr. Garfield. It had never been made public. McKenzie had not said that the same influence was used to procure the appointment of Mr. Ballinger. The witness's consultation with Shaw, of the Forestry Bureau, had been authorized by the terms of an agreement between Secretary Garfield and Secretary Wilson. The proceedings against the fraudulent Alaska claims had been stopped by Land Commissioner Dennett when he, Glavis, was on the point of laying evidence before a grand jury. He had been told that Dennett was supported for reappointment by Congressmen McLachlan, McKinlay and Kinkaid, who were in the Green group of Alaska coal claimants. He produced a letter, in which Land Agent Schwartz informed him that Senator Guggenheim (alleged to be interested in the Cunningham group of claims) had also asked for the reappointment of Dennett. Witness gave the committee copies of letters written by M. D. McEnery to Dennett and others, saying that Senator Guggenheim had called upon the President in Dennett's interest and also referring (in August, 1909) to the approaching appointment of Ernest Knaebel, of Colorado, upon the recommendation of Senator Guggenheim, to be Assistant Attorney General in charge of land questions. In 1907, Dennett before a congressional committee had argued in favor of a bill which would have validated all the Alaska coal claims. There were more than 800 of these, and Glavis had been able to make a favorable report upon only twenty-one. The Cunningham claims cover 5,200 acres.——Testimony was taken at only one session last week. The committee then suggested to Secretary Ballinger that he should be represented by counsel, because it was embarrassing for the committee to be obliged to conduct cross-examinations. This was also the opinion of the President. Therefore the Secretary retained John J. Vertrees, a prominent attorney of Nashville, Tenn., and Carl Rasch, formerly district attorney of Montana. In order that they might have time to become familiar with the case, an adjournment to February 11 was ordered.——Representative McLachlan, of California, has made a statement, saying that Governor Gillett and Representatives McKinlay and Kinkaid have been interested with him in the Green group of Alaska coal claims; that he has violated no law; that he bought an original entryman's claim, has found coal in the tract, has spent $4,000, and is willing to sell out for that sum. Representative Kinkaid says he bought an entryman's claim of 160 acres, and that Mr. Ballinger was his attorney in the transaction. He insists that he has committed no offense against a statute or the

moral law. Governor Gillett says he bought a claim of 160 acres for himself and one of 120 acres for his wife. They are in the Green group of anthracite claims, 10 miles from those of the Cunningham group. He and several of his associates have formed a company to develop the property.——It is asserted in special dispatches from Washington that when Mr. Pinchot testifies he will say that when he sent to Senator Dolliver the letter on account of which he was removed he did it with the approval or acquiescence of Secretary Wilson, the head of his Department. The President said in his letter to Mr. Pinchot that the latter had sent the letter "against the advice of the Secretary of Agriculture and without notifying him that you intended to do so." It was held that Mr. Pinchot had disobeyed the executive order that no bureau officer should take such action without the permission of the head of his Department. Mr. Pinchot, these reports say, believed he had such permission, but has preferred to make no defense that would raise an issue between himself and a superior officer with whom his relations had for years been friendly and intimate. ——The bill prepared by Secretary Ballinger, empowering the Secretary of the Interior to order the withdrawal of lands on account of forestry service, water power sites or irrigation projects, or for classification, and also authorizing him to restore them to the public domain, has been rejected by the Senate Committee on Public Lands, which has preferred to report a substitute, giving the power to the President and providing that the withdrawal orders shall be in force until revoked by him or by act of Congress.

No Tariff War with Germany

A tariff war with Germany was averted by an agreement reached on the 3d. A bill ratifying this agreement was introduced in the Reichstag by the German Government on that date, and it was passed on the 5th, without change and without debate. There were only a few dissenting votes. Germany has a maximum tariff and a minimum, or conventional, tariff, the rates of the latter being granted to several countries by special treaties. Under an agreement made with the United States in 1907, these lower rates have been imposed upon nearly all imports from this country. But this agreement was to expire on February 7. Thereafter the imposition of Germany's maximum rates would have been required by the German law. This discrimination against the United States would have caused, after March 31, the imposition here, on imports from Germany, of duties exceeding by 25 per cent. those of our new tariff. Under the new agreement Germany grants to us, for all imports, the lower duties fixed by her conventions with seven other countries, in return for the imposition of our regular tariff rates upon her products. The provisions of the old agreement as to valuation of German imports are continued in force. There was some friction about Germany's severe restrictions upon imports of pork and her exclusion of American live cattle. Finally these questions were set aside for separate treatment hereafter. Probably the pork regulations will be modified, but it is not expected that cattle will be admitted. Germany insists that these questions are in the domain of sanitation and cannot properly be associated with tariff rates. Trade between the two countries amounts now to $409,000,000 a year. Since 1899 our exports to Germany have risen from $161,400,000 to $247,300,000, and our imports from Germany from $89,500,000 to $161,950,000. There will now be similar negotiations with France. That country will doubtless avoid the imposition of the additional 25 per cent., being surrounded by countries—Great Britain, Germany, Russia, the Netherlands, Switzerland, Spain and Italy—which have done so. France will be required to give to the United States rates as low as those granted to any other country.

Heavy Damages in a Boycott Case

In Hartford, on the 4th, at the close of a trial that had consumed eleven weeks, in the suit of D. E. Loewe & Co., hat manufacturers, of Danbury, Conn., against Martin Lawlor and 240 other members of local unions of the United Hatters of North America, to recover damages inflicted by a boycott following a strike declared because Loewe & Co. had refused to unionize their factory, the jury decided that the damages were $74,000. As the Sherman Anti-Trust Act, under which the suit

was brought, multiplies the damages by three, the sum to be paid is $222,000. The suit was begun in 1903, and in 1908, upon a demurrer, the Supreme Court decided that such a combination as was made by those who directed the boycott in question was one which the Sherman Act made unlawful. The evidence showed that the striking union men, supported by the Federation of Labor, extended the boycott thru the country and made it notably effective on the Pacific Coast. The trial was in the United States Circuit Court, and Judge Platt, in his charge, practically directed that a verdict for the plaintiffs be brought in, leaving the jury only to determine the amount of damages. The defendants will appeal. Soon after the suit was brought, their real estate and savings bank deposits were attached to insure payment. This property was afterward released under a bond given by the national union.

The Islands

One of the principal witnesses in the Philippine Government's investigation of election frauds in Laguna province has been murdered, and it is thought that he was killed by those whose corrupt conduct had been exposed by his testimony. The inquiry shows that there was widespread bribery of election officers and much corruption at the polls in the November election. On account of the evidence, the claim of General Cailles, for a long time Governor of Laguna, who contested the election of his successor, has been thrown out.——Twenty-three Japanese arrested for violating the United States laws against killing birds of plumage have been brought to Honolulu on a revenue cutter, whose commander had seized 250,000 pairs of wings that were in their possession. It is said that for some years past at least 1,000,000 birds have been killed each year by Japanese on Midway Island and other islands of the group lying northwest of Hawaii. It has been the custom of the poachers to leave the birds to die after cutting off their wings. These were carried away in fishing schooners and sold in London and Paris.——The editors of four newspapers in Havana were arrested last week for slandering and insulting the President of Cuba. Two (the editors of *La Prensa* and *El Gordo*) were found guilty of libeling him and were sent to prison for short terms. The others were released, because the articles which they published had been written by Congressmen, who enjoy parliamentary immunity. The Speaker of the House has introduced a severe bill for the regulation of the press, and it is condemned by newspapers of all parties and factions.

Revolutionists Winning in Nicaragua

At the close of last week the end of the war in Nicaragua appeared to be in sight. The revolutionist army has been moving westward in two columns. General Chamorro's, taking a northerly course, passed around the Government army (intrenched near Acoyapa), captured the town of Boaca, and at last accounts was about to force a passage to Managua, the capital, across the neck of land which separates the two lakes. The Government intended to make a stand at Tipatapa, 24 miles from the capital. The other column, under General Mena, attacked and defeated the Government's main army, near Acoyapa, and on Saturday this army was practically surrounded, Chamorro's forces being between it and the capital. A brother of Estrada, the revolutionist President, has, it is said, raised a force of 1,200 men within a few miles of the capital, and will add these to Chamorro's column. Volunteers are joining the revolutionists, who now have more than 6,000 men in the field. At Managua, Madriz has added censorship of the mails to censorship of cable messages. He has forced American citizens to join his army, and several plantations owned by Americans have been pillaged by his forces. He asserts that his political opponents have been plotting to cause American intervention by firing upon a United States warship at Corinto.——Zelaya left the Mexican capital on the 30th ult., to sail from Vera Cruz for Belgium. It is reported that at the suggestion of our Government President Diaz advised him to leave Mexico. He has published the letters and telegrams upon which he relies for defense against prosecution for the execution of Cannon and Groce. He says the Nicaraguan Government was robbed of a decisive

victory over Estrada by the trickery of the United States Government, which asked for a truce of one week for peace negotiations and during that week supplied Estrada with arms and ammunition. ——The situation in Honduras is critical, and President Davila may be deposed. He was placed in power by Zelaya. Congress refuses to ratify his decrees. The Central American Peace Congress, in session at San Salvador, has adopted resolutions favoring the gold standard, tariff reciprocity for the five republics, the unification of their consular service abroad, the use of the French metric system, and the establishment of a pedagogical institute in Costa Rica.

Various Topics

Owing to the popular interest in the increased cost of living, provision has been made for a thoro investigation of the subject in Congress, by the Ways and Means Committee in the House and by a select committee in the Senate. In several State legislatures bills for the regulation of cold storage warehouses have been introduced, because some believe that the prices of food have been raised by means of such storage facilities. In Jersey City a grand jury is making an inquiry concerning the storage warehouses. The Eastern railroad companies have published a statement in which they say that the increased cost of living is not due to a higher cost of transportation, because the average of freight rates has declined in the last decade. On the other hand, they point out that the cost of the articles which railroad companies must buy has been advancing.——At Albany, the charges against Jotham P. Allds, president of the Senate and formerly leader of the Republican majority in the House, have been formally made by Senator Conger, his accuser, who asserts that on or about April 23, 1901, Mr. Allds, in his presence, demanded and received $1,000 "in consideration for his having refrained from pressing to passage a certain bill then pending." Mr. Allds was then leader of the majority and a member of the powerful Committee on Rules. His reply to the accusation is a comprehensive denial. In the approaching investigation both men will be represented by prominent attorneys.

The Paris Floods

The Seine has rapidly subsided during the week and most of the inundated area of the city and environs is again habitable. The Parisians have reacted against the recent apprehension and misery with their usual vivacity, and resumed social life with enhanced liveliness, while in an equally characteristic manner the catastrophe is made the basis of attacks upon the Government. President Fallières is being blamed for his parsimony in subscribing only $4,000 for the sufferers and in not risking his life in taking an active part in the rescue. He has, however, inspected the flooded quarters daily in an open rowboat, whatever the weather, in spite of his sixty-nine years. The fact that the old bridges and quais of Paris stood the inundation better than the modern has been seized upon by the Royalists and Clericals as an occasion to denounce the incompetence and unreliability of a generation which has deserted the old standards and puts faith only in scientific formulas. The damage to buildings has, however, been very much less than was apprehended. None of the monumental edifices of France have collapsed, and the streets, sewers and quais can be restored without much difficulty, tho probably a new system will be designed to prevent catastrophes in the future. There are so far no evidences of an outbreak of epidemic diseases, and it is believed that by a systematic disinfection and pumping out of the cellars this may be averted. In fact, the immense volume of water flooding the city has, on the whole, purified rather than contaminated it. It is estimated that more than a quarter of a million persons have suffered from the flood in some way, and the total financial loss due to interruption of employment and interference of trade cannot be estimated. Some employers have granted half pay to their working people during the period when their works have been closed. The foreign relief contributions amount to about $700,000, of which more than half come from American and English sources. On account of the delay and red tape of the Government and municipal relief measures, the independent organizations and private individuals have been actively engaged in behalf of the sufferers. Automobiles loaded with provisions and

A Submerged Quai in front of the Louvre.

supplies have visited the devastated districts, where they were sometimes received with hostility by being mistaken for sight-seeing parties. Terrible tales continue to be received of the cruelty and greed of the apaches, or Parisian outlaws, and many of these have been shot, hanged or drowned by the people or soldiers who caught them looting the flooded houses. —— "Chantecler," the barnyard play of Edmond Rostand, finally secured its first representation on Sunday night. The novelty of having all the actors in the guise of birds and animals and an enlarged stage setting to correspond aroused interest, and its verse is said to be equal to "Cyrano" and "L'Aiglon."

British Politics

As a final result of the Parliament elections the Liberals have practically come out even with the Unionists. In so far as party lines can be drawn, the composition of the new Parliament will be: Liberals, 274; Unionists, 273; Laborites, 40; Redmond Nationalists, 70; O'Brien Nationalists, 12. The attitude of the followers of Mr. Redmond is uncertain. Altho they are dissatisfied with the budget they may be expected to support the Government on this point, if they have some assurance of home rule legislation, but William O'Brien, leader of the "Independent Nationalists," will fight it with all means in his power. His attitude may be judged from the following utterance:

> "There is no doubt that the Irish Party contemplates the blackest treason perpetrated against the Irish since the Act of Union. The Nationalists propose to assist the Government in passing the budget which will impose on Ireland $10,000,000 in taxation per annum."

Premier Asquith has not yet divulged his plan, so speculation is still rife as to the extent of his reorganization of the Cabinet and as to whether he will bring forward first the budget bill or a motion for the limitation of the powers of the House of Lords. If he begins by the attack on the House of Lords it will postpone indefinitely the settlement of the financial question and leave the revenues in their present chaos. It is impossible under the circumstances to enforce the payment of the income taxes

provided for in the new budget, and the majority of those liable to the taxes are postponing payment until the bill is passed. The House of Lords could not consistently refuse to pass the budget bill, but if it is brought up in the House of Commons now part at least of the Irish contingent would desert the Government. On the other hand, all the Nationalists would support a vote against the House of Lords, but the Lords might take occasion to precipitate another general election, in which the Liberals would fare worse than before. But it is hardly possible to postpone the settlement of the revenue until such a difficult constitutional question as the reorganization of the Upper House is worked out satisfactorily to the various elements composing the Liberal majority.——One of the measures of the Government from which great good is hoped went into effect on February 1, when 80 labor exchanges were opened in different parts of the United Kingdom. One hundred and fifty more are to be started within the next six months. The need for such facilities was demonstrated on the first day, when the rush for registration at the London bureaus was so great that the doors had to be closed before noon. This is a purely voluntary system intended to direct labor to those occupations and to localities where the opportunities for employment are greatest, and to aid employers in finding the men they need.

The Cretan Question

The announcement that King George had consented to call a national assembly for the revision of the Greek Constitution has again renewed the agitation of the Cretans for annexation to Greece, and they at once exprest a determination to send delegates to the constitutional convention. Of course, their admission would be an open affront to Turkey, but it would be difficult to get the Greeks to exclude them if they present themselves for admission. The situation has been

THE PARIS FLOODS.
The Pont de l'Alma.

relieved temporarily by the decision of the King to postpone the convocation of the national assembly to next December. The four protecting Powers—France, Russia, Great Britain and Italy—have notified the executive committee of Crete that they will not be allowed to send delegates to Athens. In case they show a disposition to persist in the intention, the Powers will probably reoccupy the island, which they evacuated last July. The Turkish Government, humiliated by the loss of all authority and claim over Bulgaria and Bosnia-Herzegovina, would not endure any further dismemberment of the empire, and the Young Turks are not at all indisposed to undertake a war with Greece.

The Indian Councils

The workings of the new system of legislative councils devised by Lord Morley and the Viceroy and approved by Parliament will be watched with interest in view of the disturbed condition of the country. The Imperial Legislative Council as enlarged and reconstituted may contain thirty-six officials, including the Viceroy, while the non-official element will number thirty-two. In the elections the Mohammedans proved to be more skilful politicians than the Hindus and secured a larger representation than was expected. The rules permit of interpellation on all subjects except foreign affairs and cases under adjudication in the courts. All questions must, however, be designed *bona fide* for information and must not "contain arguments, inferences, ironical expressions or defamatory statements," and the president may disallow any question without giving a reason for it. Speeches are to be limited and obstructive tactics will not be tolerated. The Viceroy, Lord Minto, in opening the Imperial Council in Calcutta, made it very plain that the British Government did not intend to relinquish or endanger its supreme authority, as the following extracts from his speech will show:

"I commit no breach of confidence in saying that the Government of India distinctly maintained that representative government in the Western sense was totally inapplicable to the Indian Empire and uncongenial to the traditions of an Eastern population. The safety and welfare of the country depend on the supremacy of the British administration, and that supremacy cannot be delegated to any kind of representative assembly. We have aimed at reform and the enlargement of our Counsels, not at the creation of Parliaments. One criticism I refuse to accept—namely, the suggestion that the Councils Act of 1909 is the result of a concession to seditious agitation. It is purely a recognition of the political condition of India which no responsible administrator could disregard.

"It is, unfortunately, too true that the progress of the work upon which we have been engaged, and in the completion of which we hoped to confer a welcome boon upon the people of India, has been marred by a succession of abominable crimes which forced my Government into one repressive measure after another; and yesterday, on the eve of the assembly of this Council, a faithful and gallant public servant was brutally murdered within the precincts of the High Court and in the broad light of day. A spirit hitherto unknown in India has come into existence—a spirit opposed to all teachings of Indian religion and traditions, a spirit of anarchy and lawlessness, which seeks to subvert not only British rule, but the governments of Indian chiefs to whom I am so deeply indebted for loyal assistance. We are called upon to deal with subterranean machinations, methods of assassination and robbery, which are dangerous to public safety and discreditable to the fair fame of India. We are aware of associations which are doing their best to inveigle into their meshes the youth of the country poisoned by the dissemination of revolutionary literature, and which, out of a chivalrous unwillingness to interfere in any form with freedom of speech, the British Administrations have tolerated for too long. The present dangers we are prepared to meet, and the moral training of the rising generation our duty will no longer allow us to neglect.

"We can no longer tolerate the preachings of the revolutionary press. We are determined to bridle literary license, and I am glad to believe that the support of the enlarged Council will go far to assure the Indian public of the soundness of any measures which we may deem right to introduce."

It is apparent that the agitation against British rule is growing, and that a serious outbreak is to be feared. The chief danger is that the movement may spread to the army and cause another mutiny. Some symptoms of disaffection have already appeared in a native regiment of Jats stationed at Calcutta. Ten soldiers have been arrested for seditious propaganda. The regiment will be sent to some remote station. The Government of India has within the last two years been given exceptional powers for the suppression of criminal attacks on officials and the holding of seditious meetings and other manifestations of disloyalty.

The Remedy for the High Prices

BY J. PEASE NORTON

[Mr. Norton is Professor of Political Economy at Yale University and is also Actuary for a large firm of New York bankers. He is a member of many learned societies and has written widely on economic and financial topics. His suggestions for currency reform are along the most advanced lines.—EDITOR.]

THE popular outcry, now sweeping the country, directed against the prevailing high prices, forcibly illustrates some of the social consequences of the depreciation of gold. As a standard of value, gold has proved decidedly unstable. Under new methods of mining, the mining cost of gold, which for practical purposes of comparison may be measured in gold per ton of ore, has decreased to a very considerable extent.

Gold ore yielding twenty dollars gold bullion per ton is relatively rare in nature. On the other hand, gold ore running four and five dollars per ton is distributed very widely and the deposits are of large area. When, therefore, mining engineers and chemists succeeded in devising methods of extracting gold from ore as low in grade as five dollars per ton at a profit, the potential supply of gold enormously increased. As a result of these scientific discoveries, the annual production of gold began to mount at an increasing rate in the nineties. Exactly as the successive issues of greenbacks by our Government during the Civil War forced prices to higher and higher levels until finally commodities sold at two and threefold previous prices, so gold, ever increasing in production, has produced a similar effect.

Bradstreet's index of average prices indicates an advance of 60 per cent. in prices since July 1, 1896. In other words, a dollar's worth of goods today could have been purchased for sixty-two cents in 1896. During the past thirteen years, prices have maintained an average advance of 4½ per cent. per annum.

The individual, therefore, who deposited one dollar in the savings bank in 1896, to be compounded at 4 per cent. for the thirteen years, at the present time would have an amount, principal and accumulated interest, barely sufficient to purchase the goods which he could have purchased with his original dollar in 1896. Measured in purchasing power, the savings bank depositors of the United States in reality have received no interest on their funds for thirteen years, since the interest credited just about balances the depreciation of their funds in purchasing power.

The gold inflation is world-wide and prices everywhere have moved upward in response. In the United States the rise in prices has been intensified by three causes, which probably are in order of importance the banknote laws, the storage and cold-storage development and the tariff. If the advances in prices for the United States and England are contrasted, the increases are 60 and 40 per cent. respectively. It is reasonable to infer that two-thirds of the advance in this country probably are due to the gold and banknote inflation, and one-third to other causes such as the trusts and the tariff.

At the present time popular clamor seeks to fix the responsibility upon the trusts, just as in Washington's day a similar agitation resulted in laws against "forestallers and monopolists," whereas the true cause lay in the depreciating continental currency. "Not worth a continental" in the future may be substituted by the phrase "Not worth a gold dollar"; for, how serious the situation may become nobody knows.

Great evils are caused by the swift changes in average prices. No writer has discussed the exceedingly important phases of this subject more trenchantly than Mr. Byron Holt. Mr. Holt stated in his vice-presidential address at the meetings of the American Association for the Advancement of Science that in the past year prices have increased 10 per cent. Every individual knows whether his income has increased 10 per cent. If his income has not increased in proportion, that person is to be numbered among those who in Cicero's

words are "eager for new things." History teaches that social disturbances are fed on rising prices because the seeds of discontent more easily are sown. Social disturbance and prosperity are night and day in history. Prosperity is based on order. To maintain prosperity, therefore, a stable standard of value is imperative.

The United States is at a critical period in monetary history. It is fortunate that the Monetary Commission is in existence and in a position to pay attention to the grievances of the people. Just as in a critical period in the monetary history of England Locke and Newton were given the task of framing a financial system based on correct "mathematical principles," so preparations should be made to substitute for the present, illogical monetary and currency systems, one based on the "mathematical principles" of monetary science.

It was Jevons who, in a previous generation, pointed out the two forward steps in money and exchange: first, a stable standard of value based on all commodities rather than on one or two metals, and, second, the use of credit money for purposes of exchange.

Whether or not the time has come for these signal achievements in social progress, time must decide. That the science of applied economics can produce the necessary machinery, not only practical and inexpensive in operation, but also sound in mathematical principles, undoubtedly is true. Further, the changes necessary gradually may be brought about so that no confusion or disturbance to business would result.

Before outlining the simple steps necessary to accomplish the transition to a money and a currency based on a multiple standard which is the scientific solution, it is interesting to contemplate the advantages in store. As the result of a comparatively simple organization and brief straightforward legislation, the average prices of goods, thereafter, would remain constant and interest would fluctuate within a narrow range, say 3½ per cent. to 4½ per cent. So stable would be the standard and so elastic the exchange machinery that business men would be able to calculate in advance over a period twofold to fivefold longer than now they possibly can. By eliminating a large fraction of unnecessary risk which arises from an unstable standard and an inelastic currency, much unhealthy speculation would end for all time, and as a result more and more could the energy of our people be turned into productive rather than into the gambling channels of business.

Prevention of injustice is better than the remedy of the court where remedy is possible. Many wrongs, however, permit of no remedy. What court of justice can return to the savings bank depositors of this country more than one thousand millions of dollars lost to them by gold depreciation in the past thirteen years?

It is surprising how simple are the steps to establish the optional multiple standard which has the favor of our foremost experts. Such an optional standard would not affect present long term contracts represented by leases, corporation and Government bonds. Moreover, the establishment of the optional standard would not prevent the continued use of gold as the standard in long term contracts, if desired.

To outline briefly the steps necessary, requires us to show just what the monetary experts would recommend that Congress should do.

As a first step, the monetary commission should set experts to work to devise a unit for the multiple standard which for purposes of brevity may be called a "Dill." The definition of the "Dill" should be so worded that on a given future date (say January 1, 1912), the "Dill" would equal the purchasing power of one gold dollar. The science of index numbers is developed sufficiently to enable the experts to frame such a definition. The "Dill" then, on January 1, 1912 (or any other date specified for the change), would equal in value the weighted average of the gold prices of specified quantities of staple commodities, as designated in the Federal law.

In future transactions, the ultimate deliveries under the "Dill" standard would be the specified quantities of the staple commodities in accordance with the definition.

As a second step Congress in the same law would appoint a board on the "Dill" standard with power to arrange for changes in the ultimate deliveries under

the "Dill" standard, to take effect five years after the announcement, and such changes would be restricted in amount, say, to one-fourth of one per cent. per annum in the average.

As a third step, Congress should require that on and after January 1, 1912 (or the date of change of the standard), all prices and contracts covering periods less than one hundred days should be stated in "Dills," cents, etc., and that all wages should be paid in "Dills." Since the "Dill" equals the "Dollar" on the date of change, by definition, all prices current in gold dollars are current in "Dills." Thereafter, the metal gold quoted in "Dills" would fluctuate in price in the gold market, just as silver now does, gradually falling in value with the result that interest rates in the gold standard for agreements longer than one hundred days would rule higher than under the "Dill" standard.

The steps mentioned above would provide for the definition of the "Dill" standard, the gradual perfection of the standard in the future and the transition to the multiple standard in current transactions. These steps, then, establish the standard. The following steps would be necessary to provide at the same time the machinery of exchange.

The board on the "Dill" standard should be given supervision over the clearing houses, the stock and produce exchanges and all classes of storehouses.

A central bank should be established along the lines suggested by Mr. Julian D. Fairchild, which should be owned by the 18,915 banking institutions and the licensed storehouses mentioned below. As Mr. Julian D. Fairchild states, "No institution should be allowed to control stock in excess of 10 per cent. of its own capital nor in excess of 2 per cent. of the capital stock of the central bank." To this central bank should be given power to issue credit notes under the supervision of the board on the "Dill" standard in accordance with basic regulations.

The central bank should issue on demand to banks of all classes and to licensed storehouses "Dill" credit notes to the extent of 10 per cent. of the value of gold, silver or commodities on hand, the same to be repaid as stocks of gold, silver or commodities diminish and reissued as the stocks increase. To become a licensed bank or storehouse would require compliance with the regulations of the board on the "Dill" standard, such as uniform, statistical reports, covering rates charged, stocks, etc., sanitary conditions, clearings and ultimate deliveries. In this way the currency of the country is based on the annual national products. It would build up a system of licensed storehouses which would be subject to inspection, thereby preventing discrimination in charges, which is the present strength of the trusts in articles of food and a form of paying railroad rebates. Finally, the currency would vary in volume with the needs of commerce, both in accordance with the change of seasons and the geographical requirements. The currency is always where the stock is before the movement takes place. If one hundred millions value of cotton goes into licensed storehouses in the South in October, ten millions of currency automatically comes into existence at that point with which to move the crop. Moreover, the volume of currency grows with the national product.

In regard to the present Federal issues, several courses are possible. The Government might reissue the greenbacks as irredeemable "Dill" credit notes, or preferably retire them by an issue of bonds. The present bond-secured banknotes should be returned by issuing investment bonds at reasonable interest with which to redeem the 2 per cent. bonds at par.

Such in brief outline is the financial system which monetary science now offers the statesman, the details of which could be adjusted easily and equitably by monetary experts. As a net result the use of gold and silver as money would be ended, average prices would remain uniform, the volume of currency automatically would vary when and where the needs are pressing to move the crops and the products of commerce. In short, with such a scientific system which has been suggested repeatedly by the great thinkers of this as well as of previous generations, the vexatious problems of the past fifty years, to a large extent, would be solved forever.

NEW HAVEN, CONN.

The War Between Lords and Commons

BY JUSTIN McCARTHY

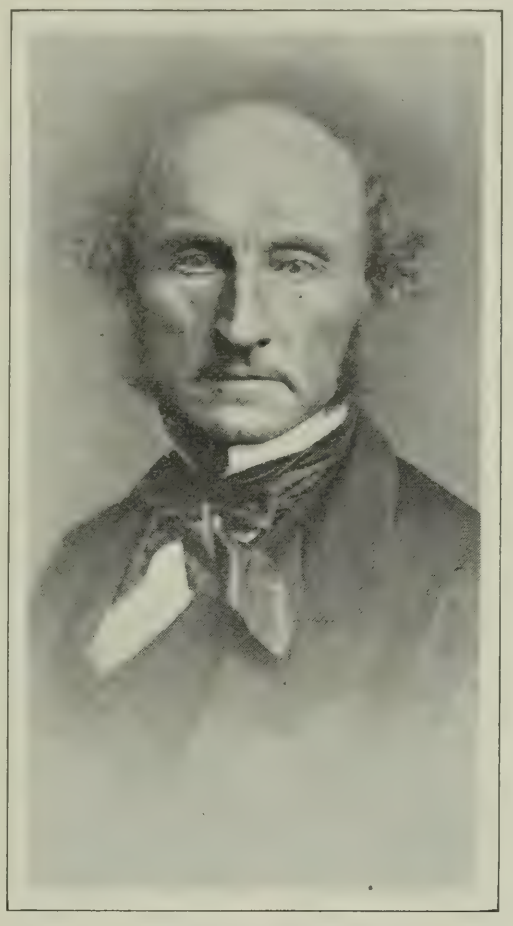
THE first day of this present week was made memorable by the opening of the state ceremonials which inaugurate and proclaim the dismissal of the lately existing Parliament at Westminster and the election of a new House of Commons. The King then held a council at Buckingham Palace and signed the proclamation dissolving the still existing Parliament, and the writs were immediately issued. Of course, these are the ceremonials which belong to the close of every Parliament and the election of its successor, but we have not had for many years a dissolution so fraught with important and conflicting interest as that which this first month of the year 1910 seems destined to see thruout the British Islands. I can never recall within my own recollection any dissolution during which each conflicting political party seems so absolutely confident of success as is the state at present. I must frankly admit that I am myself to be numbered among those who feel thus quite sure—I do not like to say cock-sure—of seeing my political principles crowned with victory.

Perhaps I may explain to my readers in the United States that this adhesion on my part to the claims of the statesmen led by Mr. Asquith has come from the fact that they have at last proclaimed their absolute devotion to the principle of Home Rule for Ireland. The fact that utterly astonishes me at the present crisis is that there are many Conservatives whom I know personally to be men of high and keen intelligence, and who yet firmly believe that the House of Lords will prove, after all, to be popular with the majority of the country, and will be retained as a boon and a blessing by the great majority of the voters when the time comes for filling the ballot boxes. I read most of the London papers on both sides of the question, and I find the supporters of the Liberal statesmen and the supporters of the Tories equally vehement and equally uncompromising in their pre-announcements of certain victory. For myself I am quite prepared to issue my unqualified prediction and to tell my readers that I feel quite sure the Liberal candidates will win all along the line, and that the one great and lasting result of the dissolution will be the entire extinction of any right of absolute succession belonging to the members of the House of Lords. I do not believe that we are likely to have no second chamber. I have always believed that a second chamber, a consulting and revising senate, is a necessary part of every free political constitution, but that a political legislative chamber should be composed exclusively of men who enter that chamber by mere right of hereditary succession is an institution which would seem to have its proper place in some of the realms described in "Gulliver's Travels."

There are some new questions this time, however, or at least there are some questions, coming up now under a political organization which has only lately been brought into efficiency and of which we may now and for the first time have serious chance of knowing what its influence may be reckoned upon to have during coming years at each separate or general election. I refer now to such subjects as are described as socialistic, and to those which concern the working classes generally and which may possibly throw the employing classes into wild alarms as to the perils to be brought by poverty on property. The operative classes have, of course, been long becoming a considerable influence over the elections to the representative assembly, especially on the Liberal side, but their influence has not thus far created any serious alarm among reasonable human beings, and only the most narrow-minded of the old-fashioned Conservative order now profess to regard a workingman candidate as necessarily a social revolutionist. But so far as the Socialists are concerned, the classes possessing property, whether as heirloom or as commercial acquisition, are as yet quite free to persuade themselves that the socialistic creed fully authorizes its believers

to embrace, avow and act upon the doctrine that the Socialist may claim the right, if he only can secure the power, to annex the possessions of anybody else. Many of the Conservative journals seem in fact to characterize a Socialist, day after day, as a class of beings who are merely new embodiments of the pirate or the highway robber. But the alarmists add to this the incalculable danger to the law-abiding community that the Socialists seem always eager to create themselves a robber force in combination, while the pirates and the highway robbers never certainly showed any feverish anxiety for such a union of strength on field or sea.

The elections began with the close of the past week, and the new Parliament is to be opened on February 15. One figure bearing a most honored name and always looked upon as destined to make a memorable career, will not appear among the members of the House of Commons in the new Parliament. That is the figure of Mr. Herbert Gladstone, son of England's great Prime Minister, orator and statesman, whose name ranks among the most illustrious of her past generations. Herbert Gladstone has now received an appointment of great importance in the colonial service of King Edward. He has quite lately been created Governor-General of United South Africa. This colony is constructed of the Transvaal Republic and the Orange Free State, which, after years of active rebellion, was at last compelled to submission by the forces of England.



HERBERT GLADSTONE.

The *Daily News* thus sums up Herbert Gladstone's political career to the date of his present and very momentous appointment: "The new Governor-General was born in Downing Street, in 1854, when his father was Chancellor of the Exchequer. Educated at Eton and Oxford, where he took a first class in history, he entered the House of Commons as member for West Leeds in 1880, and has represented that constituency ever since. Starting as private secretary to his father, then Premier, Mr. Gladstone was Lord of the Treasury from 1881 to 1885, Financial Secretary to the War Office in 1886, Under Secretary to the Home Office 1892-94, First Commissioner of Works 1894-95, and he has been Home Secretary since 1905." Now, it is quite certain that in all these offices Herbert Gladstone has displayed great efficiency and rendered a valuable service to the public and indeed to the empire. But at the same time I feel impelled to say that to many others, as well as to me, it always seemed as if he had not yet displayed all the brilliant qualities of statesmanship of which we had fully expected the development. Mr. Gladstone always appeared to me to have a positive genius for the work of parliamentary government.

I had many opportunities during my course of twenty years in the House of Commons of consulting with him on all manner of important political questions, and I soon came to regard him as a man endowed with a leading mind in the work of statesmanship. He was a convinced advocate of the principle of Home Rule for Ireland long before his illustrious father became a convert to the same doctrine, and this naturally gave me at a very early period of our inter-

course a strong conviction alike as to his judgment and as to his sincerity. He did not indeed prove or try to prove himself a rival in eloquence to his father, who, since the death of John Bright, had no rival in eloquence thruout English public life, but Herbert Gladstone could always make a thoroly attractive, lucid, argumentative and even eloquent speech, and I always became possessed with the belief or the fantasy that he was habitually repressing rather than encouraging his own capacity for the art of rhetoric. All this I now set forth as a prelude to the expression of my belief that this appointment of Herbert Gladstone as Governor-General of this new colony in Africa, under the rule of King Edward, must have come in order to give him the opportunity of developing fully his genius for statesmanship in an entirely new career for him and a career of almost limitless possibility. The new African colonies have to be constructed and consolidated out of entirely new material, and will then be a source of strength and of peace to the empire, and I feel filled with hope that Herbert Gladstone is a man well qualified by heart as well as by intellect to accomplish such a triumph.

JOHN STUART MILL.

In the rush, however, of the new elections, the public in general have not paid as much attention to this latest appointment of Herbert Gladstone as would have been given if it had taken place during the course of an ordinary session. Indeed, it has been very little talked about since its announcement, and we have gone on discussing the chances of candidates for counties and boroughs as if these contained for the present the only interests of a public nature that could absorb the attention of Great Britain and Ireland. But when the first rush of the electoral contests has got safely over, and when we begin to see what the final results are likely to be; when the Conservative party come to doubt the probability of their complete restoration to political power, and when the faint-hearted Liberals are growing to recognize the fact that the great bulk of the population are not Socialists, and that every Socialist is not a professional robber, then it is at least probable that public interest will find that the appointment of Herbert Gladstone to the governorship of the South African colonies is something like an event in English history.

The *Daily Chronicle* has recently announced in its literary column that the Messrs. Longmans, the influential London publishers, are about to bring out two volumes of the letters of John Stuart Mill, the great political economist and philosophical author. To many readers of the present day the letters of John Stuart Mill would seem to belong to a period which has already passed out of public memory. His name, however, will live as long as the fame and the fruits of great intellect survive among civilized men. Mill passed out of this life in 1873, but the reading world will everywhere be quickened into sincere and keen interest by the announcement that a collection of his letters is only now in preparation. To me it has an especial interest. I had always, from my very early years, been an enthusiastic admirer of Mill, and during his later years I came to have the great

honor and great pleasure of knowing him personally, and of receiving kindness and much literary encouragement from him. I stood by his grave more than once at Avignon, the same grave which had been already occupied by the wife whom he so loved and who so loved him. I know very well his step-daughter, Miss Helen Taylor, who became for some years a conspicuous and influential figure, among the earliest advocates of what were then as now described as woman's rights, in the advocacy of which John Stuart Mill, I need hardly say, took a commanding place. I may perhaps add that, long after Mill's death, I was the means of making Charles Stewart Parnell, then leader of the Irish National party, and Helen Taylor personally acquainted with each other. I had a very thoro admiration, I might indeed almost say affection, for Stuart Mill, and I feel ever grateful to him for the encouragement which he quite spontaneously gave to some of my earliest writings in the *Westminster Review*, a periodical of which he had at one time been the editor. Mill had endeared himself to me before this time by the earnest manner in which he had condemned the misgovernment of Ireland. He had condemned especially the manner in which the whole land question had been so dealt with as to compel the Irish tenant-farmer to believe "that he could neither benefit by his industry nor suffer by his improvidence." Mill was prevailed upon to stand as candidate for the constituency of Westminster because he was assured that he could render most valuable service for many a great Liberal cause, and he accepted the invitation and became representative of that very important constituency, and here, as need hardly be said, he became the advocate of advanced Liberal doctrines and of the vote for women. His autobiography, as some of my American friends will remember, was not published until after his death, when it was read with the deepest interest on both sides of the Atlantic, and indeed wherever English literature and culture could find a way. I sincerely hope and trust that the coming volumes of his letters may receive, as I am sure they will deserve, a welcome almost universal.

LONDON, ENGLAND.

Why the Boston Experiment Failed

BY MORRISON I. SWIFT

[The Boston election has puzzled most people outside the city and doubtless not a few inside. The deliberate rejection of a reform candidate under a reform charter seemed to discredit democracy. Our readers will be interested, therefore, in this interpretation of the result by a writer whose faith in democracy is sincere and thorogoing.—EDITOR.]

ONE very important error to be noted in the comments of the press on Boston's recent election of Mayor is the assumption that the new charter gave the people a fair opportunity to express their will This is a very natural but also a very great mistake. The papers say that the Boston people got what they wanted, whereas the new charter was so framed that they could not get what they wanted and therefore elected Mr. Fitzgerald. And this came about because the charter framers neither trusted nor heeded the great crowd of "common" voters.

Since this Boston experiment is of national importance, and since public lessons and warnings are being deduced from it that are quite unwarranted by the facts, it deserves a more careful analysis than that which reaches the conclusion that the voters of cities have once more shown their preference to be boss-ridden.

The new charter was the work of good government people, the merchants and "best citizens," pared down to a certain extent by the politicians, who had their inning thru the Legislature which put the final touches on the document

and passed it. When enacted into law it stood as essentially the product and achievement of the business and professional elements whose standard bearer in the subsequent campaign Mr. Storrow became.

Now, these charter-makers had placed a big handicap beforehand on their candidate, whoever he might be, in the nature of their instrument. That instrument did not trust the people; in getting it thru its composers were very frank to admit that they did not trust the people; and the people knew the fact and resented it when the vote came. Primarily the defeat of Mr. Storrow was administered to punish his backers, the business and good government classes, for imposing an undemocratic charter on the citizens.

The mention of two points to substantiate this will suffice: The practically fictitious nature of the recall allowed, and the number of signatures required to gain a nomination. This recall cannot be operated at any time that the people find need for it, but only in the middle of the Mayor's four years' term, at the end of the second year, which gives a vicious Mayor the last two years to behave as he pleases But as if to make a complete comedy of the matter, the recall is effective only if half of the registered voters demand it—an achievement so obviously unlikely even against the worst Mayor that he is practically safe in snapping his fingers at the public. When the people were presented with this emasculated means of protection, they naturally felt that the good government business men had given them a gold brick and they were not grateful; later, at the polls, they registered their displeasure in votes

But had this cause of opposition to Mr. Storrow been entirely absent, the charter clause requiring five thousand names upon a candidate's papers would have defeated him. The lesser political groups, like the Socialists, cannot secure that number of names, hence they were obliterated, perhaps intentionally. If their suppression was intended the act was a boomerang, for the political extinction of the small groups was not likely to lead the members of those groups to vote for the candidate of the citizens' bodies that had extinguished them. But most of them undoubtedly voted for Mr. Fitzgerald for other reasons also, chief of which was Mr. Storrow's wealth and their opposition to placing a rich man at the head of the city. Could they have had their own candidate and given a positive vote for their principles it would have withdrawn from Fitzgerald many more than enough votes to have elected Storrow; as it was, they were obliged to vote negatively for their principles to the extent that they could, which was no further than preventing the election of a rich man. Had the charter, in a democratic spirit, required but one thousand, instead of five thousand names to place a candidate in nomination, the Socialists would also have gained a large vote which Fitzgerald secured from among the merely detached and dissatisfied.

Prejudice against the reformers was intensified by the object lesson the people had just had from Mr. Hibbard's official career. Hibbard went into office as the clean government people's representative, and his weak and disappointing administration had thrown much discredit on the wisdom of those elements. He set organized labor against him by treating its official representatives to uncalled for affronts. During the two winters following the panic Boston had many unemployed; their appeal to Hibbard to investigate the problem with a view to easing their condition was met with unqualified refusal and hostility. At the same time he turned off many of the city's wage-earning employees, thus increasing the distress. His purpose was to make a record as a money-saver, even at the expense of the health and lives of the poorer citizens. Meanwhile his office expenses were exceeding those of any other Mayor Boston had ever had, eclipsing those of Fitzgerald, whose financial extravagances were Hibbard's chief asset. In 1908 these expenses were $50,601.83, which included the entertainment of guests, the automobile, and traveling expenses. Mayor Curtis's office expenses, including all these things, in no year exceeded $30,000. For carriage hire and traveling expenses alone Mayor Hibbard cost the city in that year $3,581.75, almost $10 a day for every day in the year. He expended $3,125.55 for "sundry parties"; for "stationery, books, papers and small items," $4,527.53; and for "automobile rental, sup-

plies, etc.," $5,167.57, which was in addition to his carriage hire and traveling expenses. These figures are contained in the statement sent to the Council from the Mayor's office at the end of January, 1909. When called upon by the Common Council to itemize the foregoing sums Mr. Hibbard refused.

This was the work of a reform Mayor, who during two years in pleasant clover paid for by the taxpayer could not permit himself even to recognize that Boston contained at the time a large population of unemployed in profound need. By this policy Hibbard was manufacturing thousands of votes for the next Fitzgerald. I often heard it said by workingmen during that period, "Fitzgerald would not have treated us this way." The feeling took the form of enmity against all reform mayors, as interested solely in saving for the rich, and it fell to Mr. Storrow's lot to overcome this enmity in a brief campaign if he could. It turned out that Hibbard had served Fitzgerald's interests too well. And in justice to these voters it is to be said that Mr. Fitzgerald, with his much more comprehensive mind than Mr. Hibbard's, would certainly have found means to meet the situation constructively and to relieve that part of the population least able to protect itself when general business stagnates.

The common people of Boston desired an opportunity to vote on the new charter, clause by clause. When the legislative committee was having its State House hearings on the subject, an evening was given to the delegates of organized labor, who exprest themselves strongly in favor of such a detailed referendum. But the plan was opposed by practically all the most active proponents of the charter. Some of these labor men were also familiar with the newer advances in government by the people themselves in the Western States, and urged their incorporation into the Boston document; whereas at no time in the proceedings, beginning with the prolonged study given to the subject by the commission that drafted the charter, was there evidence that the great importance of these Western measures had made any impression upon the minds of the charter advocates, or that most of them had even learned of their existence. In these particulars a less up-to-date document could hardly have been formulated a hundred years ago. No heed was paid to the urgent presentations of the labor delegates on these points by the legislative committee. Is it surprising if the labor element, listened to by mere courtesy and ignored in action, and who realized that the charter was already behind the times before its adoption, lacked sufficient confidence in the enlightenment and sincerity of the charter reformers to elect their candidate.

Mr. Storrow's tremendous outlay of money on the campaign—it was $103,250—of course supplied his enemies with an inimitable handle for attack.

Taking the Boston election as a whole, then, it proves the very opposite of what has been so widely deduced from it. The common voters appreciate good government better than those reformers who assumed the rôle of leading them. The reformers refused to bend far enough to understand or get in touch with these voters; it seemed a simpler thing just to tell them what to do and insist upon their doing it. It was simpler and it failed merely at one point—the voters didn't obey. They had so much more intelligence and self-respect than their mentors suspected that they saw thru what was either ignorance or insincerity in their mentors and rebuked them for it.

Had a real partnership with the people been entered into, had their advice as to the charter been attended to with the same deference that was accorded to the wishes of the Chamber of Commerce and business men, Mr. Storrow would have swept the city. The people defeated the reformers because the reformers had failed to convince them that their good government would mean anything more than class government in favor of the business class.

If this is so, the way to good government, in Boston at least, is perfectly simple. Let the business men consult with the workingmen, not as better-endowed superiors, but as equals; then the workingmen's wishes being incorporated in the political plans, the workingmen's votes will follow.

And I believe that every other city in the United States is exactly like Boston in this respect.

CONCORD, N. H.

Poems

BY BARON TAKASAKI, POET LAUREATE OF JAPAN

A Window.

Ashibiki no
Yama wo mo no wo mo
Iruru koso
Munashiki mado no
Kokoro narikeri.

How free from prejudice is yonder pane
Of window-glass! Whatever comes by it,
Mountain or lowly field, has equal rights
To find a welcome in its picture-frame.

Savings.

Minamoto wa
Tada yamabuki no
Hito shizuku
Kuni wo uruosu
Tomi no ogawa mo.

See yon fair stream (men call it Stream of Wealth)
That waters all the country. At its source
A single golden dewdrop off the gorse
That blooms in spring is trickling down the hill.

The Bamboo.

Kuretake no
Munashigokoro ni
Narite miyo!
Ukifushi nomi wa
Naki yo narikeri.

Be open-minded, like the brave bamboo,
That is not all compact of knots, but shows
Between the knots spaces of smoother bark;
And know the knottiest life still has its joys.

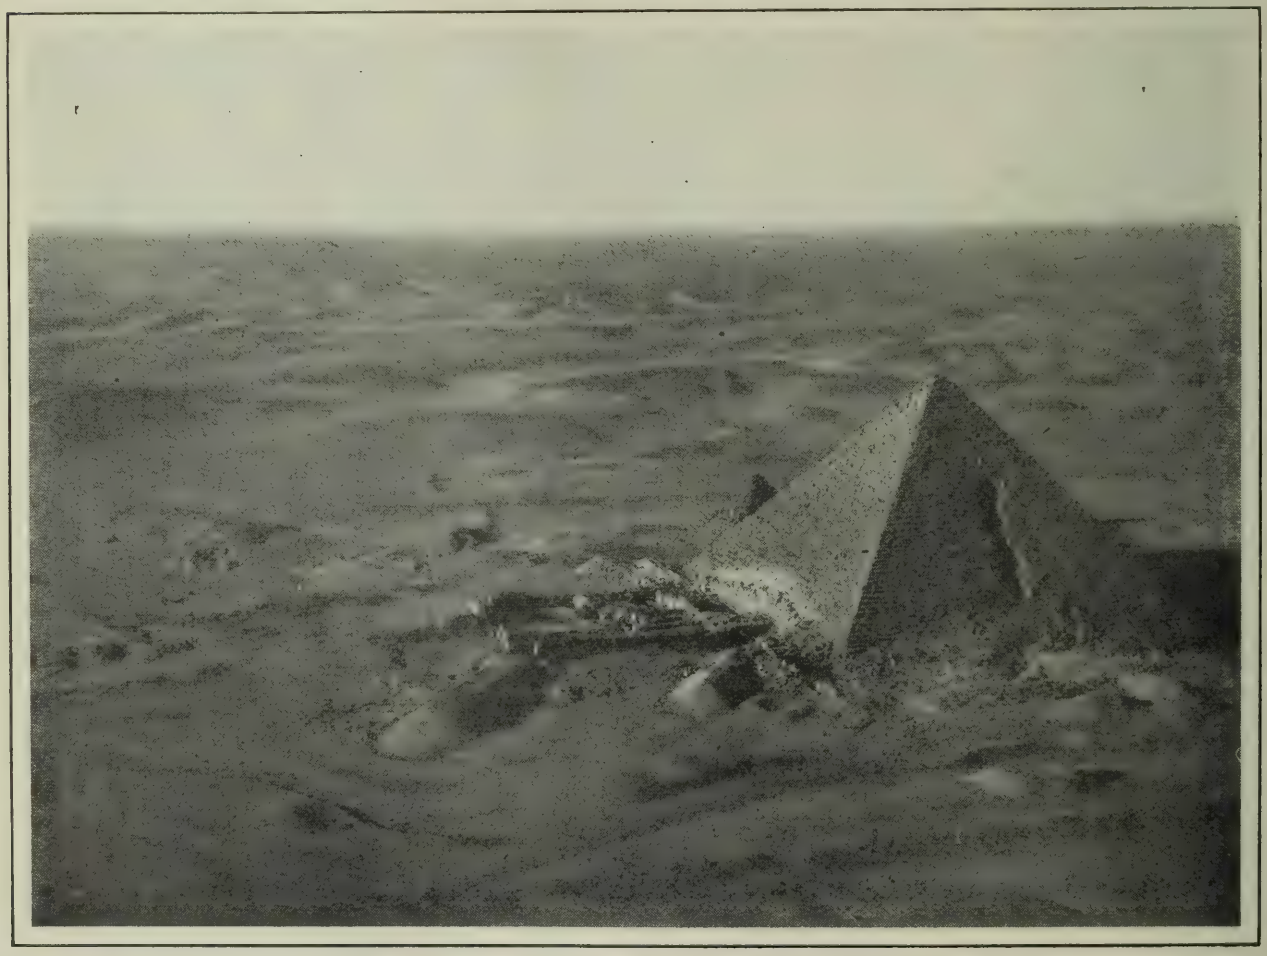
A Blind School.

Kaki-saguru
Michi no hirakete
Mushio gusa
Ima wa Minume no
Ura-mi dani nashi.

No blind man now need groan for want of eyes:
He has his knowledge at his fingers' ends,
To scrape and gather, as they rake the weeds
Along the "sightless" shore of Minume.

On the Death of Prince Ito.

Watakushi no
Nageki wa tae mo
Shinobu beshi;
Mikuni no tame wo
Ika ni ka wa sen.



My private grief,
I might make shift to bear it. But the thought
Of what my land has lost can scarce be borne.

Recent Explorations in Egypt

BY DR. GEORGE A. REISNER

[Dr. Reisner is one of the leading American Egyptologists, and has spent over ten years of active work in the field. He is now assistant professor of Semitic languages at Harvard University and associated with the Boston Museum of Fine Arts.—EDITOR.]

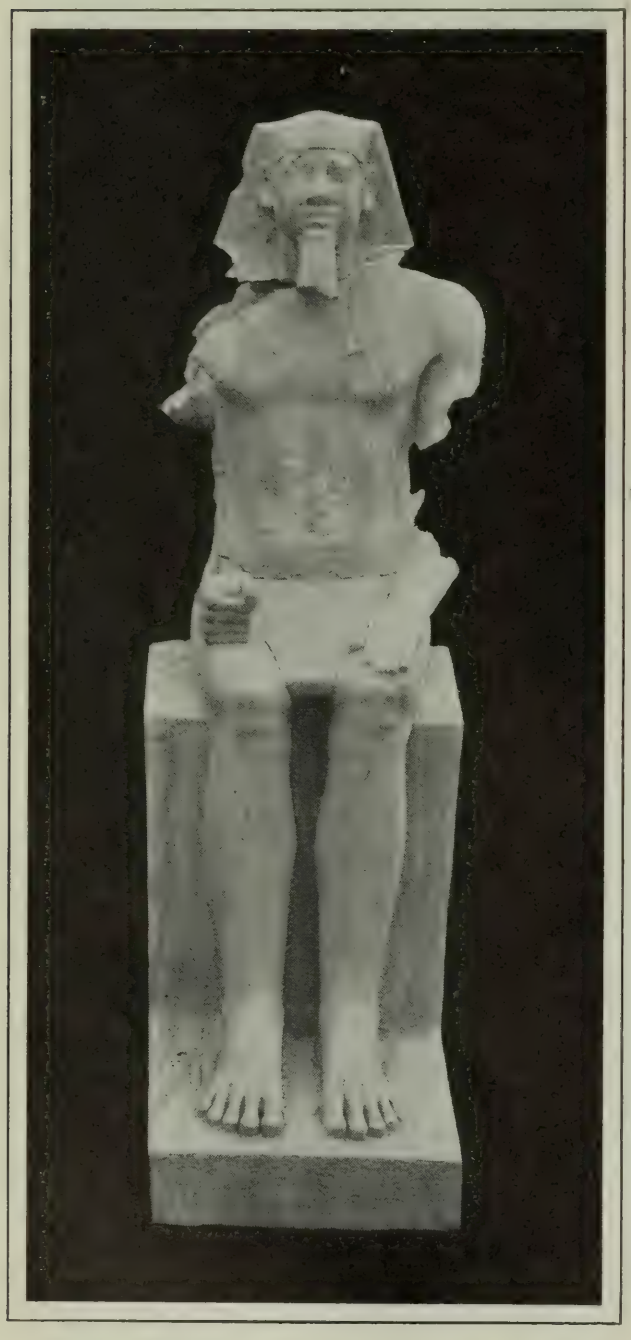
IN 1907 and 1908 the Egyptian expedition of Harvard University and the Boston Museum of Fine Arts made the first great addition to the known masterpieces of Egyptian art of the fourth dynasty since the days of Mariette. The ruling family of the Fourth Dynasty (2900 to 2700 B. C.) caused the Pyramids of Giza to be built, and the Sphinx to be carved out of the solid rock of the desert plateau. For milleniums, these monuments have stood for Egypt itself in the mind of the world, and while our knowledge now reckons with thousands of years before and after the pyramids, they still mark the fourth dynasty as the most remarkable in the history of that country. The researches of the last century, conducted by Caviglia, Vyse, Lepsius, Mariette, Petrie and Borchardt, have taught us the manner in which the pyramids were built, and their place in the history of Egyptian architecture. The excavations of the last ten years have shown that these great monuments were the culmination of a period of national prosperity and political union, the foundation of which was laid far back in the prehistoric age by the invention of copper weapons and copper implements. The great period of political, industrial, technical and artistic development in Egypt was the first five dynasties, and the greatest of these was the fourth. After the sixth dynasty the Egyptian learned practically no new art except that of glass-making, and the elements of glass-making were already contained in the glazed paste manufactures of the earlier period. The greatness of the

THE UPPER TEMPLE OF THE THIRD PYRAMID AFTER EXCAVATION.

Middle and the New Empire lay rather in foreign conquest, and most of the *new* artistic motives of later times came from outside, possibly even the realistic tendency of art in the eighteenth dynasty. But it must not be forgotten that in spite of all that seemed to be new or foreign, the forms and technique of Egyptian art were never entirely freed from the canons of the Old Empire, and in the renaissance of the Saite period it was the art of the Old Empire which the Egyptians themselves selected as their ideal of the best their fathers had produced. Thus it is not without cause that the monuments of the fourth dynasty have stood for Egypt thru so many ages: and the great finds of the last two years at the Third Pyramid serve to make clearer our knowledge of the greatness of the Egyptians of that period—the men who brought to its climax the architecture and the art which were to dominate Egypt for a period of nearly three thousand years.

Fifty years ago Mariette, excavating in the Granite Temple near the Sphinx, found the great diorite portrait-statue of Chephren, the builder of the Second Pyramid, which has stood since then as almost the greatest masterpiece of Egyptian art. The statue had been made to stand forever in the funerary chapel as a royal image of Chephren, receiving from day to day and year to year the offerings which were to feed the spirit of the king in another world. Fifty years this statue has been in the Cairo Museum, while the even greater statues of his son or nephew, Mykerinos, lay unsuspected under the sand.

The royal sites in Egypt were the ones first examined by the great French scholars who served the Khedivial Government during the middle of last century. For years these sites have been maintained as government reservations where only the officials of the Egyptian Department of Antiquities were allowed to dig. Popularly, the great royal cemetery of the fourth dynasty (2900-2750 B. C.) at the pyramids was supposed to be exhausted; but a number of archeologists who had dug in sites supposed to be exhausted knew the imperfections of the old methods of excavation, and believed that a great deal of scientific and artistic material might still be found at the pyramids. No one, however, ventured to apply for a concession in a Government reservation. In the meantime, the natives of Kafr-el-Haram, the pyramid village, were carrying on an almost systematic series of illicit excavations in



SLATE TRIAD IN THE BOSTON MUSEUM OF FINE ARTS.

the great cemetery: and every year a number of reliefs, offering-stones and private statues from the tombs found their way to European museums. In 1902 a gentleman who came to Egypt desirous of adding to his private collection, found that the only way he could get genuine antiquities was to dig for them. He was informed, I believe, by Kafr-el-Haram natives that many antiquities were still to be found at the pyramids. Possibly he did not know that the place was a museum reservation. At any rate he applied for a concession, and received it. M. Maspéro, the Director-General of the Department of Antiquities, was convinced of the futility of attempting to guard the site, and gave it

to the first who applied. The concessionaire dug in the old fashion, making a hole here and there, and looking simply for antiquities, and, as so often happens in a rich field, he found a dozen or more private statues and stelæ.

Thus notice was given that the pyramid field was no longer a Government reservation, and in 1902 three different archeologists made application for the site: Professor Schiaparelli, Director of the Turin Museum; Professor Steindorff, of Leipzig, and myself, at that time Director of the Hearst Egyptian Expedition. All three applications were granted in principle, and we were asked to divide the territory amicably among ourselves. Each one had made a private examination of the ground, and on January 27 Professor Schiaparelli, Dr. Borchardt, acting for Professor Steindorff, and I, met on the veranda of the Mena House Hotel with a large map of the district to make the division.

STATUE OF MYKERINOS IN THE CAIRO MUSEUM.

As a result of that division, I received the northern third of the great cemetery west of the First Pyramid, where I afterward found the royal cemetery of Cheops, a part of the field in front of the First Pyramid, and all of the Third Pyramid. The Hearst Expedition worked for two full seasons on the great cemetery, when the work was taken up by the Egyptian Expedition of Harvard University and the Boston Museum of Fine Arts, and carried on for a third year.

Having thus cleared the greater part of our concession there, I transferred the work in 1906 to the Third Pyramid. The work at the cemetery field had been very important scientifically and had enriched greatly the collections of Old Empire antiquities at the University of California and at the Boston Museum of Fine Arts. But it is the work at the Third Pyramid which has enriched the world's collection of Old Empire masterpieces, and has made the Boston collection one of the two greatest of that period.

The Upper Temple of the Third Pyramid, excavated in 1906-7, was found in an unfinished condition. The plan of casing the walls of the temple with black granits had been abandoned, and the casing was built of mud-brick, covering the granite casing-blocks already in position. The walls of the inner rooms of the temple, the storerooms around the inner sanctuary, had been built of huge rough limestone blocks, and two of them had been dressed; but the others were left unfinished. On the south of this part of the temple, an inclined plane built of limestone boulders, was found in place, just as it was left by the masons after dragging up it the roofing stones of the inner rooms. On all sides were the evidences of hasty completion. Mykerinos had died unexpectedly, and left the work to his successor. The fragments of a stela found in the great court of the temple, dated "in the year of the first cattle

THE HEAD OF THE CROWN PRINCE—PROBABLY THE ILL-FATED SHEPSES-KAF.

census of the King of Upper and Lower Egypt, Shepses-kaf, the Horus Shepsesy-khet," relates that Shepses-kaf "had made it a monument for the King of Upper and Lower Egypt Menkaura." It is clear that Shepses-kaf was the successor and probably the son of Mykerinos. But he, too, had a short reign—far shorter than Mykerinos—ending in violence. Thus the temple was finished in haste, leaving on all sides the most valuable of historical evidences as to the manner in which the Egyptian architects build their temples.

In the debris of the temple we found the fragments of about a dozen statues of diorite, alabaster, basalt, slate, granite and copper: and the fragments of the great alabaster statue of Mykerinos, the beauty of which exceeds that of the famous Chephren statue. The knees and some other fragments of the statue were in the magazines on the north of the temple, and the head and one shoulder lay just under the modern surface outside the north wall. The head was so near the surface that it might have been reached at any time by a cane or a parasol in the hands of a casual traveler. In the summer of 1908 a successful effort was made to find and excavate the Valley Temple of the Pyramid. The causeway leading to the valley from the entrance to the upper temple was traced down to the edge of the rock plateau, where it disappeared under the sand. After clearing a space about 70 x 30 meters in area, it was clear that the temple was larger than expected, and that it would be necessary to take out the debris of the part already cleared of sand before going further with the sand clearing. The debris consisted, for the greater part, of decayed mud-brick, drift-sand and ashes. As it was cut out, the mud-brick walls of the temple came into view, and revealed a central offering chamber with an anteroom containing the bases of four columns and the lower parts of four statues. In the debris were hundreds of fragments of statues. On the floor lay the body of the northermost alabaster statue, its head, the head of another statue with a royal headdress like that of the Sphinx, and the head of the Crown Prince. The two heads of the king were portraits of Mykerinos, while the head of the Crown Prince is apparently a portrait of his son—the ill-fated Shepses-kaf, the last of the dynasty. On each side of this were the storerooms. In the storerooms to the north were found about three hundred stone vessels, many of them, however, in fragments. To the south there were found the four slate triads and a number of small unfinished statuets.

The unfinished statuets show every stage in the making of statues—the rough form rudely hammered out of a block, five stages in the shaping of the features and members by rubbing the unpolished statue, with the details indicated on the rough surface, and finally the finished figure.

Thus the excavations at the Third Pyramid have added to the world's collection of Egyptian masterpieces the four royal portrait heads and four slate triads. These triads are unique in their way, showing Mykerinos as King of Upper Egypt, the goddess Hathor and one of the nomes of Upper Egypt as a divinity. Each one of the four is different from

the other. Now there were twenty Upper Egyptian and twenty-two Lower Egyptian nomes. It appears, therefore, that there were originally twenty of these slate triads for the twenty Upper Egyptian nomes and twenty-two similar triads for the Lower Egyptian nomes, making a total of forty-two triads. Originally, like all Egyptian statues, of whatever material they may be, these exquisitely modeled figures were painted in conventional colors. Fortunately for our taste, the colors have been almost entirely removed by damp, except the necklaces, bracelets, the girdle with the king's name on it and similar parts. The head of the nearly complete statue from the lower temple was never entirely finished and so differs slightly from the other portraits. The great head, with its exquisite modeling, reproduces for us the face of Mykerinos with heavy, bulging eyes, sensual lips and a cynical half smile—but without doubt a king, the builder of a pyramid. The head of the crown prince shows a curious similarity to the features of the great head, but softened by youth. There is wanting only the portrait of the queen of Mykerinos to complete the family group; and the valley temple still lies but half excavated, permitting us to hope for this and perhaps for the triads of Lower Egypt.

THE HEAD OF THE GREAT ALABASTER STATUE OF MYKERINOS.

CAIRO, EGYPT.

The Cost of Dying

BY REV. CHARLES M. SHELDON

AUTHOR OF "IN HIS STEPS," ETC.

IN the first place, he was probably to blame for getting married when he did. But that has nothing to do with the purpose of this story. As a matter of fact, he did get married, for reasons which concern him more than anybody else, and when this story begins he had two beautiful children, a girl of eight and a boy of five.

He was an average country school teacher in the grades, with a salary of $56 a month. Teaching eight months in the year, and having an unusually good manager in his wife, he actually lived on the salary, and sometimes put $5 a month into the savings bank.

It should be said at this point that he was thirty-five years old, and the savings had reached the sum of $85 so far.

One night the little girl was suddenly taken ill. A doctor was called the next day. He called ten times, and then advised taking the child to the hospital for an operation.

She was accordingly taken there, and, after five days, was operated upon, apparently recovered from the operation, but died seven days later.

The father went to the undertaker to buy a casket. The cheapest casket in the place was $25. The next in price was $40. The father took that because the $25 article looked cheap.

A lot in the cemetery was next purchased, at 50 cents a foot. Just ground enough for one grave, 8 by 5 feet, cost $20. After the man and his wife had recovered from the heart shock, and could count up the total in cold figures, this is what they found it to be—that is,

this is what the cost of dying is in one American family:

Doctor, ten visits at $3 the visit	$30.00
Hospital expenses for twelve days	28.00
Surgeon's fee for operation	125.00
Casket	40.00
Services of undertaker	10.00
Cemetery lot	20.00
Hearse	5.00
Two carriages at $5 each	10.00
Total	$268.00

The father could not bear to think of owing for the casket and the immediate expenses of the funeral, so he drew out the entire savings from the bank, amounting to $85, and paid for the casket, the cemetery lot, the undertaker, the hearse and the two carriages, making exactly the entire amount. For the balance, he had on hand from his month's salary enough to pay the doctor $10, leaving unpaid the balance of $173. Counting the teacher's salary at $56 a month for eight months of the year is a total of $448. Subtracting the $173, leaves as a balance for a year's living, $275.

But this American father and mother, when they were able to talk composedly about the entire matter, could not help wondering about some of the items of expense, and especially the matter of the casket. The young man, being thirty-five years of age, and above the average of intelligence, having spent five years of his young manhood as a carpenter, and knowing something of the cost of lumber, in his spare moments, when he was able to figure on it, reckoned that he could buy for $1.50, at the nearest planing mill, all of the material for the making of such a casket as he bought for $40. His wife, who had been before her marriage a dressmaker in a large furnishing establishment, figured that the piqué plush, even at the high price of $1.25 a yard, would cover the entire casket, including the lining, for less than $4. In other words, this one item in the cost of dying could be easily cut down to $6 or $7 at the outside.

As to the surgeon's fee, they asked no questions, neither considering the expenses at the hospital, nor the doctor's visits. Land to be buried in is always expensive. People who never rode in a hearse in their life while they were living would naturally be a little surprised to have to pay $5 to be carried in one when dead, even tho the distance, as in this case, was less than one-quarter of a mile.

This is not a story out of a book, but a story out of a life. Any one good in mathematics can easily figure how long it will take this young man to pay the balance of the cost of his child dying—that is, the $173 out of a salary of a total of $448 a year. This is the price the American people pay some of the splendid young men and women of this country for teaching their children. Some get more, some less. Those who get less ought not to get married. If they do, it is at their own risk. If they have children, and these children occasionally die, then they must pay the price. Children come high, especially when they get sick and have to be buried. But can the American people give any reason why they should have to pay $40 for a box to be buried in, when the box could be made for about one-eighth of the price? Also it is in order to ask several other things, but life is too short. Let us eat, drink and save money, for tomorrow we die, and we may need the money to pay the cost of dying.

TOPEKA, KANSAS.

A Chance for Armament Retrenchment

BY FREDERIC AUSTIN OGG

COMPETITIVE armament building has been in progress somewhat more than a quarter of a century. The Franco-German War set the nations imitating the Prussian military system and inaugurated the present era of prodigious expenditure on standing armies, while the promulgation in the eighties of German's ambitious colonial and maritime program started the race for naval aggrandizement. Out of every 100 shillings that Great Britain expends today, 39 go for the army and the navy, as compared with 31 in 1885. In France the respective proportions are 30 and 22. In Germany the annual outlay on the army has doubled within the period, while that on the navy has been increased sixfold.

The result has been neither to precipitate a general European conflagration nor to plunge the nations into the depths of impoverishment. But the drain upon the purses, and therefore upon the energies, of vast masses of men has been very great. And in more or less grudging response to complaints arising from these men, the governing authorities of a number of the principal Powers have but lately been brought to pause and more seriously than ever before to face the question as to whether the game is worth the candle. An address by the Kaiser, at the convening of the Reichstag, which contained not one request or suggestion in behalf of the imperial navy; a flat refusal by a British Ministry to incur a shilling of fresh indebtedness for the upbuilding of the national defense; a budget presented to the French Chamber of Deputies in which the estimates for ordinary military and naval expenditure are below the average for the past decade—these are some of the marvels of 1909. They are not accidents. They are symptoms. Disclosing the arrival of a rare opportunity for the promotion of international concord and well-being, they portend possibilities that may make the new year the most remarkable in a generation.

The governments of most of the leading states are inevitably being forced by the pressure of adverse fiscal conditions into a position where they cannot afford to contemplate with indifference any reasonable opportunity for saving in armament expenditure. There is not one first-class European nation today whose Government is not laboring under financial embarrassment, more or less serious. The notable contest now drawing to a close in Great Britain has involved a wide variety of issues, but the whole thing originated in Mr. Lloyd-George's attempt to provide the exchequer with £15,000,000 of much-needed additional revenue. During the past two years Germany has passed thru one of the hottest constitutional and political struggles in her entire history, and she continues in the throes of an unprecedented warfare of parties, all because the imperial Government undertook twelve months ago to secure an increase of 500,000,000 marks in the yearly revenue. Russia is laboring under the load of tremendous indebtedness, increasing expenditures, and onerous but indifferently productive taxation. France, facing mounting de-

ficits, is wrought up over a budget carrying 200,000,000 francs of additional taxation. Austria-Hungary is confronted at one time by growing racial disorders and the necessity of screwing up the tax rates all along the line to meet increased imperial expenditure. And an Italian Ministry has but recently fallen because of its unsuccessful attempt to provide for the fiscal requirements of the nation.

The truth of the matter is that during recent years the sphere of governmental activity in most European countries has been enormously extended, and with it the cost of government itself. This may or may not be indicative of a gradual, universal trend toward State socialism; it may or may not, in the long run, prove of advantage to the peoples concerned; the fact itself is indisputable. Now it is pensions for the aged; now the purchase or construction of railways; now the operation of telegraphs and telephones; now the subsidizing of industry; now the administration of charity. These things cost money. Some of them yield pecuniary returns; most of them do not. The swelling of national budgets during the past decade is not to be explained solely, or even chiefly, by the increase of expenditure on armaments. Much of it has arisen from the increase of ordinary civil expenditures and from the great social and industrial enterprises in which the governments, by their own inclination or in response to public demand, have been led to embark. Such fields of expenditure, once entered, can rarely be abandoned. And the outlays are usually of such a nature that with the increase of population they tend inevitably to be augmented.

An admirable illustration is afforded by the British system of old-age pensions, established by legislation in 1908 and put in effect January 1, 1909. Here is a great project of social reform to which all parties in the United Kingdom have long been committed and for which there has arisen in recent years a public demand calculated to overwhelm the most sturdy forces of opposition. If a Liberal Government had not acceded to the popular desire in this matter, a Unionist ministry would eventually have been found ready to do so. The project was carried into execution at an estimated annual cost of £7,000,000. Already the Labor party and a rapidly increasing proportion of the population generally are demanding that the system adopted in 1908 be broadened so as to provide pensions for everybody over sixty-five years of age, instead of simply for men and women over seventy whose ordinary yearly income falls below £31 10s. There is not the slightest doubt that some day, perhaps in the very near future, this step will be taken, altho it will introduce into the budget anywhere from £20,000,000 to £25,000,000 new expenditure, and nobody can begin to tell where or how the money is to be obtained. When the change is made, the annual outlay of the United Kingdom for old-age pensions alone will be almost, if not quite, as large as that which at present maintains the British navy as the mistress of the seas. Does anybody suppose that when thirty million pounds are to be paid out in pensions it will be so easy to get the thirty or thirty-five millions for the navy? And to every one who understands the political trend in Great Britain today it must be plain enough that old-age pensions will but serve to inaugurate a whole series of social and industrial undertakings, all at the public cost and much to the further embarrassment of those who are charged with making both ends of the budget meet.

In Germany, where the activities of the state within this field have long been the marvel of the European world, the indications are that, after all, only a beginning has been made. Under pressure of inexorable political necessity the Imperial Government is today mapping out a broader and costlier program of state insurance, state supervision of employment, state pensions and state controlled public utilities. The ever present alternative is the dreaded triumph of the Social Democracy. The attempt last year at a reformation of the public finances was largely a failure; the new taxes which were voted promise to yield not more than half the amount that the Government wanted, and the Empire is under the necessity of borrowing during 1910 a greater sum of money than any European nation ever borrowed in a year of profound peace. Even if the new taxes were to yield all that their Con-

servative and Clerical sponsors professed to expect of them, the Government would very soon be under the necessity of demanding fresh levies to meet increased civil expenditures already in prospect. Notwithstanding all this, the Kaiser and his ministers dare not hold back in the program of social reform, for the people demand reforms and even in Germany the people have a way of getting what they want.

Under the stimulus of German achievement, and of a Socialist ministry, France is today rapidly swinging into line with her great rivals. It is a question of but a very short time before she will have doubled her present outlay on pensions, subsidies and other civil items of the sort. For many weeks the Senate has been debating a workmen's pension bill (already past in the Chamber), which, in its present form, provides a pension for every worker and employee over sixty-five years of age. The measure is certain to be passed, and the perplexities of the Finance Minister will be correspondingly augmented. Italy, Austria-Hungary and even Russia exhibit the same general tendency. The practical meaning of it all is that as the various European Governments find themselves forced by political expediency or the pressure of public demand into programs involving vast outlays for social and industrial ends, deficits will become more formidable, taxation more troublesome, borrowings more frequent, until relief is found in the reduction of what Mr. Asquith has called the "sterilizing expenditures" of the nations, namely, the outlays upon armaments. This does not mean disarmament, or even necessarily a positive diminution of the present scale of military and naval expenditure. It means simply that the governing powers, finding that they cannot keep up the recent rate of yearly increase on armies and navies, will be constrained, on the basis of formal international agreement or simply of individual national policy, to build battleships, raise regiments and construct fortifications with more regard than they have hitherto had for the principles of rational economy. And perhaps that is all that we have a right to expect at the present day.

It must also be observed that the international situation in Europe today is extremely favorable for the unfettered operation of the forces that have been described. No one of the nations contemplates war. No one of them desires war. Great Britain, France, Russia and Italy are bound up together in a seemingly inextricable mesh of alliances, ententes and rapprochements. Germany and Austria-Hungary are standing firmly together, with Italy still a nominal member of the old triplice. But there is no proper ground on which to assume that these two great affiliations are inherently and necessarily so hostile to each other as perpetually to menace the European world with an international conflagration. The key to the situation, admittedly, lies in the relations of Great Britain and Germany. It is an unfortunate fact that the Germans and the British still labor under a mutual misunderstanding of motives and purposes. Contact between the two peoples is not so close as it should be—some maintain not even so close as it once was. There are elements in press and people of both nations which take execrable delight in keeping alive the fires of suspicion and jealousy. Thru a highly colored series of articles written by the socialistic editor of the *Clarion,* the London *Daily Mail* has lately been endeavoring to inject into the British campaign a fresh anti-German panic similar to that which swept the English people off their feet a year ago, and Mr. Balfour has so far discredited his cause as to drag out on the hustings what ought, by common consent, to be a forbidden subject among British statesmen. But there is no evidence that the Englishman is going to be taken in again; and from Germany there has come a swift denial of the alleged purposes of invasion which to the neutral observer rings true and fair.

It is not to be inferred that the German Imperial Government would today be willing to negotiate with Great Britain on the limitation of competitive armament building. But the seriousness of the fiscal situation which looms up ahead of the Kaiser and his advisers has already imparted a conspicuously milder tone to the pronouncements of the Wilhelmstrasse, and the correct handling of the subject by the British authorities

might very conceivably bring an understanding that would be worth more to the European world than one would dare attempt to calculate. It is hardly too much to say that the outcome will hinge upon the results of the present British elections. It is generally conceded that the Liberals stands for a less aggressive foreign policy than do the Unionists, and that the chances of an Anglo-German understanding would be very much enhanced by a Liberal victory. In the first place, the Liberals are committed to the maintenance of free trade, and a free trade British Government will always be in a position to deal on better terms with protectionist Germany than would a Government advocating the principles of the tariff reformers. In the second place, the Liberals are more irrevocably committed to fiscal reform, remission of taxes and national economy than are the Unionists, and in their program the demands of the army and the navy fill an appreciably smaller place. On the other hand, they are pledged to the carrying out of vast projects of social and industrial improvement, of which old-age pensions have been but a beginning; and in the execution of this program they are very certain to find that, however much solicitude they may cherish for the military and maritime prestige of the United Kingdom, the pressure of civil expenditure will not allow more than the most carefully considered additions to armament outlays. Arrived, in their respective courses, at an almost identical fiscal situation, a Liberal Ministry of Great Britain and the Imperial Government of Germany might very conceivably yield to the obvious dictates of common interest and agree between themselves upon a sane restriction of enervating public expenditure; whereupon, a dozen nations, great and small, would most gladly take the cue and follow suit.

CAMBRIDGE, MASS.

Transplanting African Animals

BY MAJOR FREDERIC RUSSELL BURNHAM

[Major Burnham writes with exceptional authority on the possible adaptation of selections of the game of Africa to the semi-arid regions of our Southwestern States and Territories. From earliest boyhood the life of this remarkable son of a Protestant missionary on the Minnesota frontier has been a drama of far-ranging experience and thrilling adventure, graphically sketched by Richard Harding Davis in his "Real Soldiers of Fortune." For fifteen years he roved the West from Hudson's Bay to Mexico until he was tempted to try his fortune as a prospector on the South African gold fields in 1893. Soon after landing at Cape Town he was induced to head the scouts in the Matabele wars and the conquest of Rhodesia, and when he sought the new field of the Klondike he was recalled by a cable from Lord Roberts to become Chief of Scouts for the main British Army in the Boer War. His daring service made him heroic in the eye of the army and people and he was signally honored by the presentation of the Distinguished Service Order by King Edward personally. After the war he headed an expedition to explore East Africa as a director of the British East African Syndicate and spent two arduous and perilous years in determining the resources of the new province and the openings for settlement. He is now closely associated with John Hays Hammond as executive head in the reclamation of a great tract in Sonora, Mexico.—EDITOR.]

THERE is in Africa a wonderfully varied range of interesting animals. Most of the desirable ones could easily be introduced into our own Southwest. They would multiply where our own domestic animals cannot live. Vast tracts of our lonely deserts could be teeming with life interesting, beautiful, harmless, very useful for food and leather, displacing not a head of our cattle or other domestic stock, offering a grand hunting ground, a true pleasure land to all lovers of animal life.

Thruout all the foot-hill region and far south, into Mexico, the bushbuck would thrive. It is mostly a browsing animal about the size of our deer; one variety has peculiar white markings, like

a harness, and it is called the harness buck; the horns are slightly spiral, measuring about fifteen inches in length. Great skill is required to stalk it, and a quick, sure shot when found, or it will escape every time. Its flesh is of very fine flavor, and its hide makes one of the strongest leathers known. It is commonly used by the Boers to make forelashes on their immensely long ox-whips and stage-whips. Another possible importation is the oribe, a marvelously swift and graceful gazelle, weighing about 30 pounds, which ranges over the drier regions of Africa, especially in the north. The gemsbok, called the oryx in the north, is a much larger animal, which is equally adaptable to conditions in this country. Its marked characteristic is its perfect, straight, tapering black horns, that reach a length of 36 to 40 inches. The buck weighs from 200 to 250 pounds, and will fight savagely when hard pressed. It has been known to kill a lion with its dagger-like horns. The gemsbok is a true game animal, and can live out on the desert a hundred miles from water. Its eyesight is wonderfully strong, so that it is exceedingly difficult to stalk. Its meat is well flavored, and its hide equal to the best calf. The gemsbok should have for a pal on our plains the speedy sesipe. I think most of the hunters of South Africa are well agreed that the sesipe is the fleetest antelope known. Some swift horses are bred in South Africa, but it is a rare one that can outfoot this game. The Posselt brothers had the only horses in Rhodesia that I ever personally saw run down a sesipe.

The springbok, that corresponds to our pronghorn, is readily bred. It is a beautifully marked antelope, and exceedingly agile. Often a whole herd in running will give a series of marvelous bounds several feet high, and, it may be, 30 feet span, apparently for sheer joy in the sport. A wagon road across the veldt will almost always tempt them to show how far they can leap. The Boers on the farms now preserve them, and have a series of great hunts every year, coming with their families and wagons and making a picnic of the chase, each farmer taking only what he needs, or what the herds can well spare, to avoid overstocking. In the hilly country the roi buck and duiker, as well as the quick darting stembok, add variety to the small game, all successfully preserved now, and adding to both the food supply and the charm of life in the African veldt.

East Africa, broadly viewed, seems designed by nature as a vast game preserve, and should be held largely with this aim in view, for the greater part of the country is of no value for settlement. The English Government, on the strong advice of its local officials, has set aside a domain that shelters everything—the elephant with his valuable ivory, even the lion. Yet these officials, almost to a man, are skilled hunters and fond of sport. But they restrict themselves as well as others, and allow in no part of the country indiscriminate slaughter. Possibly from this preserve we may, at some future time, be allowed to bring enough specimens to start a herd in our own country. We, too, have an immense area, fully 1,500 miles long and 1,000 wide, that would hold countless thousands of rare game to add greatly to our national wealth, and furnish a reserve food supply.

Take, for example, the giraffe, which is a browsing animal, living almost exclusively on a thorny scrub, like the mesquite. Its flesh is very palatable and its hide extremely tough and serviceable, making the favorite lash of the Boer, and a shield for the Somali warrior that no spear can pierce. This picturesque and harmless animal would thrive from the borders of Nevada to Texas, and far into Mexico. No enemy save man would touch it. A full-grown animal weighs over a ton, and must stoop his towering head to feed from your hand at the second-story window of a good-sized house. In contrast, there is that little fairy antelope, called the dick-dick, with sharp hoofs the size of a dime, and jet black horns about an inch and a half long. It weighs about 15 pounds and stands a foot high. It is easily tamed, and its flesh is of delicate flavor. In South Africa it goes by the name of nosebuck, as its upper lip is prehensile, tho it is a true antelope. It would thrive certainly on the cactus patches in our Southwest.

There is further the lordly eland, weighing from 800 to as high as 1,500 pounds. It can go great distances from water, and would help stock many an arid range if given the chance. On our cliffs and mountains the clipspringer would be perfectly at home, and think

MAJOR F. R. BURNHAM.

he was again in his own Rhodesia or Transvaal. Its peculiar hollowed hoofs enable it to cling to a pinnacle of rock that would baffle a wild cat or even a goat. It weighs about 40 pounds. Its hair is hollow and very springy, making excellent paddings for saddles, and its flesh is delicate meat. Like the gemsbok, it would be an excellent curative for weaklings if they hunted him in his natural surroundings. Mr. Warthog, big and ugly, would be quite happy and most useful in the everglades or swamps of the South. Many beautiful and harmless waders, flamingoes, plover, frankholins, cranes, herons, and certainly the royal bustard, could be introduced thru all our southern lands very profitably. The ostrich would be quite at home in Arizona and New Mexico. It is already successfully introduced in California on fenced ranches.

In short, Africa is a wonderland of animal life to draw from. We can exclude its venomous reptiles and insects, and take the useful animals that have worked out from a hard environment a way to survive. By transportation to our land they would be delivered from their chief natural enemies. To this New World were brought the ass, the cow, the horse, sheep, goat and hog. All of these ran wild at once and thrived, except the sheep, who is and always was a mollycoddle. Camels, valuable for both flesh, milk and hair, grew wild in Arizona from a Government herd until an enterprising Yankee rounded up every female, old and young, shipped them East and sold them to a circus. Otherwise we should have had good-sized herds long ago, and made use of them, as the Australians have, if we were equally enterprising. The Cape buffalo would thrive also, but might be considered too fierce for the rising generation to play with. Any one hunting him will not complain of a dull time. Its flesh is very good eating, and its hide much better than that of an ox. When a Boer wants a good pair of shoes he tries, if possible, to have the soles of buffalo hide.

The zebra would dot our plains with color if we gave it the chance, tho, from experience, I do not think it a valuable animal either to work or ride, and its hide does not make a leather of any value. Its flesh is good to eat, and it is one of the most beautiful of all the game animals.

These are only a few of the animals and birds that might be introduced into

our own vast solitudes, where, for hundreds of miles, can only be seen a lonely raven or solitary coyote. But it cannot be, altho there should be nothing to prevent it. In Africa the game lives ever in dread of attack. It is haunted by lions, leopards, hyenas, chetahs, wild dogs more savage than lions, crocodiles in every stream, eagles and vultures that prey on the young, pythons beside the trails, poisonous snakes and other foes too numerous to mention. Yet millions survive and endure further the scourge of droughts and the hardships of the desert. Why, then, should these hardy game animals not thrive and multiply in a country exempt from these perils, with a climate corresponding exactly in range to that of their native land? We ourselves are the only reason why none of this precious game can ever live in our wild plains. So intent are we on destruction that we have become the wonder of the world. We have dynamited our fish, killed all our buffalo, carried off even his bones in train loads, then came back with herds of cattle, tramped out and ate out the finest natural grass ever known. When it was eaten level with the ground, for fear it might, with its great recuperative powers, renew itself, we have put that curse of God, the sheep, to tear it up by the roots and gnaw to death every little shrub left by the cattle. I have seen forest fires 40 miles wide burning in the Sierras to make early grass for herds of sheep. If it were known that a herd of eland were on the Rio Grande, a thousand guns would be after them and their hides sold to the nearest tannery; even a rare bird would surely be slaughtered. Again and again I have known of individuals trying to introduce useful birds and animals; their fate is always the same. Only a national law and a changed public opinion can make it possible to ever either save what animal life we have or introduce new and valuable additions.

The man with a natural and wholesome love for sport and all forms of sturdy life is confronted by the ruthless pot-hunters, who gather the eggs and feathers of every bird that flies, and trap, poison and kill every animal within reach for the immediate gain. To this class must be added a small number of simply destructive men who kill and kill and let the game rot where it falls; men who use a stick of dynamite to get a mess of trout, killing one hundred and catching maybe three or four. All these men naturally hate game laws. Still another class looks upon all sport and pastime, especially hunting and fishing, as so much time wasted. I remember an old farmer in Iowa saying he would be glad when the last duck was shot and the last fish caught, as then, maybe, he could get his boys to attend to the plowing. Well, he has his wish. His house now stands where it did in my boyhood. Not a duck nor a goose nor a plover ever passes by. Scarcely a bird, save the ominous raven, ever breaks the silence. The prairie chicken and quail are all killed; they sometimes ate the corn. The once clear stream is now the wallow of his favorite breed of hogs. Everything is as he planned it. Hogs and corn, barbed wire, more hogs, more corn. His wife is dead, his boys long years ago left the farm. His one happiness is when he goes into the hog pasture and calls "Suke, Suke, Sook, Sook," in quavering voice, more dismal to hear than the caw of the crows. Naturally he is against any game laws, and will poison the first covey of quail that cross his cornfield. Another element that opposes every form of hunting and fishing is the supersensitive people who are teaching the rising generation that all life is sacred and that animals should not be sacrificed to the demands of man. These people would find in India this conceit of protection to life carried out to the full. Even the vermin that infest the natives may not be killed. When they become intolerable they are picked off and laid in the hot dust, their belief being that if God intended the pests to live He would cool the dust; otherwise they perish at His will, not theirs.

In the animal world Nature seems to work out the essential end by means apparently harsh. If it were not for the natural enemies of the great game herds, they would increase so fast that there would be no food supply, and starvation would be their end. The greater part of the grass-eating animals are not long-

lived. With the heat of summer the old must die of thirst and weakness. But as it is now arranged, the lion and leopard and many other enemies kill in one instant, or, at most, in a short, sharp fight, in which the animal can feel no pain. Its not yet emaciated body gives food and life to others. Furthermore, it is among the sick and weak that disease is spread, and infection there may reach a point that endangers the whole healthy herd. Always when some unnatural increase occurs, some disease sweeps them off. So even the lions and tigers, vultures and eagles, serve a merciful and proper purpose. In the countries where they are found, any animal that is born deficient in its faculties, or becomes ill or aged or wounded, is at once usefully destroyed as a means of preserving the high average of the herd.

CAPE TOWN, SOUTH AFRICA.

A Tuscan Violin

BY ETHEL TALBOT

THE blue hills rise on either side the city
In Italy, where all men's dreams begin;
There Maturin, forsaken even of pity,
Secretly fashioned forth the violin.

His soul, deep drowned in the pale seas of passion,
Lay down before him, a white dreadful thing,
That yet should live in some enchanted fashion,
Waked up again, and subtle-mouthed to sing.

The great gold sun made glorious the city,
The golden lilies wavered by the wall,
And maids glad-eyed for many a lover's ditty
Sang past his door, who heard them not at all.

Nor ever heard across the noontide clamors
From hill to hill the hurrying bells' alarms,
Nor heeded tho all night the echoing hammers
Fashioned great weapons for the men-at-arms.

A silence and a sleep-time fell thereafter,
Upon a certain amber evening,
By the well-side not any maiden laughter;—
The gray grass thru the stones began to spring.

Yet from his toil he neither strayed nor faltered,
All day he shaped the music's murmurings.
Night, coming softly when the shadows altered,
Found him asleep, his hand upon the strings.

Perfect and beautiful to outward seeming
Grew the fair thing that he had made to be,
Fashioned of sorrow and despair and dreaming,
A poet's marvel, fashioned gloriously.

As its strange wailings rang and swept and lingered,
The drowned soul came again between his hands
Into the music: sweet low tunes he fingered—
The last hour ran itself in shifting sands.

It was cool twilight in the summer weather;
Among the sudden shadows Maturin
Fell; they lay quiet in the dust together
The Master and the Master's violin.

. . . . . .

A little hill-side where the shadows linger—
(A Tuscan city where the Muses sit
No more)—a violin one may not finger;
The fairest treasure that is left of it.

In its wild heart there is a song like laughter,
Mad laughter on the grave of hidden love—
Sorrow the Queen by shadowy ways thereafter
Comes forth, and flouts the silver moon above.

Yea, when the Master singeth in the city,
Each man therein remembers his old hate,
And every woman tender-eyed with pity
Grows for love's kisses warm and passionate.

LONDON, ENGLAND.

Literature

American Industrial Society

THE *Documentary History of American Industrial Society** is due chiefly to the inspiration of two men, both of whom are now professors in the University of Wisconsin. It was Prof. Richard T. Ely who conceived the idea of the American Bureau of Industrial Research and raised the funds which made it possible; while Prof. Frederick J. Turner has long been engaged in training young men for the sort of work that Ulrich B. Phillips, one of his ablest disciples, has now accomplished. We have known and watched Professor Phillips for several years, since he won the Justin Winsor prize of the American Historical Association for his essay on "Georgia and State Rights." In this he showed the insight into the economic background of the South that has enabled him to produce in his writings, since then, what is probably the truest and keenest exposition of the plantation system. Two years ago he left the University of Wisconsin, where he had been a colleague of Turner and Ely, to take a chair among his own people in the South, in the Tulane University of Louisiana. The private researches of Mr. Phillips have covered a wide area thruout the Southern States. They have been encouraged at opportune times by grants from Professor Ely's bureau and the Carnegie Institution, with the result that they have gathered the remarkable collection of documents now given to the public. It has called for laborious industry and shrewd diplomacy to extract these documents from their hiding places in cellars and attics, or, worse yet, the strongboxes of Southern households. Probably no Northerner could have done the work. But we have here as a result two volumes on the plantation and the frontier that are without a parallel. Save in Mr. Phillips's own essays, the plantation and its labor problems have rarely been described with any fidelity and insight. The old-time Southerner ran his own estate with little introspection. The Northerner was obsessed by a humanitarian view of slavery that blunted his perception of the labor problem beneath it. And indeed, without research like this, it would long have remained impossible to describe the plantation as it really was. We believe it fair to say that in these two volumes the casual student can learn more about the economic foundations of the ante-bellum South than any one scholar knew before Professor Phillips began his work.

The great collection, of which these make only the beginning, is to run to ten volumes under co-operative editorship, under the general supervision of Prof. John B. Commons. The main purpose is to portray the American labor problem in its various aspects from the beginning until 1880. Following these volumes on plantation and frontier will come others on the labor conspiracy cases and the labor movement in general. With these before him, the future historian will be not only able but compelled to begin a revision of many of our notions of American history. Because it was easiest, historians have dealt most intimately with wars and governments, and some have even tried to defend an adherence to the aphorism that history is past politics and politics present history. Most of them know better today, and realize that governments, *et al.*, are only the surface manifestations of the real forces of life underneath. As evidence of honest and successful attempt to get at these forces, we commend this book.

*A DOCUMENTARY HISTORY OF AMERICAN INDUSTRIAL SOCIETY. Edited by *John R. Commons, Ulrich B. Phillips, Eugene A. Gilmore, Helen L. Sumner* and *John B. Andrews*. Prepared under the anspices of the American Bureau of Industrial Research, with the co-operation of the Carnegie Institution of Washington. Volumes I and II, Plantation and Frontier, by Ulrich B. Phillips. Cleveland: The Arthur H. Clark Company. $50 for the set of ten volumes.

A Champion of the White Slaves

THE history of the woman's movement in England has yet to be written. Whenever it is undertaken, a large and honorable place in it will have to be given to one of the most saintly figures that the English race has produced, a woman blessed far above the average in everything that makes life worth living — beauty, talent, education, assured

social standing, devoted love of husband and children, and the love and admiration of a large circle of relatives and friends.* And yet Mrs. Josephine Butler was content to step out of the safe and happy haven of her home, and to face the cold disapproval of her own social circle, the bitter antagonism of the world at large, and the curses and missiles of infuriated mobs, for the sake of rescuing the most downtrodden and helpless of her own sex from the condition of hopeless slavery to which they had been reduced by English law.

Notwithstanding the greatness of Mrs. Butler's service to her own sex and to the cause of woman's emancipation, surprisingly little appears to be known of her on this side of the Atlantic.

Her great lifework began in 1869, when she engaged in the crusade which had already been begun by a little group of medical men against the state regulation of vice. This system had been imported from France (where it was established in 1802 by Napoleon) in 1864, when an Act of Parliament was passed "for the prevention of contagious diseases at certain naval and military stations." Other heroines of the woman's movement have usually been women fighting to some degree their own battle —for the custody of their children, for fairer divorce laws, for education, for the right to enter the medical profession, for the suffrage. But Mrs. Butler's championship of the cause of the white slave was utterly unselfish and self-sacrificing, and in her fight she had to step down into the deepest mud of human sin and misery. One thing she had always to help her—the sympathy and support of her husband, the Rev. George Butler, principal of Liverpool College, who, while perceiving that in this woman's fight she must take the first place, was fully as earnest in the cause as she herself.

The fight was long and bitter. It was kept up in season and out of season, in England, then in France, Switzerland and Italy; but it was not until 1883 that the resolution condemning the system was passed thru the House of Commons, and the operation of the act was suspended until its repeal in 1886.

As might be expected from the experiences of their helplessness in regard to legislation, not only Mrs. Butler, but almost all those engaged in the cause, were in favor of woman's suffrage. In all of her writings, especially in those in which she appealed to women, she laid stress on the fact that there can be no real emancipation for the sex until the fundamental wrong to womanhood of the white slave traffic is removed. The new solidarity of womanhood, the new loyalty of women to women, which gives the lie to the old sneers about woman's jealousy and treachery to her own sex, is largely due to Mrs. Butler's work. Again and again in her writings and speeches she emphasized the need of this recognition of the common interests of the sex, and the obligation which rests upon the stronger and more fortunate women to stand by and champion their weaker and more opprest sisters.

The Earliest Cosmologies. The Universe as Pictured in Thought by the Ancient Hebrews, Babylonians, Egpytians, Greeks, Iranians, and Indo-Aryans. A Guide-book for beginners in the study of ancient literatures and religions. By William Fairchild Warren, S. T. D., LL. D. 8vo, pp. 222. New York: Eaton & Mains. $1.50.

Ex-President Warren, of Boston University, has for a number of years devoted special attention to the study of the way the Hebrews and other early nations conceived of the universe, and has published two books and several papers on the subject, of which one volume, known as "Paradise Found," has reached a dozen editions, an unusual illustration of the interest people take in other than purely practical subjects. For ancient views were all wrong, and we have merely a story of the errors of infantile races. But that is a large part of anthropology. The present volume discusses the commonly received erroneous views as to the Hebrew conception of the universe, then calls attention to the contradictory conclusions of scholars as to the Babylonian conception, and provides a new interpretation; and in view of this compares the biblical, rabbinic, Egyptian, Homeric, Iranian and Aryan ideas; while an appendix in-

cludes seven papers previously printed on kindred points of cosmology. It is impossible here to enter into the immense and complicated subject further than to indicate that President Warren has added much to our correct understanding of it, and has presented a view of the early popular conception of the universe which explains the biblical and other data, and which makes the universe consist of eight concentric "crystal spheres," of the inner one of which the earth occupies the center, a seven-stepped pyramid rising upward, and a similar reversed pyramid below it, thus giving seven heavens and seven hells. It is a very attractive view, and is presented with both ingenuity and learning. One only questions whether the Oriental mind ever diagramed it out so exactly, or whether it was satisfied with indefinite ideas, unconcerned with their consistency; but the author's theory is approved by some of our most competent scholars.

The Danger Mark. By Robert W. Chambers. New York: D. Appleton & Co. $1.50.

Mr. Chambers has written a book in which every character has some besetting sin, and it is in the bare portrayal of these sins that the interest of the book lies. It is itself the feminine counterpart of "The Fighting Chance," but lacks its strength by reason of the difference in sex of the main characters. There is something logical about a man struggling openly against a taste for intoxicants. Men are public characters even in their weaknesses, and in battling against tremendous odds they evince a stolid virility that makes them admirable subjects for normal fiction. Women are, on the other hand, secretive, especially about their weaknesses and their struggles. When they are frank about them they are unpleasant. They struggle too intensely, too hysterically, with a too-evident self-consciousness of what is happening. Nevertheless, when Geraldine Seagrave, a New York heiress, discovers early in life that she has inherited a fatal taste for intoxicants, instead of concealing this appetite, she yields whenever the author considers it dramatically possible. And her lover has to save her from embarrassing situations. The scene of the story is laid partly in New York and partly at the Seagrave country place, where a series of Mr. Chambers's notorious house parties gives proper setting for the scandals that are always rife in his novels. No one escapes with the skirts of their morals unbedraggled, unless it be Geraldine's beetle-hunting brother and the chaperone. It is a contradictory feature of the book to find an impeccable chaperone amid such surroundings. One supposes the author felt the need of some innocent characters to give now and then a morning freshness to the atmosphere of his romance.

Trix and Over-the-Moon. By Amélie Rives. New York: Harper & Brothers. $1.25.

It comes as a surprise to the reader's preconceived notions of Amélie Rives's heroines to find one that is proudly and frankly "horsey." We have grown so accustomed to her pale, passionate ladies that to come upon one in this book who is curtly a sport and a born horsewoman intolerant of anything that does not pertain to horses makes us think that the author has had a mental housecleaning and thrown out her literary orchids and substituted Johnny-jump-ups. The scene is laid at a country place in Virginia. The story is chiefly concerned with the "breaking" by the heroine of a famous and dangerous colt whom she purposes to ride in a horse show. Rather than have her mistress run such a risk one of the old servants of the place secretly kills the horse. There is no doubt but that the book is breezy and full of fresh air and vitality, but for the reader its main interest lies in its startling difference from other novels by the same writer.

Society and Politics in Ancient Rome. Essays and Sketches. By Frank Frost Abbott, Professor of Classics in Princeton University. New York: Charles Scribner's Sons. $1.25 net.

Light, graceful sketches these are, but they touch vital points in the Roman life which are only meagerly treated in the general histories. Professor Abbott follows closely on the heels of the gleaners in the fields of archeological research. These gleaners have uncovered the

earth's bones, have almost brought down the stars in their effort to add a little to what the historians have told. In a dozen essays, the author has let the coins alone, troubled the monuments a little for their inscriptions, and given his attention chiefly to charcoal marks on the white walls of buried cities. Pompeii comes in for a large share of study. Its "graffiti"—1,500 of which have been uncovered, deciphered and recorded in print—furnish slight but determining hints of a typical life which, in A. D. 79, went suddenly out before the inhabitants had time to efface the tell-tale records on their stuccoed houses. That the common folk are pretty much the same the world over and times down, is sufficiently evidenced by the trifles they leave behind. In Pompeii, when the volcanic hand fell on the city, the boys were still boys, the petty elections developed tricks which are common today. Common they were then in Siena, Rome, and wherever the archeological spade has been at work to elicit information. "Vote for Julius Polybius; he supplies good bread," says a voter in Pompeii on his white-walled house. "Proculus, do your duty by your friend Fronto!" says another; and still a third: "All the Pompeians have voted for Proculus." This must have been an early election. "Support Q. Bruttius Balbus; he will guard the treasury," is a desirable assurance. Equally applicable to all times is this: "I beg you to support A. Vettius Firmus as aedile; he deserves well of the state. I ask for your support. Ball-players, support him!" Of course it is some madcap wag who has studied the ways of the Pompeian Tammany who writes: "All the sleepy men nominate Vatia for aedile"—"The petty thieves propose Vatia for the aedileship"—"I ask your support for M. Cerrinius Vatia for the aedileship. All the late drinkers nominate him." So much for Pompeii. A more ambitious attempt is made by Professor Abbott to draw a parallel between the Roman senate and ours at Washington. Here he seems to overstate the sins of our legislative body, in affirming an element of continuity in our senate's political hold on legislative action based on the continuous service of a few senators, not giving stress enough to the fact that our senate was in the beginning purposely intended to be repressive in its character and to invite this character by securing a certain degree of continuity—a purpose still considered desirable by all thinking men, while the continuity of the Roman senate was of a totally different character and history. Many good points also are made in the essays on "Women and Public Affairs Under the Roman Republic," on "Roman Women in the Trades and Professions." A little hint of an un-Christian Science, or an ante-Christian Science is given by the record on stone of a certain Felix, who says: "After having been given up by his physician, his sight had been restored by the goddess Bona Dea and the indirect treatment of her priestess Caunia Fortunata." Altogether, Professor Abbott's essays are the fine work of a gleaner in new and old fields. There are a dozen of them, scholarly and with a delicate charm of their own not always found in men of learning who gather their material from gravestones.

Old Boston Days and Ways—From the Dawn of the Revolution until the Town became a City. By Mary Caroline Crawford. With numerous illustrations. Boston: Little, Brown & Co. $2.50 net.

There is in this generation a great turning over of old papers, some of local, some of national interest. In *Old Boston Days and Ways* we have not so much new material as old material brought together and assorted, old records scoured for their final word, old letters printed more at length than would be called for by the historical needs of a wider theme. Boston is still no mean theme for the historian of the Revolution. With Samuel Adams, Joseph Warren, Governor Gage, Lord Howe and the "Occupation" to deal with; with the eatings and drinkings, the dancings and the tea-spillings in Boston harbor; with John Hancock to take to pieces in the way that has become almost a fashion; with Israel Putnam to keep within bounds; Paul Revere to put on living terms with Mr. Longfellow; with Earl Percy to be given his innings at the bat; and, in general, with art, music, theaters, society, religion, oratory, tradition, all to be more fully

illustrated, the author has a grateful task, and she takes it up with interest, both for the Bostonian of today and for the Sons of the Revolution, whose ancestors sat with guns in that semi-circle of investment round the historic city, and for a year following the memorable lessons given King George at Lexington and Bunker Hill, studied in the "classic shades" of Harvard how they might best drive the lesson home at the point of the bayonet. Both Britishers and Yankees at the end of the year got their walking papers—*ad gradus summos*—and went on to higher work.

Songs from the Silence. By Minnie Ferris Hanenstein. 12mo, pp. 111. Buffalo: The Matthews-Northrup Works.

Over a hundred short poems are included in a fair volume which the author has issued primarily for the circle of her family and friends. Many of them have appealed to a wider public in THE INDEPENDENT and a number of other magazines. They express pure and worthy sentiments, worthily put into verse, and freighted with the happy experiences of love and life, and enriched by memories of lands that seem to carry longer traditions than our own.

The Junior Republic. By W. R. George. New York: D. Appleton & Co.

William R. George, the founder of the Junior Republic, began where most philanthropic effort, until the past few years, has begun—and ended—with the futile attempt to even the discrepancies in the social structure by treats and gifts. He learned, as many have learned, and thereby grown disheartened and resentful, that gratitude is seldom the crop raised from a broad sowing of generosity. Instead of blaming the individual for what was a widespread result of something, he questioned the method. Then commenced a series of discoveries about the nature of boys and girls that resulted in the founding, fourteen years ago, of the republic at Freeville, N. Y. Already it has several descendants, and has modified, as it will continue to do, the whole system of discipline in schools and institutions, the Junior Republic is precisely what its name implies, a commonwealth, carried on by the boys and girls, its citizens. By its supreme court, composed of three directors, to which an appeal can be taken as one would be to the Supreme Court of the United States, is wielded the only direct power reserved by those in charge of the institution. The boys and girls govern themselves, and do it well. It is a practice school which seems to solve the serious problem of teaching self-government and citizenship to the children of our mixed and rapidly growing population. Mr. George tells of his experiment in a concise, informal and modest way, with a sense of humor and a vividness of description that make the book more entertaining than a story; but he tells it also with an earnestness and a breadth of view that give it value, not alone to those who work among the less fortunate, but to all who have to do with boys and girls.

The Pilgrim Fathers: Their Church and Colony. By Winnifred Cockshott, St. Hilda's Hall, Oxford. With 12 Illustrations and a Map. New York: G. P. Putnam's Sons. $2.50.

Very wisely has the historian of the Pilgrim Fathers chosen to give us at last a well-defined story of the original cause of their departure from England to Amsterdam, from Amsterdam to Plymouth with little discussion of mooted points, with little discursiveness, with small attention to the quarrels of local historians. She has found sufficient help from the more recent specialists, but has preferred to take the reader into the spicier narratives and original documents for coloring. About half her story lingers in England among the "origins," and in the first migration which took the wanderers to Amsterdam. New material covering that forlorn hope exists and has been used by Edward Eggleston, and by Campbell and a dozen historians. Of this material she has made use, evidently under judicious direction, but an eye for style and interest has led her to Bradford and Winslow and Barrow and Browne, whose picturesque relations, narratives and histories are not easily excelled. For a popular history, going deeply into the real story of the tribulations in England, the stormy passage across the ocean, the privations of the first years in Plymouth, this is much the

best work we have seen. Those hard-working, earnest, God-fearing traders and worshipers knew what they wanted, and knew how to tell of the difficulties of getting it. All this the historian has given us as far as possible in their own picturesque way of telling it. The narrative is straightforward; it never lags; it is full and rich in details, with the freshness of nature in them. It should be in the hands of all young people who wish a decidedly racy story of adventures that are not fanciful.

The Socialist. By Guy Thorne. New York: G. P. Putnam's Sons. $1.35.

The young Duke of Paddington is one of the richest landholders in London. A series of somewhat unusual experiences lands him in the Socialist movement. He marries a talented and beautiful actress, renounces most of his wealth and gives himself, as does his wife, to the proletarian cause. Then his troubles begin. At the end of the story he learns that Christian Socialism, and not the orthodox brand, is the thing he has been seeking. In that conviction, and in the realization of a closer union with his wife, who now leaves the stage, he comes to happiness. It is not much of a story. The characterization is not strong, and the narrative has no suspense. Perhaps the most effective passages in the book are those which depict the attitude of the Tory classes toward the proletariat. The courtly bishop says piously to his questioning daughter:

"In the sight of God, my dear, we are certainly all equal. The soul of one man is as precious as the soul of another. But in this world God has ordained that certain classes should exist, and we should not presume to question his ordinance. Our Lord said: 'Render unto Cæsar the things that are Cæsar's.'"

Thessalonians and Corinthians (The Westminster New Testament). With introduction and notes by the Rev. Prof. R. Mackintosh. New York: Fleming H. Revell Co. 75 cents.

This is the first volume of a new edition of the New Testament, under the general editorship of Principal Alfred E. Garvie, of New College, London. It perhaps should rather be called a commentary, since the plan includes a brief introduction to each scriptural book, and concise running notes on the text, in close juxtaposition therewith. In form and appearance, however, the volume resembles the recent convenient printings of the biblical books, such as "The Temple Bible" and "The Modern Reader's Bible," and is not at all like the traditional bulky commentary. The point of view is that of modern critical scholarship, but the positions taken are moderate, while familiarity with the work of thoro scholars of all schools is evident. A commentary of this sort, designed to be popular, easily runs into a garrulous paraphrase, with explanations of that which needs no explaining, but the notes in this volume are well designed to convey light where light is needed, and will be found to be neither prolix nor superfluous. The reader is supplied with that which he really needs to know, in convenient form, and no space is wasted in mention of views which have no support in sound judgment.

Options. By O. Henry. New York: Harper & Brothers. $1.50.

Just why this book should be entitled *Options* we cannot guess. But for that matter we have often wondered at Mr. Henry's nomenclature. Anyway, here is the latest collection of his short stories, most of which, no doubt, the alert and assiduous follower of Henry has already found in the magazines. The style is much the same as of old, and there is something approaching the marvelous in the fact that the author can keep up, thru such a flood of output, the freshness and originality which has made him the most popular story-teller of the day. But the substance begins to thin out somewhat; less matter—less body—is required in these days than of old to make a Henry tale. And as the substance begins to thin, the effects must necessarily be emphasized, the treatment must make up for the lack of body. Thus we have the familiar impossible situations, the extravagant characterizations, made more impossible and more extravagant. Nevertheless, we are of those who never tire of fresh products from the Henry workshop.

Literary Notes

....The great men of modern mind in the seventeenth century, John Hales, William Chillingworth, Benjamin Whichcote, John Smith, Henry More, Jeremy Taylor, Sir Thomas Browne, and Richard Baxter, are the subject of a thoughtful essay by Edward Augustus George. The volume is entitled *Seventeenth Century Men of Latitude* (New York: Charles Scribner's Sons).

....One who desires to be religious despite the impossibilities of some of the older theologies will find sympathetic assistance in Prof. Borden P. Bowne's *Studies in Christianity* (Boston: Houghton-Mifflin Co. $1.50 net.) It is an attempt to combine the new theology with the old religion, and deserves an honorable place among the many re-statements of Christian belief in the light of the new knowledge in criticism and science.

....The Art Commission of the City of New York has sent to our tables a copy of its new *Catalog of the Works of Art Belonging to the City of New York.* It is a very dignified looking volume of nearly five hundred pages, almost elegant in its artistic simplicity, profusely illustrated with carefully selected full-page half-tones, every third leaf being the reproduction of a portrait, painting, or other work of art belonging to the city. The text, prepared by the secretary of the Commission, Mr. John Quincy Adams, is peculiarly suitable and adapted to a work of this nature, confining itself as it does to real information about the picture and its subject, offering a description that would identify in case tablets were misplaced or lost and being entirely devoid of that criticism or praise that presupposes the ignorance of the public and varies with the taste of the times. The catalog is not on sale and is distributed mainly to institutions.

....A curious reprint is John Davis's *Travels of Four Years and a Half in the United States of America* (1798-1802), by John Davis, published in London in 1803, with a dedication to Thomas Jefferson. Davis stands apart from the other early foreign visitors to our shores, in that he was not a man of standing, culture and means, traveling to satisfy his interest or curiosity, but an immigrant seeking a livelihood. He started life as a sailor, when very young, caught a glimmer of culture from a German gentleman who took an interest in him on a long trip to India, and later developed literary aspirations—whence this book, whose interest lies in the very fact that its author, who came to these shores at twenty-two years of age, possessing no standards of comparison, draws none, social, political, or economic. He tells his experiences as facts, not as points of departure; the reader can make his own deductions. Aaron Burr befriended him in New York, but thence he wandered far, even into South Carolina. All unconsciously he has drawn for later generations a simple picture of the conditions of life and the manners of their early American ancestors. (Holt. $2.50 net.)

Pebbles

"How about going to the theater tonight?" inquired the young lady.

"What, and miss seeing the new comet?" responded the economical young man.

"I NEVER saw a purple cow,
I never hope to see one,
But by the purple milk we get
I know that there must be one!"
—*New York Times.*

"How often does your road kill a man?" asked a facetious traveling salesman of a Central Branch conductor the other day.

"Just once," replied the conductor, sourly.—*Kansas City Journal.*

HE was a kind and benevolent old gentleman, who took much interest in little boys.

One day, as he was walking along the street, he stopped and looked with compassionate sympathy at a lad whose face bore clear evidence of having been in the wars.

"My poor little fellow," he said, patting the boy on the head, "I fear you've been fighting. You've got a black eye. Dear me, now, I'm really very sorry. I——"

"Never you mind about me," said the poor little fellow. "You go home and be sorry for your own little boy. He's got two black eyes."—*Tit-Bits.*

A SOUTHERN RHYMING CEREMONY THAT STARTED TWO IN MATRIMONY.

Maben, Miss.—Altho Judge Norman Moore has often charged the jury in rhyme, he came into the limelight today as an impromptu rhymer for the first time when he performed the ceremony that made James Davis and Bettie Johnson man and wife. The ceremony, as performed by Judge Moore, who is now Mayor of Maben, was, in exact words:

"Jim, will you take Bet
Without any regret
To love and cherish
Until one of you perish
And is laid under the sod,
So help you God?"

The bridegroom replied in the affirmative. Then, turning to the bride, Judge Moore said:

"Bet, will you take Jim
And cling to him,
Both out and in,
Thru thick and thin,
Holding him to your heart
Until death do you part?"

The bride blushed in consent, with modest bow, and Judge Moore dismissed them as follows:

"Thru life's alternative joy and strife
I now pronounce you man and wife.
Go up life's rugged hill
Until you both reach the level,
And then salute your bride,
You big but trusty devil."

Judge Moore charged the bridegroom no more than the regular fee.—*New York Herald.*

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $3.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

The Situation in Congress

Two months have elapsed since the beginning of the session of Congress, and the national legislators have done almost nothing. This is what is called the long session; in the following short one it will be difficult to find time for important legislation in addition to the appropriation bills. There is much that should be done at the present session, but members are already talking of an early adjournment.

Many of the Republican Representatives are uneasy about the political condition of their districts. They should see that they can best serve the interests of their party and commend themselves to voters by doing something at Washington. Many of them have good cause for anxiety. They are held responsible for a very unsatisfactory revision of the tariff. When they ask for renomination and re-election they should be able to show something more than the Payne-Aldrich bill, and the additional legislation should be at least a considerable part of the program laid before them by the President.

The people are familiar with that program and nearly all of it has their approval. It includes the bills creating a Court of Commerce, increasing the power of the Interstate Commerce Commission with respect to railroad rates and in other ways improving the official regulation of the railway service; the establishment of postal savings banks; the conservation of natural resources, as provided by several important measures relating to the public lands; Statehood for Arizona and New Mexico; a new form of government for Alaska, and voluntary incorporation of great companies or combinations under Federal charters. There is a popular and just demand for substantially all of this, except Federal incorporation, as to the merits of which the public does not feel well informed. Members of Congress who represent the dominant party have been misled as to the attitude of their constituents if they think they can safely close this session without passing the bills for further regulation of railroads, for postal savings banks and for reform in the land service.

Inaction has been more noticeable in the House than in the Senate, where the postal savings bank bill has been reported and is now under consideration. One cause of delay in the House has been the revolt of about twenty-five Republican insurgents against Speaker Cannon and the rules. But these insurgents in conference have exprest their purpose to support the greater part of the President's program. While no attempt to deprive the Speaker of a part of his power may be made for some time to come, those who oppose him are probably ready to take advantage of any favorable opportunity to do this. Sharp factional division may delay or even prevent the passage of those Administration measures the principles of which are approved by a majority of the House. The situation in the Senate, while it probably permits favorable action upon several of the measures in question, is not one of ideal harmony. On the whole, the condition of Congress, and of the dominant party in it, at the present time leaves much to be desired.

The cause of discord and revolt is to be found in the recent control of the ma-

jority party in both the Senate and the House by men whom the people regard with distrust, and in the exercise of power by these men to procure an unjust revision of the tariff. The organization rulers who are responsible for this bad work, and their party as well, are now menaced by the popular outcry against the great and growing cost of living. They have been forced to provide for investigations of high prices in both the Senate and the House. In each body the inquiry will be in the hands of those who were responsible for the tariff revision, and, quite naturally, they will seek to minimize the effect of their tariff law, and of the tariff law immediately preceding it, upon the prices of commodities.

We would not be understood as holding that the recent increase in the cost of living has been due to either the tariff of 1909 or to that of 1897. We do not undertake to show here how much of that increase, in our judgment, has been caused by tariff duties. It is true, however, that a great many people, without the aid of exact information, are ascribing the prevailing high prices mainly to the tariff and to the greed of Trusts. Their opinions and attitude may well cause uneasiness in the mind of any Republican member of the House who voted for the present tariff and whose majority in his district at the last election was small.

In the face of political danger that cannot be ignored, the members of the Republican majority in Congress should diligently strive to enact legislation for the public good. They cannot make a better revision of the tariff at the present session, nor can they speedily reduce the cost of living, but it is within their power to give the people new laws for an honest management of the land service in the public interest, for regulation of railroad rates, and for postal savings banks, laws which the people want, which the people believe they ought to have, and which are clearly for the public welfare. If a desire to "mend their fences" in their districts leads them to neglect this opportunity for doing something to appease the people, some of them may find that they have no fences left to be repaired.

Björnson

In our issue of September 30 we published a review of the novels of Björnstjerne Björnson by Professor Phelps, of Yale, and now it seems the time has come or is close approaching when his life work may be discussed in its entirety. The remarkable thing about it is that there should be any occasion for such a discussion, that a man using one of the minor languages of the world, and writing for the benefit of his own people, should have the power so to project his personality beyond the bounds of language and nationality that multitudes of Americans should feel an interest in him. Of the present generation—which, it must be remembered, is only the second generation of purely Norwegian authors—there are three who are known to us Americans, Björnson, Henrik Ibsen and Jonas Lie, and of these two have practically become part of our literature.

The wonder grows when we think that Björnson did not aim at cosmopolitanism, but the opposite. He was emphatically and unceasingly a nationalist, taking up the task begun by Henrik Wergeland, of freeing Norway and making it independent. Politically Norway was separated from Denmark in 1814 and from Sweden in 1906, but its literary and spiritual independence has been gradually achieved thru the struggle of more than a century against the dominant influence of the other members of the Scandinavian group. The band of Norwegian writers who have been leaders in this movement deliberately determined to narrow their already limited audience by the accentuation and intensification of the differences existing between the Norwegian language and its congeners, Swedish and Danish. This was sectionalism, but not provincialism. It was a revolt against provincialism, against the imitative and dependent attitude imposed upon Norway by the habit of looking beyond the peninsula for its ideals and standards of taste and by too close an association with its more populous, wealthy and aristocratic neighbor, Sweden. The movement was, in its inception, something like the revival of Provençal by Frederic Mistral, and the

revival of Gaelic in Ireland, an effort to create a nationalistic spirit by the literary development of an obsolescent dialect thru drama, folk-tales and poetry. The Provençal movement has declined without producing any important political or social effects. The Gaelic movement is still rising and it is too early to tell what it will accomplish. The Norwegian movement has triumphed and Björnson has lived to see his native land free and independent in every sense of the word, and Norwegian nationality distinctly recognized by all the world. The formal separation from Sweden came about peacefully because the separation had been already practically accomplished, and thru his efforts as much as any man's.

An outsider may question whether it was wise, whether it would not have been better to have striven for a wider unity rather than a narrower one, but he cannot refrain from admiration at the courage and success of the effort. We can realize these better if we consider what the literary secession of an equal population in our own country would mean. Let us suppose that the Indiana group of poets, novelists and playwrights had all remained in their native State instead of permitting themselves to be drawn to New York City; that they had confined their contributions to the *Reader* magazine and local papers; and that they had written exclusively in Hoosier dialect, using Riley's poems as the basis of the new literary language. Would they have been able in the course of a century to have given Hoosier literature an honorable standing in France and Germany, to have revolutionized the dramatic technique of the world, and to have so differentiated Indiana from the surrounding States that its political separation would follow naturally and quietly?

It is a mystery to us Americans why Björnson, after preaching republicanism for half a century, should have advised his countrymen to get a king when they had achieved their independence. Perhaps when the diplomatic notes exchanged between the chancelleries of Europe at that time on the advisability of letting Norway go its own way, are published, we may understand it better and be more lenient in our judgment of Björnson. Perhaps, too, his republican ardor had cooled since the days when he sacrificed his prospects and alienated his admirers by a bitter attack on the monarchy in his poem "The King." A similar transformation took place in another Nobel prizeman, Carducci, whose youthful poems of anarchy did not prevent him from coming to toleration and friendliness with royalty in his old age.

But Björnson always had the courage of his convictions, even the courage to change his convictions. He was the embodiment of the Viking spirit, in his fearlessness, in his self-reliance and in his fondness for a fight. His career was climacteric. It may be divided into three parts. In the first he defied the king, in the second he denied the devil and in the third he shocked Mrs. Grundy. He has used pen and speech, book, play and poem, on one side or the other, sometimes on both sides, of every literary, political or social problem in Norway for the last sixty years.

His journalistic efforts began in the memorable year 1848 with the school paper *Liberty,* and he complains of his teachers because they wanted him to study when he preferred to write. How his early literary ambitions were regarded is shown by a story told of him when he was in the University of Christiania. He was so conspicuous among the gathering of students that a visitor inquired who he was. He was told "that is Björnstjerne Björnson, a young man who wants to become a genius." This was corrected by a bystander who said, "I would rather call him a young genius who wants to become a man." The second speaker showed the greater insight. He was a genius and he did become a man. Not every genius does.

A Permanent Solution

A CLEARER, saner and surer solution of the present collapse of our monetary situation it would be hard to find, than that presented by Professor Norton to our readers in the present issue. We commend it to their thoughtful consideration.

The alarming phenomenon is that of

the steadily increasing cost of everything we need to buy; or, put in reversed terms, the decreasing value of money as a purchasing agent. What would have cost us a dollar of almost any of the standard articles of food or wear a dozen years ago will now cost $1.60 or $1.70. The condition is precisely as it was after the Civil War, when the prices of all commodities were doubled or trebled.

Professor Norton tells us the reason. Then the Government issued an enormous amount of promissory notes as money, which decreased their value as money. The excess raised prices everywhere, until the excess was withdrawn, when prices steadily fell to a normal level. Just so now gold has been produced to an extraordinary amount and issued as money, with a like result. Prices have risen; or, which is the same thing, the purchasing value of gold has fallen. This, Professor Norton tells us, is the principal cause of the alarming increase in the cost of living; not the entire cause, but responsible for two-thirds of the rise in this country, the remaining one-third due to trusts, tariff, cold storage and banking laws which prevent an elastic currency. The fact that prices have risen the world over, in England, Russia, China and South America, as well as in the United States, altho not so much as here, proves a world-wide cause.

Professor Norton tells us why we have in circulation so much more gold than we had fifteen years ago. It is because of the improved methods of extracting gold from low-grade ores. It did not use to pay to extract gold from ore which would yield less than twenty dollars to the ton; now it can be extracted from ore that will yield five dollars to the ton. Gold is thus an unstable basis of value, just as in the first Bryan campaign silver was proved to be an unstable standard. We then hoped that gold would remain stable, but it has not. Engineering chemistry has spoiled that hope. Silver had to be given up as the standard of value. We came to a single gold standard. Gold has now failed us; what shall we take in its place?

It is hard work to make people who have looked on gold as money only, think of it as a commodity, just like wheat, or cotton, or cattle, or iron. Iron has been used as money. Today in Africa cattle are money in buying a wife. The Latin *pecunia,* our *pecuniary,* is said to come from *pecus,* a sheep. We have dropt one standard after another—iron, sheep, cattle—as they became too abundant, and later have dropt copper and silver from the same reason. We have been reduced to one standard, gold, because that seemed relatively stable. But it is not stable. Its increasing quantity, sure to continue, has ruined it as a standard, and we must find a more permanent one. What shall it be? What is there that will not change?

Sixty years ago the economists told us that probably the most permanent of all values was wheat, but wheat is bulky and inconvenient. Besides, it is only one product, like gold, and why not equally use rice or cotton? Economists now are agreed that no single standard of value is safe, but that we must have recourse to a composite standard, the resultant of the values of all the principal products we need. These staple commodities have been selected, and their values noted year by year, and index numbers given them, so that it is quite possible now to establish a general resultant that will be comparatively stable. This resultant of the whole number of staple commodities should be the standard of value, and not any single one like gold or wheat.

This resultant may seem intangible, but it is not intangible. It gives us not the total quantity of one commodity, like gold, but of all staple commodities. If we call the resultant unit of value a new dollar, or a "dill," it will mean not that much worth of gold, but that much worth of everything we need to live on—flour, sugar, meat, cotton, wool, iron lumber. The new dollar, based on all commodities, will buy just as much of these things ten years from now as it does to-day. A day's wages or a month's salary will not diminish in purchasing power. Prices will not rise and fall, and the danger of discontent and riots because of dissatisfaction will be greatly diminished.

Something of this sort will have to come. But this will not give entire re-

lief, for Professor Norton would have us remember that other causes of inflated prices, more easily visible to everybody, will still exist, in combinations of wealth and in unwise legislation. Here is work enough for the President and his Attorney-General. Fortunately we have a Monetary Commission which will study the whole matter. Something must come out of it, and something radical may be expected. We conclude by adding that the result will not be, cannot be, to give us fiat money. Professor Norton indicates that just as gold is now piled in the Treasury's vaults as the basis of notes given on it, just so, with the new currency, absolute value in all staple commodities, held in storehouses, and secured in banks all over the country, will be the better basis of value for our currency.

The Paulist Apostolate

THERE is no more truly evangelical and intelligently devoted body of men in the Catholic Church than those who, under the name of the Paulist Community, celebrated during the last week of January the founding of their order. They are few in number, organized by five priests in 1859, and now numbering only sixty-three priests, but they have put a new spirit and courage into the Catholic Church, thru the missionary zeal which is the essence and inspiration of their purpose and service.

The five priests who organized the Paulist community were all converts from Protestantism, and imbued with the best culture and spiritual fervor of the Protestant Churches. Their leader was Father Hecker, and we are pleased to see that in their historical "souvenir" for their centennial they are far from making any apology for him, altho the "Life of Father Hecker," translated into European languages, gave support to the charge of "Americanism," brought against the Catholic Church in this country, which was condemned by Pope Leo. Nevertheless, altho fully alive to the conditions of the age and far from medievalism, the Paulist Fathers have always been most loyal to the Church and to its Pontiff at Rome. But they have never made much of the popular superstitions and adventitious devotions, but have concerned themselves with the more vital articles of faith and worship.

The Paulist Community was organized principally to do mission work, and first among non-Catholics. They seek to speak to Protestants, to invite them to meetings, and to answer in public the objections and questions raised by Protestants against the Catholic Church. They make much of the question box, and they think that replies to questions put in it have brought many conversions. To this missionary work no Protestants have the right to object. The Catholic Church is welcome to all the converts it can get in this way. Most of them will be from the lapsed or indifferent, who are waking to their religious needs, and who will be helped into a religious life, while the smaller number of the more intelligent and religiously trained will find in the authority of the Catholic Church a peace, at least for a while, which they have not found in Protestantism. Converts from Protestantism, like those five Paulist fathers, have added to the strength of their adopted Church. It is only proper to add that such missionary work as it is right for Catholic priests to carry on among Protestants in this country, and which we do not resent, it is equally proper for Protestant missionaries to carry on in Catholic countries—in Spain, or Italy, or Mexico, or the South American republics; but we are sorry to say that Catholic journals published even in this country are offended by it. Whoever has a message has the right and duty to spread what he believes to be the truth, and to try to convert the people to what he holds to be the purer religion.

But by far the best and principal work of the Paulist fathers has turned out to be their missions to Catholics. This is nothing less than admirable and wholly useful. They go to a large city church and conduct a mission, what we would call a revival. They will carry it on for four weeks. The first week the married women are invited, the second week the unmarried women, the third week the married men, and the last week, as the hardest to reach, the unmarried men. The church will be crowded at five o'clock in the morning. Very simple,

very positive, very stringent doctrine will be preached. The common sins will be condemned, Christ's cross set up, Heaven and Hell presented before the people, repentance and reformation required; and after the service and during the day the confessions of penitents will be heard. We suppose that ten Catholics turn Protestant for one Protestant convert to the Catholic Church, but the careless and lapsed Catholics who are recovered by these missions held all over the country may be numbered by the hundreds of thousands. These missions have become a chief institution in the Church, and are a thousandfold better than all the scapulars and medals and relics so much depended on by the ignorant.

After Father Hecker's death Father Hewitt became the Superior, who was given the doctorate of Divinity by Amherst College, his alma mater; and he has been succeeded by three others, of whom Father John J. Hughes is now the Superior; every one of them a convert, tho not all the members now are converts, and comparatively few will be. But the missionary spirit is faithfully cultivated, and the duty of defending the Catholic faith before the people. This involves much work in publication, and *The Catholic World,* the chief Catholic monthly, is from their press. They have in this city one of the finest churches, and the largest church audience room but one in the country. They have succeeded far beyond their numbers in the truest Christian work, and they are especially to be commended for their success in preaching the great truths of religion, and in somewhat alleviating the prejudiced ill will with which fifty years ago Catholics and Protestants looked on each other.

A Paradise of Dead Beats

THE place is here. The time is now. Organic evolution has produced many queer and many admirable varieties of living things, but nothing more neatly adapted to the conditions of its existence than the American dead beat.

He (or she) is as distinct a variate as a seedless orange or a self-fatting pig. He (or she) does not rely on such crude devices as the unpaid bill or the bogus check. These pertain to the generic, or unimproved, dead beat, common to all countries. The American variety always offers you something for your money, and you buy it with the conviction that you are getting something strictly up to date. You are.

Naturally enough, material commodities are the stock in trade of those American dead beats, who feel no particular impulsion to lead the "higher" life. Cleverly they remind you that this is the land of inventors and inventions, the land, too, of domesticity, where inventive genius takes celestial delight in adapting wonderful devices to the alleviation of cookery, of indigestion, of the Saturday night bath, and of the wash tub. Wherefore breakfast foods, each more attenuated than another, remedies guaranteed to work till the doctor comes, and soaps that put elbow grease to the blush. It never occurs to you to ask what these things are made of, or whether you could obtain in a simpler form, with fewer wrappers and milder illustrations, their essential ingredients. On the whole, you like to linger over the illustrations, and the testimonials divert your weary mind. The dead beat understands your understanding, and is glad.

The field of operations for the materialistic dead beat, however—the dead beat without a soul—is limited. It is he who can soar into metaphysical realms who finds boundless opportunity and a multitude that no man can number of that human mutant known to anthropologists as "the sucker." If the d. b. is but recently risen above material considerations, and is still a bit new to spiritual possibilities, he (or she) is likely to offer some new form of consolation. Attractive brands of "right thinking," "placidity," "soul breathings," "gentle pressures on the medulla oblongata" are temptingly arrayed, and they always bring fair prices. But commerce in these wares does not satisfy the expert. Nothing less than a new religion offers an adequate career to a d. b. of the finest quality. It must not be too new, and, above all, not too comprehensible. Its scriptures must require much interpretation and the "personal element," skillful in dealing with individual difficulties, gracious and cheering

in office consultation, must be developed in generous fashion. Unfortunately, the recently issued Census Bulletin on American Religions does not give the statistics of the really "advanced" cults. One has to get his inexact knowledge of these largely from Boston and Chicago newspapers and from morning lectures to "exclusive" audiences. We probably do not exaggerate if we make a guess that in the United States a hundred thousand men and women keep soul and body together and suitably clothed in frock coats and shawl muffs by selling new styles in soul goods to a yearning populace.

There is yet a higher, a more distinguished grade of d. b. than even the "life saver." His nerve is finer, his method more artistic. Usually he scorns the religious and metaphysical brothers and sisters of his profession as heartily as he despises the soap venders and the breakfast purveyors. He (or she) is, above all things, intellectual, thoroly "advanced" and positively ethical. Everything that he (or she) does must have a purpose. It must advance some reform. It must contribute to the "uplift." Two methods lend themselves to the professional aims of the intellectual-ethical d. b. One is to organize a society, with all proper offices (with salaries), advertise it unremittingly, and hold up the public for contributions. The object of the society must be obviously "good." It should be backed by a long and impressive array of distinguished names, constituting the "advisory board." There must be annual meetings, with speeches properly reported in the newspapers. "Ladies' auxiliaries" and "teas" are a help. This method of dead beating by organization doesn't, however, s u i t everybody. Appealing to the man or woman who instinctively tends toward the socialistic pole of thought, it as naturally repels the anarchistic temperaments. These as naturally resort to the alternative plan. Each one on his (or her) own account publishes a "magazine." Each "magazine" is by its own admission the only organ that addresses itself to the most burning questions and tells the entire truth on all subjects. Each is an ebullition of unrestrained self-assurance and of uncontrollable willingness to set the universe to rights at any cost. Each solicits advertisements and subscriptions.

What have all of these characteristically American phases of the dead beat career in common? This: They are not always frauds, they are not always intentional hypocrisies or humbugs. To a great extent they are sincerely regarded by the men and women who live by them as legitimate enterprises. Yet each and every one of them *is sheer waste.* Not one of them offers to mankind anything that, if necessary to welfare, could not be obtained at less cost and in a more satisfactory form, while most of them contribute nothing whatever to life or happiness. In a word, the hundreds of thousands of American men and women who are living by these means are to all intents and purposes *sponging on the human race.* They are selling pseudo goods in exchange for substantial bread and meat.

And why not? So long as the American public likes these goods well enough to buy them with avidity, why should anybody who enjoys being comfortable milk cows or teach school, feed pigs, nurse the sick, or dig potatoes? The American people have "money to burn," and if they didn't spend it in making a paradise for dead beats, they would find a way to burn it.

"Away from the Church" in Germany

The number of those who in recent times have officially and legally severed their connection with the Protestant churches in Germany has grown at such an alarming proportion that the Church authorities, synods and conferences are seriously discussing this burning problem. In Berlin alone the daily average of those breaking away from the Church is 300, and in the *Cultus Ministerium* five extra clerks had to be engaged to attend to this new business alone.

There has all along for some thirty years been a small contingent, ranging from 1,000 to 2,000 annually, who broke away from the State Churches, but in 1906 there was a sudden jump all at once to 12,007 in Prussia alone, altho the year before it had been 9,158 in

1905, and 8,802 in 1905. It is principally the working men who are affected by this away-from-the-Church agitation, and in Berlin alone, during the past three years, more than 17,000 working people have left the Church for good.

In other parts of Germany, the agitation is also spreading, including even Catholic South Germany, especially Munich, altho it must be recognized as a fact that the Catholic Church has by no means suffered such losses by this agitation as has the Protestant. Other centers of agitation are Wiesbaden, Frankfurt-a-M. and the great manufacturing districts thruout the empire. At the present rate the losses to the Protestant churches are at least 30,000 per year.

The Social Democratic hostility to the Church is only in part the cause of the trouble, and the *Massenaustritt* which that party urged upon its members after their great political defeat two years ago proved a dismal failure. Yet their great organ, the *Vorwärts,* of Berlin, publishes in each number a list of twenty places thruout the metropolis, mostly *Kneipen,* cigar stores and the like, where those who want to leave the Church can secure the necessary blanks and information. The reason assigned by most applicants is that they want to be freed from paying further Church taxes (*Kirchensteuer*), which they can do thru such a declaration and which is the only tax which the German can in any way escape.

Conservative papers express their surprise that the number who sever their connection with the Church is not larger. as those who do, it is claimed, are only dead branches of the Church at any rate, and had not internally been members for years. Many hesitate because, by making such a declaration, they forego all claims on the Church, such as the services of a minister at baptisms, marriages and funerals, pastoral visits for the sick and dying, participation in communion and the like. As in recent years the payment of the Church taxes have been obligatory on not a few who before this had been excused because of their small incomes, it is thought that the sudden increase of these Church insurgents is attributable to this cause.

Both religious and social conditions combine to produce this agitation. Radical religious thought, as exprest in the Monistenbund, and the failure of the Protestant Church to do justice to the social problem, especially among the workingmen, are all factors in the trouble. Dr. Stöcker's attempt to organize a Christian Socialistic party ended in a failure, while similar movements by the Catholic churchmen have been more successful. Some Protestant periodicals profess to be fairly pleased with this insurgent propaganda on the ground that it rids the Church of undesirable members, but it is very evident that they nevertheless are worried and ask, What next? So far at least the crusade has not brought forth any disestablishment project, and Church and State seem to be more closely united than ever, in trying to stem the tide of an inner breakup of some of the Protestant state churches of the Fatherland. Liberal theologians as well as conservatives are trying to stem the tide.

"Barbarous" Spokane

By various communications accompanied with lurid printed accounts we have been asked to call attention to the crimes and cruelties inflicted in Spokane, Wash., against free speech, as represented by the International Workers of the World, a secession from a larger Socialist body. We take this account from the *International Socialist Review.* It tells us of "four hundred men and women of the ranks of labor" using the weapons of "passive resistance," "pitted against the law of brutality, tyranny, oppression and greed," the victims "lying on the bare floor in a jail, slowly starving; their emaciated bodies which try to rise, after thirty days of torture." "Their crime consists of speaking in the street," "no bed, no blankets," "ice-cold cells." It is an awful story that was told and seemed incredible. So we wrote for information to a trustworthy and sympathetic source and we got the other side. Speakers of the I. W. W. began to hold meetings on the principal streets, blocking traffic. The Mayor required them to go to a vacant lot four or five blocks from the main street. They refused, saying that the Salvation Army was allowed to speak. Then the Mayor forbade all street speak-

ing within fire limits. A new Mayor then gave permission to the Salvation Army to hold meetings on the side streets, and the I. W. W. cried "Favoritism." The Mayor offered them the privilege of speaking in certain streets near their headquarters. This they refused, and began the crusade of speaking on the corners where there was the most traffic. When arrested they sent and called in all who could pay or hobo their way to Spokane from Butte, Helena, Seattle, Portland and San Francisco, with a view of putting the city to such expense for support as to compel the authorities to yield, as they had succeeded a year or two ago in doing in Butte. This stirred up the citizens and officials, and they directed that the men arrested and sentenced for thirty days should go to the rock pile and work and be well fed, or live on bread and water. Most refused, chose "passive resistance." The jails were filled to overflowing, and the overflow were put in a vacant school building, but were told they must cut their own wood and bring it in or get cold. They preferred the latter. Doubtless there was some roughness —policemen are not always gentle with lawbreakers; but, so far as we can see, the authorities did right, and the stories of abuse are not verified, and those who suffered had themselves to blame. Free speech is a right in a free country, but under restrictions, like the right to bear arms.

Mr. Fairbanks Not Received

We are sorry that ex-Vice-President Fairbanks was not permitted to pay his respects to the Pope, but the fact that he was advertised to speak at the Methodist Church in Rome is given as the reason for refusal to admit him. People are too anxious to get receptions from distinguished men who are burdened by their appeals. It does not do them any good, except as it flatters their self-esteem and gives them something to boast of. In Mr. Fairbanks's case it was only courteous for him, as a chief ex-official of a great country, to offer to pay his respects at both the Quirinal and the Vatican. The reason said to have been given for the refusal is that the Methodists in Rome have been active in proselyting. Doubtless they have, but that is not an immoral or unchristian offense, any more than for Catholics to proselyte Protestants. Both are Christians, tho each thinks his own style the better. But if the Pope does not think it proper to receive him, that it would be approving the Methodist schism, no one has the right to complain. Social privileges go by favor. The Pope receives many Protestants.

Religious Statistics

Once more Dr. H. K. Carroll presents in *The Christian Advocate* statistics of the churches in the United States for the present date, that is, three years later than those given in the Census of 1906. The grand total is 168,378 ministers, 215,160 churches, and 34,677,000 communicants, the latter an increase of 791,713 during the past year. In the order of denominations the Catholic Church stands first, with 12,354,596 members (all Catholics except young children not admitted to their first communion, or 85 per cent. of the population); then Methodists, 3,159,913; Southern Baptists, 2,139,080; Colored Baptists, 1,874,261; Southern Methodists, 1,780,788; Northern Presbyterians, 1,311,828; Disciples, 1,273,357; Northern Baptists 1,176,380; Episcopalians, 912,123; Congregationalists, 732,500; Lutheran Synodical, 726,926; all others less than 600,000.

Justice to the Belgian Church

A correspondent thinks we might properly tell what we think of the attitude of the Belgian Church toward the marriage of King Leopold, a few months before his death, to his mistress. We think it on the whole most admirable. It forced the King, on penalty of not receiving the rites of the Church at his impending death, to do justice to the woman and to his children. It required him to express repentance and to do what he could to repair the wrong to them and the outrage done to public morality. He made confession of his sin and exprest repentance for it, and the Church was bound to accept it; could do no less. It accordingly gave him extreme unction and a Christian burial, and publicly gave him very qualified eulogy and asked the world to judge him mercifully. In our judgment, King

Leopold's crime against the natives of the Kongo Free State was vastly greater than his social offense, but we can imagine that the Church did not feel free to investigate the political conditions there and to assign the blame to those who were guilty. We know the Church received contradictory evidence on the subject, and may well have found it easy to believe that the charges were greatly exaggerated by American Protestant missionaries.

The Canadian papers are publishing a story according to which Alaska was stolen from Great Britain, and it was stolen goods that the United States bought of Russia for $7,000,000. The story tells of an official document lately found in Sitka, which proves that in 1826 a Russian officer was directed to go to Alaska, and bury along the coast tablets which should indicate the discovery and possession of the coast by Russia long before its actual occupation. The moral presented is that Canada should make no delay in taking official possession of all the discovered lands about the Pole, for who knows when they may get warm and be worth while. It is too late to recover Alaska.

The principal difficulty encountered in the negotiations with Germany as to the minimum tariff have had to do with the laws regulating the import of live animals and meat. Germany could not yield as to things forbidden by law. Among preservatives interdicted are boracic acid and its salts, formaldehyde, sulfuric, hyposulfuric, hydrofluoric and salicylic acids and their salts, and all coloring matters except yellow for margarine butter and sausage skins. A failure to agree would have been very unfortunate for both countries.

Why is it that in Great Britain the Upper House is denied the right to meddle with financial legislation, and the claim it now makes to reject the Budget is so hotly resented, while in this country no one imagines that our upper house is not to be consulted and not to vote on amendments or the passage of a financial bill? Simply because our Senate is an elective body, and represents the people as really as does the House of Representatives, while in Great Britain the House of Lords represents no body of the people, but only their own little but wealthy families, the right descending from father to son. They have no right to vote for the people at large, as our Senators have.

It is difficult to believe that Colonel Harvey, editor of the *North American Review* and *Harper's Weekly*, is correctly reported in a usually careful paper of this city, when he said, speaking to the Women's University Club, that the Ten Commandments do not allow women to have any soul:

> "The fourth, for instance, prohibits work to all the members of the family except the woman."

He has probably read, or heard, "Thou, nor thy son, nor thy *daughter*."

Senator Tillman's suit for the possession of his son's children is based on a South Carolina law which still lingers in its statute book, as does the law which allows no divorce, and which gives the mother no right over the possession of her children. All the right to the children belongs to the father, no matter how unworthy he may be.

Père Loisy says there are not more than 1,500 of the French clergy that have any sympathy with Modernism, and that it will not be difficult to crush it out in the Church. Yet 1,500 is a good many, and it is subterranean fires that make an earthquake. It is the slow, invisible work of scholarship that gradually reforms theology.

The new navy which Canada proposes to build will cost $11,000,000 for the first outlay, and further millions to maintain it, for navies are very expensive in the keeping. All this has to be paid by taxes and brings no bit of profit; it is utter waste. But all the big nations do worse.

Here is a moral lesson and example for the mayors of American cities. The mayor of an English provincial town not long ago made a speech on coming into office, in which he declared that he would do his duty without fear or favor, "not leaning to partiality on the one hand, nor to impartiality on the other."

JOHN W. PLATTEN.

The New President of the United States Mortgage and Trust Company

JOHN W. PLATTEN was last week advanced from his position as vice-president of the U. S. Mortgage and Trust Company, which he has held for the last five years, to the office of president, which has been vacant since last July, when Cornelius C. Cuyler was killed in an automobile accident in France.

Mr. Platten is forty-five years old. In 1888 he entered the employ of the Erie Railroad in the general manager's office in Cleveland, and after several promotions became treasurer of the Erie in April, 1901. In July, 1903, he resigned to become assistant to Eben B. Thomas, president of the Lehigh Valley, and in November, 1904, was chosen second vice-president of that road. Mr. Platten was in charge of the treasury, accounting, purchasing, insurance and secretary's departments, and also handled many matters connected with the operating department. With the election of Mr. Platten as president of the U. S. Mortgage and Trust Company the directorate was increased to twenty-four members, the new directors being Lewis L. Clarke, president of the American Exchange National Bank, who was elected to succeed his father, the late Dumont Clarke; Adolph Lewisohn, president of the United Metals Selling Company; Henry Tatnall, vice-president of the Pennsylvania Railroad Company; and Paul M. Warburg, of Kuhn, Loeb & Co. The full directorate includes also C. A. Con, T. Dewitt Cuyler, Charles D. Dickey, William P. Dixon, Allen B. Forbes, Robert A. Granniss, Charles M. Hayes, H. R. Ickelheimer, William A. Jamison, Gustav E. Kissel, Louis C. Krauthoff, Clarence H. Mackay, Robert Olyphant, John W. Platten, Moses Taylor Pyne, Mortimer L. Schiff, Eben B. Thomas, James Timpson, Arthur Turnbull and Cornelius Vanderbilt. The U. S. Mortgage and Trust Company, which began business in 1893, has a capital of $2,000,000, a surplus (including undivided profits) of $4,380,369, and total deposits of $41,002,036, according to its statement as of January 1, 1910.

....The Knickerbocker Trust Company proposes to increase its capital stock from $1,200,000 to $3,200,000, issuing the new stock at $300 per share. For the shareholders who hold the B certificates for money paid in for the resumption of business in March, 1908, $800,000 of the new stock will be reserved, and the remaining $1,200,000 must be offered to the holders of the outstanding $3,600,000 of A certificates. But a syndicate under the management of F. G. Bourne, J. Horace Harding and William A. Tucker offers to the holders of these certificates par and interest for

INSURANCE

Preventing Church Fires

THE present is the dangerous season of the year for churches and other public buildings in which more than the usual heating is required on account of the cold weather. Because of the fire hazard thus arising the New York Board of Fire Underwriters has lately been busy with the special inspection of churches. Superintendent Stewart, of the Bureau of Surveys, has lately issued the following letter, having more than a mere local application in the laudable attempt to safeguard these buildings against fires:

"The frequent fires each year in churches, due to defective heating and lighting equipments, emphasize the importance of a special warning at this season. We, therefore, respectfully solicit your co-operation in our efforts to reduce the fire waste in churches and accessory buildings, such as rectories, assembly halls, schools, colleges, hospitals, asylums and charitable institutions. In this connection we ask that you have all heating equipments carefully inspected. In like manner all lighting systems should be inspected and repaired. Defective heating and lighting devices, together with carelessness in the handling of motors, fuel, packing material, paint and general refuse, have caused the majority of fires in churches. Systematic supervision of these features will, therefore, prevent many church fires. Our experts on the subject of heating and lighting apparatus will call occasionally to inspect your equipments and offer suggestions, if any seem warranted. They will be sent to any church upon request made of us for that purpose. We bespeak for our inspectors your hearty co-operation in these matters of mutual interest, which involve the protection of life and property against fire."

THE tremendous losses by river floods in Paris and the outlying districts, variously estimated at $200,000,000 and upwards, has aroused interest in the subject of insurance and as to whether or not some of these enormous losses would be found to have been covered by flood insurance policies in force at the time of the Seine overflow. Those who are counted as well informed upon European insurance conditions incline to the opinion that little if any such protection existed in France, or indeed does now exist in any of the Continental countries. The basis for estimating such losses is so meager and such data as is available is so uncertain as to afford little if any help in adequate rate making. Insurance of this kind consequently largely partakes of speculation and is not sought after by conservative companies. In this connection it may also be noted that flood insurance has not been developed in the United States, nor is it likely to do so under the existing conditions here as well as abroad, notwithstanding the damage inflicted upon property by the swelling of our great rivers in the North, South and West by spring freshets that have grown with forest denudation.

(Continued from page 333.)

the amount due thereon, if they do not desire to convert them into capital stock. The net result of the entire operation will be a large addition of capital, a surplus of nearly $6,000,000, the payment of assenting old depositors in full, and the placing of the company in a position to resume dividends on its stock.

....William A. Law, vice-president, has recently been elected president of the Merchants National Bank of Philadelphia, and F. W. Ayer, the former president, has been made chairman of the board. The capital of the Merchants is $1,000,000; the surplus and undivided profits $868,872, and the total resources $14,964,035.

....The retirement of Warner Van Norden and his sons from the offices they held in the Van Norden Trust Company and its affiliated banks follows the sale of their interest some months ago to capitalists who control the Carnegie Trust Company. Their purpose is to consolidate with this company the Van Norden Trust Company, the Twelfth Ward Bank and the Nineteenth Ward Bank. The four institutions have a capital of $3,000,000 and a surplus of about the same amount. Their deposits are in the neighborhood of $30,000,000.

....The cashier of the Second National Bank, Joseph S. Case, who has recently been elected vice-president, has been in the service of the bank forty-three years, seventeen years as paying teller and twenty-six years as cashier. This is a remarkable length of service. The Second National Bank was organized in 1863 and has a capital of a million dollars, a surplus of a million and a half dollars, undivided profits of over four hundred and forty-five thousand dollars, and total resources of over seventeen million dollars.

The Independent

VOL. LXVIII NEW YORK, THURSDAY, FEBRUARY 17, 1910 No. 3194

Survey of the World

The President Defends His Party

President Taft made a long speech last Saturday evening in New York at the annual Lincoln dinner of the Republican Club. His subject was the promises and policy of the Republican party. These promises, he said, the party had "either substantially complied with" or was "about to perform within the present session of Congress." It had promised tariff revision. The platform had not expressly said that the revision was to be downward, altho a revision generally downward was fairly implied. The revision of last year, he asserted, was a downward revision, not with respect to silks or liquors or high-priced cottons in the nature of luxuries, but with respect to nearly all other articles except woolens, which were not affected at all. An increase of revenue from luxuries was required by the con-

PRESIDENT TAFT, GOVERNOR HUGHES AND THE REPUBLICAN LEADERS.

Left to right, standing—Speaker J. W. Wadsworth, Jr., Otto T. Bannard, Timothy L. Woodruff, Lloyd C. Griscom and Senator Chauncey M. Depew. Seated—Governor Charles E. Hughes and President William H. Taft.

dition of the treasury. "The change which this tariff effected was a marked change downward in the rate of duties." There had been a dispute as to what the difference in production costs was, notably in the case of print paper. The failure to make a larger reduction of the duty on such paper affected the editorial columns of a great number of newspapers. The amount of misrepresentation to which the bill was subjected had "never been exceeded in this country." For the first six months of the new tariff the average duty on all dutiable imports had been 21.09 per cent., against 24.03 per cent. for the corresponding periods of the preceding four years under the Dingley tariff. Moreover, the free imports had been 51.6 per cent. of the total, against 45.46 per cent. during the last four years of the old law. There had been an increase of revenue, which for the six months amounted to $166,002,856, against a Dingley tariff semi-annual average of $130,265,841, and only $83,147,625 under the Wilson-Gorman tariff. The new tariff, he asserted, was the best that had ever been passed; it indicated the adoption by the Republican party "of a policy to change from an increase of duties to a reduction of them, and to increase revenues at the same time. It had created a new tariff board which would, at his direction, inquire as to costs of production at home and abroad. He expected to ask Congress for $250,000 to be used for this investigation, which would supply data for future revisions. The party had "substantially complied with its promise in respect to the tariff." It had promised postal savings banks, and a bill for such banks was now under consideration. He criticised changes made in the Senate, urging that investment of the deposits in Government bonds should be authorized, and that deposits in country banks with State charters should not be permitted. Speaking of the Administration's bills relating to railroads, and especially of provisions to prevent watering of stock and the control of competing lines by stock purchases, he predicted that the bills would be enacted. It was also proposed that the issue of injunctions without notice should be forbidden by statute, and the passage of bills giving Statehood to New Mexico and Arizona was at hand, with safeguards preventing the hasty adoption of such a "zoological garden of cranks" as could now be seen in the Constitution of Oklahoma. The party's promises concerning conservation and relating to the improvement of waterways were also to be kept. He pointed out the provisions of pending bills. There was also a movement for economy. The Government's estimates were $40,000,000 less than last year's appropriations, and Congress would probably appoint a commission to consider plans for reorganizing the bureaus of the departments. Some thought that in this way the permanent annual expenditure could be reduced by from $50,000,000 to $100,000,000.

Trusts, Dissension, and Other Topics

Taking up the subject of Trusts, he read the platform's commendation of the Sherman Anti-Trust law and its assertion that this law could be strengthened by giving the Government greater supervision and control of the corporations which have "power and opportunity to effect monopolies":

> "It has been said that the Republican party made a promise so to amend the law as to ameliorate and soften the application of the trust law in its interdiction upon business as conducted by the greatest corporations, but I find nothing in the platform to justify such a construction. The principle of the anti-trust law is that those engaged in modern business, especially of manufacture and transportation, shall pursue the policy with respect to their competitors of 'live and let live,' and that they shall not use the bigness of their concerns to frighten exclusive patronage from customers and the elimination of smaller concerns from competition, and thus control output and fix prices."

The Federal Incorporation bill, prepared by the Attorney-General, offered to those who wished to pursue a lawful method of doing business the means of easily doing so. The business of a company would be subjected to the closest scrutiny by Government officers, and would be "saved from harassment by State authorities." He believed that the bill was constitutional and that it "would furnish a solution of our present difficulties," but as there had been no specific declaration for it in the platform he did not feel justified in asking the adoption of it as a party measure. If the other bills should be enacted there would be

no good reason why the party should not retain its power at the Congressional elections:

"But there are signs which many construe as an indication that the Republican majority in the present Congress will change to a Democratic majority in the next. This is based chiefly on the dissensions in the Republican party, and upon the very severe attacks made by a great many of the newspapers having Republican tendencies upon the party and its leaders in Congress and in the nation. I am glad to say that so far as the legislation which I have indicated above is concerned there seems to be a clear party majority in both houses in favor of its passage and the redemption of the party pledges. There is, however, a very decided difference as to the proper rules to prevail in the House and as to the personnel of the leadership. It would seem as if these questions were questions that might well be solved within the party lines, but they have been so acute as to produce what has been called an insurrection and to awaken the country over a controversy between the insurgents and the regulars, so called. I am hopeful that as we approach the lines of battle for the next year the settlement of these internal questions can be effected without such a breach of the party as to prevent our presenting an unbroken front to the enemy."

Republicans could take courage by considering the condition of the Democratic party. If that party were a solid, cohesive opposition, guided by one principle and holding the same economic views, the situation would be far more discouraging. The Republican party in the last seventeen years had discharged its responsibilities with wonderful success:

"Mr. Roosevelt aroused the country and the people to the danger we were in of having all our politics and all our places of governmental authority controlled in corporate interests and to serve the greed of selfish but powerful men. During his two terms of office, by what almost may be compared to a religious crusade, he aroused the people to the point of protecting themselves and the public interest against the aggressions of corporate greed, and has left public opinion in an apt condition to bring about the reforms needed to clinch his policies and to make them permanent in the form of enacted law. But as an inevitable aftermath of such agitation we find a condition of hysteria on the part of certain individuals and on the part of others a condition of hypocrisy manifesting itself in the blind denunciation of all wealth and in the impeachment of the motives of men of the highest character, and by demagogic appeals to the imagination of a people greatly aroused upon the subject of purity and honesty in the administration of Government. The tendency is to resent attachment to party or party organization and to an assertion of individual opinion and purpose at the expense of party discipline. The movement is toward factionalism and small groups, rather than toward large party organization, and the leaders of the party organization are subjected to the severest attacks and to the questioning of their motives without any adequate evidence to justify it."

He was far from saying that the Republican party was perfect. He would be the last one to advocate any halt in the prosecution and condemnation of Republicans, however prominent and powerful, whose conduct required prosecution and condemnation. Moreover, with the party in its present condition, subjected to the cross fire of its own newspapers and its own factions, any halt or any failure on the part of those in authority to punish and condemn corruption would be properly visited upon the party itself, however many good men it contained. In the next campaign it would be charged that the new tariff had raised prices. But it could be shown that high prices were due to entirely different causes, "the increase of our measure of values (gold), and possibly in some cases to the combinations in restraint of trade." The question of the tariff must be argued out. From time to time the Administration was attacked on the ground that its policy tended to create a panic in Wall Street and to disturb business:

"All I have to say upon that subject is: That certainly no one responsible for a Government like ours would foolishly run amuck in business and destroy values and confidence just for the pleasure of doing so. No one has a motive as strong as the Administration in power to cultivate and strengthen business confidence and business prosperity. But it does rest with the National Government to enforce the law, and if the enforcement of the law is not consistent with the present method of carrying on business, then it does not speak well for the present methods of conducting business, and they must be changed to conform to the law. There was no promise on the part of the Republican party to change the anti-trust law except to strengthen it, or to authorize monopoly and a suppression of competition and the control of prices, and those who look forward to such a change cannot now visit the responsibility for their mistake on innocent persons. Of course, the Government at Washington can be counted on to enforce the law in the way best calculated to prevent a destruction of public confidence in business, but that it must enforce the law goes without saying."

In closing, the President said that to lose Governor Hughes as a candidate by his voluntary withdrawal was to lose the party's strongest asset in the State. Governor Hughes, speaking later, highly commended the President and predicted

that by reason of just public confidence in him he would be renominated and re-elected. The Governor, having in mind the charges against Senator Allds, said this was not a time to retire in dismay from any disclosure. The party should purge itself of evil.

Recovered from Sugar Refiners

The National Sugar Refining Company, of New York City, has paid to the Government $604,304, the same being duties withheld, presumably by fraud of some kind. This makes $3,435,263 recovered from sugar refiners, the American Company (or Trust) having paid $2,135,486, and the Arbuckle Company $695,573. This latest payment does not prevent prosecution on criminal charges. Oliver Spitzer, the convicted superintendent of the Trust, was sentenced last week to be imprisoned two years in the Atlanta Penitentiary. Before leaving New York he complained bitterly that the Trust had made a scapegoat of him. It had deserted him, he said, after his arrest, altho he had served it faithfully for twenty-nine years. The cost of his trial had taken all his savings. "Somebody," he added, "had to go to prison to save those 'higher up.'"——Twenty-seven of the manufacturers who are members of the Paper Board Association and were indicted in New York two months ago for violation of the Sherman act, have pleaded guilty and been fined $2,000 each. There are about forty more who will probably take the same course. It was estimated when they were indicted that by combination they had exacted from consumers each year $5,000,000 in excess of competitive prices.——In Cincinnati, the Dueber Watch Case Company has sued the Keystone and several other companies, known as the Watch Case Trust, for $375,000 damages, alleging violation of the Sherman act.

The Public Lands

A further adjournment of the Ballinger-Pinchot investigation was ordered last week. Mr. Pinchot, as president of the Conservation Association, has addrest to members a letter in which he criticises several of the nine conservation bills which were sent to Congress. He asserts that two of them are bad.——Secretary Ballinger withdrew last week from settlement 672,000 acres in Wyoming, which are regarded as coal lands, and 44,000 acres of water power sites in Idaho and Nevada. It is expected that, as suggested by Mr. Pinchot, 4,000,000 acres of land in forest reserves will be opened to entry, being unsuitable for the growth of forests.——At Lander, in Wyoming, 64 men, a majority of them residents of New York, are defendants in a prosecution by the Government, which alleges that they unlawfully assisted two coal companies, said to be controlled by New York capitalists, to obtain possession, by dummy entry, of 9,500 acres of coal land in Utah, valued at $2,000,000.——In Utica, N. Y., the Government has sued George Foster Peabody, formerly a New York banker and now interested in philanthropic and educational projects, to recover $543,000, alleging that he unlawfully took coal worth that sum from unsurveyed public lands in Utah. Mr. Peabody, who is treasurer and a director of the General Education Board, a director of the Young Men's Christian Association, and a trustee of Hampton Institute, says he presumes there is involved the validity of land titles held now by the Denver & Rio Grande Railroad Company. He has never personally engaged, he adds, in the mining of coal, and does not believe that any company with which he has been connected has mined coal unlawfully.

The Revolution in Nicaragua

At the end of last week the forces of the revolutionists in Nicaragua were within fifty miles of the capital. One of the insurgent columns had suffered a check in a sharply fought engagement, owing mainly to the misinterpretation of one of the orders of its commander, but the reports, altho conflicting, indicated that the westward movement of the main body was continuing. Boaca was reoccupied by the Government, but the revolutionists captured Matagalpa, which is eighty miles from the capital. In the engagement mentioned above, the Government used four machine guns, and the revolutionists were aided by American sharpshooters. They are expecting the arrival of fifty

more of these. General Blandon, of the revolutionist army, was killed, and Colonel Conrad, the American commander of the machine gun battery, was severely wounded. Revolutionist conspirators last week attacked and captured the Government's gunboat at her dock in Managua and steamed away across the lake. Pursued by a motor boat and several schooners, they beached the gunboat and took to the woods. The revolutionists have sold $240,000 of bonds in New York at 50 cents on the dollar. Customs revenues on the east coast are pledged for the redemption of these securities.——The threatened retirement of all the American conductors and engineers employed on the Mexican Government's railways has been averted by an agreement in which the Government's attitude toward these employees and those of Mexican birth is defined. James A. Cook, the American conductor whose trial was so long delayed that our Government made protest, has been found guilty of contributory negligence and sentenced to be imprisoned three years. Brakemen on his trains robbed many freight cars.

The French Antarctic Expedition

The expedition in charge of Dr. Jean Charcot sent out under the auspices of the French Academy of Science two years ago, for the purpose of exploring the Antarctic region, returned on February 11 to the Strait of Magellan and sent its first report from Punta Arenas, the most southerly of cable stations. It does not appear that the expedition made any determined effort to reach the Pole, but it made careful surveys of little known lands and mapped the coast line farther to the west. The steamer "Pourquoi Pas" left Havre in August, 1908, and starting from Punta Arenas December 17, 1908, began the exploration of the islands to the southward between South America and the Antarctic Continent. Queen Adelaide Island, the South Shetland Archipelago, Grahamland and Alexanderland were explored during the first season. The winter was spent at Petermann Island and in the next Antarctic summer the "Pourquoi Pas" went to Peter I. Island and then followed the coast westward and southward for 120 miles, arriving at latitude 70° south, longitude 126° west. Journeys into the interior were made by a sledge but the ice fields were too rough to permit the use of motor cars, such as Shackleton found convenient. The expedition was unfortunate in meeting with a series of accidents which threatened disaster. The "Pourquoi Pas" was stranded on the coast of Grahamland for three days and later lost her rudder in the collision with icebergs. The crew suffered severely from scurvy and other diseases.

French Affairs

The Seine is rising again and has reached a point 30 inches above the level to which it had fallen during the preceding week. No such flood as that recently experienced is apprehended, but the work of repairing the sewers, pavement and quays, and the emptying of the cellars had been retarded. In other parts of France and Belgium serious inundations are reported. The Marne near Reims has again overflowed its banks and driven from their homes the people living in the valley. The Doubs, Saone, Rhone and Meuse are also causing trouble and anxiety. Railroad traffic in France is quite generally impeded by floods, rain or snow. Parliament will be asked by the Government to appropriate $4,000,000 for the relief of flood sufferers, which will be loaned for five years without interest in sums not over $1,000——The Government bill for the control of private schools has been introduced into the Chamber of Deputies. It requires all teachers to have certificates, but allows two years in which to qualify for them. All teachers must furnish written certificates proving that they do not belong to any of the unauthorized religious orders. All textbooks are to be submitted to inspection of the authorities, in order to see that they contain nothing against morals, the Constitution and the laws of the country. All instruction must be in French and include all of the studies prescribed by the public school law; otherwise the private schools are left free to choose their course of study and methods of instruction.——The Government has de-

cided that the French navy shall be composed of the following vessels: Baltic fleet, 28 battleships, 10 scoutships, 52 sea-going torpedo boats; coast defense, 94 submarines, 2 mine layers; foreign service, 10 ships.——The Socialist congress, meeting at Nimes, adopted resolutions declaring against this naval program and advocating disarmament. There was a heated controversy in the congress between the revolutionary and anti-militarist faction, led by Professor Hervé, and the moderate and parliamentary faction, led by Jean Jaurès, over the question whether it was proper for the Socialists to support the reform measures of the Government. The Jaurès faction finally won, and the congress adopted a resolution instructing the Socialist Deputies in the Chamber to vote for the old age pension bill.

German Politics

The new electoral bill prepared by the Government for Prussia does not by any means satisfy the popular demand for reform in the voting system. The three-class system, according to which those who pay the most taxes have the most votes, is retained, altho modified by including officials and other educated persons in the first and second classes, regardless of the taxes they pay. The bill, however, is an improvement on the present system in that it substitutes direct for indirect voting. The new Chancellor, Dr. von Bethmann-Hollweg, in introducing the bill, stated frankly that the Government refused to follow a policy leading to the democratization of Prussia and finally of the German Empire. He said he considered that one of the results of the democratization of parliaments in all countries was to render the political sense of a people coarse, superficial and a hindrance to progress. It was a mistake, he said, to overestimate the value of electoral rights to Prussia, for they were not the zenith of its political life. The Liberals received his remarks in silence and the Socialists with jeers. On Sunday, meetings of protest were held by the Socialists all over the empire, and in many cases these were followed by street demonstrations which brought about conflicts with the police. At Halle, Saxony, the crowd, singing the workingmen's "Marseillaise" and shouting "Down with Bethmann-Hollweg!" in the public square was dispersed by the police and the military with drawn sabers. There were many arrests and forty wounded persons were treated in the university hospital. Similar affairs took place at Frankfort-on-Main, Essen, Duisburg, Königsberg, Neumünster and the suburbs of Berlin. A general strike is feared.——The Chancellor sent to the Imperial Reichstag the following statement about the tariff agreement with the United States:

"The American Government has declared that the live stock question is withdrawn wholly from the negotiations on the condition that the unlimited enjoyment of Germany's conventional tariff be conceded to the United States. It further agrees that the advantages of the American minimum tariff shall be extended unrestrictedly to Germany after March 31; that the customs administrative features of the existing tariff arrangement shall remain in force; that this extension of the minimum tariff to Germany secures to her the treatment in accordance with the most-favored-nation clause; that the American customs administrative regulations shall be applied to German goods in a friendly and conciliatory spirit; that the present agreement respecting the labeling of wines shall remain in force, and that the customs administrative provisions respecting the marketing of goods shall be applied in a friendly and conciliatory spirit."

The tariff bill embodying this agreement passed the Reichstag with but few Center and Agrarian votes in opposition. ——The army estimates for 1910 call for an expenditure of about $250,000,000. The peace strength of the army now stands at 620,000 of all ranks and 111,820 horses, but there soon will be over a million men who receive military training for two weeks or a month every year, and altogether there are over 4,000,000 trained men in the German Empire. The Government has upon its lists 4,345,000 horses and 41,727 motor cars of all sorts, which may be drawn upon in an emergency. Notwithstanding the enormous expense of the army and navy now being developed, the resources of the country are abundantly able to bear the burden. It has been calculated by the Central Association of German Industrialists that the national wealth of Germany has risen to $85,000,000,000; that capital is increasing at the rate of $3,500,000,000 a year; and that

by 1950 Germany will have a population of 96,000,000 and a national wealth of $225,000,000,000, or more than double the present estimated wealth of the whole British Empire.

Liberal Régimes in Spain and Italy

King Alfonso did an unexpected thing in calling to the head of the Government a man who calls himself "the most radical of monarchists," José Canalejas y Mendes. In his first public announcement he states:

"I believe in acts, not words. I am now consulting with the King regarding various national questions, notably the negotiations with the Vatican concerning the reform of the Concordat, after which I will immediately submit concrete propositions to the Cortes."

The new Premier expresses his regret that he has not a sufficient majority behind him, but he relies upon the country to support him in the coming election under a reformed system of voting. Unless the Vatican meets his negotiations in a spirit of compromise, he is likely to begin his anti-clerical program by a series of royal decrees, relying upon future legislation to give them sanction. He understands fully the need of reform in military matters, because he served in the Cuban campaign, and will at once set about the reorganization of the army. After disposing of the question of the revision of the Concordat of 1851 and the reduction of the number of religious orders, he will undertake to promote the education of the people by means of a system of public schools.——The program announced by Premier Sonnino for Italy also deals with the necessity of removing the reproach of illiteracy from his country. He proposes to establish a system of elementary schools supported by local taxation, with the assistance of loans from the state. He will recommend an appropriation for this purpose of $1,600,000 the first year and an increase during the following seven years until the total amounts to $8,000,000. The new system of public schools will require 40,000 new buildings, which, it is estimated, will cost about $48,000,000. For the promotion of Italian shipping he asks for subsidies amounting to $6,000,000.

Bills would also be introduced creating departments of railways and of labor; providing greater assistance by the Government in the rebuilding of cities and villages destroyed by the earthquake; establishing a co-operative bank for working people with an initial capital of $3,000,000, and making more stringent rules for the control of foreign insurance companies doing business in Italy. It was also proposed to reduce the term of compulsory military service from three to two years.

Unfortunately, Premier Sonnino, like Premier Canalejas y Mendes, has an unstable majority behind him, and is not likely to remain in power long enough to carry thru his advance program.

Morocco

Sultan Mulai Hafid of Morocco lost his temper when he learned the conditions on which the French financiers had consented to make a loan to Morocco. He repudiated the action of his commission in Paris and arrested all the persons connected with it whom he could lay his hands upon. He drove his French advisers from his presence with violent language and ordered the dismissal of all the Frenchmen in his service including the officers who were giving instruction in the Moroccan army. The French Consul immediately protested and the French papers threatened the seizure of the custom house at Casablanca unless the Sultan agreed to the terms of the loan. On the following day the Sultan and his Chamberlain and his Minister of War made due apologies to the French Consul and Commandant Mangin for the outburst, and peace was restored.——It is reported that Raisuli, the Moroccan bandit and now Governor of the Djebala Province, has died from poisoning.——The Commission of Indemnity, which has been sitting for the last fourteen months for the purpose of settling the claims against Morocco for the anti-foreign outbreak at Casablanca, has brought in its report. Claims for damages were filed before the commission to the amount of $5,300,000, but they were all cut down to about half, making the total indemnity $2,614,000. The Spanish claims, amounting to $970,000, were reduced to $300,000; the French, from $920,000 to $375,000; the German, from $490,000 to $260,000, and the American claims, from $76,000 to $28,000.

The Cost of Living. II.

[Realizing that there is today no economic question of greater importance to all of our readers than the increased cost of living, we have arranged for a series of contributions from the leading authorities of the United States on this subject. Last week we published the first of these articles, by Professor J. Pease Norton, of Yale, entitled "The Remedy for the High Prices." This week we continue the discussion with a study by Professor Patten, who stands in the front rank of American economists and who is best known to the general reader from his "Theory of Social Forces," "Theory of Prosperity," "Hereditary and Social Progress" and "The New Basis of Civilization." Next week we will publish an article by Prof. Franklin H. Giddings, of Columbia University, on some of the social aspects of the question. These will be followed by articles of equal authority and importance.—EDITOR.]

The Crisis in American Home Life

BY SIMON N. PATTEN, Ph.D., LL.D.

PROFESSOR OF POLITICAL ECONOMY IN THE UNIVERSITY OF PENNSYLVANIA.

THE recently awakened interest in the high cost of living is concentrating public attention on the fact, before little heeded, that a normal life for a vast multitude of people is rapidly becoming impossible. When the home life is at stake, the foundation of the nation itself is threatened, for its strength lies in the inspiration of the home and the influence of family life. There is today a crisis in American home life. It should be noted, however, that the crisis is the result of a perfectly normal tendency for the standard of living in a rich, dynamic nation to advance with rapid strides. This American standard of living is the marvel of the world. During the past twenty years there has been an enormous increase in wealth thruout the country, and in the number of families with an income of more than $5,000 a year. Among the groups of organized skilled labor the rise in the standard of living has been hardly less marked. Many today living in the modern two-story house, with its porch and sanitary plumbing, enamel bath tub, running hot and cold water, and steam heat, are enjoying luxuries denied to kings in the Middle Ages. Perhaps in no field has there been so much progress in the last fifty years as in that of food supply. Hand in hand with an increase in quantity has gone an increase in variety. This fact can readily be appreciated by a comparison of the corner store of today with that of fifty years ago. Many articles of common consumption are now there which were either absent or rarely seen at an earlier date. Of such are tomatoes, bananas, oranges and many other tropical products, lettuce, strawberries and the whole host of breakfast foods, not to mention all kinds of canned and preserved goods. All these have changed the laborer's table from the monotony of stewed meat and bread to one with a well-balanced variety. The introduction of the sewing machine and other labor-saving devices have also liberated much of the housewife's time, and enabled the average man to dress and care for his family in a style before impossible. Ready-made clothing, including shoes and hats, enable all classes in this country to dress in a style approximating a uniformity unknown elsewhere or before.

The evidence of our material well being is no less apparent when we consider the vast sums of money Americans spend on education. To-day the child in the poorest districts of our large cities has provided for him free educational opportunities with which the old type private school of the well-to-do classes could not compare. In place of poorly lighted and badly ventilated rooms of the old school house, rise modern stone structures complete in every detail of effi-

ciency and artistic finish. Another evidence of our general prosperity is the amount that Americans spend on amusements. Theaters, pleasure parks, nickelet shows, day excursions, Coney Islands and Atlantic Cities all bear testimony to the general surplus that is available for such purposes, not to mention the vast sum of money that changes hands each year in Christmas purchases or the enormous expenditure of Americans for travel and culture. The inevitable result of this increased demand for commodities of all kinds is for prices to rise.

At this time when the question of the cause of high prices is on every one's lips, many explanations are offered. The three most generally accepted, tho false in the writer's opinion, deserve notice because voiced so often by men with broad business experience. The first explains the present high values on the basis of an increase in the supply of gold, which means a higher level of prices. Besides that of its incompleteness, the danger of this view lies in the fact that its advocates look upon the present situation not as a crisis requiring a broad constructive social program, but as a temporary maladjustment of prices which will in the end right itself.

The second explanation of present high prices is that advanced by men like James J. Hill, who see the basis for a general increase in prices in the slow but steady failure of our natural resources. We thus seem to be in the merciless grip of the law of diminishing returns, and if we accept this view of the present situation, the outlook is hopeless. The statement of the failure of our resources is merely a prophecy while high prices are a present reality. This view ignores also the new wonders of agriculture which science is daily revealing. In many lines we are doubling the yield per acre thru scientific farming, with its rotation of crops and approved methods of fertilization. In addition, we are adding millions of acres to our agricultural lands by irrigation, swamp drainage and the evolution of crops capable of either withstanding extensive dry spells or occasional frosts.

The third explanation of the present crisis is that the worker is being exploited. This group, for which the Socialist is the spokesman, tells us that so much is being kept from the laborer in wages that he cannot meet present prices which would not be relatively high if he but had his just income. If such an explanation be true, the only escape from the situation is revolution. Moreover, if such an explanation is the correct one we should expect to find in the present crisis that it is the poor who are affected most by higher prices when, as a matter of fact, the crisis is not so severe in the case of the marginal workers as it is with the class whose incomes range from $1,000 to $3,000 a year. The urgent, unsatisfied demand to-day is not for food but for comforts.

The real explanation of the present *régime* of high prices is not so simple as these theories suppose. In contrast to them I hope to show that the leading causes at work in the present situation are: first, lack of sufficient capital; second, bad distribution of population; third, isolation of producer and consumer; fourth, new status of woman. Let us analyze each of these in turn.

We are so used to pounding millionaires and denouncing trusts that the underlying fact of the lack of capital is overlooked. We could utilize twice the amount of our present capital could we get it, and it is only thru an increase in capital that we can hope to get any large measure of relief from a *régime* of high prices. More capital is needed to supply the increased demand for commodities occasioned by the newer standard of living. Yet in face of this need, the sources of capital are drying up. Families with incomes of $5,000 a year have set a new standard of liberality in expenditures. The group below finds it more than it can do to keep pace with the new standard set by those above. This constant pressure to keep up appearances, along with a decay of the moral instruction emphasizing the benefits of frugality and saving, has taken from industry the people who formerly were the great source of its capital. Because the day laborer still saves, as is evidenced by the size of his saving-bank account, we assume that all classes above him are likewise saving, when, as a matter of fact, the class above him is no longer

saving. The new standard of living has cut down on the amount of saving as it has likewise cut down on the number of children per family. A small family or no children does not argue an increased amount of saving. Small families and small savings are two effects of one cause, a high standard of living. The family with no children is also the family with no saving.

To make this point clear, I shall take as an illustration the city of Philadelphia, whose changes have been under my observation for twenty-five years. Roughly speaking, its population may be divided into four classes: the marginal laborers, made up mainly of recent immigrants; the organized laborers; the salaried class, and the energetic, dominating business men. To all appearances the condition of the marginal laborers has altered but little since I have been in the city, except in as far as they have benefited by municipal improvements. The organized laborers, whose family incomes run from $800 to $1,200, have gained immensely. Formerly they were housed in the congested parts of the city; now they live in the outskirts, where acres of two-story houses have been built. They show many indications of improvement, better housing, food, clothing and schools having come to them with other comforts of our growing civilization. In marked contrast to this is the position of the salaried class and the small proprietors whose incomes range from $1,000 to $3,000. They have suffered not only from the rapid rise in the cost of living, but also in many cases from an actual decrease in income. Years ago they were the well-housed class of whom the city was justly proud. The rows of three-story houses in the older part of the city attest to how they lived and as to what was their standard. To-day these three-story houses are largely boarding or apartment houses, and the families who formerly lived in comfort, having sold or stored their household goods and treasures, live in single rooms of their former homes.

New tastes and high costs of living are a prominent cause of this, but no one gets at the inwardness of the situation until he finds how much the servant problem has helped to bring it about. Wages have doubled in price and halved in efficiency; good servants have gone to richer employers and the incompetents that have taken their places soon make home life unbearable. Even a hall bedroom seems a haven of rest after a dozen or so have gone thru a woman's kitchen. Another evil comes from the prosperity of the energetic business men whose rapidly growing incomes have set new standards and taken from Philadelphia that conservative tone which for generations has been its pride. It is marvelous how the number of the families has grown whose expenditures show that they have an income above $5,000 a year, and it is from them that the pressure has come that is destroying the home life and independence of those with smaller incomes.

Along with these losses is a social change even more far reaching in its effects. For generations the family of moderate income has been the source from which the increase of capital has come. In the good old days of conservative living there was scarcely a family with $1,000 income that did not lay by at least $100, and these savings made Philadelphia a great industrial center. The recent pressure on income has stopped most of this saving. With the present organization of life insurance a slight reduction in the annual income protects a family better than did the older system of saving. But the change has dried up a leading source for increasing capital. Now capital comes from profits instead of saving, and this means that the point in income where effective motives for the increase of capital appear is raised from $1,000 to $5,000. It is the power which the possession of capital gives that prompts its increase and not the provision for the future. The favored few give us our new capital. The ordinary man seeks a salaried position, lives up to his income and gets protection thru an insurance policy. This is the Philadelphia of today as compared with the Philadelphia of yesterday. The marked contrasts of the old and the new life are perhaps greater than has ever before been wrought in so short a time. The great middle class, once the city's pride, are rapidly becoming a homeless class, living in boarding-

houses or patrons of cheap restaurants. Their homes are also childless or reduced to the one-child basis. In the America of today they have little influence and in that of tomorrow they will have no part. The future of Philadelphia is the future of its recent immigrants.

After a lack of adequate capital, due to the disappearance of the saving class, the second most important cause of higher prices is found in the bad distribution of population. The great mass of our industrial population are situated in the northeastern section of the country, while the center of food and raw material lies a thousand or two thousand miles to the west and south. It would be a conservative estimate to say that if Philadelphia could be bodily transplanted to the source of its food supply, the cost of living would be reduced 20 per cent. There is no reason, other than lack of foresight, why our industrial population should not be scattered in groups of 100,000 thruout the country. We have also allowed a railroad policy of granting favorable rates to large competitive points to hasten the short-sighted policy of concentrating wealth at certain points irrespective of the general welfare.

Not only has this wide geographical separation of producer and consumer increased our cost of living, but the planning or lack of planning of the cities themselves has greatly increased the rent item of the family budget. There are good reasons for having the commercial center of a city the geographical center as well, but when the industries of a city are forced within an already congested area, city rents are materially increased. With a reasonable basis for city planning, rents could be cut in half. This is but a conservative estimate when one realizes the enormous rentals that are realized for centralized city sites, and that this rental becomes part of the price of the finished article. The consumer bears the burden.

A third cause of high prices lies in our cumbersome system of reaching the consumer. Today, in many articles of common consumption, two or three sets of middle men separate the consumer and the producer. Each group of middle men means an added sum to the basic price, for each must have his profit. With a better geographical distribution of the industrial population, much of this cumbersome system of middle men could be avoided. When fifteen or twenty years ago in Philadelphia we could buy our food direct from the farmers who brought it direct to the markets, and we dealt first-hand with the producer, prices were decidedly lower than now. When food must be shipped in from a distance, we must pay the profits of middle men, of transportation and the artificial prices created by various combinations. This change has raised prices from 20 to 30 per cent.

A fourth cause for the present crisis lies in the new status of women. Forty years ago a man could live comfortably on $1,000 a year. Under the magic of the wife's hand this $1,000 became $1,500 or $2,000. The wife created more value by industry in the home than her husband did out of it. In her hands cloth became clothes, flour bread, and fresh fruits the winter's preserves. Now all things are done outside the home and must be purchased with the $1,000 income. The wife no longer contributes to the family income by creating values, and with the increased standard of elaborate dressing, she is often its chief burden.

As a result of these four causes, the salaried class in America is face to face with a problem analogous to that which is at present agitating England. Her crisis involves political parties, America's the home, but the fundamental question in each case is the same. England is asking how can we get enough income to meet the present increased standard of government expenditures. We are asking how can we get enough income to meet the present increased standard of living. In neither case is there likely to be a curtailment of expenditures. The higher standard must prevail.

It is no solution of the present problem to increase the incomes of some of those earning $1,500 to $2,500 or the earnings of those getting $2,500 to $3,500. The individual thus changed simply drops into a new class with a higher standard and finds the pressure of the new situation as great as before. The relief must be general to be effective,

and it must include the possibility of saving as well as the possibility of living. Only a comprehensive social policy can accomplish this, and to show the direction along which the nation should move, I give the following figures of savings and gains in income that it would bring to a family at the minimum of comfort, say $1,000 a year:

	Per cent.
A rational tariff	10
The control of monopolies	15
Reductions in rent	10
Technical education	25
Co-operative buying	10
By doubling the nation's capital:	
(a) Lowering prices	10
(b) Increasing income	20

There is nothing striking in this program except in the emphasis that is placed on the need of capital. It is a new thought that the higher standard of living has checked saving and yet the basis for this belief is as well grounded as that the higher standard of living has led to race suicide. What seemed better founded than the opinion that population and capital increased without limit Does not John Stuart Mill lay this down as a fundamental law? And yet right under our eyes a change is being wrought that eradicates the motives on which both of them rest. When religious scruples are no longer checks to extravagance and the Quaker, Puritan and Scotch-Irish have ceased to exist, we shall realize, if we do not before, that the essential conditions of home life cannot be neglected without bringing prosperity to a standstill and putting discord and rebellion in the place of peace and harmony.

PHILADELPHIA, PA.

A Southern Woman in New York

BY MRS. L. H. HARRIS

[Each of the three times Mrs. Harris has ventured to New York our readers have had the benefit of her impressions. It is usually well to see ourselves as others see us.—EDITOR.]

A FRENCHMAN calls New York the "dynamo of the Western Hemisphere." If he had added, "with the devil's tail sticking out for a fuse," he would have completed a definition which the rest of the hemisphere would recognize at a glance even if the name of the city had not been mentioned, because a Frenchman is apt to have a percussion-cap mind and would naturally think in explosives. While in New York recently I ventured to ask men of other nationalities for their impressions of the place.

"It is the wharf of the nation," said an Englishman, which was not bad for a man handicapped with the imagination of a seafaring ancestry.

"It is a great place, lacking repose and refinement. The most cultured homes in it are to be found among the Jews on the East Side," was the amazing reply of a young Jewess who has the *entrée* to some of the most exclusive circles.

"It is a good market for da banan'," said an Italian. And I am not sure but that this is the best definition of them all. New York is dynamic, it is the "wharf" where the waste material of all the other nations is dumped, and everybody agrees that it is a "great place," but the things you can market there which cannot be so well marketed anywhere else is one of its characteristic features—anything from a promoter's bogus mine to a brass-faced aristocrat brings a better price than elsewhere. I was astonished to see the class of people accepted there as aristocrats. Fiction too bad to be read finds voracious publishers. If a few of the horror hunters would establish a literary stock exchange they could form a publisher's trust that would ruin the minds and morals of all the reading people in the country.

Meanwhile I was not able to get a definition from the native of New York at all. If you ask one, he shows plainly by the raised eyebrows of his patience that he thinks you are a foolish person

to make an interrogation too large for a mind to measure with an answer. As a matter of fact, he does not exist as a separate personal entity, except in the discharge of a few natural functions like eating and sleeping. He has been absorbed and dissolved by the place. He can tell you what you will find on certain streets and in certain districts, but he has no more sense of the whole than an ant has of creation. He sustains the ant-relation to the multitude, and cannot withdraw his mind from the common mind sufficiently to think apart from the mass thinking about him.

Still, if one is not merely an undigested human atom in the maw of it, is sufficiently ignorant, and detached in consciousness from it, one may receive some startlingly vivid impressions of life and death-in-life in New York. And with this qualifying advantage I shall set down here the impressions of an autochthonous American woman of the place. By autochthonous, I mean one whose American Adam ancestor came to this country in the "Susan Constant," landed at Jamestown in 1608, and who has since grown her own forefathers upon strictly American soil. Neither has any one of them ever been born, married or buried north of the Mason and Dixon line of moral and intellectual demarkation in this country. That not only makes a difference in the point of view, but in the conclusions such a person would reach from any point of view. Six generations at least are required to produce a simon-pure, soil-true native, even when the strain is not crossed with feverish foreign blood. But once you have got him bred, born and breathing, you have one of the narrowest, most vigilantly virtuous, conservative mental mechanisms conceivable.

These impressions will be lacking also in economic value, because I have not employed the new near-sighted scientific method in getting them. For such a treatment of the subject the reader is respectfully referred to some romantic articles on the abolishment of the home and on the training of citizen babes which sometimes appear in THE INDEPENDENT and the scenes of which appear to be laid in New York. The authors are said to take most of the dramatic material for these economic studies from the "World Almanac," which of course accounts for their accuracy. But the vital and truthful inaccuracies that are sure to show in this article shall be due to the opposite cause. My material is not taken from the "World Almanac," nor from the Census Report, nor from any other book, but from glimpses of life as I saw it in the hotels, homes, theaters, churches, subways and streets of New York. The figures in a census report are only the little arithmetic bones of what has died or changed, useful in a way, but no more veracious than any other grave bones are of life if one desires the latest, most immediate estimates of it.

I reached New York at five o'clock in the afternoon and registered at the Maggie Hotel, having already forwarded references of a good character that would have admitted me to the Kingdom of Heaven. The Maggie is a hotel for women only, and my first impression of it was of a boarding school where the girls remained and grew old and trenchantly good without ever graduating. And this accounts for the fact that every woman who enters it as a guest must furnish a certificate of decency. A man does not care if the man in the room next his at a hotel is a blackleg or a thief; neither does a woman, but she cares very much what kind of a sister woman has the room next to her own. This is because the standard of morality among women is higher for women than it is among men for men. I may add by way of further information that if you stop at the Maggie you will not need to bring your guardian angel with you. You will not require one there, for if you stay inside the place you can do nothing wrong nor any too much that is right. You cannot even speak to the manager without a chaperon. He sits in an office curtained off from the lobby on three sides. Having no idea of the ceremony involved, I asked to see him about cashing a check the day I came. The bell girl stepped forward and pulled the curtains of all three sides back till he sat in the full glare of every feminine eye in the lobby. Then she motioned me to the interview. "My dear, if he is that questionable I'd rather not speak to him," I replied, retreating.

As a matter of fact he had the appear-

ance of being a perfectly respectable person, and I have no doubt that he was. And certainly the character of the guests in the hotel did not warrant such scandalous precautions. Even if every one of them had not furnished certificates of morals, one could not question them. I have never seen women anywhere whose virtues had hardened more conspicuously upon their countenances. One could only infer that this espionage was not meant to reflect upon the manager, but that it is required on account of the peculiar distrust of feminine public opinion in regard to its own sex in New York. To the stranger from the South there are everywhere these evidences of the distrust of the character of women. The rudeness with which she is treated in the subways, on the street cars and in other public places grows out of this lack of confidence in her and respect for her. But I did not see anything in the conduct of the women to justify it. The cold, unsexed, expression of their faces is due, in my opinion, to the effort they make to show that they do not deserve such suspicion. The poor things are hacked into a sort of ugly homeliness which has settled for good on their faces and made them the least attractive women in appearance to be found in this country. I question if any New York woman could make herself femininely pleasant to a man, or practise the charming art of legitimate coquetry, without injuring her moral sense. No sadder state of affairs could exist for her outside of the Turk's country. What you cultivate in the mind and spirit finally gets bred in the bone, and not only affects the shape of the nose, but changes the whole skeleton of the face, and it is only a question of time when the New York woman suppresses her natural sweetness, which renders the feminine face soft and appealing and adorable, till she will look as unprepossessing as a man in petticoats.

The next morning my mail contained an invitation to a Christian Science "reading," and one from some kind of Am Ram society to attend a lecture on "psychic therapeutics." But during the two weeks of my residence in the hotel no invitation came from a church and no Christian woman spoke to me. I might have inferred that there was not one among the guests if I did not know what a partial thing a woman's Christian experience generally is. It never overcomes her caste prejudice against strangers, nor others whom she actually *knows* to be of a different class from herself. She is the author of one of the most hateful features of modern church life — social distinction between saints. Men are naturally democratic, but the feebleness and inferiority of women is proclaimed by their ignoble conservatism at this point. Unquestionably there were many church workers among the "guests" of the Maggie Hotel who probably spent their time relieving the wants of the despised poor, who were even trained by a catechism conscience to speak to a person inside their church door whether known to them or not; but these same women would pass the same stranger in their hotel without the courtesy of the briefest salutation. To make sure of this I ventured to address one whom I knew to be a prominent church woman one evening in the lobby of the hotel. We had rooms side by side on the same floor, ascended and descended daily in the same elevator. By way of making a perfectly legitimate test of the humane quality of her spirituality I asked her a question that might have been answered with a "yes" or "no." She merely stared at me in thorny silence, nor opened her lips to reply. It was funny, of course, but far more pathetic than funny. To lose so completely the Christian sense of courtesy, to have such knowledge or such suspicions of women as to be afraid to treat a sister stranger civilly is worse than being in a primitive or heathen state, because one does not expect so much of a savage.

The reader must not fail to make the proper distinction. The scene of my observations about women is the Maggie Hotel because it is one kind of female life center in New York. But the hotel must not be held responsible for the manners of its guests. It is enough to stand for their morals. It is a remarkably Christian institution, evidently conceived and planned by women who knew the needs of women travelers. The service is excellent, the tea delicious, and the only extortionate price charged is for face powder. You have only to bring enough of this with you to be perfectly

safe from overcharge. It is also the center of the gravest female interests, and I must not forget to mention a woman's suffrage meeting that convened there during my visit.

The suffragists of New York are almost as exclusive as the Christians. Anyway, while I continued to have invitations to mental scientists' meetings, I was not invited to sit with the suffragists, and was obliged to sustain the same relation to them, figuratively speaking, that Zaccheus did to a certain other crowd long ago because he was such a little man. I could only see them go in and come out. But this was seeing a good deal that was sad and discouraging to the woman's movement, which I was told is very actively engaged now in the suffrage campaign in New York. Like very many Southern women, I am earnestly but not "savigerously" in favor of suffrage for my sex, because a woman cannot do anything with a man in a temper, even if he is wrong and she is right. But if ever I saw the fiery furnace instinct written upon the human countenance I saw it that day glowing upon the brows of those capable, heavy, ugly-faced New York dowager suffragists. They had on the whole armor of war expression, and it is about the least becoming any kind of women can wear, also the least effective. If the suffrage movement there does not get sweeter, prettier, gentler-looking ladies engaged in it than I saw, it is doomed to be postponed till after the death of those who deliberated upon their wrongs that day at the Maggie Hotel.

The majority of the people in New York are still normal, and they really hold the city together by their indifference to it. By normal I mean those who belong to the Order of Things, not to the Disorder of Things. But the latter make more noise, and therefore attract more attention, especially from the stranger. There is an old, dusty-headed philosopher in a little office near the entrance of Wall street who has been writing scriptures for his generation for thirty years with the sublime unconcern of the predestinarian. He has the millennium face, and has got his dawn-look fixed somewhere in time far beyond the reach of the din and roar of the street. He belongs to the Order. What he writes will be read and heeded long after the street has become a sheep pasture. But somehow I have always paid more attention to an idealist whose office is on one side of the old philosopher's. He is a modern idealist rendered incompetent by the lack of length and quality of his faith, a hurried kind of dreamer who cannot believe enough and yet believes too much of what he does believe. There is something heroic and immediate in his vision that stirs the blood. And on the other side of the philosopher is a man with the modern scientific instincts, sufficiently unscrupulous and inquisitive to squeeze his own soul into a test tube, if he could manage it, for an experiment in sulphuric acid. This man would attract more attention in a day in New York than the gray old pilgrim will in a lifetime. He answers better to the dreadful intellectual impatience of his times. For me he is as fascinating as Bulwer Lytton's Margrave, and for much the same reason. He is the new alchemist, ready to boil down human destiny in a pot. That sort of experiment appeals strongly to the New York imagination.

And again I was in a home where the young mother was intent upon bringing up her children, not upon any other "w o r l d movement" whatever. She thought of them not as citizen babes, but as babies. She showed none of the new diablerie, started by old maid authors of infant study books, to experiment with their little mucous membrane psychologies, but she was capably concerned about their bread and butter and proper prayers. She was doing the right things with sufficient simplicity to insure them against any morbid consciousness of their pancreas or cartilaginous substances, or without suggesting to them that they had little pink-toed "auras" instead of souls, which would in the course of time become "sky blue" if they were very good! I felt the ancient order and peace of that home, but for that very reason it did not rivet attention like another home to which I was invited with the distinct understanding that the hospitality was not sacred or personal, but intellectual, ethical, and open to what-

ever comment a guest might choose to make—a curious kind of invitation, and indicates that in New York you may be treated with courtesy, hospitable kindness, not because of any personal interest in you, but for your good and your enlightenment, and the advancement of your part of the race. In this home the host and hostess are rich, radical, philanthropic, and both claim to be atheists, altho they confer benefits with simple Christian sincerity that I have never seen surpassed. And one cannot blame them for thinking themselves away from Providence. New York is composed of man and matter. Nothing suggests God, and everything which does not suggest the devil outright suggests the capitalist or the pauper. However, these two people have a surprise in store for them hereafter. Some Judgment Day they may land at the gate of One Pearl, in spite of their rational materialism, and Peter will say impatiently:

"Come along in, you foolish good people. There is a God, after all, and you served him beautifully, faithfully, all the days of your life. Take front seats at the Hallelujah Chorus!" This will be their punishment, sitting in front of the smile at their expense of all the saints in heaven.

I mention these two orphaned saints to illustrate the peculiar orphaned condition of the spiritual nature of good men and women in New York, because it is as characteristic there as old-fashioned phariseeism used to be in Jerusalem. On Sunday afternoon the young girl in the family entered the drawing-room, seated herself with the air of a blessed damosel, spread out some stuff upon her knees and naïvely began to embroider. I was shocked, not at the wickedness of it, for one could see that the girl was incapable of wickedness, but at the moral desecration of a fair nature. For human nature requires arbitrary restrictions in order to develop in the right direction. It does not matter which restrictions are chosen, so that one is superstitiously faithful to them. Considered comparatively, there was less harm in her embroidering than in the conversation in which the rest of us were engaged. But man is founded morally on traditions, one of the most scriptural of which is toiling not on the Sabbath Day. And it is far more dangerous to break the entail of such a tradition than it is to fracture one's body-legs. If the best-bred horse in the country, broken and trained into a serviceable animal, is turned out with a herd of wild asses, he will live and kick like one till he dies. This is what some of the best people in New York have done. They have taken the reins off of their minds, discarded the arbitrary methods of disciplining their human natures, which may always be counted upon to remain primitive, and it is only a question of time and begetting when their city will become one of the wild-ass centers of American life.

A man may be born of a place long after he has been born of a woman. And this is what happens in New York, no matter who you are, nor from what country or section of it you come; you are in danger of being born of the place if you remain in it long enough, you are in danger of being changed from a person, or personage even, into an infinitesimal little vulgar human fraction of a rather monstrous whole. Something happens to you, often very like an inverted conversion, the more difficult to guard against because all the time it is happening you have the feeling of having your vision stretched, your wisdom increased, your prejudices removed, and your poor, little, narrow, tight-waisted, morally-buttoned-up mind opened and enlarged till you cannot tell the difference between righteousness and unrighteousness. I had not been there a week before cocktails on the table looked as natural as biscuits. And I saw a man who had always been a gentleman at home that had made a New York "rise" in the world and had become a glittering toadfrog in *risqué* society. He had even changed his name, but continued to pose as a pouter-pigeon aristocrat from the South. The place had made him a cad, just as it makes some others "sharks," and still others different kinds of fowls. Certainly it changes the nature of every man and woman born of it. And the stranger has no difficulty in recognizing those who have naturalized there. They are not balanced the way other people are balanced, to say the least of it. They are ready to tip the scales of Providence either way for the sake of a momentary sensation. For example, there is some-

thing not quite sane in the night-natured throngs that crowd Broadway in the evening. They think they are looking for pleasure, and really they are looking for excitement. They have dipsomnia temperaments and crave more and more stimulating sights and adventures.

Another thing the stranger notices is their highly developed destructive faculty, which they have substituted for the old-fashioned moral sense. Whether a native of New York goes to see the worst or best things in life dramatized in a play, he takes his pleasure in it fastidiously, from the analytical point of view of a critic. No matter where he hails from, East or West, if he has lived there long enough to get the glare of the footlights in his eyes, he is no longer capable of becoming subject to the illusion of reality, which it is the purpose of the play to produce. His interest is in the smile or throat line of the actress, or in her gestures, never in the *meaning* of what she is trying to mean by her acting. To watch a cultivated New York audience at a theater is one of the most exasperating and depressing things one can do. They are art mad and morally innocuous. I heard an Episcopal minister express annoyance at the criticism the Strauss opera, "Salome," excited when it was first put on at the Metropolitan. He thought it provincial and beside the mark to consider the immoral meaning of such art. Since then the city has grown up to the Episcopal minister's point of view and it can watch this decadent performance without blushing.

The same thing is true of the naturalized New Yorker everywhere. He is after effects, not much else. The result of this is curious to trace in his social life. No matter how indecent a man is, he is respectable if he has painted a great picture, designed a beautiful building or written a decadent novel. I was invited to a reception where the guest of honor was to come with her lover, on whose account she had been divorced from her husband. And it would have been perfectly proper to go, in spite of her ill fame, because she was a great artist. This is the intelligent, broad-minded way to do. But we have no parallel to it in the South save among negroes, where the disgrace suffered on account of marital infidelity is equally slight.

In short, one of the traits by which the New York native may be recognized is the way he misses the real point and clings to his own tangent. There is a difference between having a moral consciousness and a theoretically ethical intelligence. And I know of no other place where men and women make the distinction clearer in their own living. One hears more talk, for example, about human brotherhood here than in all the Southern cities put together, but the reigning antipathy in New York is the antipathy of the human for the human. This amounts to a neurasthenic repulsion, and affords in part the reason why some respectable people cannot remain married, but seek relief in divorce. The relation is too constant, and the temperament of New York is not constant. It must have a change, even of affections, or tear its hair and have hysterics.

Everything they do leads to curious contradictions because of this hiatus between their minds and their morals, and because they have made the fundamental mistake of putting the accent of life in the wrong place—upon the unscrupulous development of their mental faculties, rather than upon the more tedious seed sowing of virtues. The human mind is very belittling to man once it becomes inquisitive and acquisitive concerning him. The greater your thinker, the nearer does man and ant crawl side by side in his estimation. Just so, the scandalous, wholesale use of mind, such as one sees in sane intellectual circles in New York, is too offensively democratic in its effects upon consciousness, and placing one in the embarrassing position of being no better than his inferiors. One is interested to observe the kind of ethical lying to which this leads. I have never seen a place where servants, for example, were treated with such deadly coldness, as if they belonged to another species. No self-respecting negro servant would bear it for a day. There is a gentle, esoteric human kindness in the South to one's other kind that I do believe has been smelted out of the hearts of the most ethical and charitable people I met in New York by their hypocritical intellectual processes. One day a woman whose life is full of good works, and whose heart is merely a dictionary of impersonal ethical terms, solved the

negro problem to me during the pauses on the subway. And it was a beautiful solution, naturally leaving out the rights of the whites in her romantic enthusiasm for a downtrodden race. But I am certain that she could not have nursed and cared for an old mendicant negro servant as I have seen my mother care. Neither could she bear patiently and kindly with the half evolved moral nature of a negro maid in her own house as we bear with them. Her everlasting ethical pedantry would render her uncharitable, too exacting and intolerant. Another thing I understood as I listened to her with the same patience I have listened to the prattle of babes, that she does not know and never could be made to understand that people do not solve race problems. They only talk about them. Time does the solving. The Northern abolitionists thought they had solved the negro problem when they freed the slaves. As a matter of fact they started it then, and they have done all they could think of to complicate it since. Meanwhile God is taking his own immeasurable time, and eventually the thing will be settled *right,* irrespective of the injustice of Southerners to an inferior race, and equally irrespective of the romantic idiocy of Northerners. But when God does finish the adjustment, if New York is still in existence, the children of it will not recognize the solution. I have never seen so many people afflicted with the mania of the "fixed idea." The great-grandchild of the first abolitionist inherits what was a noble virtue in his forefathers, but what is simply a survival of emotion in him which is stupid and obsolete. It is because he lacks elasticity and originality of mind. You cannot teach a New York man or woman a thing that they do not know and believe already. With all their intellectual energy, they have no room for the unsuspected and to them the unknown. This is one of the reasons why degeneracy and decadence have set in among them. They can become infinitely more intelligent, but they cannot *grow,* by adding another cubit to their stature, because you cannot make them believe they haven't it already. You will not find such invincible ignorance anywhere else in this world as is to be found especially among the intellectual classes in New York. It is the kind that withstands experience and all the enlightenment of civilization.

The eagerness with which they engage in and magnify views and movements that sane men leave to develop naturally marks them again as abnormal. There are men and women in New York who spend their entire time serving on "committees." They have no other occupation. Usually they are rich and really idle, and take to committee work as a moral stimulus to an otherwise innocuous existence. And the committees all have revolutionary names and purposes. One will be to arrange universal peace, another to establish social equality between races in the South. The latter actually held a "convention" recently in New York, and had a regular abolition pow-wow. Such a thing could not have happened in any other city in the Union, because there is not another one with enough sentimental cranks in it of the same mind to stir up such a "convention." Meanwhile, over and above the committee class, there are two classes of reformers in New York—the professional ones who are in the business of agitation and destruction for the money and excitement that is in it, and a few real reformers who are honestly, intelligently, patiently concerned to choose a right course for the future. Any stranger soon distinguishes between them. The professionals have a following and the others have not. They are merely the old allopathic dusty heads preparing bitter pills for the next generation.

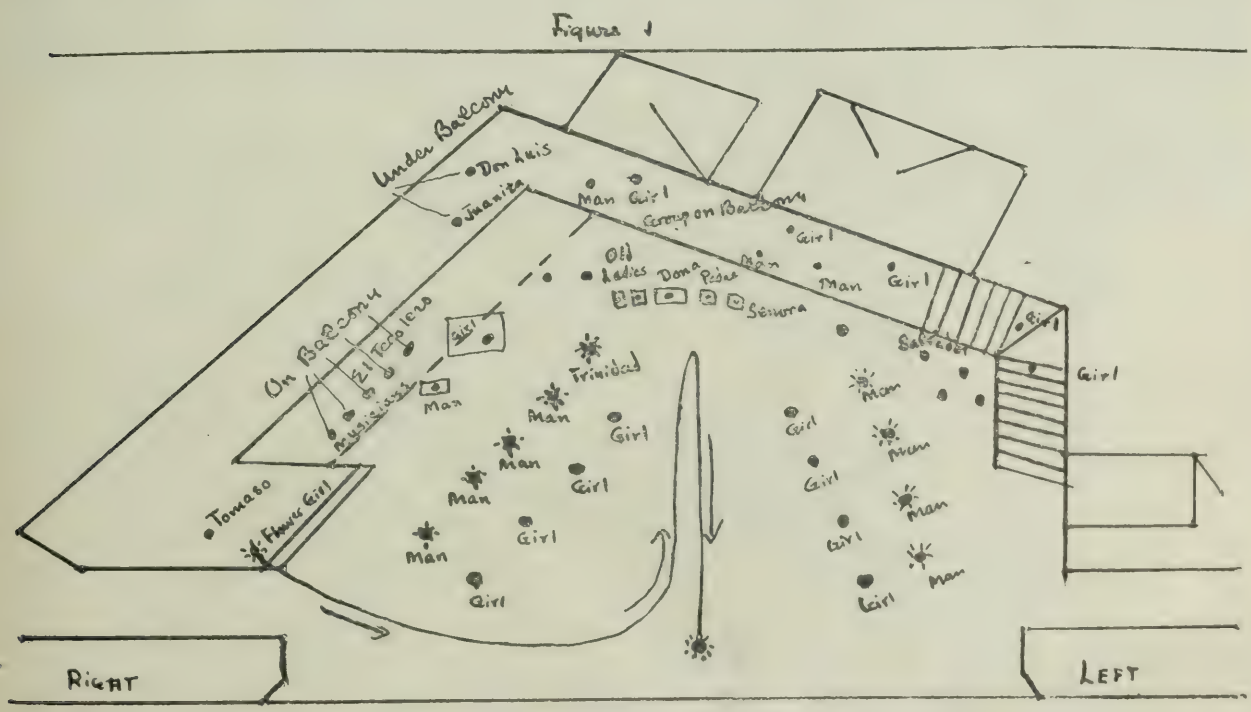
It is not possible to give a consecutive impression of these mania people, because they are restless, changeable and still fragmentary. The genealogical tree of one of them must look as if it had been in a cyclone of racial competitions. Every one is mixed with some one else's forefathers who ought not to belong to him, and none of them have assimilated the foreign elements in their own composite natures. This accounts for their misdirected energy and their bias vision. The man with the New York faculty has a sense of humor in regard to every one else save himself. But to see himself as others see him is a sacrilege of which he could not be guilty.

NASHVILLE, TENN. E7

The Cardboard Play

BY MONTROSE J. MOSES

Author of "Famous Actor-Families of America," "Children's Books and Reading," Etc.



WE have no grievance against the outward excellence of the cardboard play; it is planned according to the latest devices and its structure is pleasing to the eye. Yet it is like a house untenanted, like a shell without the kernel.

It is of the utmost importance that drama be externalized, that its scene be proportioned and in good taste; but that does not mean that the yardstick measurements of the average manager are sufficient to guarantee a success in his theater. Every play is subjected to the same processes of preparation; the extravaganza as well as the problem drama has its scene and its costume and has to be carefully rehearsed.

In mounting a comic opera, the stage manager is chiefly concerned with pleasing the eye—the attention is carried in the channels of least mental exertion; the final analysis of such effect is that one has been cheated, since the light and paint of the stage are only accessories, appetizers for the imagination, and do not take the place of Nature. The Rosalind of the "boards" lacks the fresh youth of the Rosalind of the greensward. On the other hand, in mounting a straight drama, with serious undercurrent of motive, it is incumbent upon the stage manager to be particular about harmonizing scene with idea. He leaves this to his working staff, more than likely, thoroly content when he sees during rehearsal any variety of design, any new effect of novel action. A theater man once said, not realizing the poignant truth of his statement: "I hear with my eyes and see with my ears."

It is not an easy matter to balance consistency with action; and it is well nigh impossible for the dramatist, if he be lacking in psychological situation, to insert it after his play is written; he is continually forced to recast his dialog so as to make possible certain motives.

From the moment a dramatic author conceives his plot to the first night, he travels the long road of preparation; considering how long, it is a wonder that more plays are not silently withdrawn before they are publicly condemned. But the manager finds himself in the position of a landlord whose houses have to be

filled, and the weakness of the situation lies in the fact that he has more comfortable theaters than he has deserving dramas. That is why he leans so heavily on the cardboard play; if it is weak on the first night it may be bolstered up on the next morning. The manager and author have had time to watch the audience; on the prompt copy of the play there are marks, indicating where those "in front" "laughed," where they "cried," where they were confused. A rehearsal is always called the morning after a first

A SCENE SKETCH FOR "THE MUSIC MASTER."
This drawing was made by Mr. Buckland, who is Mr. Belasco's assistant; in his hands rests the large responsibility of designing Mr. Belasco's cardboard houses.

night, so as to touch up, to cut out, to shift or heighten. A play is hardly settled in its "business" and "effects" until after the first week.

The true dramatic author is always thoroly alive to the surroundings of his play, to the precise atmosphere of his scene. While he leaves it to the art of the stage carpenter and of the scene painter to perfect his mental picture, nevertheless, in the writing of his play the dramatist allows atmosphere to affect his dialog as well as his action. Not only do details of furniture, of dress, of architecture *decorate* the present moment in the story, but each object of external position measures the temperament, the personality (to a more or less degree) of the character or group of characters approaching the climax of this particular incident in life called a drama. I have just had read to me the script of a play to be acted next season; the dramatist himself read it. In describing the *locale* he indicated to me how many trees were on the lawn of the country home; he saw the living-room in which a large part of the action was to take place; the ground plan was as *real* as tho he had himself lived in such a house. To him the essential fact was that his family, which he had chosen for this play, could not possibly have lived in any other house. He was having his scene built, he was selecting his furniture, he was clothing his actors, to satisfy his *sense of environment.*

It is evident, therefore, that the first two things to be done after a play is

A LEAF FROM MR. BELASCO'S BOOT PLOT FOR "ADREA."
Not only does the designer make his sketches, but he likewise has to procure samples of leather and felt of suitable color.

chosen for production are to have the stage director make sketches of the scenes, while the dramatist, if he is well known, or the stage manager, begins to "cast" the characters. Mr. Clyde Fitch always personally superintended these initial details. Compare a preparatory sketch of "The Music Master" with the finally adopted scene, after Mr. Belasco had altered it; what is lacking from the original conception has been discarded in order to satisfy the practical side of stagecraft. Nothing is done toward actually building the scenery until the sketches have been approved, until the "model" has been constructed. Then the carpenter and painter are allowed to begin their work.

The preliminary drawings made for a production include costume sketches of varied design and color; even as an artist or a sculptor makes diverse outlines of arms and eyes and noses, so the costumer prepares "boot plots," "fan plots" and studies out carefully, if his play calls for archaic setting, every detail relating to the dress of his period. From an orchestra chair one does not fully realize the amount of ingenuity required in preparing the cardboard surroundings for an historical, a fantastical or a romantic play. Dances, peculiar to locality or characteristic of a period, must be worked out by diagram, each movement indicated in the manner of Juanita's dance in "The Rose of the Rancho." Colors have to be massed and harmonized; every character must be kept within the tone of the picture. When large choruses are used, such care must be rigorously observed. The Hippodrome has had several immense ballets, where, if you but half close your eyes, blurring the individual figures, a spectrum scheme of the whole might be observed. Masses of color are circulated in well-conceived, sinuous design—geometry turned into the poetry of motion.

The cardboard aspects of a play are in the hands of four men: the scene painter, the stage carpenter, the electrician and the property man. Each does his work separately at first, but in such a way that when they come together their "effects" shall dovetail. The mounting of a play is much like a cut-up puzzle; there is a very definite design somewhere, which the stage manager has in mind. Even in the acting, rehearsals are done in fragments, the players go off to odd corners of the room discussing their business, while others are doing a scene under the direct supervision of the dramatist.

The play is practically rehearsed by the time scenery and costumes are ready; the actors are "letter perfect" and are fairly familiar with the properties which they are going to have. Up to this time the king has probably imagined a kitchen chair to be his throne; the princess has dropped upon the bare boards of the dusty floor for the greensward; the retainers of the palace have had a veritable Belshazzar's feast, without even the assistance of papier maché venison. I attended several of the rehearsals of "Pélléas et Mélisande" when Mr. Hammerstein was preparing his Debussy opera. In the balcony scene I saw Miss Garden, dressed in a street gown, with a toque hat, "make believe" she was shaking out the golden locks of Mélisande, while up an ordinary house ladder climbed the love-consumed Pélléas, in a brown frock coat and derby hat! It is at such moments that all arguments as to the need of scenery and costume are difficult to offset with any plea of not needing scenery at all. It has its legitimate uses; its undoing is bad taste which leads to repletion.

The theater people do not proceed blindly in building their cardboard house; while they are usually lavish in their scenic outlay, they know what they want before they look for it; they are quicker to discover a flaw in stage setting than to question the intellectual value of their amusement; their visual power far exceeds their critical judgment. They usually possess a "scenario" knowledge of the play which they offset by their stage "model," in which draperies, furniture, ornaments and the numberless details grouped under the name "properties," are accurately placed. One can imagine the necessity for this doll house—this *facsimile* of the larger thing—this miniature theater. But the mental measurement of the cardboard play hardly goes further, as far as the average manager is concerned.

Let us now grant all this preliminary

work to have been done; the scenery is "set"; the actors know their rôles; the cardboard parts of the theater and the human elements are to be brought together for the first time; the play and its idea are to be draped in color, set in an atmosphere, still make-believe, but nevertheless tangible.

Scenery should never take the place of imagination, yet scenery is its working basis. If the Elizabethans did not need it, save in very primitive form—a cardboard here like a "keep off the grass" sign to mark Elsinore; a bowl of water there for the ocean—it was first, that mechanics were not as highly developed as painting, which is entirely on the flat, and second, that the Elizabethan period was essentially one of imagination. But critics should remember that the actor of Shakespeare's day often overdressed his part, assisted by the rich wardrobe of some patron prince or lady.

COSTUME SKETCH MADE BY JAPANESE ARTIST FOR "THE DARLING OF THE GODS."

The cast is now assembled for "dress rehearsal"; the stage manager having familiarized his actors with the necessary properties, locates the latter definitely on a diagram, besides noting their use on his manuscript copy of the play; the electrician, having experimented so as to establish the nature *tone* to the picture, has his light plot well thought out, and a diagram drawn. The whole is now to be put together and made perfect for the opening night. The cardboard house is ready for tenantry.

During this time, has the manager given much critical thought to the content of his play? He says to his scene painter, "Make your surroundings as true to life as you can; experiment until you get them, no matter the expense; if you are painting a room in a New York boarding house, rent such a room and work there for a fortnight; absorb the atmosphere." He says the same thing to the carpenter, who in his economy of space must take the apparent position of being lavish and ample. The electrician reads the play, and his part of the work must be original. Stage appliances, once they have proven successful, are protected by patents; no one could steal the storm mechanism in "Brewster's Millions," or the "sunrise" in "The Girl of the Golden West." But the electrician, when he has discovered weird light effects, guards them jealously; he has his technique as well as the artist, and he is loath to give it away.

The perfection to which the cardboard aspects of a play have been brought is at the same time a strong asset and a weakness. It is so easy to interest the eye with the devices of scene and effect that the manager has reached the point where he can disguise any threadbare parts of his story beneath some startling novelty of stagecraft. The ship scene in "Via Wireless" last season was the old storm of "Brewster's Millions" given a more timely setting and played swiftly, with blinding sparks and deafening noise, accentuated by long silences of suspense; the play was ordinary. But the manager's calculations were right when he felt that he could attract his audiences alone on that one "effect."

In the discussion of the theatrical situation no criticism can be brought against the manager that he is miserly in his outlay during the production of his "attraction"; fortunes are spent every year in the cardboard houses which amuse the eye, but which bring no profit.

Commercialization in dramatic art is largely due to the very necessity of seeking financial returns on the immense investment required to enrich an ordinary idea. There is a general belief in publishing circles that the true literary adviser is the traveling man who sells books on the road. The same condition is tenable in the theatrical business. Judging by the character of plays produced in a season, the "reader" for any theater watches more for effect than for content; dependence is placed, not so much on the dramatist as on the theater staff of trained mechanics.

The master of cardboard architecture is Mr. Belasco; his secret of success lies in the fact that he possesses sensibility which attempts to blend scene with sense; his realism is always placed in the midst of romanticism; he believes in the poetic possibilities of mechanics. For this reason he illustrates the legitimate value of cardboard. I am privileged to make use of some illustrations which exhibit different stages in his work; his studio is an alchemist's den, where, with human response in one hand and with the lever of the switchboard in the other, he measures effect in terms of heart throbs. His weakness is in this dependence on the psychological value of the cardboard house.

So, while there is art in the external drama, its perfection is the danger we have to guard against. Commercialization will exist just as long as the period of preparation is spent entirely on "effect," for, on the first night, with the scene set, the lights lit, the property details placed, and the actors doing their best, the manager suddenly realizes that he has no play.

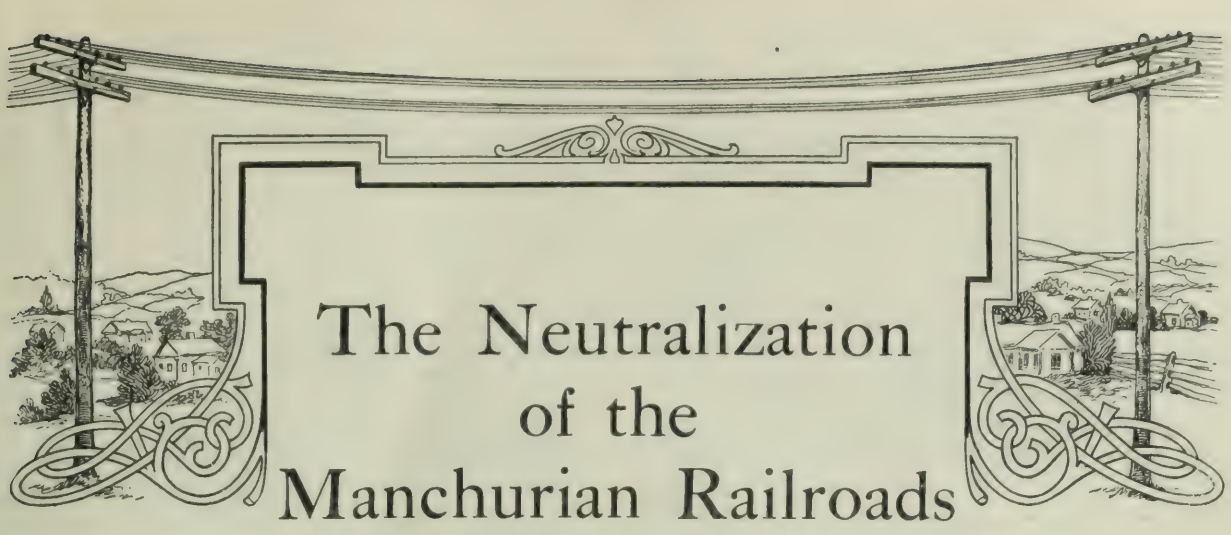
NEW YORK CITY.

A Royal Birthday

To Her Majesty, Queen Alexandra

BY ALFRED AUSTIN, POET LAUREATE

NOT regal robe nor queenly crown,
Nor halo fresh from "stricken fields,"
Nor soundest statecraft's wide renown,
Confers the spell your presence wields.



It is the peace your coming brings
To lowly pallet, humble heart,
And to the whitewashed refuge clings
Lingering, when you yourself depart.

Should battle rend the soldier's limb
And he must bear war's stern award,
The whispered word "She comes!" for him
Makes anguish less and fate less hard.

Nor less within our peaceful isle
You seek the thresholds of disease,
And with your sympathetic smile
Radiate there a sense of ease.

Long may your look of pity chase
The pillowed grief from couch of pain,
And blend the woman's tender grace
With records of a manly reign.

SWINFORD OLD MANOR, ASHFORD, KENT, ENGLAND.

The Neutralization of the Manchurian Railroads

BY CHINSON YOUNG

A Chinese Graduate Student at the University of Pennsylvania.

NO event since the signing of the Portsmouth treaty has been more significant in the history of the Far East or has aroused greater and more genuine internationl interest than the recent proposal made by the United States to Russia, Japan, Great Britain, Germany and France for the neutralization of the Manchurian railroads now held by Russia and Japan, thru the sale by those countries of their interests to China, who is to raise the necessary funds from a great international syndicate to be composed of capitalists of practically all the important Powers of the world. Upon the approval or rejection of this momentous proposal the welfare of Eastern Asia and the future of a great portion of the Oriental trade of the commercial nations of the world depend. Its approval means the reassured guarantee of the sovereignty of China in Manchuria, the maintenance of the open door, insuring equal trading opportunity for all the commercial nations on the earth; while its rejection means ultimately a Russian Manchuria, or a Japanese Manchuria, and that, at all events, the so called open door will continue to be a hollow sham.

At the beginning of the Russo-Japanese War Japan declared to the whole world: "We are not fighting our battle alone; we are fighting the battle of all civilization, and we are working for the commercial benefit of all trading nations." At the close of the great struggle in the Far East, Manchuria, according to the treaty of peace, was to be restored "entirely and completely to the exclusive administration of China." Such assurances, however, have turned out to be fiction. Instead of putting into actual practice what they preached, the Japanese and Russians have clinched a stronger hold upon their interests in Manchuria than ever before. China, being the recognized owner of Manchuria, feebly attempted to reassert her sovereignty and to resume her governmental functions, to practically no avail; while Russia and Japan have finally become the actual sovereigns by means of the "peaceful penetrators," or, in other words, the railroads.

The question that makes the railway situation in Manchuria of such great interest and importance from the international viewpoint and from the Chinese domestic point of view is the attempt on the part of Russia and Japan to administer the settlements along their railroads. The Russian claim of the alleged right is based upon an alleged clause in the grant of a franchise for the Chinese Eastern Railway by China to the Russo-Chinese Bank. In the first place, the validity of the clause itself is questionable, and secondly, the grantee, the Russo-Chinese Bank, is a private corporation under the joint ownership of Chinese and Russian capitalists. This fact proves conclusively that the Russian claim is ludicrous. The basis of the Japanese claim is a little more complicated. The original grant made by China to the Russo-Chinese Bank of the franchise for the Chinese Eastern Rail-

way covers the line from Harbin to Port Arthur, or, rather, Dalny. By the article six of the Portsmouth treaty, Russia assigned to Japan that portion of the Chinese Eastern Railway between Kwang-Cheng-Tse (Chang-Chun) and Port Arthur, including all its branches; and retained for herself the remaining portion from Kwang-Cheng-Tse to Harbin. Japan therefore bases her claim as an inheritor of the original grantee. The absurdity of the Russian claim proves the equal absurdity of the Japanese claim.

Even if we admit the validity of such ridiculous claims, the administrative powers certainly cannot extend to other than strictly railway property, actually required and used in the operation of the railroads. But what is the Russian and Japanese interpretation? These two countries, with no logical reasons whatsoever, claim that the administrative power extends to all settlements, which, of course, includes all cities, which are and may be situated along their railroads. Such a broad and sweeping assertion means the continual increase of the political influence of Russia and Japan in Manchuria as the cities and towns along the railroads grow and the railroads themselves increase in importance. This can have but one ultimate result, the ousting of China, the rightful owner, from Manchuria. The so-called Russian and Japanese railroad zones already cover a strip of land running from the north to the south, cutting Manchuria into halves. This strip of land includes some of the most important cities in Manchuria, such as Harbin, Mukden, Dalny and Kwang-Cheng-Tse, and over the entire strip, of which China is properly the owner, China can exercise little or no political sovereignty. To illustrate, suppose the arteries and the veins of a human system become the abodes of two species of formidable germs which multiply in a most tremendous rate, what else can we look for except the immediate and complete destruction of the unfortunate individual?

Such claims, on whatever ground they base, reasonable or unreasonable, are clearly in violation of the sovereign rights of China and cannot be tolerated. It is, moreover, a violation of the Portsmouth treaty, the seventh article of which contains the following: "Japan and Russia engage to exploit their respective railways in Manchuria exclusively for commercial and industrial purposes, and in no wise for strategic purposes." The "Harbin incident," by which Russia attempted to establish administrative authority over the entire city of Harbin, brought her into contact with the United States, and resulted in an agreement signed last May, by Russia and China. The agreement provided a method of government for the Russian railroad zone, based on the guarantee of Chinese sovereignty and the principle of joint administration. But has the agreement been actually put in force? It is another sham. The only conclusion that one can arrive at in this question is that, unless the railroads are deprived of all political administrative powers, the sovereignty of China in Manchuria will vanish.

From the Chinese point of view, therefore, the proposed neutralization of the Russian and the Japanese railroads is at present the best possible solution. The only possible alternatives are the submission of the Russian and the Japanese claims for the political administrative rights along their railroads to an arbitration tribunal, but it is questionable whether Japan and Russia would be willing to submit the question to arbitration; and the purchase of the Russian and the Japanese interests with Chinese funds, but this could not be accomplished on account of, first, the lack of funds, for such a project would involve at least several hundred million dollars, and, secondly, the almost certain refusal of Russia and Japan to sell.

Prior to the Russo-Japanese War Japan was a strong supporter of the principle of the open door, as well as a bitter opponent of the doctrine of the sphere of influence. She then had no interests in Manchuria. Immediately after the signing of the Portsmouth treaty, she, after having acquired her interests in Manchuria, became the most dangerous foe to the doctrine of the open door. The railroads held by her provide a means to evade, by practices which are difficult to trace definitely, the principle of equal opportunity for all commercial nations

of the world. Thru rebates, subsidies, strategies and cheap imitations, her merchants have succeeded in underselling the Americans, the English and the Germans. Occidental trade and property rights are now already suffering. Half of the Oriental trade of the United States did go to Manchuria, a fact which most of the Americans fail to realize, but under the present *régime* the American trade in Manchuria is rapidly declining, as the American trade consists chiefly in cotton goods, and it is against the cotton goods that the Japanese competition is the most severe. In competition with Japanese goods, all Western goods are badly handicapped by the obstacles imposed upon them by the Japanese railroads. For the United States, Great Britain and Germany, therefore, if they still desire to retain Manchuria as a market for their surplus products, the present actions of Japan in Manchuria must be arrested. To acomplish this, no scheme is more desirable than the neutralization of the Manchurian railroads, for the Powers who finance the project will undoubtedly safeguard the doctrine of equal commercial opportunity for all nations.

On the Manchurian railroads, the trade between Europe and the Far East is the most important single factor, and, indeed, without the trans-Siberian traffic, the railroads cannot run on a profitable basis. The railway situation is, therefore, a three-cornered one, as Russia holds the line in the north, running as far south as Kwang-Cheng-Tse; Japan, the line from Kwang-Cheng-Tse to Dalny, and China, the line from Mukden to Peking. Russia possesses the connecting link, but has no outlet, for Vladivostok is a harbor closed to traffic during the greater portion of the year. Russia must combine either with Japan, using Dalny as the destination and the outlet to the sea; or with China, using the Chinese line as an ally, and, by sending her goods via the Peking-Hankow Railroad, spreading them all over China, for Hankow, by her situation, is naturally the distributing center of China. Russia, therefore, holds the key to the entire situation, since her Siberian railways and trans-Caspian lines are indispensable as links in any route between Asia and Europe. She can form an agreement with Japan to obstruct Chinese railway construction in the north and retain Manchuria for themselves, or she can ally with China to oust Japan by leaving the Japanese lines with no thru connection.

Japan, of course, perfectly realizes the situation. It was for this matter that Baron Goto, the president of the Southern Manchurian Railway, the line from Kwang-Cheng-Tse to Dalny, visited St. Petersburg in 1908. But no definite arrangement was made. It was again for this purpose that in October last a meeting was arranged at Harbin between M. Kokovsoff, the Russian Minister of Finance, and the late Prince Ito, President of the Privy Council of Japan, to consider seriously the sale of the Russian interests in the Manchurian Railroad. The sale to Japan, however, is not possible, for this will practically mean the withdrawal of Russia from Manchuria, leaving the field clear for Japan. Nor is there any possibility of a satisfactory agreement between Russia and Japan, for both Japan and Russia desire to possess the whole of Manchuria, and so Manchuria has no room for both of them. In either case, the protest of China will be raised, as China has half of the interest in the Chinese Eastern Railway between Harbin and Kwang-Cheng-Tse, thus entitling her to object strongly to a sale or a discriminating agreement of the Russian railroad.

An agreement between Russia and China to oust Japan will undoubtedly confront the bitter opposition of Japan and give rise to another international conflict. The solution is the proposed sale of all the railroads, Japanese as well as Russian, to China, financed by an international syndicate. This practically amounts to the ousting of both Russia and Japan from Manchuria. The opposition to such a proposal by the Japanese is inevitable. All Japanese, of course, wish to keep the part of Manchuria now held by their Government. Viscount Hayashi, former Minister of Foreign Affairs, was reported to have said of the proposal: "It amounts to a confiscation by the Powers of Japan's rights in Manchuria, secured as a reward of the heavy

expenditure of blood and treasure. The popular sentiment is certainly violently opposed to the proposition." Count Okuma, evidently in a fit of anger, was reported to have said: "If the Manchurian railways must be neutralized, why not all the railways in China?" Count Okuma's query is no argument at all, and the argument advanced by Viscount Hayashi practically means this: "We defeated Russia and therefore we have the right to rob China. You have no right to interefere." Japan certainly will not accept the proposal philosophically, but the approval of England, her ally and supporter in the Russian war, will ultimately force her hand.

Russia, altho unwilling to accept the suggestion of the United States without giving the subject the most careful consideration, will raise no serious objection. The fact that she has been pushing her plans for the Amur Railroad to Vladivostok, so that her Vladivostok and the Ussuri littoral will not be left isolated in case a project like the present one is carried out, shows that Russia has long been aware of the possibility of such a proposal and probably indicates that she is not unwilling to relax her hold in Manchuria if Japan likewise is not to retain hers. In addition, the concession granted by China to the United States and Great Britain, to construct a railroad from Aigun to Chin-Chow-Fu, casually referred to by Secretary Knox in his memorandum to Russia, gives the proposal considerable weight. The line covered by the concession would cross the Russian line at Tsi-Tsi-Har and penetrate well up toward the Amur line. This fact alone will give Russia much cause for consideration in framing her reply to the United States. And the fact that the projected railroad would form a very dangerous competitor for the Japanese railroad will be something for Japan to consider.

PHILADELPHIA, PA.

The Peace Movement in the Colleges

BY GEORGE W. NASMYTH

[Mr. Nasmyth is president of the Association of Cosmopolitan Clubs, which held a convention at Cornell University during the Christmas holidays. This is a unique and interesting organization, from which much may be expected.—EDITOR.]

ONE of the most difficult problems which man has yet to solve is that of living together in peace. In the twentieth century man has little to fear from the forces of nature. Maeterlinck has shown us, in "The Blue Bird," how all the evils, all the plagues, all the sicknesses, all the terrors, all the catastrophes, all the mysteries that have afflicted life since the beginning of the world have been imprisoned, one by one, in the basalt caves of the palace of Night The evil spirits of the air and the ghosts and witches of darker ages have been resolved into their true elements by the alchemy of science and the touchstone of reason. The only enemies of man that are left are his fellow men. Against these he must build fortresses and mighty engines of war; because of these he must stagger under the burdens of huge standing armies and enormous navies. And all because we have not learned how to live together in peace upon this little globe called the world.

It is upon this problem that the Association of Cosmopolitan Clubs, which held its third annual convention at Cornell University, Ithaca, N. Y., during the Christmas vacation, is at work. At this convention were gathered together seventy students from almost every nationality and from the four corners of the earth. Chinese and Japanese students formed a large delegation, but students were also present whose homes are in India, Russia, Armenia, Greece, British South Africa and the West Indies, Switzerland, France, Germany, the Philippines, and many of the countries of South America. The most important result of the convention was

the formation of an affiliation with Corda Fratres, an organization with aims similar to those of the Cosmopolitan Club, and whose membership includes 60,000 students in the universities of Europe. This marks the beginning of a world-wide union of students in the cause of international peace and the universal brotherhood of man. Each continental organization will be known by its own name in addition to the general name of Corda Fratres, "Brothers in Heart." The name of the European organization is thus "Corda Fratres, International Federation des Etudiants," and the official name of the American branch is "Corda Fratres, Association of Cosmopolitan Clubs."

The executive headquarters of the world organization, which is at present in Paris, will come to America in 1911 for a two year term, and the biennial world convention, which is to be held at Rome in 1911, will also come to the United States in 1913. Plans are already under way to have an organized delegation of a hundred or more students from all nationalities present at the third Hague Conference. The object is twofold, to have an effective representation of the desire for peace on the part of the students of the world, and to train the young men who will compose the delegation for the great work which lies before cosmopolitanism in the next twenty years.

The Cosmopolitan movement derives its importance from the large number of foreign students in American universities. In Cornell University, as an example, representative of many others, there were last year 180 foreign students, representing thirty-two nationalities and races of the world, and including thirty-two students from China, nineteen from Cuba, twelve from the Philippines, twelve from Argentina and ten from Japan. A group of the Hindu students is shown in the accompanying photograph. The members of this group would hardly come into contact with each other in India, as they belong to widely different strata of society, ranging from a prince

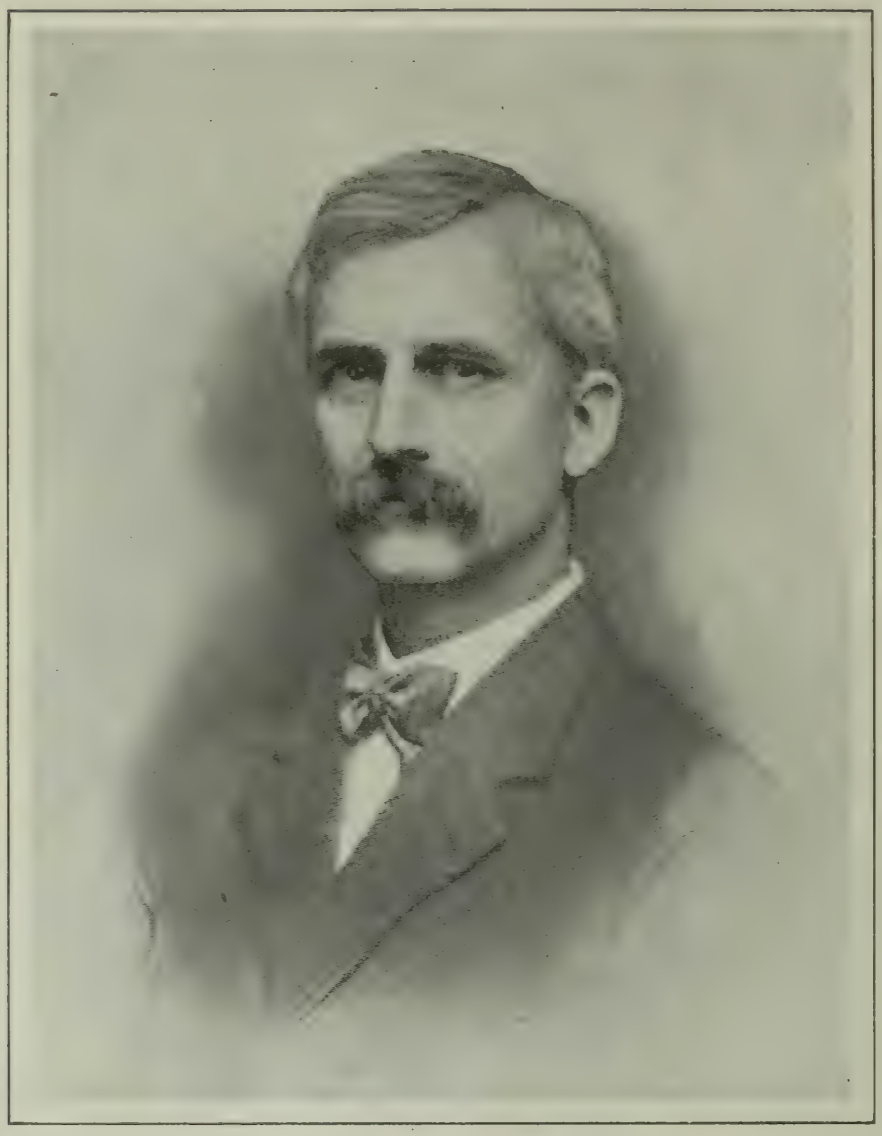
PRINCE VICTOR NARAYAN AND A GROUP OF HINDU STUDENTS,
Who were Members of the Association of Cosmopolitan Clubs at Cornell. In India these men would probably never meet, as they belong to different castes, but in the Cosmopolitan movement all caste distinctions are broken down and all men meet on level ground.

DELEGATES TO THE SECOND ANNUAL CONVENTION OF THE ASSOCIATION OF COSMOPOLITAN CLUBS, ANN ARBOR, MICH.

down to members of the lowest castes, but in the Cosmopolitan movement they all meet on an equal basis. In the photograph of the International banquet, held on the last day of the convention, are seen sitting together at the same table students from Japan, China, Greece, Armenia, Mexico, Uruguay, Germany, Brazil and many other countries.

These foreign students in American universities are picked men, the majority of them sent here by their governments, and many of them will rise to high positions of power and influence among their countrymen when they return home. It is difficult to conceive of more favorable conditions for growing ideals of universal peace and international good-will, for breaking down the barriers of race, religion and nationality, and for bringing about a better understanding and mutual sympathy between man and man. As a matter of experience, we have found that these prejudices are caused chiefly by ignorance, and that all that is necessary to accomplish our object is to bring these men together. The experience of the American members of the Cosmopolitan Clubs is typical. We find, first, that the foreign students are surprisingly like ourselves. We learn to understand them, then to admire and trust them, and finally to love them. I know of no other influence so effective, so pregnant with possibilities for the cause of "Peace on Earth, Good Will to Men," as these deep friendships which are formed between the young men from many nations and far-off lands, who are gathered together under the roofs of American universities. The United States, under the leadership of Elihu Root, seems to have taken as her peculiar mission the spreading of the gospel of peace, and the presence of these foreign students affords an unprecedented opportunity for extending her fer-

vent spirit beyond her physical boundaries. The spontaneous origin and marvelous growth of the Cosmopolitan movement are eloquent tributes to the vital force which underlies it. Internationalism seems to be in the very air which we breathe. Cosmopolitan clubs were formed independently and without knowledge of each other at half a dozen universities before 1907, beginning with Wisconsin in 1903 and Cornell in 1904. At the time of the first convention in 1907, eight universities were represented in the association. At the second convention, in 1908, the number had increased to sixteen. At the last convention the roll included active clubs in twenty-three universities, with two others in the process of formation. The total active membership is about 2,000 and the first issue of a monthly magazine of about 40 pages, into which the "Cosmopolitan Annual" has grown, will be published in March. Thru the generous aid of Mr. Ginn, the founder of the International School of Peace, the movement will henceforth have a permanent secretary, Mr. Louis P. Lochner, at Madison, Wis., who will also act as the editor of the Cosmopolitan publications.



Cosmopolitanism has been defined as "democracy writ large." But it is more than that. To the ideas of liberty, equality and fraternity for which democracy stands must be added the spirit of that song which the angels sang so many years ago, and the realization of which seems so bright before us now. Cosmopolitanism stands far towards the front in that great movement toward the unity of the world in which, for the first time in human history, the races are almost unanimous and there is a quorum of the continents. It is this last ideal which gives such depth of meaning in the heart of every cosmopolitan to those prophetic words of Goldwin Smith which we have chosen for our motto, "Above all nations is humanity."

ITHACA, N. Y.

A COSMOPOLITAN DINNER.

Students from Japan, China, India, Greece, Armenia, Mexico, Uruguay, Germany, Brazil, Argentine Republic and many other countries, who met at Cornell University to organize the peace movement among the students of the world.

The New President of Clark College

Dr. Edmund Clark Sanford, who recently succeeded Carroll D. Wright as president of Clark College, at Worcester, Mass., was born at Oakland, Cal., on November 10, 1859. His preliminary education was obtained in his native town. He was afterward a student at the University of California, from which he was graduated in 1883. He received the degree of Ph. D. at Johns Hopkins in 1888. He was for a time instructor in psychology in his alma mater. From thence he went to Clark University and the chair of psychology, which he continues to hold since his elevation to the presidency of Clark College. He is author of "A Course in Experimental Psychology" and has written extensively for magazines and periodicals on the same subject. He is now president and professor of Physiological Psychology. Clark College is young, being scarcely ten years of age. But it is a college devoted to "student ambitions." It is, in point of fact, contrary to the statutes of the college to admit men not regarded as capable of completing the work in three years. There is no "code," but the students of Clark have never had to be asked to "behave." The founder of Clark instituted an interesting experiment that is, by no means closed, but is reporting progress. Athletics are not given so prominent a place in Clark as they are in some of the larger colleges, and if the classes are small they are picked, and Clark College is forcing itself upon the attention of youths who are worth teaching.

Literature

Some Interesting Fiction

We have long since become acquainted with the weather melancholia of Mr. Phillpotts's novels. We have acquired a patience for enduring his chronological tables of domestic tragedy because, in spite of this dreariness and too many details, he does dramatize the sea with a sort of Old Testament dignity. His latest novel[1] is another salt-sprayed epic of storied Devonshire, a story (with the mist between it and the reader) of village deaths, of the putting to sea of boats, of unhappy marriages, of old men bowed by sorrows, young ones struggling against their heritages, and of women at home baking bread and bearing children. Each solo of the tragedy is accompanied by the sodden grayness of rough seas and gaunt cliffs. The people of the story take on the bleak sincerity of the nature about them. Living day by day within the sound of the waves seems to have filled them with a scriptural austerity and the fear of God. Elsewhere men temper the primitive license of the solid earth with homes, with fields of corn, flowers and trees. But there in Devonshire men and women saw and heard always the untempered greatness of God washing against their very doorsills. It became to them a "haven" from the snares of the land, a place where restless spirits could be purged and broken to the laws of life.

Just as Mr. Phillpotts is master in this language, so is Alice MacGowan a sure-footed guide along the trails of the Tennessee mountains. The hero of her latest novel[2] is a carefree young mountaineer who has strolled thru some twenty years of his life strumming a banjo, hunting when he was hungry, building a fire under a tree when he was cold, and in general thrusting the responsibility of his existence upon the palpable resources of nature about him rather than upon any he could plow or dig up. He marries as instinctively as a bird mates, and is aggrieved to find that his wife refuses to show the same young raven trust in Providence. The book has a certain marital significance typical of the mountains. There the women marry as they do elsewhere, but the men are but sojourners in the relationship. To them it is a tavern by the road. They are one not with their wives and children, but with the blue peaks, the hidden caves and silent paths about them.

Mr. Connor's novels come as hymn-singing missionaries among other heathen romances of the season. *The Foreigner*[3] is a narrative sermon. It is a tale of how Canada assimilated her Saxon, Celt and Slav immigrants, and of their lives. The story is chiefly concerned with the son of a Russian Nihilist. He is being evilly reared in the injurious, beer-drinking environment of his fellow countrymen when a little, dove-winged woman snatches him from his native mire and delivers him into the hands of her dissipated admirer, hoping that by giving him the moral responsibility of the lad she might kill two spiritual birds with one stone. Thereafter the story drags. The author concerns himself too much with the moral combinations of his characters and too little with the objective in their lives. He can dramatize a drunken Galician wedding feast and a revival with astonishing vividness, but the space between the feast and the revival is a time of prayer and fasting to the reader.

The Master[4] is an effort at socialistic aviation in which Mr. Bacheller attempts to interpret a Christ in terms of modern life. The atmosphere of the book, in spite of its villains, is too rarefied to support any continued interest.

Mr. Kipling created the illusion of India. He cast over the barracks, the desert wastes, the silent jungles and the savage interiors the languorous heat of the country and surcharged it with an electrical atmosphere of Hindu mystery.

[1] The Haven. *By Eden Phillpotts.* New York: John Lane Company. $1.50.
[2] The Wiving of Lance Cleaverage. *By Alice MacGowan.* New York: G. P. Putnam's Sons. $1.50.
[3] The Foreigner. *By Ralph Connor.* New York: Hodder & Stoughton. $1.50.
[4] The Master. *By Irving Bacheller.* New York: Doubleday, Page & Co. $1.50.

Since then any author may embroider his romance with these tropical designs and be sure of an interested public. *Candles in the Wind*[5] is a story of an Englishwoman who marries a man part English and part Hindu. On their return to India she learns that he is a half-breed. Unfortunate marriages and illicit love spring up like the luxurious and poisonous vegetation of the region. The authors of these stories seem to drop into a sort of moral coma from which they rarely recover till the last page. In this instance the husband dies opportunely, and the lover and the wife, who have been suffering pangs of decency and honor, are relieved.

The reader often feels that it is his prerogative to understand with cynical wisdom the men and women of a book, and when an author takes away his prerogative he is apt to resent the lack of the usual romantic blindfold. Miss Austin, in the collection of stories entitled *Lost Borders*,[6] is really working out several problems in human algebra, and she solves them so astutely we have no opportunity of doubting her substitutions for the *x*, *y* and *z*'s of her characters. The scenes are laid in the arid regions of the West and the people are those who have missed their cue in life, lost their borders, and who are forever searching for "the word" that will teach the way back or out, whichever the reader infers.

The Florentine Frame[7] reminds one of Mrs. Humphry Ward's "Eleanor." The two are narratively very similar, tho there is a distorted family complication in the latter. In both novels an admirable and versatile woman loves and incidentally holds up the awkward hands of a young literary man. In both instances she is supplanted by a younger woman, but in this latest version it is a mother supplanted by her daughter. We naturally recoil from any romantic rivalry between mother and child, and no amount of martyr-like restraint on the mother's part reconciles us to the innate indecency of such a situation. The distressing details of the story are enhanced by the fact that in this case the man loves the mother, but thinking her beyond his reach, marries the daughter. The girl learns the truth after her mother's death, and a period of painful and abnormal readjustment follows. The title illustrates the hysteria of the book. The frame is one which the mother has cherished for twenty years with sixteen-year-old sentimentality, waiting for a picture worthy to fill it. She finally uses a likeness of the young dramatist. Any author who allows her heroine such fads and makes of her a Medici lady with a literary coterie, who permits her to die at the dramatically right but ethically wrong time, is sure to give her novel a tone of high-browed hypochondria.

[5] CANDLES IN THE WIND. *By Maud River.* New York: John Lane Company. $1.50.
[6] LOST BORDERS. *By Mary Austin.* New York: Harper & Brothers. $1.25.
[7] THE FLORENTINE FRAME. *By Elizabeth Robins.* New York: Moffat, Yard & Co. $1.50.

The Literature of Spiritualism

MUCH reading of spiritualistic literature may be recommended to the romanticist who would emulate the White Queen in "Through a Looking Glass," and learn to believe six impossible things before breakfast. Unfortunately, the appearance of such literature under the sponsorship of men of scientific achievement precludes the consideration of it as a form of entertaining fiction.

None the less, it must be confessed that Cesare Lombroso's last book, *After Death—What?*[1] is far from convincing. Himself won over to a belief in spiritualism by the mediumship of Eusapia Palladino, he takes his reader on a gallop into a realm of fantastic ideas. His introductory discussion of transposition of the senses and supernormal transmission of thought is very uncritical. Practically, he would precipitate the modern world into a wholesale revival of the superstitions of savagery. It is somewhat startling, in the twentieth century, to have the customs and arts of barbarism reviewed in admiring fashion as evidence of the way in which the organism of the primitive man, finer than that of civilized man, vibrated to the spiritual world around him. Yet, strangely, Lombroso conceives mediumship, as he conceived genius, to be a matter of a diseased organism. Once con-

[1] AFTER DEATH—WHAT? *By Cesare Lombroso.* Boston: Small, Maynard & Co. $2.50.

vinced of the truth of Palladino's contentions, Lombroso apparently accepts without further question the most extravagant claims of the most extravagant advocates of spiritualism. Haunted houses, transcendental photography, phantasmal doubles, are accredited—all, too, without the slightest reference to exposures that have been made in the past. Slade's performances, for example, are cited in evidence of the medium's activity in the Fourth Dimension! He admits, however, that Palladino has been detected in trickery. The admission that a given medium both *can* and *does* cheat must inevitably arouse in the candid mind what the believer calls the illusions of the incredulous. And with reason. A little knowledge of the limitations to which human observation is subject makes us less ready to believe all that we see and hear, and induces a healthy skepticism of the senses, a doubt whether "de sun do move." By far the most valuable part of Lombroso's book is the part devoted to a clinical study of Palladino.

In *Are the Dead Alive?*[2] Fremont Rider makes large use of the argument from authority to prove that they are. One is not thoroly convinced that the authorities cited have convinced the author. There is copious quotation from eminent men, such as Sir Oliver Lodge, F. W. H. Myers, William T. Stead and others, citing their belief in the future life in more or less spiritualistic language. Argument from authority is a two-edged sword, to be used with care. After all, a man's testimony has weight only when he is a specialist in the matter upon which he passes judgment. The experience of the best trained fireman may be of no avail in fighting a fiery rash. It would seem that, to be a thoroly competent observer of the medium *and* her circle, one should be an expert in two fields—that of psychology and of sleight-of-hand, a requirement rarely fulfilled. A thoro study of involuntary movement should precede all investigation of the physical phenomena of spiritualism. It cannot be urged too strongly that unconscious movements are *unconscious,* and that no subjective testimony is of value in regard to them.

Telepathy is considered as a hypothesis supplementary to, or possibly antagonistic to, the spiritistic interpretation of certain phenomena. Rider apparently thinks that science had sealed this hypothesis with approval. As an argument from authority, however, the statement may be ventured that with perhaps two or three exceptions there is not a psychologist in America who accepts thought transference as proved, so overwhelmingly negative, on the one hand, have been the results under test conditions; so surprising, on the other hand, the discovery of the acuteness of the natural agents of transmission, as the eye, the ear and the skin. For the rest, Rider gives an entertaining and candid summary of spiritualistic phenomena, so called, and sketches of the most noted—and most notorious—mediums, from Slade to Mrs. Piper and Palladino.

A very complete account of the latter is that written by Carrington.[3] A sketch of the medium's life is followed by a summary of the reports of other investigators, after which the author gives a detailed report of his own observations. Carrington's account of the phenomena he observed is certainly one of the most satisfactory published; its value being increased by the fact that he is himself a prestidigitateur and practised in the detection of spiritualistic frauds. Altho convinced as to the reality of Palladino's pretensions, Mr. Carrington recognizes the difficulty of convincing his readers. Accepting the existence of hitherto unknown facts, he reviews the theories that have been advanced to explain them. He himself inclines toward a spiritualistic interpretation.

The religious note in the literature of spiritualism is sounded in Miss Robbins's *Both Sides of the Veil.*[4] The sincerity of the writer and her longing to know the truth redeem the book from commonplaceness. It records the revelations of the life-beyond made by a friend to the

[2] ARE THE DEAD ALIVE? *By Fremont Rider.* New York: B. W. Dodge & Co. $1.75.

[3] EUSAPIA PALLADINO AND HER PHENOMENA. *By Hereward Carrington.* New York: B. W. Dodge & Co. $2.

[4] BOTH SIDES OF THE VEIL. *By Anne Manning Robbins.* Boston: Sherman, French & Co. $1.25.

author thru Mrs. Piper, the Boston medium. It must be said that the life-after-death revealed therein does not seem highly desirable.

Tracing the antecedents and affiliations of spiritualism is instructive. Podmore's[5] scholarly treatment of Mesmerism and Christian Science shows that the various theories of magnetic fluids, modern Spiritualism and Christian Sciences are three offshoots from the same root, namely, Mesmerism. The psychology of suggestion has absorbed whatever there was of truth in the early doctrines of Mesmer. But the love for the miraculous and for the dominion of the prophets manifested therein has instigated movements of another dye. Of the making of saints there appears to be no end, a fact Mrs. Eddy may enjoy pondering, if her sense of humor be sufficiently developed.

Letters and Memorials of Wendell Phillips Garrison, Literary Editor of the Nation, 1865-1906. Boston: Houghton Mifflin Company. $1.50.

In 1865, when four years out of college, Wendell Phillips Garrison became the literary editor of the *Nation,* then making up its first number. From that date until within a year of his death, in 1907, he sat in the editorial chair, first as the companion of Mr. Godkin, then for twenty-six years autocrat of letters in a journal that went everywhere among the select few who made books, who sought to read good books, and who at any rate wished the standard advanced, in American literature, to a higher level, where, being seen of men, it should at least deserve the respect of good men. The *Nation,* under Godkin and Garrison, set the standard a little higher and with a little freer swing than was observed in other lands. Scholarship took a brace. Every university and college sent a recruit—worthy, but often raw—to study the manual and receive training in orderly and exact criticism. This training fell largely to the lot of Mr. Garrison. Everywhere the line was drawn with distinction between what was "fit to print," or rather what was "fit to read," and what was only partly worthy. Form, fitness, propriety, sincerity, correctness, truth—all came within the manual. Mr. Garrison was "not a journalist by accident." He had first of all from his father a fearless integrity. He could not be cajoled or won to lie back or lie low. The wrong that he saw must be amended or destroyed. From the office of the *Liberator* he entered Harvard College, and was there a kindly but fearless critic of such evil tendencies as always exist in student life; but he preferred rather to show the way to betterments. He was a writer in the best of the college magazines, and after graduating he continued the practice, taking a brief period of exercise in THE INDEPENDENT.

John Brown. By W. E. Burghardt Du Bois. American Crisis Biographies. Philadelphia: George W. Jacobs & Co. $1.25.

To Professor Du Bois, as one of the leading spokesmen of the negro race, John Brown is of course a hero of the first rank. Yet the author ventures to refer to the killing of the pro-slavery men at Pottawatomie Creek (May 24, 1856) as "the Pottawatomie murders," and in other ways his reverence for his hero is shown to rest "this side idolatry." There is nothing new in the data, as he confesses—the work of Sanborn, Hinton, Connelly and Redpath rendering any effort in that direction futile. But the viewpoint—that of a champion of the negro race—is notable, and the argument made for justice to that race is forcible and moving. Professor Du Bois sees a more or less steady growth during the greater part of the last century of the doctrines of liberty, equality and fraternity; but with the supremacy of Darwin's theory he notes a lapse backward. Since the appearance of the "Origin of Species," he writes:

> "Tremendous scientific and economic advance has been accompanied by distinct signs of moral retrogression in social philosophy. Strong arguments have been made for the fostering of war, the utility of human degradation and disease, and the inevitable and known inferiority of certain classes and races of men."

The arguments of the slaveholders are revived and reclothed in scientific dress, and everywhere the white race insists

[5] MESMERISM AND CHRISTIAN SCIENCE. *By Frank Podmore.* Philadelphia: George W. Jacobs & Co. $1.50.

upon its own superiority and upon the repression of the so-called inferior races. These are misreadings of science. The scientific age has "added to the eighteenth century idea of individual worth the complementary idea of physical immortality." We now look forward to an endless series of human achievements, and "freedom for such development becomes the central assertion of the evolutionary theory." The legacy of John Brown is this: the truth that the cost of liberty, even tho that cost be blood, is less than the price of repression. It is a legacy for all time, and never did it have a stronger bearing upon current issues than today.

The Poems of Phillis Wheatley. Philadelphia: A. M. E. Book Concern.

The first edition of Phillis Wheatley's poems, published in 1773, is now reprinted to remind a forgetful public of the genius of a once famous negress. The poems are indeed remarkable—not as poetry, but as the product of a remarkable woman. Born in Africa, she was sold as a slave in Boston at the age of eight. Within a year she had learned to read and write English, and within a few years to write verse of a quality which astonished the literary world of the time. There is nothing original in her lines. They are nearly all imitations of Pope, and some of them really plagiarizations. But rhythmically they are fluent and metrically they are correct. They had considerable vogue at one time, and they will always be interesting.

Introduction to the New Testament. By Theodor Zahn. Translated from the third German edition by John Moore Trout, William Arnot Mather, Louis Hodous, Edward Strong Worcester, William Hoyt Worrell and Howland Backus Dodge, under the direction and supervision of Melanchthon Williams Jacobus, assisted by Charles Snow Thayer. In three volumes. New York: Charles Scribner's Sons. $12.

One must look with respect upon so large and difficult an undertaking as the translation of Zahn's voluminous *New Testament Introduction*, with its involved and cumbersome style, and its multiplicity of learned and intricate notes. The work is a monument of painstaking and laborious research, and even Germans complain of its massiveness. But it may be questioned whether the result is worth the pains. Zahn is a stout defender of traditional opinions, and while he is incapable of other than fair facing of every fact looking toward a judgment opposed to his own, he is likewise incapable of full justice to considerations which militate against views of high traditional authority. His work is generally recognized as off the line of the best German criticism since Baur. There is such a thing as being misled thru an infinite number of facts, all of which are reliable in themselves. One may amass details until he loses all sense for the main considerations, and it may be feared that this will be the result with students of this vast assemblage of learning on the literature of early Christianity. The scholarly industry of the officers and fellows of the Hartford Theological Seminary in rendering these weighty volumes of German learning into English may nevertheless be commended.

Diamonds Cut Paste. By Agnes and Egerton Castle. New York: Dodd, Mead & Co. $1.50.

This story is a departure from the usual historical romances by these authors, and deals with the facts and fancies of a family instead of a nation. The misunderstanding is brought about by a typical fiction widow with blond hair, a fondness for jewels, and a tendency to seek the protection of a masculine wing, whether that wing is already bespoken or not. The authors do not take advantage of all the possibilities for unhappiness and evil presented. They concern themselves not so much with the widow as with the good women of the family, who busy themselves in extricating the clumsy husband-bee from the honey-pot into which he has fallen. The whole is written in an old-fashioned cavalier style wherein the words bow their way thru the pages with such inimitable courtesy and charm that we forget the sharpness of the modern setting.

Literary Notes

....*Games for the Playground, Home, School and Gymnasium,* by Jessie H. Bancroft (Macmillan, $1.20) will prove a great aid to teachers and others concerned with the play of children, by its completeness, and the excellent arrangement of its index.

....A new method of making pottery is described by Ralph C. Davidson in *Concrete Pottery and Garden Furniture* (Munn & Co., $1.50). In the introduction and opening chapters, Mr. Davidson dwells upon the simplicity of the work till the reader sees all the mantels, shelves and tables of his home covered with the products of his hands, but as the complexity of making molds—described in the later chapters—dawns upon him, he abandons his plans of making pottery in the corner of the attic on the next rainy day. However, to the craftsman with some mechanical ability this book on the making of vases from cement will prove instructive and full of suggestion.

....A branch of charitable work, which should be better known to the reading public, receives a concise treatment in *Visiting Nursing in the United States* (New York: Charities Publication Committee, $1.25). The author, Yssabella Waters, of the Henry Street (Nurses') Settlement, is much too modest in dealing with her subject, devoting but thirty-seven pages to the history, principles, organization and administration of the work, and the remainder to statistical tables, and to a directory of Visiting Nurses' Association thruout the United States. Had the author seen fit to go into detail concerning this important branch of health promoting, particularly her own share in it, she might have made a more general appeal to the reading public. As the book stands it will prove invaluable in the libraries of social settlements and colleges.

....It is now possible to secure in convenient English form several of the *Religionsgeschichtliche Volksbücher,* the remarkable series of brief essays on questions of importance in the history and doctrine of Christianity by some of the most eminent scholars of Germany. Messrs. Harper & Brothers have included several of these volumes in their "Library of Living Thought," among others Wrede's *Origin of the New Testament,* Becker's *Christianity and Islam,* Berthelet's *Transmigration of Souls,* Meyer's *Jesus or Paul,* Weiss's *Paul and Jesus,* and Seeberg's *Revelation and Inspiration.* The volumes are well printed, and their form is convenient. The price is modest, tho, of course, not as low as in the German editions. It would make greatly for intelligence on religious subjects if these books could circulate by the tens of thousands, as has been their good fortune in Germany. The essays by Wrede and Weiss deserve especial attention. It is unfortunate that the publishers included in this American series the valueless "Teaching of Jesus" by Count Tolstoy; it is merely a paraphrase of certain portions of the Gospels, handled without critical discernment, and supposedly for the benefit of children.

Pebbles

THE TAILOR—I can't make you another suit until you pay for the last.

The Customer—Great Scott! I can't wait that long.

"It costs more to live than it did years ago," said the man who complains.

"Yes," answered the man who enjoys modern conveniences, "but it's worth more."—*Washington Star.*

"MISS YERNER," said Mr. Dudley, who is fond of dogs, "don't you think you ought to have an intelligent animal about the house that would protect you and"——

'Oh, Mr. Dubley," giggled Miss Yerner, "this is so sudden!"

THE SISTER STATES.

A curious inquirer wants to know "what are the sister States," and the Fairfax *Forum* answers: We should judge that they are Miss Ouri, the Misses Sippi, Ida Ho, Mary Land, Callie Fornia, Ala Bama, Louisa Anna, Della Ware and Minne Sota.—*Kansas City Star.*

THE HAPPIEST HOUR.

He. "Do you remember the night I proposed to you?"

She. "Yes, dear."

He. "We sat for one hour, and you never opened your mouth."

She. "Yes, I remember, dear."

He. "Ah, that was the happiest hour of my life."—*The Catholic Mirror.*

THE IMPOLITE PORTER.

A London merchant, who had a rather ruddy complexion, after "doing" Glasgow, had some time to wait for his train at St. Enoch station, and bethought himself of a little joke.

"What is the name of this station, my good fellow?" he asked of a porter.

"St. Enoch station, sir."

A few minutes later he met the same porter and said:

"What do you call this station, porter?"

"St. Enoch's! Dae ye no see the name abune the hotel there?"

Just then the train was shunted in, and our English friend got comfortably seated in a third-class smoker, along with a few more passengers of the male persuasion.

"These railway officers are about the worst; they can't be civil," remarked the Londoner.

"That's a confounded lee!" said a Scotch farmer.

"Well," said the Londoner, "I'll bet you five bob I don't get a civil answer from the first porter I ask a question of."

"Done," replied the old farmer.

Looking out, he spied his "green" friend, and, beckoning him over, asked in his most polite tone:

"Would you kindly tell me the name of this station, porter?"

"Gang awa', ye bacon faced buffer! Pit yer daft heid in!" was the answer.—*Tid Bits.*

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $3.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

Mr. Taft's Speech

THE President says that the tariff question must be argued out in the coming campaigns. An inquiry addressed to all the Republican editors in twenty-six States west of the Alleghenies by the Chicago *Tribune* shows that much argument will be needed to convince a large majority of them that his view of last year's revision is a correct one. Of these editors, 2,686 do not approve the new law, while 812 agree with him about it; and the revision is satisfactory to only 27 of 604 independent editors. Many will be surprised to read in the report of his speech at the Lincoln dinner in New York that the average rate of duty on dutiable imports under the Dingley tariff was only 24.03 per cent., and that the average now is 21.09 per cent. We think it will be necessary to revise these figures. The Republican majority of the Ways and Means Committee reported in March last that the average rate under the Dingley tariff was 44.16 per cent., and admitted that the Payne bill would increase it to 45.72 per cent.

That unfortunate revision of the tariff has been, with the course of the leaders under whose direction it was made, the main cause of the Republican dissension which he deplores. We trust that this dissension will not prevent the enactment of those just reform measures to the support of which the party is pledged and in behalf of which he earnestly labors. He asserts that the rise of prices is not due to the tariff. Everybody knows, however, that tariff rates and combinations sheltered by them have kept the prices of certain products at an abnormally high level for many years past, altho they may be responsible for only a little of the recent general upward movement.

His address gave no comfort to those who predicted that he would announce a mild and soothing policy as to the prosecution of violators of the Sherman Anti-Trust Act. It is his duty to enforce the law. We cannot quite subscribe to his opinion that "if enforcement of the law is not consistent with the present methods of carrying on business, it does not speak well for those methods." As we understand the interpretation of the Sherman Act, many harmless and even beneficial business alliances and operations are made unlawful by it. His predecessor, Mr. Roosevelt, remarked in a message that full enforcement of this law would destroy the business of the country, which could not be conducted without breaking it.

Plutocracy and Proletariat

ONE need not accept Professor Patten's somewhat idiosyncratic theory of prices in order to find his article on "The Crisis in American Home Life" immensely interesting and thought-provoking. When an economist who disagrees with most of his scientific colleagues on most questions agrees with them, and with all sorts and conditions of radical men, that the middle class in America is being destroyed, and that our population will soon consist of Plutocracy and Proletariat, it is wise to examine his argument.

Professor Patten, of course, does not expect many students of our economic situation to follow him when, without qualification, he advances the opinion that the three most generally accepted explanations of rising prices are false.

We doubt, if indeed Professor Patten himself believes that the increasing supply of gold, and the diminishing returns of natural resources other than gold-bearing quartz, are entirely without effect upon the range and average of market prices. And while he rather explicitly denies that "exploitation" is a true cause of present prices, he obviously attributes some influence to the actual distribution of wealth, as well as to the distribution of population.

The attentive reader will observe that Professor Patten fails to discriminate between rising prices and an increasing cost of living. No argument is necessary to prove that the cost of living may go up or down without any change whatever in the level of prices. Or, on the other hand, prices may go up or down and the cost of living remain unchanged. It all depends upon how one lives.

That is to say, the standard of living, upon which Professor Patten has written so much and so suggestively, is a factor coefficient with the factor price in determining the cost of living. And the great value of Professor Patten's article lies in his analysis of this coefficient factor. It is not at all diminished by what many of his economic brethren will regard as an indefensible theory of price.

For no one can deny, we think, that the American people are living wantonly and wastefully. This is a fact, irrespective of price fluctuation, irrespective also of the question whether capital is accumulating more or less rapidly, per capita of the whole population, than it did when the middle class was in the habit of saving, and irrespective, finally, of the further question whether the standard of living of the middle class is at the present moment rising or falling.

It is true, as Professor Patten says, that new capital now comes from the profits of rich men, and not from the savings of the middle class. He does not show that the actual rate of capital-accumulation has fallen off. In the period of low prices, twenty years ago, the standard of living of the middle class was undoubtedly rising. Professor Patten does not show that it is rising today. On the contrary the facts that he so significantly arrays point strongly toward the conclusion that it is falling. Nevertheless, if we admit some slight improvement in the economic status of organized labor, and take note of the astounding expenditures of the rich, the conclusion is certain that the American standard of living is high, and that so large a proportion of expenditure is for waste and folly that capital, whether increasing more or less rapidly than formerly, is not increasing adequately.

With waste in consumption goes frightful waste also in production. In part the unfortunate distribution of population to which Professor Patten refers is an effect of a wretchedly uneconomic production, which has quite unnecessarily sundered the various classes of producers that contribute each something to the ultimate product, as it moves thru successive stages from raw material to retailed article handed over to the consumer. We do not suppose that Professor Patten would contend that our clumsy scheme of production, with its carefully devised opportunities for middlemen and rake-off agents at every turn of the road, was attributable to domestic infelicity as a cause. In fact, we have observed that his program of reform provides for a 35 per cent. reduction of the cost of living thru "a rational tariff" (whatever that may be) "the control of monopolies," and "co-operative buying."

Finally, "the new status of women" undoubtedly is a factor in both the wasteful living of the rich and the poverty of the poor. It may be unchivalrous to say so, but if the truth is to be told it must be said that the factor of waste in American living is chiefly chargeable to the women, both ignorant and idle, of that class which is often described as "the vulgar rich"; a class that has made its wealth suddenly, often by questionable means, and which, having neither ideas nor inherited standards of refinement, has seen no better way to dispose of its money than to turn it over to "the ladies" to squander. On the other hand, as Professor Patten observes, the women of the middle class who, a generation or two ago, doubled the husband's income by their household industry, creative of products that now are bought in markets and shops, have withdrawn from productive labor. We believe that Professor Patten is right in

holding that this is an important cause of the rapid destruction of the middle class. In the wage-earning class also the status of women has changed, and in a way that plainly does not promise betterment. Women by tens of thousands are becoming wage-earners in factories and shops, and with what effect upon family life is sufficiently shown by the sinister fact that when a strike, a lockout or an industrial depression closes the factory gates, the death rate of little children temporarily falls, altho the parents may be reduced nearly to starvation.

All in all, it is plain that many causes besides rising prices are today increasing the cost of living. They are making life agreeable for privilege-enjoying profit-makers, difficult for wage-earners, and nearly impossible for the salaried and other elements of what was once the mainstay of the nation, a prosperous and happy middle class.

Growing Pains

PRINCETON lost half a million or more last week on account of dissensions among the faculty and alumni as to the use of the proposed endowment. Yale was, a few weeks ago, agitated by a similar question which, however, did not result as at Princeton in so offending the donor that the gift was withdrawn. In both cases the grounds of the opposition were the fear that the proposed donation would hamper the institution by forcing upon it a policy dictated by its buildings. In both cases the question at issue was the fate of the undergraduate college and its relation to the university. Should the college be dominant or subordinate? Should it be segregated or merge its identity in a large whole? The universities in larger cities, which are now advancing most rapidly, tend to the latter type. In Columbia and the University of Chicago the undergraduate department is small and inconspicuous compared with the graduate and professional schools.

But Princeton and Yale are not in large cities and their colleges have been for over a century their chief pride, so it is a fair question whether they should strive to grow into universities like Columbia and Chicago or concentrate their efforts on undergraduate work or develop some intermediate system. Princeton as yet has hardly begun to be a university. Its graduate department is small and it has no professional schools to speak of. Yale is one of the leading universities of the country in graduate work and has professional schools which are beginning to rival the old college in numbers, but the college is still regarded as the most important part of the institution, by the general public as well as by its students. Many of the alumni of Princeton and some of the alumni of Yale believe that the expansion policy of the administration is dangerous to the integrity of the college, which ought to be the prime consideration.

Mrs. Sage's gift of $650,000 to Yale was designed for the purchase of the Hillhouse estate, upon which it is proposed to place the new physical laboratory and other buildings. This is at considerable distance from the old campus and would to a certain extent tend to break up the college life concentrated there. On the other hand Mr. Procter's offer of $500,000 was for buildings for the graduate school to be located at a distance from the old campus, presumably with a view of protecting the college from the threatened invasion of graduate students. President Wilson, however, wishes to have the graduate school in the middle of the campus, so graduates and undergraduates of all classes may associate.

Such public controversies over the acceptance of proffered gifts are unseemly and apt to deter future donors, but they have their good side. It is better to quarrel over a policy than not to have any policy in view. The difficulty arose in both cases from not having a general plan for the desired development of the university understood and agreed upon by the authorities and alumni. Some of the Yale men who objected to the Hillhouse project did so because it seemed that the university authorities were doing what they had done too often before, putting down a new building on any piece of ground that they could get hold of regardless of future development. The Princeton case is so involved with personal ambitions, national politics, club at-

tachments, educational policies and architectural designs that outsiders cannot comprehend what it is all about.

The first thing is for Princeton and Yale men to decide what kind of a university they want, then go to work to get it. The idea of a college pure and simple must of course be abandoned. The university is hatched, and it cannot get back in its shell. On the other hand no Yale or Princeton man wants to model after Columbia and Chicago. What is needed is a compromise between these extremes, a practical combination of college and university, and to devise this will require the combined wisdom of all interested.

The most encouraging feature of these controversies is that it has made it evident that the universities will work out their own policies and will not submit to the dictation of donors. Our universities have become independent enough to look a gift horse in the mouth. Fifty years ago almost any college in the land would have changed its name, allegiance, policy and most cherished customs if a million dollars had been held out as inducement. Now Princeton and Yale hesitate to accept a munificent donation if it involves placing a building a few blocks away from where they think it ought to be.

Mr. Roosevelt at Christiania

It is fortunate that Theodore Roosevelt has changed his plans so as to go to Norway and deliver his Nobel Peace lecture. Every recipient of a Nobel prize is expected to give a lecture at Christiania within six months of its award on the subject for which the prize is given. Had Mr. Roosevelt lectured in London, Paris and Berlin, as originally proposed and passed Christiania by, it is safe to say that neither Mr. Smiley, Mr. Carnegie, Senator Root, Representative Bartholdt, nor any other deserving American would be able to get the Peace prize for many years to come. It is an unparalleled opportunity for the American most known and esteemed in Europe to hunt for bigger game than he has yet met since he left our shores.

We expect Mr. Roosevelt to explain to Europe in his lecture the attitude of the United States toward the peace of the world. It would perhaps not be proper for the ex-President to discuss specifically the most pressing peace propaganda of the day and give England and Germany advice in their present somewhat strained relations. It might be misconstrued and would do more harm than good. But could he not point out the way to a stable and universal peace for them as well as for other nations? Theodore Roosevelt is the only living ruler who seems to have penetrated the philosophy of the peace movement far enough to see the limits to which arbitration can be employed at the present time in settling disputes between nations. In his remarks to the president of the North Carolina Peace Society, April 2, 1908, he said:

"Effective arbitration necessitates agreements between all the Powers to respect each others' territory and sovereignty and to arbitrate all other questions."

Thru his Secretary of State, Mr. Root, President Roosevelt has already negotiated treaties with the principal nations of the world in which both parties agree to resort to The Hague for the settlement of their differences except in these cases, where honor, vital interests and the interests of third parties are involved. But what are the vital interests of a country? Surely nothing except the integrity of a nation's territory and the absolute sovereignty over it. Therefore, if a treaty can be made in which each nation guarantees the territorial integrity and sovereignty of the other, and all other minor subjects be referred to arbitration, peace between those nations is practically assured. The United States has a treaty with Japan to refer all disputes to The Hague except those involving national honor, etc., and an agreement, or more properly speaking a declaration of intentions, in which each nation practically promises to respect the territory and sovereignty of the other. Both the treaty and the declaration taken together fulfill President Roosevelt's definition of effective arbitration. The treaty is the same we have negotiated with twenty-three nations, including England and Germany. All that has to be done, therefore, to assure peace between England, Germany and the United States, is for Secretary Knox to add to

the existing treaty with England and Germany a joint declaration similar to the one Secretary Root has negotiated with Japan and then persuade England and Germany to agree between themselves to do what they have already agreed to do with us. When this is accomplished it will be time to consider Mr. Carnegie's suggestive League of Peace, by which England, Germany and the United States, and, of course, France, shall keep the peace of the world by following Bentham's rule that the first duty of man is peace, and the second is to fight to get it.

Would it not also be an auspicious occasion for Mr. Roosevelt to review the two Hague conferences and show why the first one has fittingly been called the Magna Charta of international law. He could also without doubt urge Europe to devise with the United States some method of completing the Court of Arbitral Justice constituted at the Second Hague Conference, and thus, before the Third Hague Conference convenes in 1915, to obtain a permanent world court modeled after the Supreme Court of the United States.

Indeed, it would be a great privilege if Mr. Roosevelt, with all the authority his words would carry, should show Europe that the Constitution of the United States furnishes the key to universal peace among the nations. For just as our States brought about peace among themselves by establishing a Congress, a Court and an Executive to carry out their interstate desires, so the nations, by simply developing the Hague Court into a real international court, the recurring Hague conferences into an international legislature, and then adding an international executive should one be deemed necessary, will at last have realized Tennyson's dream of "The parliament of man, the federation of the world," and shall have constituted themselves into a real "United Nations."

We think that Theodore Roosevelt will seize the opportunity.

A Serious Accusation

We need to say no more on the Fairbanks incident at Rome. We mentioned it last week. We did not, like so many papers indiscreetly and offensively call the Pope's refusal to receive Mr. Fairbanks a "snub," for we had no proof it was meant as such. We said:

"If the Pope did not think it proper to receive him, that it would be approving the Methodist schism, no one has the right to complain. Social privileges go by favor. The Pope receives many Protestants."

We have made, and now make, no complaint against the Pope. A more serious matter is at hand.

The defense, and a perfectly adequate one if true, is made by Archbishop O'Connell, of Boston, in an editorial in his personally owned journal, *The Pilot*, and it is a severe arraignment of the conduct of the Methodist mission in Rome at which Mr. Fairbanks was announced to speak. The Archbishop says—and it is incredible that he did not see and approve the editorial, even if he did not write it—as follows:

"The Methodist College is an institution which for the last twenty years has been the center and the plague-spot of all the worst fanaticism possible to conceive, and impossible to describe in a decent paper, against the Holy Father, the Church of which he is the head, the clergy of which he is the bishop, and the doctrines which he holds and teaches. . . .

"There is no good faith in that establishment, but only venomous hatred for the Vatican and of the holy old man who resides therein. So it was positively conveyed to Mr. Fairbanks that he must choose either his audience or his address. Both were incompatible with either dignity or decency."

These are very serious charges. They come from no irresponsible source. Archbishop O'Connell has known Rome intimately for twenty-five years, by frequent visits and eight years of residence, during five years of which he was rector of the American Catholic College there. His denunciation of the Methodist College was sent thru the Associated Press over the country before it appeared in *The Pilot*. Similar charges appear from other similar sources.

If true these charges ought to be confest and a radical reform made. They would be a disgrace to Methodism and to the Board of Missions which is in control. If false they must be challenged and met. A bill of particulars should be demanded, and no fear or favor shown. They include bribery, wholesale and repeated bribery for the purchase of false conversions, bribery a hundredfold worse than that for which Senator Allds is now being tried by the New York State Senate.

Now it is not easy to believe these charges to be true. That the mission has sought for converts is confest; but that is quite legitimate if legitimately done. It is proper to speak and hold meetings and present reasons. It is proper to establish day schools and Sunday schools for children, and teach those whose parents are pleased to have them attend. That much Protestants and Catholics do properly; but to "bribe poor women," or "by money, gifts and promises cajole young men and girls away from their Catholic homes" is most reprehensible. And equally criminal is it to "lie" and to "calumniate" the Pope, priests and nuns. We had not imagined that the Italians were so devoted to the Church that it would be necessary to employ these corrupt means.

We have at hand the circular from the Methodist Board of Foreign Missions describing the work of the Methodist Mission in Rome. In a central location it has a building valued at $335,000, a large audience room, for Italian and English services, Sunday school rooms, offices, a book store, a printing plant, and rooms for a theological school and a boys' school. Here young men are trained as preachers. Another building gives quarters for the women's work, where 270 girls were taught last year thru a twelve year course from the kindergarten to the college. There is an industrial department and a faculty of thirty teachers. This building has just been sold and three new buildings will take its place providing for double the number of pupils. Yet another school of sixty-seven girls is taught by Miss Italia Garibaldi, a granddaughter of the famous liberator of Italy. There is other mission work in various cities of Italy. On the face of it this is all legitimate. Italy is such an irreligious country that all honest efforts to bring the people back to Christ might well be welcomed.

But the men who charge bribery, corruption, bigotry, calumniation and falsehood are not irresponsible. For aught we know there may have been cases in which hot-headed agents have been guilty of these offenses, but it is hard to believe they are other than exceptional. It is perfectly proper to seek converts, to proselyte, in fact, in Rome or in America. The fact that the Pope is there does not make it forbidden ground either in justice or courtesy. But these charges of most vicious methods of proselyting have been made, and must be confest or denied; and if denied Archbishop O'Connell is bound to present his proofs to the public to which he has appealed.

Federal Incorporation

THE bill for a national incorporation act which has been prepared by the Department of Justice and introduced in Congress differs in many respects from the first draft which was published some weeks ago. It now appears to prohibit the formation of holding companies, by forbidding a corporation having a national charter to "purchase, acquire or hold" the stock of any other corporation. A company so chartered, however, is authorized to take over the property of an existing corporation and to pay for the same by an issue of stock. Among the changes which published criticism suggested is the addition of a provision for the forfeiture of the charter if the corporation violates the Sherman Anti-Trust law.

It is now said that the Supreme Court's decision in the Standard Oil suit will not be made known until October. A confirmation of the lower court's decision is expected. It is the duty of the Government to enforce the laws, and if the St. Louis decision shall be sustained. the President will probably feel that the Department of Justice must proceed in the courts against many incorporated combinations. In his recent message he said:

> "It is the duty and purpose of the Executive to direct an investigation by the Department of Justice, thru the grand jury, or otherwise, into the history, organization and purposes of all the industrial companies with respect to which there is any reasonable ground for suspicion that they have been organized for a purpose, and are conducting business on a plan which is in violation of the Anti-Trust law."

This investigation and the possible prosecution of corporations, he added, would disturb the confidence of the business community and check prosperity. To avoid such unfortunate results he proposed that the combinations should

accept Federal incorporation with all that such incorporation implies.

It was at once asserted by opponents of this plan that it was designed to protect unlawful combinations, to prevent the prosecution of them under the Sherman act. But the bill does not support this assertion. Its severe requirements would exclude corporations engaged in unlawful and harmful restraint of trade, and if any corporation obtaining a Federal charter should thereafter violate the Sherman act, its charter would be subject to forfeiture, followed by a receivership. The purpose of the President was shown in part when he said that the plan offered "Federal protection on the one hand, and *close Federal supervision* on the other"; also when he spoke of "the burden of *complete Federal supervision and control* which must certainly be imposed." But the protection he had in mind was defense against prosecution by State authorities.

Doubtless the most formidable opposition will be that which will be made in behalf of State rights and State control. The bill does not seek to exempt the corporations from State or other local taxation, but it does say:

"No corporation formed hereunder shall be subject to any visitorial powers other than such as are authorized by this Act or are vested in the courts of the United States."

Objection will also be made because great powers are granted to the Commissioner of Corporations. It may be recalled that a similar plan, involving a kind of Federal license, was condemned by a Senate committee partly for the reason that it gave extraordinary power to this bureau officer.

The proposition is one of exceptional importance and should be thoroly discussed in and out of Congress. Recent growth of companies engaged in interstate business and whose scope is national indicates that eventually they must be brought under national supervision. It can be foreseen that if Congress shall act favorably upon this bill, it will be only after long debate and the adoption of many amendments. The situation will be complicated by the continued existence of the Sherman act in its present form, for a corporation might accept the proposed Federal charter, meet the requirements of it, and still be doing business in violation of the sweeping provisions of that statute.

The Albany Scandal

The cleaning up of the Republican politics at Albany looks as if it ought to result in a cleaning out. Such a dramatic case of apparent exposure of corrupt methods has never been known hereabouts before. Usually the proof of political or legislative bribery is indirect, by comparison of bank accounts, of money received here and paid there; but in this case the very man who carried the money, who went with the messenger, is the accuser, and declares he saw it paid, one thousand dollars of it to Mr. Allds, who has lately been chosen as leader of the Republican members of the Senate. Here are two witnesses and their witness agrees. It looks true, and we do not see how Mr. Allds can disprove it. Allowing it to be true, neither the accused nor the accuser can remain in the Senate; both would have to be expelled. But in this case the guilt of the accuser, Mr. Conger, is very much less than that of Mr. Allds. It was not Mr. Conger, but his deceased brother, that provided the bribe. The bill may have been a good one, but it was not to the advantage of the concern of which the brother was president, and Mr. Allds, so it is testified, threatened to have it passed, and demanded $1,000 as a condition of holding it back in committee, and so Mr. Frank Conger sent by his brother $6,000 to be paid to three men, of whom Mr. Allds was one. It was a case precisely like that when a Black Hand man extorts money on threat of blowing up a man's house. The victim does wrong to pay, but the chief crime is with the other man. The "Black Horse" crowd of half a dozen years ago at Albany are on a par with the Sicilian Black Handers. *The Evening Post* is to be praised for bringing out the scandal, and we hope it will be exposed to the bottom.

A Race for the South Pole

There were complaints, in the first days of Dr. Cook's claimed success, that it was discourteous for him to try

to snatch from Commander Peary the prize of the Pole. We were not imprest by the charge, for the Pole is anybody's right, and any route that has ever been tried is open to all successors. Accordingly the plan of the National Geographic Society and the Peary Arctic Club to send an expedition next winter to reach the South Pole does not seem to us to contravene good manners. The English expedition will follow Lieutenant Shackleton's course and will have the advantage of a known route to within 97 miles of the goal, while the American party will start from a point 1,800 miles from that taken by the British, and will cover an unknown route 100 miles the longer. We doubt not that both parties will be thoroly provided with the best known means of travel, dogs or ponies, sledges and provisions, and both will have had experience, altho Commander Peary will not be in command of the American expedition. If they succeed they will have gained their prize in about two years from this time. May the best win. It is a fair field and no interference, and they start simultaneously, with good will to each other, the British welcoming their American competitors.

Dr. Burrell's Outbreak

This is what Dr. David J. Burrell, pastor of the Marble Collegiate Dutch Church of this city, said the other day at a large religious meeting in Chicago:

"In my judgment the Carnegie Foundation is the most significant movement in modern times in the interests of agnosticism in general education. I have also been called to task for saying that the Biblical instruction in Princeton University has been under the direction of a man who does not believe in the inspired trustworthiness of the Scriptures as the word of God. The same affirmation might be made, and still more strongly, respecting many of the institutions of learning under avowedly Christian control."

This is a fair specimen of Dr. Burrell's recklessness. In his opinion no man has the right to be a teacher in the Church who does not accept his view of biblical inerrancy. If a college teacher hold in any degree to the higher criticism he is teaching infidelity and is an enemy of the Holy Bible. The Church has left Dr. Burrell behind, but he follows and barks. The Carnegie Foundation is not one particle "in the interests of Agnosticism." It asks no change in any teacher or teaching, or in any trustee of any one of the colleges and universities which it aids. Every one of them may be a Baptist or a Presbyterian or a Methodist for all it has to say. But it does require this, that the charter of the institution which it aids do not thus permanently limit control to a single denomination; and to our opinion that is not bad. It allows freedom to choose the best men, while at the same time Brown University can, thru its majority of Baptists in the board of trustees, keep that majority as long as it chooses. We are not convinced that colleges tied to a denomination have better teaching, morals or religion than undenominational institutions.

Professors Who Do Not Teach

A correspondent learned in European pedagogics questions a statement made by us in our issue of January 27, to the effect that in English universities and on the Continent of Europe there are as a matter of course professors on whom no duty of instruction is imposed. He says:

No German professor has any liberty whatever until he has fulfilled the minimum prescribed for him, either directly or by the medium of the fee system, by the Ministry of Public Instruction. My impression is that the only universities in the world where there are professors actually free to do just what they please, teaching or not, as they like, are three or four of our American universities. We have not many such men yet, but we have some at Harvard, at Columbia, and, I think, at Johns Hopkins and Chicago. Almost every one who writes about German universities overlooks the absolutely controlling power of the Ministry of Public Instruction. It works quietly and from a distance, but with amazing effectiveness and regard for detail.

Social Democratic Pastors

Some months ago the Protestant Church of Germany was dumbfounded when Pastor Blumhardt, the conservative son of the late famous prayer-healer Pastor Blumhardt, of Bad Boll, in Wurtemberg, and Pastor Neumann, the most brilliant protagonist of liberal Christianity, both formally joined the ranks of the Social Democrats. It now appears that in Scandinavia the number of pastors in the State churches who are openly taking sides with the

propaganda of Social Democracy is constantly increasing, and they are by word of mouth and by publications aiding this cause. The Church authorities see in this innovation no ground for interference. In Norway, Pastor Ericksen is not only a prime leader in the ranks of the Social Democrats, but he is also *persona grata* with the authorities. Possibly this can be explained by the fact that the present cabinet of Norway, and especially the Minister President Knudsen, have pronounced socialistic leanings. Sweden is, as a rule, more conservative than Norway, yet at a recent convention of liberal minded pastors held in Lund, at which the State Church was largely represented, an affiliation of the Church with the Social Democratic agitation was strongly advocated. The leader in this movement was the Swedish pastor in Copenhagen, Dr. Widner, who declared that in his own congregational work he found the assistance of his Social Democratic members most useful, and that among the most liberal contributors to the cause of the church in Copenhagen were the members of the Social Democratic party. Another advocate, Pastor Brulin, of Arloef, and still a third, Pastor Mauritzon, insisted that the church should and could make use of the Social Democratic agitation for the gospel cause. Dr. Holmstrom, who is also professor of theology, declared that there was an inner connection between the tendencies of Christianity and Social Democracy and that the church and pastors should most heartily co-operate with the latter. It should, however, be remembered in this connection that in the Scandinavian lands the Social Democratic party is not under the spell of the anti-Christian and anti-churchly spirit that sways, particularly in Germany, where Christian and Social Democrats are to all intents and purposes mutually exclusive terms.

Japanese Judgment of American Women

When the commercial commissioners returned home from their visit to this country, a Japanese newspaper asked them individually three questions: "What impress you most on your trip to America? What displeased you most? What were your most pleasant moments?" To the first and last of these questions the answers were appreciative and are most satisfactory to American pride or conceit; but the answers to the second, which might call out our defects, are unexpected. The things which most displeased them were:

"1.—Pretension to respect paid to ladies."
"2.—The fact that Americans wear their hearts upon their sleeves."
"3.—Extreme respect for women."
"4.—Presumptuous attitude of women over men, and the mingling of boys among girls in schools."
"5.—Too much respect for women."
"6.—Unreasonable egoism on the part of women."
"7.—Extreme mammonism."
"8.—Too much pride on the part of women."
"9.—Corruption of political parties and politics."
"10.—Supply of unfiltered water in the lakes in the neighborhood of Chicago for drinking."
"11.—To salute any kind of women."
"12.—Unnatural gestures and phraseology of women in talking."

And yet we ought not to be surprised. Our deference to women must be a shock to any people who have relegated women to an inferior position. We remember that when the famous German theologian, Dr. Christlieb, visited this country over thirty years ago and was entertained in our best families, he criticised the women because, when the man of the house returned home from business, the mistress of the house did not hasten to meet him with slippers and dressing-gown, and give him the easiest chair, but kept it herself. Japanese women are taught to be humble and deferential. American clothes do not become them, because they have been taught to bend the head and have never learned to stand straight and throw out the chest. That looks too forward, too bold.

A Boy to a County

The State Dairy Commissioner of Missouri, who is also State Pure Food Commissioner, is urging the railroads of that State each one to select one boy from each of the counties thru which they pass, and send them to the State Agricultural College, to be specially educated in the interest of advanced farming. The Commissioner believes that such a staff of young men, constantly growing up to leadership, would be of as much advantage to the carrying trade of the State as directly to agriculture. He

would have them particularly educated in dairy farming, which has been neglected in the Southwestern States in favor of range cattle raising; and all the way down thru Texas to the Gulf and to Mexico the land of these big ranges is equally good for dairying, feeding by soiling and by silos not less than eight times the milch or fatted cattle that could be fed by the wild pasturage method. The great Ozark country, which has become famous for its big red apples, is said to be just as good a field for advanced dairying, and this is true of tens of thousands of acres in half a dozen States. The proposition to link the producing and the carrying industries is a peculiarly good one, and while the conditions are not the same in the Eastern States as in the Western, the rule holds good that we cannot make our corporations too closely a part of the body politic and the body industrial. There are few men who better understand what can be and what ought to be produced in any section of the country than our railroad presidents. Why should they not join hands with the agricultural colleges—*pro bono publico?*

Nothing attests better the almost perfect character of the system of popular education in Germany than the phenomenal decrease in the number of illiterates among the military recruits. In 1887 there were 1,250 among the newly enrolled soldiers who could neither read nor write; in 1897 this number had been reduced to 200, and in the present year there were actually only 58 illiterates, or 0.02 per cent. of the total enrollment, and most of these came from the Polish districts of Eastern Prussia. During the present year the number of illiterates in France is 9,853.

The New Orleans school children who came North a year or two ago to take part in a spelling contest were quite mortified that a colored girl, Estelle E. Gibbs, got the prize. Here is another case in Hoboken where a colored girl got the prize as having passed the best written examination out of the ten thousand scholars in the grammar schools. She was rated 100 in history, civics, spelling, arithmetic and grammar, and 96 in geography. But she does not intend to go to the high school, and thence to the normal school, because she does not think she would be allowed to teach in Hoboken, and so she proposes to study music. That is an illustration how the shutting of the door of opportunity discourages ambition. But we would remind her that the world is bigger than Hoboken, and the best education pays best. And now here is another case, a negro boy who recklessly leads the eighty January graduates of the Jersey City High School. The only way to prevent it is to set up a separate school for colored children and stop competition.

It is a very frank statement that comes from Bluefields that the Nicaraguan revolutionists have sent to Panama to recruit fifty armed Americans to aid their cause. The United States Government ought to have influence enough in Panama to prevent any such American intermeddling. It adds even more color to the current belief that our country is more than benevolently taking part in the overthrow of the standing government there which succeeds President Zelaya.

We offer the following suggestion to San Francisco. In Formosa every household has to pay a monthly tax of two rats. A fine is imposed on those who fail to pay them in. Every rat is examined, and if found to be infected with the plague the house is thoroly cleaned and disinfected. Twice a year every house or shop has to be emptied of all its contents and carefully cleaned out, while rows of tables, pans, boxes, bottles, etc., line the streets. The Japanese rulers mean to have their sanitation effective.

We are likely to have a reform in the conditions which send our ambassadors and ministers abroad to live in hotels until they can lease a house in a foreign capital. A bill reported favorably appropriates $500,000 annually to purchase embassy buildings. We ought to have had them long ago.

Insurance

The Growth of Credit Insurance

CREDIT insurance is comparatively a modern development. In the old days, when a merchant was insured against fire, that was as far as he thought it necessary to go, but in modern days, since the discovery of the fact that losses by failures in business are very considerably in excess of those by fire, credit insurance has been given the place in the commercial world that properly belongs to it. Credit insurance has long since passed the experimental stage. It is similar to fire insurance in at least one respect, viz., it is purely protective in its essence and purpose. In the earliest application of the credit insurance idea it was assumed by the insuring company that the firm carrying a credit insurance bond would tend toward recklessness and carelessness in its extension of credit. The experience of those who have applied credit insurance to their operations, however, has not confirmed this hypothesis and its assumption has not been warranted. On the contrary, credit insurance is a reliable and efficient guide, and in the working out of the idea, business losses from failures have been reduced to a minimum. Credit insurance is exceedingly helpful to the credit man, in establishing his limits. It is likewise a safeguard and valuable protection to the interests represented by him. While merchandise is in the warehouse or salesroom of the firm engaged in its merchandising, and this merchandise stock is protected by fire insurance, the value of it is well defined, but upon the delivery of these same goods to a transportation or public service company, they pass from under the control of the shipper and without credit insurance the selling merchant has nothing but the entry on his books to show as an asset. Generally speaking, the selling merchant has no collateral security, and were it not a fact that the average purchaser is honest, business could not be conducted at all. No bank could extend credit as the merchant does with comparative safety, and in these days it is coming more and more to be a fact that no merchant can afford to do it in the long run. Experts have held that panics would be entirely eliminated if a sufficient line of credit insurance were carried by manufacturers and jobbers, since panics are to a very large extent the result of loss of confidence and a sense of insecurity. Such a loss of confidence and such a sense of insecurity would be impossible if the merchants' profits were guaranteed against loss by a judiciously selected line of credit insurance. The growth and development of credit insurance has thus far been bounded by a period not to exceed twenty years, but it will not be long before every credit inquiry blank will carry as a vital question (as of fire insurance), Do you carry credit insurance, and if so, to what extent?

PROF. JEREMIAH W. JENKS, the Cornell economist, recently estimated the cost of sickness to the United States at large to be a billion dollars annually. Minor ailments not requiring a physician's services, but amounting to indispositions, according to the same authority, aggregate a quarter of that sum. Published accounts of the utterances of Professor Jenks on this point credit him with the following, viz.:

> According to some of the best authorities in a country like the United States the loss through sickness on the average by every member of the population is thirteen days, resulting in a monetary loss doubtless of more than a billion dollars a year. Minor ailments which do not result in the calling of a physician cost not less than $250,000,000 a year. By proper care probably nine-tenths of this loss could be saved. The loss that comes from overfatigue or a lowering of one's surplus vitality of power of endurance is, from the economic point of view, even greater probably than that due to illness. This feeling of fatigue, coming often from the use of alcohol or of tobacco, or from carelessness in diet or unnecessary loss of sleep or undue length of the working day, amounts probably to very much more than the direct loss from illness.

FINANCIAL

Stock Exchange Evils

THE action taken by the New York Stock Exchange in the Rock Island case, a few weeks ago, left something to be desired, but it was more satisfactory to reasonable critics of speculative trading in securities than the more recent report of the committee appointed to investigate the collapse of the Hocking Coal and Iron pool. In the Rock Island case the Exchange authorities said that the offending firm (two members of which have been suspended) must have known that the execution of the capitalist manipulator's order "would serve no proper or legitimate purpose and would deprive the quotations of transactions upon the Exchange of their value as standards of the real market value of securities." To a certain extent this was condemnation of pool manipulation, but no similar disapproval of such manipulation is to be found in the Hocking report, altho it says that three or four firms "merit severe condemnation" for subscribing to the pool for the account of another firm and thus "lending their names to this undertaking." But it also excuses the course of this other firm (which, with the help of a well-known professional manipulator, managed the "undertaking") by speaking of its great confidence in the prospective value of the stock, which, during several years, had paid no dividend, and the quoted market value of which had been marked up in 1909 from $22 to $91.

What the public wants to know is the opinion of the Exchange authorities concerning such manipulation. In this case the history of the pool is given by the committee, with figures and names. If the Exchange authorities regard such undertakings as illegitimate, and as "detrimental to the Exchange's interest or welfare," they should say so plainly. If manipulation designed to create fictitious prices and to unload properties upon the public at values measured by such prices is at variance with that clause in the Exchange's constitution which asserts that the "object" of the institution is "to maintain high standards of commercial honor and integrity among its members, and to promote and inculcate just and equitable principles of trade and business," there is no time like the present for making known the governors' views on this subject. Failure to condemn and suppress such evils sharpens the hostility of unreasonable foes and invites restrictive legislation that would do more harm than good.

* * *

....The *Engineering and Mining Journal's* tables show that the gold output in 1909 was $457,567,280, which may be compared with $378,411,054 in 1905, $258,829,703 in 1900, $198,995,741 in 1895, and $118,848,700 in 1890.

....According to the American Iron and Steel Association's reports, which are the best authority, the output of pig iron in 1909 was 25,795,471 tons, against 15,936,018 in 1908, and 25,781,361 in 1907, when the highest previous record was made.

....The prosperity of grain growers in the Canadian Northwest is shown by a recent dispatch from Detroit, which says that J. C. Coe, a Saskatchewan farmer, while in that city on December 22, bought an automobile ($4,500) for himself and twenty-nine for his neighbors, the cost of the entire lot being nearly $100,000.

....In its monthly circular for February, the National City Bank asserts, upon the authority of the Comptroller of the Currency, that "there is practically not a national bank in the United States whose condition is regarded as unsatisfactory." The management and condition of a considerable number of banks have been greatly improved since September, 1908, owing to the reform policy of the Comptroller's office.

....Russia's wheat crop last year was 783,000,000 bushels, or 100,000,000 bushels in excess of any that had preceded it. The exportable surplus is 300,000,000 bushels. Russia also had record crops of barley, oats and potatoes. Canada's crop of wheat was 156,754,000 bushels. The world's wheat crop, according to the London *Statist,* exceeded that of 1908 by 341,000,000 bushels, or by 10½ per cent.

The Independent

VOL. LXVIII NEW YORK, THURSDAY, FEBRUARY 24, 1910. No. 3195

Survey of the World

The Investigation at Albany

The scope of the investigation which the New York Senate is making at Albany, with respect to the charge that Senator Allds, the leader of the Republican majority in the Senate, accepted a bribe, has been broadened by the testimony of the accuser, Senator Conger, and steps are to be taken for a comprehensive inquiry concerning the alleged corruption of legislators. The original charge made by Senator Conger (a Republican) was that in his presence Hiram G. Moe, representing the interests of his, Conger's, bridge company and other similar companies, paid to Allds, then the leader of the Republican majority in the Assembly, or House of Representatives, $1,000, to procure the killing of a bill which the companies disliked. It was drawn out, however, that $6,000 was paid, in three envelopes, the one received by Allds containing $1,000, while the second contained $1,000 and the third $4,000. In the course of his testimony last week, Senator Conger was forced to tell the names of the other men to whom the money was paid. The envelope containing $4,000, he said, was for Assemblyman Jean La Rue Burnett, now dead, of Canandaigua, Ontario County, a prominent and influential member, who had come to him about the matter. It is generally thought that Burnett was an agent for the distribution of a considerable part of the $4,000, but Mr. Conger thus far appears to be unable to name the other recipients. He saw the $4,000 paid, he said, to Burnett. He also testified that the second envelope, containing $1,000, was given to S. Frederick Nixon, Speaker of the Assembly from 1899 to the time of his death, in 1905. Mr. Nixon was a resident of Westfield, Chautauqua County. Senator Conger also asserted that he had been approached concerning the bridge legislation by Assemblyman Louis Bedell, of Goshen, Orange County. The companies, he said, had raised funds to influence legislation not only in the year in question, 1901, but also in 1902, 1903 and 1905. The same bill (restricting the freedom of township officers in dealing with bridge companies without specific authority from the people) had been brought forward at every session, and was used to extort money from the companies. There was no bribery, in his opinion; it was blackmail. In 1905 the legislators raised their demand to $10,000. This sum the companies refused to pay, and to punish them the bill was made a law. In 1902 he had talked about the bill with Colonel Dunn, the chairman of the Republican State Committee, and the companies had contributed to the committee's fund. His testimony warranted the inference that in his opinion this contribution had promoted the killing of the bill in that year. Owing to the charges against several persons in addition to Senator Allds, Senator Wainwright introduced a resolution providing for a thoro investigation by a joint committee concerning alleged corruption affecting the bridge bills or any other legislation. Probably this will be adopted. It was the sentiment of a conference in New York, at which President Taft, Governor Hughes and a few other men were present, that a most searching inquiry must be made.—— Owing to the publication of charges relating to the purchase of land by the State for the forest reserves in the Adirondacks and the Catskills, where the

State now owns 1,641,000 acres, for which about $3,500,000 has been paid, Governor Hughes has appointed commissioners to make an investigation. It is alleged that large tracts were brought at tax sales for a few cents an acre and turned over to the State at very much higher prices, and that influential politicians were the beneficiaries of these transactions. Senator Allds was employed as counsel by the State Forest Commission in connection with the acquisition of land for the reserves, and his fees are a matter of record.

Three Cent Fares in Cleveland

At last the fare on Cleveland's street railways is 3 cents. On the 17th, at a referendum election, there was a majority of 8,110, in a total vote of 46,504, for the new railway franchise proposed by Judge Robert W. Tayler, of the United States District Court, who appointed the receivers who now hold the railroad property. This franchise is for a term of twenty-five years, the main condition being that service must be furnished at cost, plus 6 per cent. upon the stockholders' investment and the interest upon bonds. For eight months as a test, the fare is to be 3 cents, with 1 cent for a transfer. If this price does not pay the cost, with the specified dividends and interest in addition, the fare may be increased to 4 cents for one ticket and seven for 25 cents, but the rates are to go no higher. Charges for operating expenses and maintenance are limited in the franchise ordinance, and expenditures for new construction are subject to the approval of the city council. The city has the right to buy the property at the end of the term, or to purchase stock at $110 at the end of eight years, if the State laws permit. There is to be a Street Railway Commissioner, who will act as adviser to the city for the regulation of service and fares. He has access to the company's books at all times. The company pays his salary, $12,000, and may be required to pay in all about $40,000 for the expenses of the office. Mayor Baehr (the successor of Mayor Tom L. Johnson, who fought for 3 cent fares thru four terms) has given the place to Gerard M. Dahl, a lawyer thirty-four years old, who came to Cleveland four years ago from Wisconsin, where he had been a follower of Senator La Follette. He is a graduate of the University of Wisconsin.

Cases of Bribery and Fraud

Max G. Leslie, one of the men recently indicted in Pittsburgh on account of the bribing of Councilmen, was tried last week. He is County Tax Collector and the local Republican leader. E. H. Jennings, president of the Columbia National Bank, and F. F. Griffin, formerly cashier of that bank (both also under indictment), testified that they had given to Leslie $25,000 to be used in procuring, by bribery, the passage of an ordinance making their bank a depository for city funds. Leslie sought to establish an alibi, swearing that on the dates specified he was at the Gravesend race track, in New York, betting on the races. He put a bookmaker on the stand to support his assertion. The jury found him not guilty.——To a legislative committee in Ohio, J. E. Brelsford, who was a partner of Mark Slater when the latter was Superintendent of State Printing, has confest that he and Slater robbed the State of $14,807 by falsifying accounts and in other ways.——John E. Stott, a clerk in the Auditor General's office at Harrisburg, Pa., dropped dead on the 16th. He was to be an important witness at the approaching trial of Joseph M. Huston, formerly State Architect, one of the fourteen men indicted for their connection with the capitol frauds. Of those who were accused or who were to testify, seven have died. Two of the officers convicted died while their appeals were pending. Two of the employees who were tools of the conspirators died soon after indictment; another is insane. John H. Sanderson, the contractor who gained a very large sum by the frauds, died in New York last year, while awaiting decision on an appeal. His secretary, James H. Stevenson, who went into exile to keep his promise that he would never testify against his employer, was so affected, a month or two ago, when (having ventured to enter the State) he was served with a subpoena, that he committed suicide.

Disorderly Strike in Philadelphia

A strike on the lines of the Philadelphia Rapid Transit Company was declared at one o'clock on the afternoon of Saturday last by the Amalgamated Association of Street and Electric Railway Employees. The company says 4,000 of its 7,000 men quit work; the union asserts that 6,200 obeyed the order. The strike last summer was ended by the intervention of James McNichol, the local Republican leader, who feared the effect of the controversy upon an approaching election. The term of the agreement then made was to expire on June 1. Recently there were conferences relating to a new agreement, the men asking for an increase of wages and opposing the employment of members of a rival union, which, they asserted, had been organized by the company with the purpose of injuring the Amalgamated Association. The conferences were discontinued on Saturday morning, when the company dismissed many men—173, its officers say, but about 600, if the union's count is correct. The company asserts that these men had been guilty of "dishonesty or evasion of duty"; the strikers say their only offense was prominence in the union. The strike order calls for an increase of wages to 25 cents an hour. In the forty-eight hours following the beginning of the strike there was great disorder, especially in the Kensington district. On Saturday evening two cars were burned and several policemen were severely injured by mobs. On Sunday there was mob rule thruout the day. More than 100 injured persons were sent to the hospitals and hundreds were arrested. At 6 p. m. all cars were withdrawn from service. The regular force of police could not deal with the mobs, and the Mayor ordered that 4,000 special policemen be sworn in. Several persons were wounded by bullets. Among these were two women and a girl. Passengers on the cars could not be protected. Dynamite was placed on the tracks. Sunday night the company reported that 297 cars had been wrecked or greatly damaged, and that 2,700 windows had been smashed. The strike is under the management of C. O. Pratt, the union's national organizer, who said in a published statement that he had "never seen so much enthusiasm" in a similar movement. On Sunday the expediency of ordering a general sympathetic strike was considered by the leaders of the local unions.——Five of the unions of workmen employed in the cotton mills at Fall River have voted to withdraw from the agreement which fixes wages by a sliding scale. Their purpose is to ask for a new agreement involving an increase of about 10 per cent.——Nearly all of the mines and smelting works at Butte, Mon., were closed last week, owing to a strike of engineers. The suspension of work is due wholly to a quarrel between two rival unions over a question of jurisdiction.

The Situation in Nicaragua

Conflicting reports about the war in Nicaragua were published last week. There was much fighting, and each side asserted that it had been victorious. Matagalpa, the city taken by the revolutionists under General Chamorro on the 10th, was bombarded from the neighboring hills by the Government forces on the 14th. Whereupon Chamorro led his troops out of the city in the night and eluded his enemies. It was reported on the 19th that he was within a few miles of the capital, and had fired shells at the Government's gunboat on Lake Managua. The main body of the revolutionist army was engaging the attention of the Government forces in the vicinity of St. Vicente. There was a report that Chamorro intended to pass around Managua, cut the railroad between Managua and Corinto, and capture that port, in order that the revolutionists might control the customs receipts on the Pacific as well as those on the eastern coast. He sent word to Madriz that he was ready to reopen peace negotiations, but the President responded that he would consider nothing but unconditional surrender. This was on the 14th. Five days later, the foreign consuls at Managua tendered their good offices as peace mediators, but apparently without effect. Madriz's peace commissioners, however, sent a message to Rear Admiral Kimball, asking for transportation from Greytown to Bluefields. He replied that he would gladly

assist any properly authorized commission.——Captain Saenz, who commanded the squad that shot Cannon and Groce, the two Americans, was shot to death on the street in Managua last week. The affair caused much excitement, and police were brought from Leon. One story is that he was assassinated by a soldier; another says that he was killed by his own revolver, having committed suicide despite the attempts of a soldier to restrain him.—— Several American adventurers who had come to Bluefields were deported last week with the assistance of the American consul. They have arrived at New Orleans.——It is reported that John Barrett, of the Bureau of American Republics, will go to Nicaragua on March 15 as the head of a commission appointed to make an investigation.——Castro, formerly President of Venezuela, is said to have asked the London and Washington governments for permission to reside in Trinidad, where he recently bought an estate. It is reported from Caracas that a new plot against the present Government and in his interest has been discovered there.

The Islands

General Nodarse, who gave up the office of Postmaster-General of Cuba when he was arrested for shooting Señor Torriente, the editor of *La Politica Comica*, was recently tried for the offense, found guilty and sentenced to be imprisoned for three years and four months. On the 12th he was set at liberty by President Gomez, "on account of eminent services in the war of the Revolution." Torriente had attacked Nodarse in cartoons.—— General Estenez, editor of *Prevision*, the organ of the independent negro party in Cuba, has been found guilty of libeling President Gomez and sent to prison for six months. The negroes are angry and the newspapers, almost without exception, condemn the Government's prosecution of editors.——An official statement shows that the financial condition of Cuba has improved during the past year. Receipts exceeded expenditures in 1909 by $1,499,846, altho the Government paid off $5,000,000 of debt. The budget for 1910 indicates a surplus of $5,000,000.——On the 19th, the commander of the Cuban Rural Guard reported that, in the Province of Pinar del Rio, he had arrested General Acevedo and four other men who had taken up arms against the Government.——It is expected that ex-Congressman John J. Jenkins, of Wisconsin, formerly chairman of the House Committee on the Judiciary, will be appointed judge of the Porto Rican Supreme Court, to succeed Judge Rodey.——The Porto Rican House of Delegates has cabled to Washington a protest against the proposed changes in the insular Government. These changes are not sufficient to satisfy the dominant party, which demands a Senate wholly elective and a grant of United States citizenship to all, without individual application.——Newton W. Gilbert, of Indiana, now Secretary of Public Instruction, has been nominated to be Vice-Governor of the Philippines, and Charles B. Elliot, of Minnesota, now Associate Justice of the Philippine Supreme Court, to be a member of the Commission and Secretary of Commerce and Police. Charles E. Magoon, formerly Provisional Governor of Cuba, declined the office now given to Mr. Gilbert, because his physician advised him to avoid life in the tropics.

British Politics

The speech of King Edward at the opening of Parliament, February 21, contained the following references to the House of Lords:

> "Recent experience has disclosed serious difficulties due to recurring differences of strong opinion between the two branches of the Legislature. Proposals will be laid before you with all convenient speed, to define the relations between the houses of Parliament so as to secure the undivided authority of the House of Commons over finance, and its predominance in legislation.
>
> "These measures in the opinion of my advisers should provide that this house should be so constituted and empowered as to exercise impartially in regard to proposed legislation the functions of initiation, revision, and, subject to proper safeguards, of delay."

It is presumed that Premier Asquith will take up the budget first, altho insisting at the start on the restriction of the Lords' veto power. Some of the Nationalist and Labor leaders have declared that the attack on the House of Lords

must be put first, but it is expected that they will not go so far as to vote against the Government on the budget issue at the beginning of the session. If they do enough of the Unionists are likely to vote in favor of the budget to carry it thru, because it would be impossible for Mr. Balfour to assume control of the Government with a Parliament majority against him, and neither party desires to force a general election immediately for the result would probably be as indecisive as the last. A few changes have been made in the Cabinet. Home Secretary Gladstone having been appointed Governor General of United South Africa, Winston Churchill has been promoted to his place, Right Hon. Charles Burton succeeds Mr. Churchill as president of the Board of Trade, and Right Hon. Herbert Louis Samuel becomes Postmaster General. The new Ministers are: Mr. William Wedgwood Benn and Mr. Ernest Joseph Soares; Junior Lords of the Treasury, Mr. Edwin Samuel Montagu, Under Secretary for India, and Mr. Cecil William Norton, Assistant Postmaster-General. Mr. Norton succeeds Sir Henry Norman, who failed of election. This completes the Ministry. In the case of the Junior Lords by-elections will be necessary, but as both had good majorities last month there is little danger of their losing their seats.——An unexpected and pathetic sight at the opening of the new Parliament was the appearance of the veteran, Joseph Chamberlain, who, as Colonial Secretary, had started the agitation for a tariff which was one of the chief issues in the recent campaign. He is seventy-four years old and paralyzed, and it was not expected that he would take the seat which he has occupied for thirty-four years, as the member from West Birmingham. As he entered he was supported on either side by his son and by Lord Morpeth, and with difficulty repeated the oath and made his mark after his name had been signed upon the roll by his son.——The suffragets have announced their intention of suspending militant tactics for a reasonable length of time in order to give the new Government a chance to reform the electoral basis. In this Parliament as in the last, the majority of the members have personally declared themselves in favor of woman suffrage and, since the issue has become a vital one, it is thought that more dependence can be placed upon their pledges than previously.

Electoral Riots in Germany

The demonstrations of the Socialists against the Prussian Government for its refusal to reform the electoral system and establish equal suffrage for all men have continued during the week in various cities of the German Empire. The mass meetings have been conducted in an orderly way and the Socialist speakers have urged the avoidance of riotous demonstrations, but on the streets after the audiences have dispersed there have been demonstrations of which the hoodlum element has taken advantage to get revenge upon the police. On the other hand, the police authorities have been unusually strict and severe, even for Germany, and the moderate papers as well as the Socialist have criticised them for their arbitrary conduct and cruelty. They have used their swords and revolvers freely, and a large number of persons have been wounded. In the riots of Thursday night over 200 persons are known to have been wounded and doubtless there are many more which were not reported at the hospitals. Twenty policemen were stabbed, shot or stoned. Halle, Neumünster and Frankfort have been the chief centers of disturbance. ——In the Reichstag the Socialists interpellated the Chancellor on what he meant by stating in his speech before the Prussian Diet that universal suffrage exercised an evil and degenerating influence upon political morals. Dr. Franke demanded whether the Reichstag would submit to such a criticism of the fundamental law of the Empire from its Chancellor and inquired how long a Chancellor could remain in office if he had said that the speeches of the Emperor had exercised an "evil and degenerating influence." This caused an uproar and the presiding officers called Dr. Franke to order. Chancellor Bethmann-Hollweg made a brief reply, assuring the house that the universal suffrage of the Empire was secured from attacks by the Imperial

Government or the Bundesrath. A Clerical member pointed out the conflict between Dr. Bethmann-Hollweg's position as Chancellor of the Empire and as Prussian Minister-President, and a Liberal declared that any attempt to overthrow universal suffrage would be the signal for a rebellion. The Socialist Deputy, Herr Lebebour, was still more outspoken in his attack upon the Chancellor and threats of violence:

"The fault is with the ruling powers, and the blood shed at Frankfort and Neumünster clings to the fingers of the Chancellor. The Socialists will continue making demonstrations in the streets, and, perhaps, will use stronger methods. We will bring it to pass that the Prussian people obtain universal suffrage against the opposition of the Government and the parties supporting it.

"If that results in violence, as is probable, then a revolution of the people would be justifiable. The English Stuarts and the French Bourbons perished in an attempt to use force against victorious and popular movements, and precisely so will any such attempt with us be crushed by the power of the people. If you let matters proceed so far the people will be ready."

China

The proposal of Mr. Knox, the American Secretary of State, that the Manchurian railroads be purchased by an international syndicate from Japan and Russia, has been decisively rejected by both Powers; but it served the purpose of smoothing the way for the project simultaneously announced, the construction of another railroad traversing Manchuria from Kinshow to Aigun. The pro-American party is said to be in the ascendant in Chinese councils, so little opposition is feared from that quarter, but Russia's protest may prevent the extension of the northern half of the line from Tsitsihar where it crosses the Russian section of the Manchurian Railroad to Aigun on the Russian frontier. Great Britain and France have advised the Chinese Government of the desirability of consulting Russia and Japan before completing an agreement for the construction of the road. The Japanese Minister at Pekin has informed the American Legation that Japan's representation to China was merely to in-

OFFICIAL RECEPTION FOR EX-PRESIDENT ROOSEVELT IN UGANDA.

Group at the Provincial Commission House at the Kampola, Uganda, December 22, 1909. Front row, left to right, Bishop Tucker, Ex-President Roosevelt, King Dandi, Provincial Commissioner Knowles, Bishop Hanlan, of the Roman Catholic Cathedral.

sure the right of the Japanese to participate in the financing of the road and in furnishing engineers and supplies. If this is granted Japan will not oppose the enterprise but will improve the opportunity to extend her own system into some rich and inaccessible regions of Manchuria.——The Imperial Board of Communications has been ordered by an Imperial rescript to consider the proposal of provinces to build the Hankow-Sze-Chuen Railroad instead of using the loan arranged for by British, German, French and American capitalists. The patriotic party objects to any foreign loan and claims that China is able to construct her own railroads. Great Britain, Germany and France joined in a protest to China against setting aside this agreement but the United States, confident in the belief that China will fulfil her obligations, refused to join in the protest. —— The Dalai Lama has returned to Lhassa from his sojourn in Mongolia, where he took refuge when the British invaded Tibet, and he is said to be contemplating a visit to London and St. Petersburg. A committee of Tibetans went from Lhassa to Calcutta and from there telegraphed to the Chinese Government complaining of the ill-treatment of the Tibetans by the Chinese Ambans and soldiers. They say that the Chinese have desecrated the holy places and used the sacred books to make boots for non-Buddhist soldiers. The Tibetans will sacrifice their lives in a revolt rather than have their religion destroyed.

Foreign Notes

The Finnish elections resulted in an increase in the radical element. Of the 200 members of the new Diet 86 are Social Democrats. There are 15 women delegates in the Diet, of whom 9 are Social Democrats. The Old Finns have lost six seats. —— The Japanese budget passed the Diet without opposition after having been cut down $4,000,000 thru the reduction of the land tax by 8 per cent.——Inchan Angan, the young Korean Nationalist, who assassinated Prince Ito at the Harbin railway station, has been sentenced to death and three of his accomplices received short prison sentences. —— M. Regnault, the French Minister of Morocco, has been instructed by his Government to dispatch a special courier to Fez, demanding that the Sultan ratify within forty-eight hours the French loan agreement negotiated by his representatives. If Mulai Hafid refuses, the French Consul and the Military Mission at Fez will leave the city immediately and France will seize the Moroccan custom houses.——A private bill has been introduced in the Italian Parliament, to permit women to vote in provincial and municipal elections, and allow them to enter the professions and to compete for public employment without the authorization of their husbands. Premier Sonnino expressed his willingness to have the matter brought up and stated that the recent intellectual, economic and social improvement in women justified a corresponding advance in legislation.——The French Minister of Labor has issued a decree prohibiting nightwork by seamstresses and other working girls after June 30.——The bill for stricter control of the press of India passed the Legislative Council with some amendments. Two of the native members opposed the measure. The Viceroy, the Earl of Minto, stated that the adoption of the bill justified the Government's confidence that the enlarged representation of the Indian communities in the Council would strengthen the British administration and announced that the Government had in consequence decided to release the state prisoners who were deported fourteen months ago for sedition. The new press bill requires that all publishers shall make a deposit of from $150 to $1,500 before issuing any newspaper, book or periodical. In case of an offense against the sedition law this deposit may be levied upon or forfeited. A second deposit will then have to be made before the publication can continue, and on a third offense the press will be confiscated. The bill defines press offenses as attempts to incite to murder or anarchical outrages, to tamper with the loyalty of the army or navy, to excite racial, class and religious animosity and hatred, and contempt of the Government or of a native prince, to incite to criminal intimidation and interference with law or order, and to intimidate public servants with threats of injury.

The Cost of Living. III.

[This is the third article in our series on the increased cost of living. Two weeks ago Prof. J. Pease Norton, of Yale, discussed the question from the standpoint of the depreciation of gold; last week Prof. Simon N. Patten, of the University of Pennsylvania, wrote of it in its relations to the home, and this week Mr. Byron W. Holt shows its bearing on the tariff. We shall continue the series next issue with an article by Prof. Franklin H. Giddings, of Columbia, on some of the sociological aspects of the question, and that will be followed by articles from Prof. John B. Clark, of Columbia, and other authorities on the subject.—EDITOR.]

The Tariff and Cost of Living

BY BYRON W. HOLT

CHAIRMAN OF THE TARIFF REFORM COMMITTEE OF THE REFORM CLUB.

THE greatest economic mystery of modern times is the cause of the present high and rapidly rising prices of commodities. More space in newspapers and more time in Congress has been devoted to this question in the last six weeks than to any other single subject. Scores of causes are assigned, each of which has able and valiant defenders. The farmers, the middlemen, the railroads, the Beef and other trusts have all been accused. Each and all disclaims responsibility for high prices. It is easy to demonstrate that nearly all of the alleged causes of high prices are not causes at all. Extravagance, cold storage, labor unions, speculation and overcapitalization, for instance, are not the culprits.

While it is easy to ascertain the more important factors that have so greatly increased the cost of living in this country since 1896, it is impossible to determine the exact responsibility of each factor. The following, in the order given, are undoubtedly the principal factors:

1.—Gold depreciation.
2.—The tariff and its progency, the trusts.
3.—Rising land values.

Gold depreciation is clearly responsible for all of the general advance in the world's level of prices. There can be no other cause, while gold is the standard of value, because the value of gold is balanced against the value of all other commodities. If one end of the scales goes down, the other must go up. As John Stuart Mill said:

"The value of money is inversely as general prices—falling as they rise and rising as they fall."

Exactly how much the world's level of prices has risen since 1896 is not known. The figures for different countries, and even for the same country, do not agree. England, being the nearest to a free trade country and being the world's greatest market and distributing center, it is, perhaps fair to conclude that the rise in prices there fairly measures the effect of gold depreciation. According to the *London Economist's* index number, prices in England rose 27 per cent. from June, 1897, to January, 1910. Sauerbeck's index number shows an advance of 29 per cent. from July, 1896, to December, 1909.

From these figures it seems safe to assume that gold depreciation is not responsible for much more than 30 per cent. of the general advance in average prices. Some allowance should, however, be made for the fact that, because of the budget agitation, industry has not improved as rapidly in England since the 1907 depression as it has in Germany, and in this and most other countries. In any case, an advance of 40 per cent. in prices since 1896 would be the extreme that can be credited to gold depreciation. The advance in this country, from July 1, 1896, to January 1, 1910, was 61.9 per cent., according to Bradstreet's index number. The advance in this country, then, was more than twice the advance in England, and not to exceed two-thirds of our advance can be credited to the decline in the value of gold. The other third must be credited mainly to the tariff and trusts and to higher prices for land—the rise in land values in this

country having, undoubtedly, been relatively much greater than in most other countries. How much of the advance in general prices should be credited to increased land values we will not attempt here to ascertain. We will simply assume that this factor is responsible for all that cannot be shown to belong to gold depreciation and the tariff. Possibly, however, it might be shown that the tariff is responsible for some of the increase in land values.

From somewhat careful estimates which I made in 1903, the cost of living in this country was then nearly 12 per cent. higher than it would have been had there been no tariff. It was estimated that the 17,000,000 families consumed goods worth about $16,000,000,000, or $941 per family. On this basis the tariff tax was about $111 per family, or $94.48, after deducting the $16.52 per family which was the amount of tariff taxes actually collected by the Government. That is, the tariff tax collected by the trusts and other protected interests then amounted to $94.48 per family. There is no reason for supposing that the amount of the tariff-trust tax per family is less now than it was then, tho it may be that, because of the 15 per cent. increase in the cost of living, the percentage of the tariff-trust graft is not over 11 per cent. of our expenditures.

Space will not permit a detailed explanation of the way in which the estimates of tariff-trust tax on each important article of food, clothing and shelter were made. In general, consideration was given to the difference between foreign and domestic prices, the percentage of expenditures for food, clothing, rent, fuel, furniture, etc., being taken from Bureau of Labor reports. Taking some of the more important items, the tariff-trust tax per family was, on woolens, $9.28; on silks, linens, laces, furs, rubber goods, gloves, etc., $9; on cottons, $6.37; on furniture, etc., $6.24; on beer, whisky, wine, etc., $5.34; on building materials, $5.20; on implements and tools, $5.05; on sugar, confectionery, etc., $4.72; on tobacco, etc., $3.72; on sickness and death, $2.55; on beef, veal and mutton, $2.49; on vegetables, $2.40; on bread, $1.94; on amusements and recreations, $1.75; on hogs and hog products, $1.74; on travel, $1.35; on boots and shoes, $1.23. Other items brought the total up to $94.48.

The average per family expenditure is now probably $1,080, of which about 10 per cent., or $108, is due to tariff "protection." If, then, prices are now 60 per cent. higher than they were in 1896, the cost of living was then $675 per family. Our tariff was at that time much less "protective" than it is now, altho it produced, relatively, more revenue. Our trust system was then very imperfect, our manufacturers were only just learning how to make the tariff an instrument of extortion. Today they are experts, and the Payne-Aldrich bill—made by and for themselves—is an ideal instrument for their purposes. That is, it yields a minimum of revenue for the Government and a maximum of tariff plunder for the trusts.

It would seem fair to deduct about 6 per cent., or $40.50 per family, from the cost of living in 1896, because of tariff-trust graft. This leaves $634.50 as the ex-tariff-trust cost of living per family in 1896. Assuming that gold depreciation has increased the cost of living 40 per cent. since 1896, and that there were no other factors to cause higher prices, the cost of living should now be $888.30 per family instead of $1,080. The difference, $191.70, contains, as we have estimated, $108 of tariff-trust tax. The balance, $83.70, is, perhaps, to be credited to the pressure of population upon land, or to increased land values.

According to these figures the "protection" part of our tariff increases our cost of living more than 11 per cent., and is responsible for about 10 per cent. of the increase in the cost of living since 1896. Of course, assuming that the tariff were abolished and that our Federal revenue was raised entirely by other taxes, both in 1896 and now, we would find that the cost of living is about 14 per cent. higher now than it would have been had there been no tariff.

If, when the tariff was being revised in 1909, all of the tariff graft had been taken out of it, the purchasing power of our money would have been increased over 11 per cent., according to these

very conservative estimates. This would have been equivalent to an advance of 11 per cent. in wages and salaries, and there would today be no serious strikes or threatened strikes for higher wages. Our railroads might then be expected to conduct their business peaceably for several years yet. They could then purchase rails for $22 a ton, instead of $28, as now, and their locomotives, cars, stations and bridges would cost less than they now cost. Besides, the railroads would then have more freight to carry. Our railroads would today start an agitation for free trade if they knew their own interests. Fully 95 per cent. of the 90,000,000 of consumers in this country would do likewise.

President Taft, in his speech in New York on February 12, said:

"If the people listen to reasonable arguments, it will be easy to demonstrate that high prices proceed from an entirely different cause, and that the present tariff, being largely a revision downward . . . cannot be charged with having increased any prices . . . The reason for the rise in the cost of necessities can easily be traced to the increase in our measure of values, the precious metal gold, and possibly in some cases to the combinations in restraint of trade."

The President is partly right, which also means that he is partly wrong. It may be that the people will listen to reasonable arguments. If so, they will discover that, while the decrease (not increase) in our measure of value is responsible for most of the increase in the cost of living, the Payne-Aldrich tariff —which the President extols as the best tariff bill ever made—is responsible for from 10 per cent. to 12 per cent. of the present cost of living, and that it neither protects wage or salary earners or farmers, but does plunder them to enrich the trusts. When the masses of the voters make this discovery they will make short work of the tariff. It is unfortunate for the party of "protection" that it will have to explain the tariff.

It may be that the present tariff bill is not at all responsible for the swift advance in prices of the last six months. The fact that the prices of farm products have advanced faster than the prices of most manufactured articles certainly indicates that the tariff is not the great cause, for even that high tariff organ, the New York *Tribune,* no longer pretends that the duties on farm products protect the farmers. We should, however, remember that the trust era really began with the passage of the Dingley bill in 1897, and that for the next three or four years the trusts were reveling in high prices and fat profits. For instance, the tin plate, wire nail and window glass trusts more than doubled the prices of their products, while scores of other trusts, like the steel rail, steel beam, lead, paper and leather trusts nearly doubled their prices, during this period. In fact, the tariff-protected trusts overdid themselves in those halcyon days and put prices above the maximum profit point, as they learned from sorrowful experience. It is because of the sad lessons learned then, especially by the American Steel and Wire Company, that the Steel Trust of today does not always force prices up to the highest monopoly notch. Having been responsible for so much of the price advances from 1897 to 1901, and having overreached themselves then in their new-found tariff power, it is not surprising that the tariff trusts have not been responsible for much of the recent advance in prices.

President Taft may honestly believe that the present tariff is "largely a revision downward." He can perhaps prove by figures that the steel schedule was largely revised downward. Practically, however, nearly all of the reductions were nominal only—that is, they were made on duties that were needlessly high, even from the Steel Trust standpoint, and the duties left afford all of the protection desired. In no case can steel products be imported. The people may make some discoveries in this direction, before they learn all about the tariff and its many deceptions.

The President would have us believe that, because the duties collected on goods imported the first six months of the new tariff act averaged somewhat lower than they did for similar periods under the old tariff, therefore the new tariff was a revision downward. There are several considerations, any one of which might spoil this demonstration:

1. The imports of goods on which duties were raised were unduly large be-

fore the new law took effect and unduly small since.

2. The imports of goods on which duties were reduced were relatively small before and relatively large after the new bill became law.

3. Because of the worldwide advance in prices, specific duties, if unchanged, would now average lower when reduced to ad valorem rates.

4. If all duties on dutiable imports had been made absolutely prohibitive, the average rate of duties on the goods imported would be zero.

The President's figures prove too much. They may be misleading. It was Bastiat who said:

"To rob the public, it is necessary to deceive them. To deceive them, it is necessary to persuade them that they are robbed for their own advantage."

NEW YORK CITY.

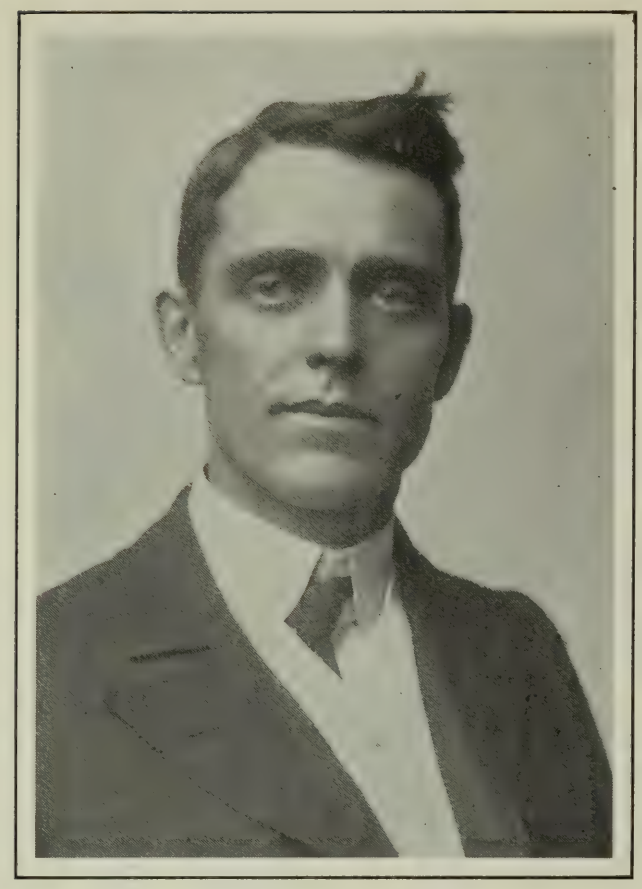
Those Kansas Editors

BY CHARLES MOREAU HARGER

[Mr. Harger holds a Chair of Journalism in the University of Kansas, is editor of *The Abilene Reflector,* and is a frequent contributor of articles on Western life to the best magazines and newspapers thruout the country. If we had written this article Mr. Harger would have had a very prominent "mention" among those Kansas editors.—EDITOR.]

"WHY is it," asked the editor of a leading Nebraska daily, as the group around the press table at a national convention a few months ago was visiting during a lull in the proceedings, "why is it that Kansas produces so many editors who are widely known by name? Nebraska has practically the same population, much the same sort of people and many good country papers, yet its newspaper men have no such fame as those of Kansas."

"There is the editor of *The Commoner,*" put in a New York correspondent.

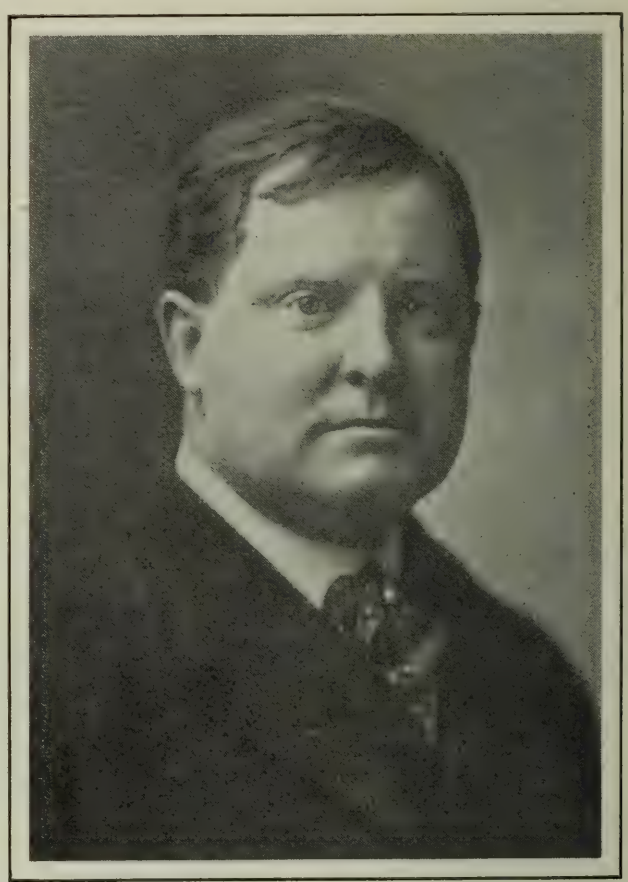


"That is politics. Kansas has many newspaper men who hold no office, are not prominent because of politics, and whose papers are published in country towns or small cities, yet whose names are known in nearly every newspaper office in the land and who are quoted from New York to San Francisco. What other Western State has such a group of men as this?

W. Y. MORGAN,
Editor, *The Hutchinson News.*

Perhaps it is the Kansas temperament as exemplified in its political activity; perhaps the Kansas climate inspires a certain positiveness of expression without much regard for the opinions of those who disagree, which is one element in editorial success; possibly something is due to accident of location—more likely it is just because it is the Kansas way, as novel writing is the Indiana way.

Early Kansas editors took their work seriously. Their ideal paper seems to have



ARTHUR CAPPER,
Editor, *The Topeka Capital.*

been one that devoted four columns to editorial comment on the state of the nation to two columns to news. They thought it almost a crime to write an editorial that could be printed in less space than a column—it was scholarly, earnest, but not attractive to the exchange department of other papers.

The group of Kansas editors to which the Nebraskan referred is made up of men who have grown up with the State and have absorbed its spirit and, in local phrase, "speak the Kansas language." There is Edgar Watson Howe—"Ed" Howe to his fellow workers—he has spent thirty-four years building up the Atchison *Globe*. William Allen White, of the Emporia *Gazette*—they call him "Bill" White at home—he is Kansas born. Charles S. Finch, of the Lawrence *Gazette*—"Old Charlie Finch," tho he is neither old nor crabbed—has mingled with all sorts of frontier life. Arthur Capper, of the Topeka *Capital* and five other publications, with a combined circulation of 500,000, has spent all his life in the State. "Bill" Morgan, whose other name is William Yost Morgan when he writes books, has edited the Hutchinson *News* nearly twenty years. So with the rest, they have worked out their success consistently, which is about the only way real success comes in the newspaper field.

It is interesting, too, to note in what various manner they have succeeded, what different roads they have taken, yet all leading to something worth while. Ed. Howe is rich; he owns what was until recently the only paper in a city of

WILLIAM ALLEN WHITE,
Editor, *The Emporia Gazette.*

16,000 population. Every morning he goes on the street, stops in the stores, shoemakers' shops, hotels. "How's business this morning?" is his greeting. He is doing the same work as the cub reporter. He writes as many columns as any man on the staff, and of the most commonplace happenings — runaways, big loads of grain, deaths, marriages, and what not. No scare heads in the paper, but solid columns so full of "human interest" that they are read in the magazine offices in New York as eagerly as by home subscribers.

Finch does much the same, but his best work goes into two columns of editorial comment, nine-tenths of which is

reprinted by his exchanges within twenty-four hours. This is the kind of paragraphs he writes:

"It looks as though the Patten family is a mighty good bunch to keep away from, or to be with, when you go into the wheat market.

"Dr. Cook says it will be easy now to discover the South Pole. If Peary could believe anything at all Dr. Cook says, he would no doubt make a bee line for the South Pole after hearing that."

Most of them, however, are directly connected with Kansas politics, and he is considered a very good man to have on your side.

Now Howe's real fame rests on a different sort of paragraphs, the "Globe Sights," which are used as "fillers" in hundreds of papers the country over. A

E. W. HOWE,
Editor, *The Atchison Globe.*

half-column of them appear every evening, and they read this way:

"The Lord never intended that a father should hold the baby, or He would have given him a lap.

"Girls are always worrying for fear something will come loose.

"When you say 'everybody says so,' it means that you say so.

"When a man throws a thing away he usually throws it where it will annoy others as much as possible.

"Poor man: he is bored to death to buy tickets to amateur entertainments, and then bored to death when he attends."

White does not go in for paragraphs; furthermore, he does not spend every day in the office. He shuts himself up and writes magazine articles for the biggest of the publications. For his own paper he writes as long editorials as he thinks are needed—and they are telegraphed to city papers, because they are so well done and so readable. He wrote a considerable part of the first draft of his new novel, "A Certain Rich Man," at the rate of 30,000 words a week, which is pretty swift work. Thirteen years ago White left some "time copy" on the hook in the office of his paper, the Emporia *Gazette,* and went to Colorado for a vacation. The piece was "What's the Matter with Kansas?" Eastern editors republished it; the Republican National Committee issued a million copies of it for the campaign—and its writer was famous. When he came home from Europe the other day two thousand of his fellow townsmen met him at the station with a band, banners and what Kansas calls "low-necked hacks." There was

C. S. FINCH,
Editor, *The Lawrence Gazette.*

speech making in the public park, the orators representing characters from "A Certain Rich Man." Nowhere but in Kansas would such a program be carried out. Of his earlier books, "The Court of Boyville" has taken a place among classic boy stories of today.

Mr. Howe has written books, too. He sat up nights and produced "The Story of a Country Town." He printed it in his own print shop and sent it out, crude in its physical form, but with a touch of what modern journalists call "human interest" that appealed to every reader. William Dean Howells read it and wrote an enthusiastic review; then an Eastern publishing house reprinted it and it has attained a permanent place as one of the real American novels. After that he wrote other books, but none so successful as his first. His latest is a story of his trip around the world, told in charming details that make the reader see things as he saw them. Howe originated the corn carnival, an unique celebration that has been copied East and West. Almost shy in his relation to outside public affairs, he must be sought. White, on the contrary, travels much and knows more public men than any writer in Kansas. When Roosevelt was President he ate at the White House every time he went to Washington.

Capper and Morgan are in another class. The former drifted in from a country village and secured a reporter's job in Topeka. Later he went to Washington as its correspondent. Now he owns the *Capital,* has four hundred employes on his various publications, which are printed in a $100,000 building, which shows that there is a field almost anywhere for the right sort of a youth. He is too busy to write much these days, but knows how to get the kind of a staff that can write. Morgan is a member of the Legislature, regent of the State University, a banker, and other things—but he puts in a lot of time at the busiest desk in his newspaper office. He went to Europe three years ago and wrote "The Journey of a Jayhawker." It had so much humor that several thousand dollars' profit accrued. As soon as the royalties were paid he went right back to Europe and spent them, which is typical of his temperament.

Nor is he the only office-holding editor. Kansas is partial to newspaper men in politics, which perhaps accounts in a measure for their success. They have some hope of appreciation. A country editor, E. W. Hoch, has just completed two terms as Governor; three Congressmen, D. R. Anthony, C. F. Scott and Victor Murdock, are editors; one United States Senator, J. L. Bristow, is an editor. The Superintendent of Insurance, C. W. Barnes; the State Printer, T. A. McNeal; the State Game Warden, T. B. Murdock; the secretary of the Historical Society, G. W. Martin; and the clerk of the Supreme Court, D. A. Valentine, are editors, while a half dozen are in the Legislature. What other State has given the press more prominence? In other activities may be mentioned J. E. Junkin, recently president of the National Editorial Association, and F. P. MacLennan, a prominent officer of the Associated Press. The first ten-story skyscraper in Kansas is being built by an editor, H. J. Allen, of Wichita.

The Kansas editor long ago passed the stage of taking potatoes on subscription. He is generally prosperous and takes a hand in the business affairs of the town. He has shared in the general prosperity that enables his subscribers to pay in advance and the merchants to advertise liberally. The starved, dependent struggling country paper is a rarity—and no editor can issue a good paper when he must borrow money every week to pay the help. Scarcely a county seat town of 4,000 population has less than two daily papers, while any town of 600 without at least one weekly is a rarity. Altogether there are 75 dailies and 635 weeklies published for the 1,600,000 people of Kansas.

As one handles a bundle of Kansas exchanges he is surprised to note how high an average of merit they reach and how few are crude and primitive. That the State has so many capable writers is evidence of the mental activity of its educated classes. That it supports well so many papers proves that it is a reading commonwealth. That it has so many editors known beyond the State's borders indicates its lack of provincialism and its grasp of wider activities of the times.

ABILENE, KANSAS.

The Negro in Cincinnati

BY FRANK W. QUILLAN

[In our issue of July 20, 1905, we printed a very significant article by Mr. Quillan, entitled "Race Prejudice in a Northern Town." It was a description of the town of Syracuse, Ohio, where no negro is permitted to live. The following article is the result of a study of the status of the negro in the life of Cincinnati, Ohio, prepared under the direction of the Department of History of the University of Michigan in which Mr. Quillan has been working for the degree of Ph. D. It will not be forgotten that Cincinnati is a Northern city and boasts of being the birthplace and present home of the President of the United States.—EDITOR.]

SAMUEL J. TILDEN, Democratic candidate for the Presidency in 1876, called Ohio a "d——d nigger State." The writer of this article, knowing that Ohio has the most interesting negro history of all the Northern States, spent the past summer touring Ohio and investigating the relations existing between the white and colored races today, to see whether the above statement is still true. I visited Cleveland, Akron, Columbus, Springfield, Dayton, Urbana, Xenia, Cincinnati, Hamilton, and many smaller cities, and talked with all classes of both colored and white people. My object was to learn the facts about what the two races think of one another, or more specifically, to find out how much race prejudice really exists. I believe that I started on the investigation unbiased, so far as it is possible for a man to be, and I desire to remain so, letting facts stand as they are. The negro question is a delicate one to treat, for the reason that there are two distinct classes of readers on the subject, one reading all on the subject that is favorable to the colored man and relegating to the waste basket all that is unfavorable, and the other doing just the opposite.

The object of the writer of this article is to bring the two classes together on a common plane, to submit facts as to conditions, and let each reader draw his own conclusions.

While conditions vary in different cities, the following facts about the situation in Cincinnati are, in a broad way, typical of all the cities of Ohio, the nearest to an exception probably being Cleveland.

In the first place, no colored man is allowed to enroll in the Ohio Medical College, which is a branch of the University of Cincinnati, a public institution, nor can he enter the Eclectic Medical School. In fact, there is no school in the city where he is privileged to equip himself for the medical profession. If he leaves the city and secures his training elsewhere and then comes back again, he finds the door of opportunity closed. The colored doctor, no matter what his training has been or what his ability and standing may be, is not allowed to operate in the large City Hospital, a public institution maintained by taxation to which the colored people contribute their share. He is debarred from the Seton Hospital, on West Sixth street, and, in fact, from all hospitals save two small charity concerns. Colored people, received with reluctance into separate wards in the City Hospital, are refused the privilege of having a physician of their own race attend them.

Recently there came up the question of having colored men in the Health Department, and the Board of Public Service, which, of course, is made up of white men, handed down the decision that it would be unwise, as the colored sanitary officer would be compelled to call at the houses of white men during the latter's absence, and their wives would be made subject to insult in having to accept orders of a colored man.

There is not a negro to be found in the city fire department, which employs hundreds of men, all, of course, paid out of public taxation. The reason given for their absence is that white firemen will not work with them, as they would be compelled to eat and sleep alongside of them under the present manner of conducting the department.

The officers controlling the Municipal Bath House now forbid all colored

people to bathe there. The privilege was granted for a short time recently under Democratic administration, but the house became practically a colored institution so quickly that the reform party had to withdraw the privilege.

All the popular parks, such as Chester, The Lagoon and Coney Island, exclude the negroes. Some of them have one "nigger day" each year, when the colored people are allowed to pass the sacred portals which are forbidden them the rest of the year. Some negroes are employed as waiters and porters at Coney Island, a leading park, six miles up the Ohio River. These are compelled to ride on the *deck* of the steamboat going and coming.

Hotels, restaurants, eating and drinking places, almost universally are closed to all people in whom the least tincture of colored blood can be detected. A colored man of education and culture, of unusual musical ability, and of great prominence among his people, told me that his wife was white enough to run the gauntlet, but that he was not, and that often when they happened to be down in the city at the noon hour he would send her into a white restaurant for her dinner, while he would stand on the curb and wait for her, or go to some cheap place for a "hand out," which he would generally have to take outside before eating. The same man told me that if he wanted a glass of beer he would have to go to some out-of-the-way place or low "dive" for it. The Bartenders' Union has passed a resolution forbidding its members to wait on a colored person, and they live up to it. On Fifth street, between Central avenue and Broadway, a distance of a dozen blocks, a colored man cannot enter a single saloon and buy a drink, or even a ham sandwich. W. P. Dabney, a colored man of education and of recognized ability in music and other arts, the Assistant Paymaster of the city of Cincinnati, handling tens of thousands of dollars annually, and paying it out to the Mayor, Chief of Police, and all other city employees, personally told the writer of the following experience: He and another prominent musician had, at much financial risk and trouble, secured a famous pupil of Rubinstein, an Italian, to give a concert in Cincinnati. After the concert was over the performer asked the committee to go to a saloon and have a drink with him. They all agreed and entered, the party consisting of the Italian musician, another foreigner, and the colored man, Mr. Dabney. The conversation at the moment happened to be about America, and the Italian was congratulating his companions upon their privilege of living in this land of the free. They sat down at a table and called for something to drink. The bartender could see but two at the table, and those the foreigners. The one real American, simply because his skin was dark (no, not that, or the Italian would have been unnoticed also), tho he was the trusted employee of a great city, was beneath the notice of a bartender.

At the Sinton Hotel, where Mr. Taft made his campaign headquarters, the colored man is not welcome even to standing room in the lobby. No matter how prominent he is, if he desires to see a white man on one of the upper floors he must take the freight elevator, or the lower compartment of the elevator, the "Jim Crow" compartment, we may call it.

The Pullman Car Company refuses to sell berths to colored people going South. Under stress, they will offer to put them in the drawing room, which costs more than they can afford to pay, and which if occupied would segregate them from the whites. Trains pulling out of Cincinnati for the South have their "Jim Crow" coaches, into which the colored people are asked to go. If they do not go willingly they are compelled to do so on reaching the Kentucky side of the Ohio river.

The Y. M. C. A. refuses them either active or associate membership. Recently some young colored men established a Y. M. C. A. on Walnut Hills, a prominent suburb of the city. The white Y. M. C. A. rose in holy wrath at this defilement of their name, and caused the colored organization to change its name to the Y. B(oys) C. A.

The Ohio Mechanics' Institute, probably the largest school of its kind in Ohio, has recently decided to deny them admission.

In the Children's Home, on Ninth street, another large public institution, colored children are permitted to stay but twenty-four hours, after which they are sent to the Colored Orphans' Asylum. The Automobile Club of America has decided to give orphans of cities in which there are branches of the association a free trip to the country annually. The Cincinnati branch two years ago forgot (?) the colored children. Last year, after a very heated public discussion of the matter, it was decided that there were not enough colored chauffeurs to draw them out, so they could not take them.

Theaters universally exclude the negro, or at the best give him a gallery seat, and that possibly at an advanced price. The large city workhouse, reformatories, city and county prisons, and hospitals, separate white and black as much as they possibly can.

The negro can neither rent nor buy a house in a decent section of the city without paying an exorbitant price. If he does succeed in buying a desirable piece of property, his white neighbors will endeavor by all possible means to get him out of it. Sometimes they even threaten his life, but more often they buy him out, generally paying him considerably more than the property cost him. This is expensive for the white man, but he maintains his price. Many negroes are taking advantage of this pride to better their financial condition, and many more would be doing the same if they had the capital. The following extract from a conversation with a colored preacher in one of the suburbs of Cincinnati will illustrate their attitude and their methods: "If I had a little money saved I would make the white folks pay for their prejudice. I would have some 'poor white trash' buy a lot in a fashionable neighborhood for me, and then I would declare my ownership and my intention to build. Immediately I would get many offers to buy, and when I could sell at a good profit I would let it go, and then I would buy another piece, and so continue. I could make a fine living in that way, far better than I can in the ministry, but I haven't the money to start with."

In St. James place, a fashionable residence district of Cincinnati, there lives a colored man of much prominence, being connected with the Southern Freedman's Aid Society and the Methodist Book Concern. The white neighbors have offered him big inducements to sell, but he, not being of the type represented above by the colored preacher, has refused all overtures and insists upon his rights.

But all of these prejudices, galling as they might be and would be to any white man, are small ones in comparison to one other. That other is the one that strikes at the law of self-preservation, strikes indeed at one of the basic principles of our life, namely, that every man should be permitted to earn his bread by the sweat of his brow, working in that pursuit best adapted to his ability. The colored man in earning his living is hampered on every side by race prejudice. The labor unions as a whole do not want him and will not have him, and their members will not work by the side of him. The result of this is that he is practically debarred from all mechanical pursuits requiring skill. He can join the hod carriers' union only, and this is due to the fact that not enough white men can be found to do the work. The bricklayers' union, the painters', the carpenters', the lathers', the plumbers', the barbers', the bartenders', the printers' unions, and many others deny him admission. The white man cannot employ them in any skilled work if he has so large a job that he has to employ white men along with them. The white men will not work with them, there are not enough colored people prepared to do the work to do it alone, and the result is that no matter how much the white employer himself is free from prejudice, his hands are tied, he must of necessity, generally speaking, refuse to employ the colored man in any skilled capacity. Many colored men who had come from the South told the writer that there was no such condition as this existing in the South; that if a colored man became capable of laying brick or doing carpentry work or any other skilled work, he was as freely employed in it by the whites as the white laborers themselves were.

Besides their being debarred from

skilled labor, they are not employed as stenographers, bookkeepers or office men in any capacity except that of janitor. Not one is employed as teacher in the public schools, none are employed as clerks in stores or factories.

The post office work is open to them because of its being under civil service rules, and we find them generally measuring up to the possibilities in this line. In the Cincinnati Post Office there are twelve employed as clerks and twenty-eight as carriers, making a total of forty out of a grand total of seven hundred employees, or about 5 per cent., which is the per cent. of colored people in the city to the total population. In the police department there are twelve colored patrolmen out of a total of six hundred and ten, which is one-half their quota according to population. They get these places as policemen from the white people solely as a price for the colored vote.

The learned professions—the law, the ministry and medicine — are open to them, but the few who are brave enough to attempt these find that they can hardly make an honest living. The white people, of course, will not employ them, and, strange to say, their colored brothers are almost as much against them, but for different reasons, one of which is jealousy (a very strong race trait, as dozens of them themselves told the writer during the summer), and the other is lack of confidence. They will not respect the advice of one another, but will take the white man's every time, having learned during their days of slavery to look upon the word of the white man as law.

What are the causes of this strong prejudice in the city of Cincinnati? In general they are the same as are found in other cities of the State. The one big cause is that—"well, *just* BECAUSE."

The other causes are:

(1) There is a large number of ignorant colored people coming in from the South, seeking the land of the free, where they can have "their rights," many of whom mistake liberty for license.

(2) When a negro commits a crime the newspapers always emphasize his race connection by such head lines as "A Big Black Burly Brute of a Negro" does such and such, and the whole race gets a share of the blame; while if the crime is committed by a white man, race is not mentioned, and the individual gets the blame.

(3) The mixing of the lower classes of the two races causes jealousy and ill feeling in these very classes, and much revulsion of feeling and fear in the higher classes.

(4) Cincinnati has always catered to the Southern trade and still does; therefore she adopts much of the South's attitude toward the negroes.

(5) An unusually large number of Cincinnati's population very probably has been in the South for a time and then returned to the North. It is almost the universal observation that such people, after their return, forever despise the negro.

(6) The white people constantly complain of not being able to depend upon the negro; they say he is shiftless, careless, and too prone to appropriate little things belonging to other people.

(7) The negro more and more is entering politics as a negro, and demanding rewards for the negroes, in the way of positions and public offices. Naturally they are meeting with strong opposition and much secret resentment. The following words from the New York *Tribune* of June, 1877, apply so remarkably well to conditions in Cincinnati and other cities thruout the State of Ohio that I quote it in full:

"If a delegation of red-haired gentlemen should invade the White House with a petition to be recognized they would at once arouse the hostility of bald-headed patriots as well as of those whose hair was black or gray, and there would be established a color line in hair, which would complicate the difficulties of civil service reform. It is equally clear that if a deputation of citizens who wear false teeth should demand some offices for their class, the citizens who gum it would combine with those who masticate their food with natural grinders, not only to the discomfiture of the fictitious ivory party, but to the peril of our institutions. Citizens of African descent should reflect before they commit like indiscretions. The political salvation of the negro depends upon his keeping out of politics *as* a negro. If he keeps everlastingly besieging the Executive Mansion in squads in order to have his color recognized he will succeed in establishing a very distinct color line. It will be a blessed day when negroes and white men both come to under-

stand that appointment to office is not one of the inalienable rights of an American citizen, and when they can impress upon the gentlemen who are reforming the civil service that appointments are to be made solely for the purpose of transacting the business of the Government and solely upon the ground of fitness, and that race, color, previous condition of servitude, or present condition of politics are to be considered no more in the selection of place-men than they are in making out the tax list."

(8) The fact that so many negroes appear in the police court and prisons certainly hurts their cause greatly. According to the report of the Chief of Police of Cincinnati for the year 1905, there were 12,138 white people arrested and 3,107 colored. According to the census of 1900 there were 325,000 people in the city and 14,482 were colored. By a little study of these figures we see that in proportion to their respective populations there were five colored people arrested to one white, and we can also see that if the white people were as criminal as the colored, the police would have made the enormous number of 68,345 arrests that one year. In 1906 there were 11,284 arrests of white people and 2,658 of colored. There were remaining in the House of Refuge, the city prison for young people, on December 31, 1907, 238 white children and 95 colored. From the annual report of the Cincinnati workhouse for 1907 we learn that there were 2,414 white prisoners and 949 colored. About the same proportion has obtained for the last several years. From a study of these figures one must conclude that in recent years and in this one city, at least, the criminality of the negro has been fully five times as great as that of the white man.

Many "extenuating circumstances" might be offered to explain this difference, but the figures tell the more convincing story to the average man.

Many other causes possibly enter into the making of this condition of affairs in this one city. I have mentioned only such as came under my observation and such as throw extra light upon the facts presented. Here and there possibly I have appeared to favor one side and then another. I have tried very hard to present the facts and all the facts that I learned. May they help to better the relations between the two races.

YPSILANTI, MICH.

The Answer

BY MARGUERITE OGDEN BIGELOW

ONCE (and perchance it will happen again)
There was a chorus of young voices eager to know what love is,
And how it may be recognized.
And all the worlds of God and all His laws combined to answer them,
But few heard.

Love is not joy in the body, nor joy in the beautiful,
It is not passion, nor is it passionless,
But these things love does, and by these it may be known:
Love stands armed at the house door to protect the mother,
And gives the strength of the body to nourish the child.
Love faces travail and the chance of death undaunted.
It nurses sickness, enriches poverty and laughs at ill report;
It fills with strong wine the chalice of courage.
Love makes truth out of falsehood and control out of lawlessness;
It places the spirit on a throne over the body.
Know that when you have seen these things you have seen love!

BURLINGTON, IA.

The Tourist in New Zealand

BY ALEXANDER HUME FORD

GREAT, immense, republican America maintains vast national parks, exploited by individuals or specially favored and licensed transportation monopolies, which are merciless in their charges to the public. In compact little New Zealand and broad, imperialistic Australia there are also extensive national parks, but these are exploited by the Government for the people, and so great are the improvements and so reasonable the cost of reaching these resorts that almost the entire populace, at some time or another, people them, living therein as cheaply as at home. How different from the American way!

AUCKLAND.

To the visitor the most remarkable thing in New Zealand is its Government bureau for the care, supervision and direction of the tourist. Not only is it the most remarkable thing to the stranger in this strange land of reforms, but it is the most welcome. The Government has actually created a department whose sole duty it is to look out for the purse and creature comfort of the man who wishes to see the country. He is carried from place to place by the Government, at rates with which no private tourist agency, relying upon commissions, can possibly compete, and is lodged at cost by the Government in hotels built by the state for his comfort and accommodation. Moreover, state guides are ever at his beck and call, and gratuities are practically unknown. New Zealand has become, by Government fiat, not only the workingman's but also the tourist's paradise.

In every large city of Australasia there is a magnificent "New Zealand Government Tourist Bureau" building, where every possible kind of information concerning the New Dominion is placed temptingly before all who will enter. Tours de luxe and tours of New Zealand afoot are mapped out and arranged with equal impartiality. The tourist may enter the country with a month's rail transportation paid for first or second class, at a rate of from fifty cents to a

dollar a day, as he may elect to pay, and hotel accommodations provided for first class at from two to two and a half dollars a day, and second class at a rate half as high, while widows, orphans and the really needy are especially taken care of at rates greatly reduced from these, for it is a part of the duty of the Tourist Department to look after the health of the people, and the New Zealand Government spends millions on its health resorts, making them really health resorts both from recreative and scientific standpoints. The man who enters New Zealand has the entire possibilities of the marvelous country placed before him by men of science and accuracy. The cost to him of travel has been reduced to a minimum and the possible benefits exalted to a maximum, and it has all paid New Zealand and its Government splendid dividends.

Our Government creates a national park and turns it over to a monopoly to conduct, so that those of modest means are kept out. In New Zealand the national parks really belong to the people and to the Government. Any one may erect a hotel or open up a stage route, but if he overcharges, the Government teaches him a lesson by erecting its own hotels and establishing its own 'bus lines, which are conducted so as to make a fair profit. This rate determined, they are leased to private parties, conditional upon a standard service at a standard rate, both set by the Government.

It costs a little over a cent a mile to visit from Wellington, the capital of New Zealand, the Rotorua District, or National Thermal Park, that in every way rivals our own Yellowstone.

At the New Zealand Government Accommodation House at Waimungu (a geyser that shoots 1,500 feet, or several times as high as any in Yellowstone), the rates, including room and board, are $2 a day for the first three days, and $1.50 per day thereafter. And this is a real spacious, comfortable hotel, where excellent meals are served. In Rotorua, Government example has reduced hotel

Looking toward Mt. Earnslaw.

rates and raised the standard, so that those of moderate means may secure all the comforts of hotel life on Government reservations at rates within reach of all. Thruout New Zealand it is the same. Even on Mount Cook the Government hotel charges are but $2.50 a day, and money is made at this rate; so that other hotels fall in line and they, too, make money. The Government has made possible the existence of private hotels in many districts by its system of erecting rest houses every few miles along mountain trails. These contain bunks in separate huts for men and for women, with a common dining room. The charges are 50 cents a night for lodging and 50 cents a meal, or you may pack your own provisions. Those boarding at Government hotels by the week merely show their cards and no charge is made them. The Government will even supply you with equipment for independent mountain climbing and exploration—a tent, 25 cents a day; sleeping bag, 10 cents; ice axe, 10 cents, and so on. Of course, if you employ a Government guide these charges are included. For glacier excursions the fee for a guide is not less than $3.50 a day, or if there is a party of five to be conducted, about $1.50 each person. The Tourist Department keeps horses for the use of those who wish to ride, hiring them at about $1.25 a day. In every way the New Zealand Government entices its own people and visitors to the country to make extended tours of its wonderful national reserves, and probably no people in the world know and love their own country better than do the New Zealanders.

Imagine our Adirondack, Champlain and White Mountain region exploited by the Government as a great health park for the multitudes. Rotorua, the Saratoga and Hot Springs of New Zealand, is absolutely under the control of the Minister of Tourist and Health Resorts. Here he has ordered the erection of a

NATIVES COOKING IN A STEAM HOLE AT WHAKAREWAREWA.

palatial bath sanatarium, and the hot pools in the city park are open to the public at a cost per bath of 12 cents, including towel and private dressing-rooms. Great medical swimming pools abound, a hundred walking tours are mapped out in every direction for parties of visitors or the lone tourist, and every few miles there is a hotel or a rest house for his accommodation. He may wander for days, with or without a guide, among the geysers, or ascend mountain peaks, on the summit of which he will find that the Government is prepared for his comfort. All this is mapped out, the Tourist Department issuing free to all a book giving every possible trip by rail, coach, boat, bicycle, horseback or afoot thruout the entire Dominion, with the positive cost of each stage of any journey, hotel rates, everything that the tourist may desire to know. Were Mt. Washington situated in New Zealand, its Government Tourist Bureau would have foot and carriage trails constructed, a rest house half way up and at the summit, while every effort would be made to get the people to indulge in a health-giving walk to the top.

So successful was the Government Tourist Bureau idea in New Zealand that New South Wales, in Australia, followed suit, and began expending millions upon the building of roads and trails, opening up caves, for the delectation of the sightseer, creating skeeing grounds on the summit of her one snow-clad peak, building Government hotels in far-off places, and organizing a literary campaign of travel. The result has been that the railways are taxed to accommodate the people who wish to know their country, and every one of the Australian States has found it to its advantage to adopt the New Zealand idea. Today the finest structures in Melbourne and Sydney are the Government Tourist Bureau buildings, and both the Federal Government of Australia and that of the Dominion of New Zealand are erecting palatial "Tourist Bureau buildings" on the Strand, in London.

MAORI CANOE ON THE IONGARIRO RIVER.

New Zealand does not confine her attentions to the three main islands; on far-off Raratonga, in the Pacific, the Government Tourist Bureau has erected a hotel, rates $10 per week, if you please, so that those New Zealanders who are advised to take an ocean voyage may do so and be sure of accommodation in the South Seas at rates within their means. This is far different from the French idea in Tahiti, where the tourists, according to Jack London and other recent visitors, are fleeced unmercifully, and in spite of its delectable beauty, place Tahiti upon the "never again" list. New Zealand is straining every nerve to secure frequent and regular service between her ports and those of our Pacific Coast, and now, with the assistance of Hawaii, this seems likely of consummation.

FRANZ JOSEF GLACIER.
From Sentinel Rock, 692 feet above the sea.

Perhaps no land has ever been fairer to the tourist and visitor than has been and is the island of Oahu, on which Honolulu is situated. The Territorial Government is now making an effort to introduce the New Zealand system in the islands, with accommodation houses everywhere and reasonable rates to and among the islands. A delegate was sent by the Governor to study the Australasian system, and Australia sent its delegates to meet and consult in Honolulu with a committee appointed by Governor Frear. The object of the meeting was the linking up of Australia, New Zealand, Java, the South Sea Islands, the Philippines, and possibly Japan, Alaska and our Pacific States, to work for a common cause, looking toward the extension of the New Zealand tourist plan to other lands. Hawaii is taking the lead in this hands-across-the-sea movement, which it is spreading, but New Zealand remains as the model on which the practical work is based.

Hawaii is endeavoring to have the volcano of Kilanea, which is the largest active volcano in the world, and Haleakela, on the island of Maui, the largest quiescent crater known to man, both set aside as national parks, conducted on the New Zealand plan, not with palatial hotels for the wealthy tourist, but with

well-equipped accommodation houses for those of moderate means, horse and foot trails everywhere, and transportation rates regulated by the Government, with a monopoly to no one. California is also feeling her way along the New Zealand lines, and it seems probable that the first real steps on the American continent looking toward the treatment of the man who would travel as one who is a seeker after higher education, and never as legitimate food for leeches, will be taken in co-operation with our Australasian neighbors to draw the Eastern man westward, instead of leaving it entirely to the European tourist agents to have their way and tempt him eastward.

AUCKLAND, NEW ZEALAND.

Why America Is Better

BY PAUL JOSEPH REPP

[Mr. Repp is a Lithuanian immigrant whose naturalization in St. Louis, November 5 attracted attention because of his naive appeal to Mrs. W. K. Kavanaugh, a society leader, for advice as to how he might hear sung certain American patriotic songs, "in respectable manner and place," to celebrate the day of his citizenship; and Mrs. Kavanaugh's genial response with a full program in a hired hall. This article was obtained by an interview.—EDITOR.]

WE Lithuanian people are mostly very ignorant. When we come to America we nearly always fall in under a leader—either the saloon or the priest. The Lithuanians have soft hearts and soft characters, and they are sure to be led. They will seldom act of their own initiative. That is why, if the American people would help them a little, and show them, they would become better citizens. The kind of voters they will be depends on the way they get started.

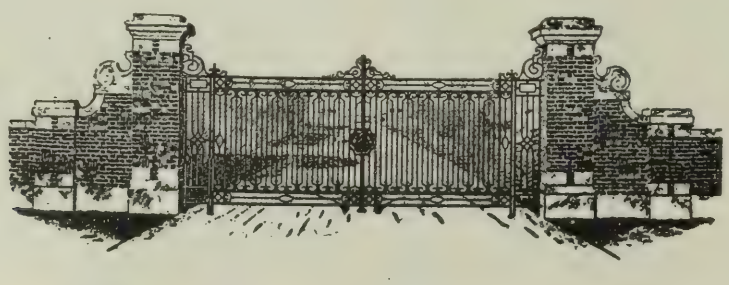
In the six years since I landed with my wife and babies in New York, I have thought many times that it would be a good thing to keep a second quarantine of ninety days. I mean a school where an emigrant could be taught how to get along in America without being cheated and fooled. Even if he had to pay for this out of his own pocket, I think it would be cheaper than what he often does have to pay before he finds things out. I am not complaining for myself. Ladies and men have been very kind to me, but I know that there are other sorts of people, too. I was better educated than the most, as I served five years in the Caucasian First Engineers' Corps, and I had relatives in the priesthood, and so on. But any one who is quite ignorant of the language must suffer if he falls into the hands of designing people.

When we came I had with me a letter to St. Joseph's Home, 117 Broad street. We came out from quarantine. It was not pleasant there. My stomach was sick. My head went around with the noise. Men surrounded me, and caught at me. They would take me, they would take me, they said. What could I do but go with some of them? "Will you surely take us to St. Joseph's Home?" "Oh, yes, yes."

There went with us from the ship two girls and a young boy. Girls are these bad guides' prey. They are easy, because they are so ignorant. Everything you have read about this in "The Jungle" is true. The guides took us thru the streets, at last to a crowded bar and tables. "Here we are," they said. Soon I saw there was a great deal of bad conduct going on. I could not believe that St. Joseph's Home would be such a place as this. But they insisted it was St. Joseph's Home. So I ordered supper. But when we had eaten our supper, I jumped up and said we would go. There was a big outcry, that I could not leave, that I must pay. But the boy and I spoke out loud. I paid for all, and we struck out a little with our fists, and the

women and children and all of us got out on the street. Undoubtedly, as I know now, the people of that place intended to make us drunk and rob us. After asking several persons on the street I found out that St. Joseph's Home, 117 Broad street, was only four or five blocks away. We walked to it, and when we got there I told the authorities pretty clearly, in Polish, what had happened, and asked what could be done to those people. They said they knew every day such things were done, and it was a shame, but they could not prevent it.

I think I must study politics before I make up my mind how to vote. That will take time. I am sure I will not be anything but an outright American. I have no sympathy for those who say they are Irish-Americans, or German-Americans, or Russian-Americans. A friend of mine, a Lithuanian, who has been in this country more than twenty-five years, reproaches me with this, saying that I ought not to go to the "pagan" churches —by these he means the Protestant—but that I should observe Fridays and Wednesdays as my fathers and my grandfathers did, and should stick to all their old ways. But I reply, No. Russia is dead to me. Americans are very good to associate with, and by choosing American company I know the language better now in six years than he does, altho he has been here more than twenty-five years. I am not a Lithuanian-American. but a true citizen who loves his country first, above even the country in which he was born. I will go to the Catholic Church of my ancestors perhaps, but if the Protestant Church be nearer, I will go to that if I wish. It saves shoe leather and street car fare, and I know enough to know that it is not any more "pagan" than the other is.



My little son will be a soldier, I hope. I do not now think of anything I would rather see him become than an American soldier. It fills my heart with joy that I have freedom, under the Stars and Stripes. I am making $3 a day in the Frisco railroad machine shops, and we have our own home, with a mortgage on it, but that will be lifted in time. And I probably do not feel the change of conditions as deeply as others, for my pay as an engineer and machinist was equal to that of eight laborers in Russia.

American women are so intelligent and well educated that I think they are equal in sense to the men. In Russia a woman of the poor classes is in slavery, almost. There is no divorce for her—that is only for the nobility and those who are rich. A breach of promise suit for a poor girl who has been betrayed helps nothing in Russia. In America I see men compelled to pay enough to support children brought into the world in this way, but a girl over there has no chance in court unless the evidence is so plain and so much of it that no one can disbelieve it. Then the man may have to pay 50 rubles, never more. That is the limit.

They say that Russia is a poor country—that that is why the people are poor. It is not true. As I went over the land, on the railroad with my engine, I could see what I knew already, that Russia is rich, very rich, in fertile land, and forests, and minerals—miles upon miles unoccupied except for the estates of the nobles, who will never sell the land.

We all love Tolstoi—that is, all of us who read. I am not in the least a Socialist, but I love liberty and fair play. I want to be an independent American—to read the Bible, to hear good leaders advise, and to live by my conscience.

St. Louis, Mo.

An Analysis of the British General Election

BY HERBERT ADAMS GIBBONS

ON the 21st of February the King will open a new Parliament, whose membership will be as follows: Liberal, 275; Labor, 40; Nationalist, 72; Unionist, 273; Independent Nationalist, 10. If the Independent Nationalists "stand out," as is probable, Mr. Asquith will have a working majority of 114. At the least, he can count upon 104 voices over the Unionists in support of the two great issues upon which the general election was fought—the passing of the budget, with its clauses for raising revenue from land taxes, and the limiting of the veto of the House of Lords.

An attempt has been made in the Conservative and Unionist press to claim that the Ministry has virtually suffered a defeat, that the gain of over a hundred seats by the Unionists is a "moral victory," a protest against the budget, a justification of the action of the House of Lords which precipitated the election, and, above all, an indication that tariff reform is coming. A large portion of the Unionist press professes entire satisfaction with the result of the election, and predicts a near dissolution. Much is being said about the untenable position in which Mr. Asquith finds himself, owing to his dependence upon the Labor and Irish vote. A proposition has even been made that a neutral Ministry should be formed under Lord Rosebery to prevent a "deadlock" and to straighten out the tangle into which the political affairs of England have gotten. It is openly stated that Mr. Redmond is now in the saddle and will dictate the policy of the Ministry that his Irish following is "a motley horde," is supported by money raised in America, and that if Mr. Asquith forms an "unholy alliance" with Mr. Redmond he will be degrading the British Parliament by making it wholly under the influence of American gold.

When we consider the fact that the Unionists have gained so heavily, not only in members returned, but also in actual votes, it does seem that the Liberal party has experienced a serious setback, and that its preponderance in Parliament is very slight indeed. I think, however, that an analysis of the general election proves just the opposite. This election has been one of tremendous importance. Its influence is bound to be felt upon the life and thought of America. So I feel justified in presenting to American readers thru THE INDEPENDENT the results of the election, not only as they are viewed by the leaders of the Liberal party, but also by very many Unionists, who unwillingly recognize the mandate of the people.

The following table gives the division of the vote in 1906 and 1910:

	1906.	1910.
Liberal	2,700,261	2,844,871
Labor	409,691	474,429
Unionist	2,456,237	3,020,209
Liberal and Labor	3,156,952	3,319,300

I do not claim absolute accuracy for this summary, as it has been compiled from the newspapers. But it is accurate enough for our purpose, and any slight discrepancy would not change the facts which it reveals.

I have left out the Nationalist vote, as it does not enter seriously into the questions at issue. Aside from the Nationalist vote, there is an actual majority for the budget and for legislation against the House of Lords of 160,000. Proportionately, Scotland and Wales are far ahead of England in rolling up this majority. It will be noted, first of all, that all the parties have increased their actual vote since 1906. But the Unionists have gained over 500,000, while the Liberal increase falls a little short of 150,000. In Scotland and Wales the Liberals increased their majorities at the expense of the Unionists. So this 350,000 votes which the Unionists have gained over the Liberals, and which accounts for their parliamentary gain, is entirely to the credit of England.

Does this indicate a growth in tariff sentiment, or a general reaction toward Unionism?

In dealing with this majority we must remember first of all that the tidal wave toward Liberalism in 1906 did not represent an overwhelming change of heart on the part of the electorate. Hundreds of thousands of seeming Liberal votes were not given because of a trend toward Liberalism. The Unionist party had been returned quite fittingly in 1900 with a majority of 134 seats, and with the good will of the people. But in its five years of administration it lost twenty by-elections and gained none. In 1906 its reduced majority of 94 was converted into a Liberal majority of 354. The virtual reimposition of Church rates and the question of freehold licenses had aroused such a storm of protest that the Tory Government was swept ignominiously out of office. It is a mistake to believe that all Nonconformists are Liberals. In many parts of England they are largely Conservative and Unionist, especially the latter. But their votes in 1906, tariff reform not being then a vital issue, were given to a hostile party for the express purpose of remedying what they considerd a great wrong. Naturally, they returned to their own political affiliations in the recent elections. Of this I shall speak again.

A second reason is the unprecedented use of the plural vote, in which the Unionists possess an overwhelming advantage. Last month every plural voter endeavored to make all his votes count. As there are at least 300,000 more plural voters in the Unionist than in the Liberal camp, and as these voters possess anywhere from two to ten—in some cases even more—qualifications, the possibilities of this are so far beyond imagination as to make the work of the analyst rather discouraging and uncertain! The university seats all represent plural votes, and not one of them is held by a Liberal. No parson ever forgets to put in his vote at Oxford or Cambridge, or both. In increasing the efficiency of the plural vote in the late election the motor car proved a great factor. It has come into general use during the past few years, and the plural voter no longer bewails his luck if the poll in several constituencies of which he is an elector fall upon the same day. (The motor car, by the way, was used extensively to bribe the ignorant rural elector. "A ride for a vote" was a great, an irresistible temptation. Liberals vied with Unionists in this sort of work.)

A few weeks before the election, practical Unionist politicians saw that the tide was not turning their way, and so a last desperate effort was put forth by endeavoring to make Unionism and patriotism synonymous terms. The articles of the Socialist Blatchford in the *Daily Mail* are a striking commentary of the blue pre-election prospects of the Unionists. Germanophobia was launched upon the electorate. During the first week of the election, while there yet seemed to be hope, the opposition press printed dispatches from their German correspondents describing the gloom and terror felt in Berlin over the Unionist successes! There is no doubt that this war scare and the navy agitation gained many converts to the Unionist candidates.

Another reason for the Unionist increase was the presence of their candidates in Irish districts, which they had not opposed against the Nationalists in 1906; while the Liberals had to suffer from the remarkable growth of 65,000 in the Labor vote.

Now let us examine the vote in detail.

Ireland.—The Unionists received some encouragement from the gratifying returns which greeted them from those districts where they endeavored to oppose the Nationalists. They were successful in gaining only Middle Tyrone in this way, however, and this because of two Nationalist candiates, and not because of actual superiority in votes. They hail with joy a split in the Nationalist ranks which has just occurred. Mr. O'Brien's followers successfully contested ten Nationalist constituencies, and have formed the nucleus of a new party. It is hardly true, however, to say that these "O'Brienites" were elected as a protest against the budget. The ground upon which the Independent Nationalists stand is far broader than that. In the north of Ireland the Unionists captured two Liberal seats, but these had both been Unionist in 1900. In Belfast

West, however, they failed to regain a seat which they had held unopposed in 1900, in spite of a three-cornered fight. This seat they had counted upon as one of their "dead sure" wins. The Liberals succeeded in holding their own in the few other Irish seats which they possess, increasing their majority in one important city constituency.

Wales.—The vote in Wales can hardly bring any comfort to Churchmen. The reiterated demand for a Welsh disestablishment bill was stronger than ever before. In almost every district the Liberals rolled up a greatly increased majority. Their list of increased majorities amounted to 19, and the Labor party's to 3—90 per cent. of the Welsh seats! The two Unionist gains were insignificant. Denbigh, their old stronghold, which they barely lost in 1906, returned to them by 8 votes. Radnor, Liberal in 1900 and 1906 by majorities of 166 and 175, fell to them with a majority of 14 votes out of 4,430. In Swansea, where the Church has claimed a great increase in membership and where the Congress to protest against Disestablishment was recently held, the Unionists felt sure of a win, especially since the Labor party had a candidate in the field. The vote was: Liberal, 6,202; Unionist, 4,375; Labor, 1,452. The Liberal majority of 1900 was 1,115; of 1906, 1,454; of 1910, 1,645. Adding the Labor vote, which is all for Disestablishment, Swansea shows an increase in majority against the Church of almost three thousand in ten years! This is the history of most Welsh constituencies.

Scotland.—The Unionist defeat in Scotland was most decisive. I know that their leaders had counted upon the return of some of the seats which they had lost in the anti-Anglican landslide of 1906. Conservative Scotland, ably helped by the press, put forth strenuous efforts to regain its position in many important districts of Scotland. The Unionist gains were all the return of seats held before 1906. These were more than offset by a Liberal gain of 5. The Liberals retained, mostly with increased majorities, 19 seats which they had wrested from the Unionists in 1906. One Labor gain from Unionist in 1906 was also retained. In 4 seats of Lanarkshire, the Liberals were successful in spite of Labor tickets in the field which polled several thousand votes in each constituency. Two of these, Northwest and Govan, had been Unionist both in 1900 and in 1906. In Ayreshire North, Fifeshire West, and Leith Burgs the Liberals retained their seats, altho, as in Lanarkshire, Labor candidates polled large votes. The Unionists were deeply disappointed in not gaining these seats where there were three-cornered fights, and the loss of Govan and Lanark Northwest could hardly be believed. They had also expected to recapture the important Glasgow Central division, which had returned a Unionist in a by-election in 1904. The Liberal party increased its majority in 30 constituencies, independent of the Labor vote.

We have seen how the Liberals not only held their own, but demonstrated a healthy increase over 1906 in Wales and Scotland. Now we shall consider England, where the Unionists gained over a hundred seats from the Liberals.

We must remember what was said above concerning the Nonconformist Conservative and Unionist vote in 1906. One who has followed the course of general election after general elections, with a knowledge of the distinctive elements of the different English counties, readily sees that the Liberals in 1906 had to thank the Nonconformist Tory vote for many of their seats. The Unionist gains in England were, with the exception of 14, the return of these naturally Tory seats to the Unionist fold. Of the Unionist gains 91 were seats which they had held in 1900, and 29 of them had been so strongly Tory as to have been unopposed at the election of 1900.

On the other hand, the Liberals retained 77, and the Labor party 16, seats which had been Unionist in 1900. *At least 75 of these 93 seats Mr. Balfour felt that he had a reasonable chance of regaining. It was upon the basis of this belief that he and the other Unionist leaders advised the Lords to refer the budget to the people.*

The Unionists gained 9 seats from the Labor party, 2 of them owing to a three-cornered fight. Six of these seats they had held in 1900, 3 of them unopposed.

Six of their wins from the Liberals were in divisions where they did not succeed in getting a majority of all the votes polled.

The Labor party gained from the Unionists the important seat of Wigan, and 6 of the Liberal gains from Unionists were of seats which the Unionists had held both in 1900 and in 1906. In 3 of these seats the Unionist candidates had been unopposed in 1900.

As far as the budget referendum goes, one of the most significant facts of the election is that 9 of the Liberal gains from Unionists were of seats that had been lost on a by-election since 1906; while the Unionists cannot count a single gain of this nature. The Labor representatives are unreservedly for the budget. The 72 Nationalists are for the budget in so far as the issues of the late election are concerned. So the land taxes have won. All the Labor and Nationalist members of Parliament will stand shoulder to shoulder with the Liberals in legislation against the veto of the House of Lords. So, on these issues of the general election, the voice of the people, not only in Great Britain, but also in England, has spoken with no uncertain sound.

Now, how about British tariff reform, a question in which Americans have every reason to be deeply interested? I confess that I should like to find here some gleam of hope for the Unionist, as my sympathies are personally on that side in this issue; but I cannot.

Every day during the election the enthusiastic Unionist dailies of London would come out with headlines proclaiming the wonderful gains which "Tariff Reform" was making. The *Times,* however, was more reserved, and at last reluctantly confessed that England did not yet seem ripe for the pet policy of the Unionist platform. One might go much farther, and say that the general election of 1910 has revealed an amazing distaste for tariff reform in those parts of England which are competent to speak upon this question, and among the people whom tariff reform is supposed to benefit. It is either this—or a tremendous enthusiasm for Mr. Lloyd-George's budget!

Where were the Unionist gains and their large majorities? In what parts of England did the people clamor for tariff reform, rebuke the land taxes, and commend the House of Lords? In the agricultural regions of the south and midlands where the lord and squire reign supreme, in sleepy cathedral towns where man lives on his income or off the rich endowments of the Church.

I do not want to talk generalities, but to give facts. The Liberals increased their majorities in 48 districts, 6 of them with the co-operation of the Labor vote. Of these increases the most noteworthy occurred in the following counties: Yorkshire, 13; Lancashire, 9; Durham, 4; Cheshire, 2; Northumberland, 1. Ten Labor increases of note, in districts which were abandoned by the Liberals to them, were all in the northern counties.

The story is the same for Yorkshire, Durham, Cumberland, Lincoln and Cheshire.

How do the seaports like tariff reform?

Let us examine the 9 Liverpool seats and the 1 belonging to Birkenhead, which, tho in Cheshire, is naturally of Liverpool. In the Scotland district Mr. O'Connor made a big increase in his Nationalist majority. Abercromby, a seat held unopposed in 1900, went back to the Unionists with a majority of 526. Everton, also unopposed in 1900, gave a Unionist majority of only 1,706. The great Exchange seat, held by the Unionists in 1900 with a majority of 1,297, and which had gone to the Liberals in 1906, was counted as a "sure thing" by the Unionists. Not only did the Liberals retain the seat, but they slightly increased their majority. Kirkdale has had four elections since 1900. The Unionist majority of 2,295 in 1900 has steadily decreased to 223 in 1910, and the Liberals have now put a red crayon mark against Kirkdale. East Toxteth, abandoned without opposition to the Unionists in 1906, retained its present member with a majority of 285 out of 8,000 votes polled. West Toxteth, which went unopposed to the Unionists in 1900, gave them this year a bare thousand majority over a Labor candidate. Walton, formerly unopposed, cut its Unionist majority down to 1,114. This has been

the history of ten years in the middle-class West Derby constituency: 1900, Unionist unopposed; 1903, majority 2,204; 1906, majority 1,847; 1910, majority 1,508. Birkenhead, where the Unionists were unopposed in 1900, but beaten in 1906, was, like the Exchange seat, counted upon as a sure return to the Tory fold. It remained Liberal.

I should not have been able to write this article had I not known beforehand something of the Unionist "hopes." I have merely compared the hopes with the results. Mr. Asquith may get into trouble with Mr. Redmond, and there may be some reason for prophesying a short term of life to the present Parliament. But, were I Mr. Balfour, I should not welcome another general election very soon.

London, England.

The Experience of Haverhill

BY DE MONT GOODYEAR, Ph.D.

[The commission form of city government started in Texas and has not only spread thruout the State, but is even being adopted thruout the country. The following article gives a succinct account of its success in Haverhill, Mass.—Editor.]

IN January, 1909, The Independent published an article entitled "The Example of Haverhill," in being the first city in the East to substitute a municipal council consisting of a mayor and four aldermen elected at large for the old form of city government, consisting of a mayor and two chambers.

Numerous inquiries are pouring in from students in colleges and citizens from all directions, asking for our testimony after experience. Here is a brief statement expressing it.

1. *Professional politicians are down and out.* Men of integrity and ability readily responded to the new opportunity. Whereas before the professional politician with the party name attached to his own upon the ballot held the city helpless in his grasp, now, deprived of party trademark, he has in three desperate attempts been beaten to dismay.

The first election was a close contest. During the year a defeated candidate for mayor attempted to use the recall for political purposes by forcing a new election. This failed, because the people were so well satisfied that he was unable to secure a sufficient number of signatures upon his petitions to bring about the special election. At the end of the year two of the new aldermen were candidates for re-election. After the preliminary vote their rivals were Roswell L. Wood, an ex-mayor, and James O'Connell, an ex-alderman, two of the most astute politicians and successful vote-getters ever known in Haverhill. Despite the tremendous exertions of these two men and all the forces allied with them, the new councilmen were returned by pluralities of 1,729 and 1,026 respectively, out of a total vote of 6,289. This offers ample proof that the people were too well satisfied with good business management of public affairs to revert to the old order of things.

2. *The financial success* of the new council has exceeded the most sanguine expectations. That accounts for the strong endorsement at the polls. The old city government frankly admitted that it was unable to run the city on its income and desired the Legislature to raise the legal tax rate. The borrowing capacity was exhausted, and toward the end of the year 1908 the city was actually unable to pay its last bills, amounting to $61,000, and a deficit to that amount was handed down to the new city council as a starter.

During this first year, with a slightly lower tax rate, that deficit was wiped out, and at the end of the year the city treasury contained a cash balance applicable to current expenses amounting to $36,000. The only unpaid bills for current expenses were those incurred dur-

ing the last week, and therefore too late for presentation before the books were closed. This net gain of $97,900 appeared after a year conspicuous for good service, especially in permanent street construction and paving. For the first time in many years no bonds were issued for street lighting.

How was it done? By carefully planning for all departments months in advance; by unearthing taxable property, and by getting full value for every dollar expended. Here are a few examples of the results when purchases are made in a businesslike manner. In 1908 the old form and in 1909 the new form of government made purchases at the following prices:

	1908.	1909.
Cannel coal (for fire engines) per ton	$12.00@$15.	$9.00
Disinfectant, per gallon	1.25	.40
Soda, per pound	.03	.01½
Oils, per gallon	.35@.55	.18@.23
Soap, per hundred	4.00	3.65
Shovels, per dozen	9.00	8.25
Lanterns, per dozen	5.00	3.90
Kerosene, per gallon	.12	.08@.09½
Tar, per barrel	2.25	2.15
Pitch for paving, per barrel	19.20	14.00

After making the proper allowances for changes in the market prices of these articles, the comparison is impressive. These are not exceptional cases selected to make a showing, but are illustrative of what generally prevails. When one reminds himself that his city consumes large quantities of merchandise, it is of great interest to him as a taxpayer that the purchasing be done with businesslike skill. This does not necessarily mean that graft entered into the purchases in 1908. Lack of intelligence or time on the part of the purchaser will likewise punish the taxpayer.

3. *The license question.* Unexpectedly this situation has greatly affected the license issue. Liquor license advocates depend mainly upon the revenue argument to win votes. At the last election the no-license forces used the excellent condition of the city treasury so effectively as completely to demolish the money argument, winning a decisive victory. The anti-saloon people believe that the good enforcement of law now secured will assist them in the future.

4. *Ease of administration.* Our citizens now know which alderman has charge of a given department. The mayor's clerk is also clerk for the aldermen. His telephone is always ready and any citizen can thus communicate with the right alderman at any time. This convenience greatly assists the people to secure prompt action on the part of the public servants. This simple fact, taken with one other, viz., that there is no dodging of responsibility, is of the greatest importance in securing the right co-operation between officials and people. The new charter has given us a centralized efficiency and at the same time it has made the city more democratic by putting the people in control. With the experience thus far the people of Haverhill are more than satisfied.

HAVERHILL, MASS.

In the Forgotten Lands

BY LUNDY HOWARD HARRIS

In the far forgotten lands,
By the world's last gulf of night,
Gasps a naked human soul,
Writhing up and falling back,
Screaming for a God who cares

In the far forgotten lands,
By the world's last gulf of night,
Bat-like creatures vex the gloom
And whimper as they shudder by—
"Is there any God who cares?"

In the far forgotten lands,
By the world's last gulf of night,
Walks the cross-stained Nazarene,
Searching ever for his own
On the crumbling edge of hell.

In the far forgotten lands,
By the world's last gulf of night,
There He wanders, all alone,
Dragging bleeding hearts from hell
With the whisper, "God does care!"

NASHVILLE, TENN.

Literature

Eucken's Philosophy

THE awarding to Rudolf Eucken, in 1908, of the Nobel Prize for Literature has served to call attention to the distinctive aspects of his philosophy, the main feature of which is a belief in the infinite worth of the spiritual life that lies beyond and gives actuality to the natural and human life. The spiritual world is an independent world; it is not a human product, yet every man must win for himself a part in this life or find his existence an empty mockery, a half life. The progress of the life of the spirit is sketched by Eucken in his book of this title,[1] a book that serves admirably as an introduction to his more technical works.

It is this spiritual progress that gives significance to history and makes its story more than the description of a magnificent but meaningless pageant. Philosophy, too, earns its claim to recognition as a servant in the outer temple of the spiritual life. By pressing home the questions that besiege the honest thinker, it shows how inevitable is the yearning that drives one to metaphysics as a refuge; to a metaphysics, above all, that is religious in tone and justifies earthly life by an appeal to a Beyond.

Yet the claims of modern life are distinctly hostile to metaphysical beliefs. The satisfaction the modern world finds in work for its own sake, the pride it feels in making for itself a world of reality and rejecting all restrictions, the courage with which it faces the problems of Nature, are wholly at variance with the religious need of belief in a final purpose, of a dependency upon a power not ourselves, of a conviction of sin. The struggle of thought has been to find unity amid multiplicity; yet the world today is intoxicated by diversity. It is burning itself out in the fever of progress. Thought would seek the Permanent; the modern world would deify Becoming. Thought struggles to reach a timeless truth; but modern positivism would rest satisfied with isolated facts. A shallow culture looks askance at religion, yet the pursuit of worldly happiness has ended in deep skepticism as to the reality of an abiding joy.

Nevertheless Eucken holds that an enlightened reading of the history of thought shows that there is no cause for despair in the present outlook. Always the spirit has come to its own, enriched by the conflicts thru which it has passed. For the spiritual life does not merely transcend the life of nature and of humanity, it is also in some strange way immanent in it.

Eucken would interpret the history of philosophy[2] in a large and serious way, as a deepening of the life of the spirit. A new unity and a greater faith evolve from the contradictions of experience and the profound unrest of the individual. This coming to consciousness on the part of the spirit Eucken conceives as a religious matter, nay, even as a matter of Christianity, if Christianity be interpreted liberally. This emphasis upon its religious aspect distinguishes Eucken's history of philosophy and determines the estimate he places upon the contributions of different thinkers as upon those of Plotinus and the formulators of Christian theology. Those philosophers appear greatest who have broken thru the bounds of their own systems and given wings to their infinite desires. In Plato the poet is found a source of fresher inspiration than in Aristotle—"the master of those who know." Eucken recognizes, too, the worth of the merely individual outlook. The extravagant vagaries of German romanticism, the bitter pessimism of Schopenhauer, the destructive subjectivism of Nietzsche—even these point beyond themselves to the "life of the spirit."

The great spiritual experience of the world Eucken finds in Christianity,[3] for which Greek thought served as a prepa-

[1] THE LIFE OF THE SPIRIT. *By Rudolf Eucken.* Translated by F. L. Pogson. New York: G. P. Putman's Sons. $1.50.

[2] THE PROBLEM OF HUMAN LIFE. *By Rudolf Eucken.* Translated from the German by W. S. Hough and W. R. Boyce Gibson. New York: Scribner's Sons. $3.

[3] CHRISTIANITY AND THE NEW IDEALISM. *By Rudolf Eucken.* Translated by L. J. Gibson and W. R. Boyce Gibson. London and New York: Harper & Bros. 75 cents.

ration. He would show that it "not only has a great past, but also a great future." Just when its extinction seems imminent come the signs of its revival. Yet in its reconquering of the world it will appear stripped of all accretions incidental to its historical development. Much of modern uncertainty in belief, much of its skepticism, can be traced to the break with ecclesiasticism and the throwing of the individual back upon his inner life which took place at the time of the Reformation. But this break was inevitable; inevitable, too, the warring of consciences and the license of disbelief which today precede the new unity that is to come.

The revival of Christianity, according to Eucken, will bring no return to primitive beliefs, no return to an ecclesiasticism whose mission is worked out. The new Christianity will be one that answers modern needs in a modern way, one that will introduce unity into a civilization that threatens to go to pieces of its own complexity. What form the upbuilding of the kingdom of God may take cannot be said in advance, but unless this kingdom of God come the life of the spirit will go out in darkness. Its prophecies will have failed.

It is a matter for congratulation that Eucken's philosophy has reached his English readers in such admirable translations, translations that preserve the dignity and fine literary tone of the original production.

Race Culture

In the past history of the human race, so far as we know it, efforts toward the betterment of the conditions of life, in so far as they were conscious, have been almost entirely in the direction of modifying and improving the environmental conditions under which man finds himself obliged to live. The attempt has been made to bring about a more perfect adjustment between man and his environment largely by adapting the environment, so far as might be, to man's needs and caprices. That we have gone far in this direction is sufficiently obvious to any one who enjoys the creature comforts of contemporary civilized life.

But this very ability of man's to control his environment (both physical and social) and in some degree abate its asperities removes *ipso facto* one, and perhaps the most important one, of the agencies which were instrumental in raising him to his high estate. Natural selection, as we know its action among plants and animals, operates to produce racial improvement or evolution by eliminating the unfit, the "undesirable citizens" of organic life. This elimination is brought about by environmental pressure. The animal which is not able, as a result of perfect health and an abundance of vigor, to withstand the rigors of a severe winter, for example, is killed off, and makes way for his betters, which possess the necessary vital equipment to meet the conditions. In modern human society the thing works very differently. So far as possible, thru organized charity and other similar agencies, man tempers and adapts the harsh features of the environment to the powers of resistance of the weaker brother. Nature is no longer allowed to take her course with man. The unfortunates are looked out for.

This brings us to the logical *raison d'etre* of the new science of eugenics. If, as the theory of organic evolution maintains, the progressive evolution of man to what he now is has been the result of the naturally selective action of the environment on a plastic organism, and we then so modify the environment that it can no longer have any but a very much reduced selective action, it is logical to assert that some human agency must be brought into play to take the place, so far as may be, of the no longer operative natural agency.

This eugenics aims to do. Its fundamental assertion is that the continued improvement and betterment of the human race, either physically, mentally or morally, cannot be insured, nor can its degeneration be prevented, solely and entirely by adapting the environment to man. On the contrary, attention must be paid to the fundamental biological make-up of man himself. The unfit, the great body of physical, mental and moral derelicts, must not be allowed to reproduce themselves indiscriminately, as

they now for the most part are. And further, every legitimate effort possible must be made to encourage the reproduction of the fittest. This does not involve any change in the laws and sentiments now governing the marriage relation in civilized countries, but inculcates a deeper sense of responsibility for it.

The first book to deal specifically and solely with the subject of eugenics is Saleeby's *Parenthood and Race Culture.** Dr. Saleeby has in the past been a prolific writer on evolution, with particular reference to human affairs. He has been very active in the eugenics movement in England from its beginning. The present book is a frank and enthusiastic exposition of his personal views regarding eugenic problems and their solution, giving expression to ideas which in many cases are distinctly outside the pale of eugenic orthodoxy. The work falls naturally into two main divisions. In the first of these divisions, "The Theory of Eugenics," the author discusses those fundamental biological considerations upon which all eugenics propaganda must rest. The second part, "The Practice of Eugenics," deals with such topics as selection in marriage, racial "poisons" (*e. g.*, alcohol, syphilis, etc.), and the promise of racial culture. An appendix includes a useful tho brief annotated list of literature on eugenics and kindred subjects. While this book can in no sense be regarded as a contribution of anything new to what is already known of eugenic principles, it is to be commended as a forceful and interesting popular presentation of the existing state of knowledge and expert opinion in this highly important field.

A Son of the Immortals. By Louis Tracy. New York: Edward J. Clode. $1.50.

Delgratz, capital of Kosnovia, is another of the fabled cities of the air situated in the Balkans. As in the first of the novels of little kingdoms and their kinglets, "The Prisoner of Zenda," the author of *A Son of the Immortals* has caught the picturesque contrast between Old World intrigue and the frank and straightforward methods known as "American diplomacy." The reigning King and Queen of Kosnovia having been victims of assassination, reminding the reader of a like recent tragedy in Servia, the next in line is a dissolute exiled monarch living in Paris; his son Alexis, by an American mother, rashly dares the adventure of regaining the throne on his father's abdication of all claim to it. He is in love with a pretty copyist in the Louvre from Vermont, and he is a genuine American in spirit, quite determined to rule his tiny kingdom well—or proclaim a republic; he is frank, manly and fine, his wit and courage are matched against Serb prejudice and Greek craftiness; his ministers are determined to marry him to a Princess of Montenegro. Here are materials for a swift and exciting romance, and Louis Tracy knows how to make the most of them. It is a story of political adventure, bravely carried off. We wish the artist, who bears no less a name than Howard Chandler Christy, had read the book! The picture of General Stampoff, opposite page 75, wears a mustache which the author had shaved off a few pages before. How it could have grown between Paris and the Danube is an illustrator's secret, priceless to a barber.

The Ball and the Cross. By Gilbert K. Chesterton. New York: John Lane Co. $1.50.

Mr. Chesterton has apparently taken Mr. Shaw's advice to produce works of art instead of always criticising those of others. *The Ball and the Cross* is a novel in form, an extravaganza in substance. A duel prolonged over so many pages grows a little monotonous, but Mr. Chesterton is not monotonous, altho he repeats himself without hesitation. We recognize passages from "Orthodoxy" in their new setting:

> "Man is a beast whose superiority to other beasts consists in having fallen."
>
> "All thru his life he thought of the daylight world as a sort of divine débris, the broken remainder of his first vision."

A young Highlander, born and bred in the Catholic faith, sees in a secularist's window a scurrilous remark about the Virgin Mary, promptly smashes the window and challenges the atheist to fight a duel with swords for the honor of Our Lady and the satisfaction of her defender. The two men, in deadly earnest, seek a place where they may fight,

*Parenthood and Race Culture. An Outline of Eugenics. *By C. W. Saleeby.* New York: Moffat, Yard & Co. $2.50 net.

and, pursued by the police, are interrupted again and again, and an insane asylum forms their precarious final refuge. An outline of the story could give no idea of the impassioned argument of the fleeing duelists; of the mixture of the ordinary and the supernatural; of the alternations of the grotesque and the grandiloquent, the pathetic and the preposterous, that form the fantastic fabric of the tale. There is much of symbolism, patent and obscure. The Ball typifies reason and the Cross a divine unreason; one rounded, complete, ending in itself; the other unsymmetrical, imperfect, stretching out to infinity, down to the heart of man and upward to God. MacIan, champion of the Cross, and Turnbull, the protagonist of the Ball, fight thru many changes and picture the endless conflict between the mystic and the materialist. The author respects them both, altho he has scant patience with the Tolstoian and the Nietzschean, equally invertebrate, unreal and insincere, as they try to hinder or encourage the duelists. Each of the men dreams a dream, in which he sees the world as it would be if his own ideas should prevail, to the exclusion of his antagonist's. These dreams are full of beauty and terror; a midnight landscape swept by tempest and revealed by flashes of lightning in a series of pictures as vivid as Mr. Chesterton's pyrotechnic art can make them. One is a frozen world of blue-white steel; the other a world on fire; and they are equally insupportable, the Ball without the Cross, and the Cross without the Ball. Each needs the other and man needs both.

Cardillac. By Robert Barr. New York: Frederick A. Stokes Company. $1.50.

In spite of the historical incidents of this book it is chiefly a love episode, and tho we are sure of the hero's prowess in his hazardous adventures, we feel that love rather than pure delight in danger is the stimulus. The scene is in France, in the time of Louis XIII. The Queen-mother is a prisoner in the Castle of Blois, and by chance Victor de Cardillac is forced to espouse her cause. He falls in love with one of her ladies-in-waiting, and thereafter his efforts to free the Queen arise from a more specific desire than that of displaying unselfish patriotism. After the escape has been effected by means of a silken ladder invented by Cardillac, the author turns his back upon the history of his book and concerns himself with the happy consummation of the romance. No more is heard of the Queen or the plots for her restoration, tho from the care with which the historical framework was arranged one might have expected at least a definite conclusion. This Mr. Barr fails to make. It is an unfortunate feature of the book that he does not force all lines of action to converge into some point and thus leave the reader with a clear impression of the climax.

History of the Great American Fortunes. By Gustavus Myers. Chicago: Charles H. Kerr & Co. Vol. I. $1.50.

After decrying both eulogists and muck-rakers, Mr. Myers declares that "great fortunes are the natural, logical outcome of a system based upon factors the inevitable result of which is the utter despoilment of the many for the benefit of a few." His object "has not been the current one" of portraying the owners of great fortunes "either as remarkable successes or as unspeakable criminals." He hardly succeeds in this laudable purpose, for he freely charges the subjects of his studies with practising cruel, extortionate, illegal methods. His zeal for propaganda often upsets the judicial poise of the historian. Because shippers in early days were allowed by the United States Government from six to eighteen months in which to pay custom duties the author is aghast and denounces "the shippers' huge graft," "the free-of-interest loan from the Government," as he styles the long credit. He seems not to suspect that the merchant and the free trader, looking at the other side of the shield, see the Government as the robber of the suffering merchant. Every fortune, according to this work, is based on force or fraud of some sort. The reader would accept a number of Mr. Myers's withering statements and insinuations with more readiness if they were better backed with references to authorities. Overstatement weakens his case not infrequently. For example, to multiply the articles in his indictment of John Jacob Astor, the writer describes the trappers as "poor wretches, who gave up

their labor and often their health and lives for Astor!" How unlike from Parkman's description of "the grim romance of the trappers' hard, wild life." It is possible to recognize that the adventurous, rough life of the wilds did not produce "poor wretches," meek victims of city cupidity, without abating one jot of indignation over the stupid ways and laws of men, that yield to hardy daring but scant rewards and pile riches on the lap of the cunning bargainer. Doubtless far better methods will be found to conduct the world's work than the ways which have produced the Girards, Astors, Fields and Goelets. Especially the lavish gifts of city land values by the community to favored individuals, gifts which this volume shows to have been the source of some of the biggest fortunes, may be checked when a few more rays of intelligence pierce the twilight of the common mind.

The Poems of William Winter. Author's Edition, with a Portrait. New York: Moffatt, Yard & Co. $2 net.

A vein of sadness runs thru this latest collection of a life's poems by William Winter. Like a November day the evening of hope and promise, natural to youth, seems to have come on early, with a little gathering of mist which, later, was to be driven away perhaps by the lamplight and glow of friendship. That his friends were many is amply indicated by the many graceful partings, when absence was to be temporary; wistful *au revoirs,* when the meetings elsewhere were only to be hoped for. His measures are always of the long-accepted order, never the bold inventions of the riming *nouveaux riches,* who nowadays help themselves to the manifold product of the shops and sometimes get a collection of rhythmic "longs and shorts" worth patenting, but oftener do not. As a poet, Mr. Winter could hardly have had very warm sympathetic relations with such. The old melodies that send a thrill of delight among the contented every-day folk —measures so deftly managed by Longfellow, hallowed by Whittier, made rich and warm by the wit of Holmes—measures varied enough for the uses of those who wished to put thought, beauty and human passion into verse—thinkers as well as singers. Mr. Winter has long been the poet of friendships—of warm-hearted, almost of womanly attachment to persons. There is never a forced note in his verse of reminiscence, of generous fellowship, of eulogy. It is invidious to speak of one poem as better than another, when all express so well the heart of the man; but one that, like a good painting hung in the every-day room, calls from us every morning a glad note of recognition, is the beautiful tribute to George Arnold, which is called "A Reverie." It is possible to find in his best pieces, as there were in the exquisitely fresh and beautiful measures of Wordsworth, prosiac words—words so homely of feature that one questions why they were invited to a company when they could not dance. There are also phrases once fresh and welcome, when they first had a card for the dance, but have been so beaten about that they belong to the winds. They live best in the company with which they grew up. They are, like an old beau in the ballroom, of finer manners perhaps than the company they have fallen in with. It would be unkind to the reader to point them out. Let him find them if he can. Many will welcome such old friends. We all, like the traditional old lady, have our dreamy "Mesopotamian" words, worth all the rest of the sermon.

A Manual of American Literature. Edited by Theodore Stanton. Leipzig: Bernhard Tauchnitz. (Putnam. $1.75.)

The four thousandth volume of the cheap and popular Tauchnitz Library is given to a collection of manuals of the different periods of American literature, by members of the faculty of Cornell University. The late Moses Coit Tyler deals with both colonial and revolutionary times, and there are seven chapters on the nineteenth century. The statement that John Hay wrote "The Breadwinners" is here authoritatively made for the first time. Most persons have long suspected the fact, and some have known it, and the statement will thus cause little surprise. The authorship of the novel "Democracy" is unhesitatingly given to Henry Adams. The work is comprehensive and thoro, and it is brought down to date, for most of the current writers are included.

Literary Notes

....The General Assembly of the Southern Presbyterian Church observed the 400th anniversary of the birth of John Calvin by special exercises in connection with their meeting at Savannah, Ga., last May. The *Calvin Memorial Addresses* delivered at that time have been published by the Presbyterian Committee of Publication, Richmond, Va. Among the speakers were Dr. James Orr, of Scotland; Prof. Benjamin B. Warfield, and Rev. Henry Collin Minton.

....A complete treatment of organized charity—the movement, its requirements for its workers and the good it accomplishes—has been published under the inadequate and rather indefinite title *How to Help,* written by Mary Conyngton (Macmillan, $1.50). It is an exceedingly comprehensive work, and its chapters on the homeless man and woman, its care of needy families, and the discussion of the problems of child labor will prove of value to the philanthropic worker.

....International law is being made rapidly nowadays and the fifth edition of Wilson and Tucker's standard work on that subject just issued by Silver, Burdett & Co. ($2.50) has been expanded to include the decisions in regard to the wireless and submarine telegraph; aërial jurisdiction; the Geneva Convention of 1906 for the Amelioration of the Wounded in Armies in the Field; the results of the two Hague Conferences and of the Naval Conference at London in 1908-1909; the bearing of the Pan-American Congresses; and the effects of recent wars, as the Russo-Japanese, Spanish-American and Boer Wars, upon military agreements.

....Longmans, Green & Co. have recently produced in a new and revised form President Wilson's little book on *Division and Reunion, 1829-1909* ($1.25), which is one of the three volumes in Professor Hart's well-known "Epochs" series. The utility of the book has been greatly increased by the concluding chapters, since 1889, prepared by Professor E. S. Corwin, of Princeton. Few of our younger scholars are so well equipped as Mr. Corwin to discuss the recent constitutional evolution within the United States. His survey of recent history is exceedingly brief, but we know of none that is saner or more illuminating.

....After reading *How Two Hundred Children Live and Learn,* by Rudolph R. Reeder, superintendent of the New York Orphan Asylum, at Hastings-on-Hudson (New York: Charities Publication Committee, $1.25, postpaid), one envies the lot of the orphan, and begins to question the superiority of home training over that of such institutions. Dr. Reeder has told in his book how he trains his waifs to become useful and independent men and women by making them helpers in the small groups or families into which they are divided. His chapters on economic training, punishment, and moral training could be read advantageously by parents as well as teachers in institutions.

Pebbles

A SAILOR had just shown a lady over the ship. In thanking him she said: "I am sorry to see by the rules that tips are forbidden on your ship."

"Lor' bless you, ma'am," replied the sailor, "so were apples in the Garden of Eden."—*Brooklyn Citizen.*

"My teacher's name is Brown," said the first little girl.

"My teacher's name," replied the other little girl, "is Davis, but I don't know what color it is."—*The Catholic Standard and Times.*

I love a pretty maiden;
  For her I fondly sigh.
Her face so sweet I seldom greet;
  Of me she's very shy.
I follow her day after dav
  'Mid scenes of strife and squalor;
If you would view this maiden, too—
  Look on a silver dollar.

—*Smart Set.*

A Danish paper compares "I love you" in many languages. Here are some of them—the Danish paper is our only authority for their correctness: The Chinaman says, "Uo ngai ni"; the Armenian, "Ge sirem ez hez"; the Arabian, very shortly, "Nehabeeck"; the Egyptian, similar, "N'achkeb"; the Turk, "Sisi sevejorum," and the Hindoo, "Main tym ko pijar karyn." But overwhelming is the declaration of love of an Esquimau, who tries to win the chosen one by the pleasing sound of the dainty little word: "Univifigssaerntdluinalerfimajungnarsigujak."—*Ladies' Home Journal.*

AN auctioneer advertised on his office window for an assistant, and added a list of qualifications which showed that he expected his new man to possess all the virtues.

Many people read the notice and turned away, but at last a more venturesome individual entered the office and informed the auctioneer that his brother was just the man for the job.

"What's your brother like?" queried the auctioneer. "Is he quiet?"

"Oh, yes."

"Used to a long time stopping in one place?"

"Rather. Sticks to one spot like glue."

"Never gets into trouble through meddling with other people's business?"

"Never."

"Wouldn't answer back if I called him the hardest names I could think of?"

"He'd be as mum as a fish all the time."

"Jove! He's the very man I want. Where is he now, this brother of yours?" eagerly inquired the auctioneer.

"Couldn't say with confidence," dryly responded the man as he backed toward the door. "He's been dead for the last seventeen years!"—*New York Sun.*

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $3.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

A Word with Our Readers

It will please our readers, we are sure, to learn that our subscription list has increased twenty-five per cent. in the last six months. Figures tell their story; and it is interesting to notice in what sections of the country the increase has come. New England has barely held her own, the States of Maine and New Hampshire showing a small actual loss. New York State has gained largely, numerically, but not so greatly on a percentage basis. The South shows steady gains thruout, and the Pacific States all give a good increase. The heavy gains, however, are in the Middle West and Texas. The last named State more than doubled its list of subscribers, and almost secured the largest numerical increase, altho that distinction goes to Ohio. Besides Texas and Ohio, the States gaining the most new readers were Illinois, Pennsylvania and Missouri, in the order named.

The western movement of our population is emphasized by these figures. Homes in New England are broken up, and the families take their magazines, like their household gods, with them. The spirit of progress in our great Middle West demands a full supply of the best literature. We hope that the good work may go on, and that next year we may be able to report to our readers another substantial gain.

Animal Photographs and Vacation Experiences

Again we throw upon our readers the responsibility for our Vacation Number, relying on them to see that we are supplied with plenty of attractive pictures and good stories of good times. Ordinarily our contributors are authors by profession or persons who do a great deal of writing for the press, but our Vacation Number, the first in June each year, is "Amateur Night," when anybody has a chance and everybody is welcome. For everybody, they say, has at least one good story to tell, and many of these pertain to the recreative period of the year, when the modern man and woman break away from their diurnal treadmill and go forth in search of the unusual. When a camping party sit in the evening on boxes, logs, rocks and blankets, and watch the camp fire burn down—do you build it in the log-cabin or the tepee form in your country?—and a story is demanded from each person in the circle, it is usually forthcoming, and one who sneaks away in the darkness to his tarpaulin just before his turn comes round is not so welcome to the firelight ring next night. That is the sort of gentle compulsion which we would impose upon all of our readers to induce them to break thru their natural modesty and reserve and tell us of the best time they ever had, or the worst time, which would be equally enjoyable to us. True stories, of course; The Independent is not a fiction magazine. Still, truth is a relative term, particularly when relating to one's own adventures.

"Here's my wisdom for your use, as I learned
it when the moose
And the reindeer roared where Paris roars
tonight;
There are nine and sixty ways of constructing
tribal lays,
And every single one of them is right."

What Kipling said of the tribal lays is true of the vacation story, but the professional authors have only discovered a

dozen or so of the sixty-nine varieties. That is why we look beyond them and appeal to the larger public outside the literary ring.

If you can send a photograph or a sketch to illustrate your vacation experience, so much the better. We will pay you $2 for it. But we want many more photographs than these, for there will be sixteen pages of solid pictures in that issue, and all about animals. Last year we had pictures of children. This year we will take in the rest of the animal kingdom, and if we get as many different kinds of animals and in as great a variety of postures as we got of children, you will find those sixteen pages worth looking over.

We want photographs of all kinds of animals, native and foreign, wild and tame, edible and inedible, the friends and foes of mankind; all sizes, from the elephant to the protozoon, from the comparatively harmless tiger to the malarial parasite which slays millions of human beings a year. We interpret the word "animal" in the good old way of the Game of Twenty Questions, as meaning everything not mineral or vegetable, so do not forget the birds and snakes, insects and fishes.

The vacation experiences should be told in a concise, graphic, personal and unaffected style; less than 400 words, unless you want to run the risk of their being cut down. For each story that we print we will, as last year, give two annual subscriptions to THE INDEPENDENT, of the value of $6. You can have your own subscription extended by two years or send THE INDEPENDENT to one or two friends, preferably the latter. This is worth trying for, since it costs only a postage stamp and a few minutes of pleasurable retrospection and transcription. For the most interesting and attractive photograph of animal life we will pay $10; for the next best, $5; and for all the others that we can use—and we can use a great many—$2 apiece. Put your name and address, as well as a descriptive title, on the back of each print and enclose postage, and we will return the unused prints. Manuscripts alone cannot be returned. All photographs and vacation stories must be in by April 15, 1910.

Yellow Dogs

IN the investigations which brought Governor Hughes into public prominence the term "Yellow Dogs" came to be applied to the blackmailing legislators whose "strike" it was to introduce legislation hostile to corporations, and squeeze money out of them by the threat of enactment if they were not paid for suppressing it. It is not this State alone that knows this breed of dogs which wins more rich prizes than any dog-show. There are packs of them, hunters of game and carrion; and they are particularly numerous about capitals in smaller towns of States in which there are large cities; at Albany, N. Y.; at Harrisburg, Pa.; at Springfield, Ill. At the investigation of the insurance companies in this State the trail of the pack was seen, but the yellow dogs themselves were not found. Now, for a wonder, the trail is hot and they are in sight.

The present case is a small one in itself; it was only a few thousand dollars a year; and when the demand rose to ten thousand dollars the bridge companies could not afford to buy protection at so high a price. They would be blackmailed no more. Think, then, what must have been extorted from the wealthy metropolitan corporations in the days when the "black horse cavalry" were in the saddle, for they were spoken of as a freebooting troop as well as a pack of dogs. Then protection as well as extortion was reduced to a system; a famous lawyer, or a shrewd business man was kept at Albany to provision the pack, and a fine house was rented for their kennel. All this came out a few years ago in the investigation of merely the insurance companies. In those days the cost of dog-meat was enormous, and it is almost a surprise to learn that the bones of the humbler corporations were not disdained.

In this investigation, at last, the very names are given us of those who received the bribes. Usually we would not speak of such a criminal charge until the defense had a chance to be heard; but in this case no doubt would appear to be left. Senator Conger himself testifies that he was the go-between. He received the threat. He reported it to the bridge companies. He went to Albany, himself

a member of the Legislature, with the man chosen to carry the bribe money. He pointed out the men to whom it was to be paid. He saw it safely given. Both men have testified fully and without contradiction, and everybody believes he has told the truth. To one man, now dead, four thousand dollars was given for distribution. To the Speaker of the House, Mr. Nixon, as testified to, one thousand dollars was paid, and as much to Mr. Allds. And this continued year after year, and men chosen, in theory, to make wise laws for the State, made trade of their office, and amassed fortunes. What worse crime, what more shameful perversion of a trust could be conceived?

And this system by which public trust has been made a private profit has not been confined to New York State alone. It has been developed in other capitals. Most fortunately we are trying to break up in California and Illinois and Pennsylvania and Missouri the yellow dog system. There is some improvement in legislative and executive morals. No place can be found to set up in Harrisburg the statue of the distinguished head of one such system. It is well that here in New York an investigation can go back beyond the reach of the statute of limitations, and not be confined within the criminalities of a current session. The sins of the dead rise against them. It is found that crime does not pay. A leader well versed in New York politics admits that Governor Hughes "is a wiser man than you or I will ever be," and all the politics he has is persistent, intelligent honesty. Let the scandals be digged up. That is publicity which only scoundrels can complain of.

Senator Conger will not allow that he was guilty of bribery—it was simple blackmail. Blackmail it was, but it was also bribery. There may be cases of doubt, but this was bribery. When Mr. Robert, founder of Robert College, visited Constantinople he objected strenuously to feeing the custom house officers, but was told by a very wise and good man that he must consider that he was paying them to persuade them to do their duty. But this is not Turkey. Our legislators are regularly paid their salaries. The yellow dogs are to be hunted, not fed. Exposure is the only duty. An attempt at extortion should be made public and infamous. Accordingly, with less guilt, it is true, the man who pays a blackmailer's bribe must suffer expulsion, tho with less shame, following the man who demanded it. And with blackmailing legislators let us not fail to couple the collectors of campaign funds who promise to sell protection for big contributions.

The Last Refuge

When a great popular movement for an important reform is ready to reach the stage of legislation, when every argument has been weighed and the balance is strongly in its favor, then the last refuge against it is loudly presented—it is not within the express grants of power to Congress under the Constitution. This objection has been presented over and over again, generally without success, tho occasionally, as in the case of the act taxing incomes, the Supreme Court has sustained the objection.

Just now it is the development of the Post Office that is suffering from this objection. The country wants what every other leading country has, postal savings bank service, and postal express service. Everybody knows we ought to have them as well as Great Britain, France and Germany, and even the little countries have them; but the big corporations object. They want their profit continued. Express companies are strong; so are banks; and they fear the loss of the profits which go to their big owners of stock individually, but which ought to go to the people as a whole. So as the last argument, an argument of despair when hope begins to fail, they tell us that the Constitution gives no such power to Congress.

The Constitution was not devised to stand in the way of the public welfare; in fact it specifically provides that Congress shall have power to provide for the "public welfare"; and in case of stress or necessity this power would and properly could be exercised. Indeed it has been exercised in the past, and it is only a question how great is the emergency, and whether it should be exercised. The word *centralization* has an ominous sound, and it is made much of as a bug-

aboo, but with the unification of the country by railroads, trolley lines, telegraphs, interstate commerce and the post office, State lines become obliterated and State interests identified, so that one cannot tell, from any social or political conditions, when he passes from one State to another. What differences of interest are there between New Hampshire and Vermont, or between New York and New Jersey?

So the claim of States' rights reserved under the Constitution becomes a difficulty, if not a menace, at times when it becomes desirable to adapt legislation for the whole country to conditions of civilization and commerce never dreamed of when the Constitution was framed. The control of corporations belongs to the States, but we had to take advantage of indirect and implied powers under the constitution when we enacted legislation to control them on the claim that they engaged in interstate traffic. In this case the Supreme Court sustained the law and routed the objectors.

Now it is the development of the Post Office that is in question. The Constitution puts the Post Office and post roads under the control of Congress; and we may as well admit that it never occurred to the framers of the Constitution that the Post Office could become a banking institution or a general express company. They thought of it as a convenience for transporting letters and a few newspapers. But as intercourse increases the meaning of the word *post-office* enlarges of necessity. The first Postmaster-General had only one or two clerks in Washington; now there are tens of thousands all over the country. If for the convenience of the people the Post Office could then carry a newspaper, why not a book; and if a book why not a pound of tea; and if a pound of tea why not a bag of flour or a day's marketing as in England? To be sure the Constitution says nothing about express business, and the express companies, with their enormous profit, remind us of it, but what difference is there in principle between carrying a newspaper for a man's convenience and carrying other packages? And when the rural delivery has been so enlarged, and the service is by wagons, why cannot the wagons carry packages with the letters and papers, for the benefit of the people and the profit of the department?

And so of postal banks. Already we have the money order system. But that is an initiatory banking system. A postal order is a bill of exchange, for which ten cents is charged. In these late financial disturbances not a few people, afraid of private banks, have used it as a bank of deposit, making the order in their own names, to keep their money safe. Why not extend the system so that this can be done regularly and with profit for the people? But the bankers complain of the payment of interest and the redepositing in other banks of money collected from the people. But if the department does a service for the people, it must be paid therefor; and it is no worse to sell bills of exchange, as is now done, and charge for it, than it would be to accept these deposits and pay a small interest thereon.

It is not respect for the Constitution, but regard for their own profits that the banks are concerned with. People that want a fair interest on their deposits will still patronize the savings banks. But over much the larger part of the country there are no secured savings banks such as we have in a very few Eastern States. In the West and South there may be a savings department in many banks, but they are far less secure than is the deposit in a true savings bank. The people need a place to put their savings that will be absolutely safe. It is to the public advantage that they have it. The word *post-office* is a bigger word than it was a century and a quarter ago, bigger the world over, as the country is bigger and the world is bigger. And even the Constitution has a broader meaning than it had, the Supreme Court being witness.

Causes of the Law's Delay

HERE and there some slight progress is being made toward finding and ending the causes of the intolerable delays of adjudication which have become one of the chief scandals of our civilization. Deferred decision has always been, and in the nature of things always must be, an efficient means of making the rich richer and the poor poorer; it makes the name of justice a mockery. Yet the courts

and the legislative bodies have for nearly a generation talked about it as a thing deplorable, instead of finding and taking steps to terminate it.

Something like decent attention to the business in hand has been exhibited by a Massachusetts State Commission, appointed on July 21, 1909, to investigate the causes of delay in the administration of justice in civil actions in that commonwealth. Not only has this commission in six months completed and submitted a report, but it has actually called attention to causes which really play some part in producing the evils under consideration. More remarkable still, the commission proposes that these causes be dealt with by measures that would diminish, if not make end of them, instead of by measures that would provide fat new jobs for respectable citizens in need of genteel situations.

For example, the commission does not recommend a multiplication of courts and the appointment of additional judges. The commission is of opinion that the situation ought to be relieved without increasing the burdens of taxation, and in disapproving of the proposal to constitute independent courts to deal with equity and divorce cases, it makes the curiously sane comment: "We know of no more prolific cause of delay than the necessity of resort to two courts to obtain what might be obtained in one."

Jurisdiction in divorce proceedings, the commission would hand over to the probate courts. It will be interesting to observe how the Bay Statites receive this suggestion, for we remember how reluctantly they consented some years ago to "lower the moral tone of society"—that was the fetishtic phrase used in the discussion—by handing over divorce cases from the Supreme Court to the Superior Courts. From the standpoint of common sense the probate court is the proper tribunal to deal with these cases, involving, as they do, the same sort of questions of family property and the interest of children which probate judges are otherwise concerned with, and upon which they are supposed to have or to acquire special knowledge.

But to pass to the chief causes of the law's delay. The commission finds them in two tendencies, to wit, one toward an accumulation of legal business in a few hands; two, toward a congestion of the docket with accident or employer's liability cases.

In Suffolk County alone, 1,637 cases on trial were found to be in the hands of only twenty attorneys or firms. It is well understood that in all large cities the independent individual lawyer is being driven to the wall by big offices organized on the department store plan, and employing cub clerks to do their work. These big concerns encounter little difficulty in getting their cases put over, and again put over, until it suits their convenience to try them. The Massachusetts commission recommends "that the power and responsibility shall be given to the court itself to establish rules of practice in this regard best calculated to meet the difficulties and abuses as they arise."

More important than any other cause of delay is the appalling number of cases marked for jury trial made up of tort actions for personal injuries. In Suffolk County, accident claims against street railways consume three-quarters of the time given to jury trials. There is just one possible remedy for this state of affairs, and the commission does not hesitate to make it plain. It consists in substituting a workmen's compensation act for the present resort to action for damages under the common law and employers' liability statutes.

The backwardness of American commonwealths in adopting the principle of workmen's compensation, which Germany and England have demonstrated to be not only feasible, but in every way as superior to the action for damages as the railway train is superior to the stage coach, is only one among a score of matters in which we lag behind the "effete" civilizations of Europe. Elemental justice demands that an industry should bear its own costs, and experience has proven that when this principle is accepted the costs enormously decrease. Under our present procedure, not only is the public mulcted and the business of the courts held up, but most of the injured employees ultimately fail to get compensation, preventable accidents are not prevented, and the bill for the relief of destitution

is swollen. A compensation act, as German and English experience proves, reduces the number of accidents by more than one-half, actually compensates the injured person or his family, relieves the court docket, and stops one of the great wastes of public money.

Touching on a minor cause of delay, the commission suggests the possible penalizing of needless litigation. The idea is an old one, but perhaps none the worse on that account. Article 1 of the Code of Hammurabi reads: "If a man bring an accusation against a man, and charge him with a capital crime, but cannot prove it, the accuser shall be put to death."

Corporation Tax Publicity

It is provided by the new law which imposes a tax upon the net incomes of corporations that the tax returns "shall be filed in the office of the Commissioner of Internal Revenue and shall constitute public records and be open to inspection as such." But the cost of making the returns of 400,000 corporations accessible to the public would not be less than $50,000 a year, and there is no money legally available for this purpose. There is an appropriation of $100,000 for the expense of collecting the tax. All of this is needed outside of the District of Columbia, and even if it were not, no part of it could lawfully be used in the District to promote the publicity which was intended. A law twenty-eight years old forbids the employment of persons there by the Government unless there is a specific appropriation for such employment. Some think that the almost forgotten existence of this statute now gives much satisfaction to executive officers who have been annoyed by the protests of numerous corporations against a public exhibition of statements showing what their expenditures, receipts and profits are. However this may be, the old law is plain and it must be obeyed.

Congress has been asked to appropriate $50,000 for that publicity which the tax law requires. There are indications that it will fail to do so. There are members who do not care to offend the corporations in their States or districts. In the House neither the Ways and Means Committee nor the Committee on Appropriations is willing to act. Each of these committees insists that the appropriation should be reported by the other. It is asserted that in the Senate a majority against the proposed grant of $50,000 has already been counted. It is quite probable that the returns will not be open this year to public inspection.

Those who are accustomed to criticise the Administration assert that such publicity was regarded by the President and other supporters of the tax bill as highly important. In the exprest opinion of the President, we are told, the chief virtue and value of the tax lay in this provision that everybody should be free to read the statements turned in by the corporations. We do not find in Mr. Taft's messages and speeches a warrant for this. But he did say repeatedly that by means of the new tax "the Government," not the general public, would gain knowledge of the "real business transactions and the gains and profits of every corporation," and that this would be a "long step toward that supervisory control of corporations which may prevent an abuse of power." He had in mind the information which would be acquired by the Government, not that which could be obtained by the curious or by competitors of the taxed corporations.

We are not convinced that a public exposure of the financial statements of all corporations, a majority of them small concerns, statements showing their expenditures, their gross and net income, etc., would be wholly beneficial. We can see that in the cases of many small corporations it might be harmful to the innocent. At the same time, the possession of this information by the Government will serve the public interest. And, as we understand the laws and regulations, any of these returns—even if there be no appropriation for general publicity—may be exhibited to applicants who obtain permission to inspect them from the President or the Secretary of the Treasury.

There is some unjust discrimination in this tax law. For example, a small corporation competing in business with a partnership, it may be in the same city or even in the same street, is taxed, while the partnership is not. If the financial condition of such a corporation should

be laid open for the inspection of the competing partnership, the corporation might suffer some injury in addition to that which is due to the statutory discrimination. Many who think that full publicity for the statements of debts, receipts, profits, etc., is greatly to be desired, have in mind the great corporations or combinations, and especially those whose methods excite popular hostility. They do not give sufficient weight to the fact that a vast majority of the taxed corporations are small and comparatively weak. In some instances publicity would expose such companies to successful attack by the powerful and unscrupulous.

Work for a Nobel Prize Winner

THE Presidency of the United States is the most exalted national office in the world. The man who holds any other within the gift of the nation after having occupied it has a less opportunity for public service and a less honorable position. To rise higher than the presidency one must turn from the national to the international realm. What is the opportunity for service in the international realm?

By far the greatest is to work for the substitution of law for war to the end that universal peace may prevail. Peace based on law is now practically established in the fifty-nine nations of the world claiming to be independent. But in that international realm over and above each nation, in which each nation is equally sovereign, the only way at the present moment for a nation to secure its rights is by the resort to war.

The nations, in other words, are today at that stage of civilization where they claim the right of settling their disputes by a method they would put their own subjects to death for imitating. The problem, therefore, before the international statesman is to bring the nations under a federal law made, executed, adjudicated and sanctioned by the peoples of the world.

In an editorial last week on "Mr. Roosevelt at Christiania" we pointed out the great opportunity before our ex-President to do some effective peace propaganda in his forthcoming Nobel peace lecture. This week we venture some further suggestions of even more importance.

Mr. Roosevelt returns home in June after a well earned vacation. It is inconceivable that he should not wish to put his experience and ability at the service of his countrymen. Why should he not then be made chairman of the American delegation to the Pan-American Conference that meets in Buenos Ayres this summer? This is the New World Conference and holds the same relation to North and South America that The Hague Conference does to the world. The conference is in a sense the preliminary caucus of the American republics before they enter The Hague Conference. It can be depended upon to bring up some questions that will finally be settled at The Hague, just as the recent Rio de Janeiro Conference sent the Drago doctrine to the Second Hague Conference, which finally passed it under the name of the Porter proposition, thus constituting the first step taken towards the goal of compulsory arbitration. To go to Argentina will afford Mr. Roosevelt not only a splendid chance to test his powers of putting ideas thru a deliberative body, but also of becoming familiar with the practical workings of an international conference. Then after his return home, stopping of course at some of the principal Latin-American capitals en route, he might be appointed a member of the American delegation to the next Hague Conference, which is to meet in 1915. A period of four years is none too long for Mr. Roosevelt and the other members of the commission to study the history and philosophy of the peace movement, to brush up their French (hitherto a distressing weakness of American delegations) and to visit the chancelleries of the principal nations of the world to get in touch with the best peace thought in Europe and Asia.

The great weakness of The Hague conferences has been the fact that the delegations came more or less unprepared as to what they themselves wanted and what to do when new propositions were "sprung" on them. The only exception was the German delegation at the second conference, which had studied their case with so much thoroness that their influence on the final results was quite out of proportion to the intrinsic

merits of the measures they espoused or opposed.

A bill was a year or so ago introduced into Congress providing that our ex-Presidents be made permanent delegates-at-large to international conferences. It seems a happy solution of the problem of what to do with our ex-Presidents. If Mr. Taft will appoint Mr. Roosevelt a delegate to the forthcoming Pan American Conference and then a delegate to the Third Hague Conference, we are confident that Congress will provide the means.

Theodore Roosevelt is the best known and esteemed American abroad. He has received the Nobel Peace Prize. He has the prestige, ability, energy and youth. He could succeed where others fail.

Emerson says: "History is nothing but the record of the decline of war." Will Mr. Roosevelt be given the opportunity thus to become the greatest maker of history since the world began?

The Tillman Children

All will sympathize with Senator Tillman in the severe paralytic stroke under which he suffers, and which is likely to put him permanently out of public life; and those particularly will regret it who have found in his speeches the boldest defense of Caucasian rights against the dangerous encroachments of the negro race. Who will be left, in these worser days, to hold the fort but Senator Jeff Davis and ex-Governor Vardaman? Mississippi ought to send Vardaman to the Senate just to keep the Arkansas Senator from feeling lonely. And just before his illness the Supreme Court of South Carolina had decided against his right to hold his son's children against their mother's claim, by the radical device of calling the South Carolina law, which gives all rights over children to the father and none to the mother, not only against the Constitution of the State and that of the nation, but against all right and decency. That saves South Carolina from shame, and we commend the decision to the courts and legislatures of many other States which have a similar law. It is interesting to observe that in this decision the court of South Carolina does what has often been complained of, expands the scope of the Federal Constitution by making it apply to conditions that were never in the mind of its framers. That becomes necessary as conditions and public sentiment change.

Industrial Peace

A bill has just been introduced into the Massachusetts Legislature intended to bring about industrial peace. It is modeled on the Canadian Industrial Disputes Investigation Act, which President Eliot has characterized as one of the most important pieces of legislation ever enacted in North America. The Canadian act requires that in the event of a dispute arising in any industry known as a public utility, it shall be illegal to resort to a strike or lockout until the matters in dispute have been investigated by a board appointed by the Minister of Labor on the application of either party. One of its members is named by the employer; one is named by the employees; these two choose a third, or, on their failure to agree, he is named by the Minister. The proceedings and final report are at once published extensively for their influence on public opinion. After the report, and not until then, the employer may lock out or the employees may strike, if either declines to accept the advice of the board. In the application of the principle of this act to Massachusetts, it is proposed to extend it to cover all occupations and also to have the controversy settled as the disputants may prefer, either by a board of arbitration whose decision will be final or by a board of investigation, as in Canada. This is a step in the right direction, altho many eminent students of New Zealand's compulsory arbitration law declare that voluntary arbitration which is resorted to before the case is appealed to the compulsory court has proved a complete failure. On the other hand, in the first two years of the Canadian law there were fifty-five applications for the appointment of boards and in only two instances did strikes follow their findings. Nevertheless, compulsory arbitration is based on the sound principle that industrial peace is as much the concern of society as of the disputing parties. We applaud, therefore, the Canadian and Massachu-

setts plan, but we are confident that the logical conclusion of the matter is compulsory arbitration, which must ultimately prevail, between warring economic groups in the community, just as it now does between individuals.

Use and Waste of Water Power

Reports from different parts of the country show that the utilizing of small water powers is on the increase among farmers. Omitting entirely all the large streams, there are thousands of small brooks, especially in the Eastern and Middle States, that tumble down hill without doing the slightest service, until the waters are accumulated in rivers that run factories. Every one of these streamlets might be made to furnish electricity, sufficient for lighting and in some cases heating adjacent farm houses, and barns, and for running machinery. This is the simplest solution also for the help problem. It is our little brooks and brooklets that can be transformed into unhired workers (almost costless power), to do our work for us. The power is not only very cheap, but much safer than that obtained from the ordinary oil lamps and lanterns that are generally used. An inexpensive dam across a brook will frequently secure power enough to furnish light for two or more adjacent farms. One recent report says that "Electricity has been secured sufficient to light a farm house from cellar to garret, and to lighten up every dark place about the property, including stables and barns." Another report tells of lighting all the farm buildings, and doing nearly all the farm work for four adjacent properties. It is a grand chance for co-operation. In many places a town can advantageously harness a larger watercourse for public use, and sell superfluous power to corporations and private parties. We look to see a very large share of town taxation paid by the utilization of town power. In France the canal system is so managed as to assist a large part of the population with cheap lighting for their houses and cheap power for their machinery. If our old canal system had not been mostly put out of use, it might now be made to pay its way from the locks. We have probably twice the values going to waste in the United States that we have turned to the supply of human needs.

Health of School Children

Superintendent Maxwell reports that a thoro examination of the children in the schools in New York City, made by competent physicians, shows that not less than two-thirds of them are in need of medical care. Most of these children are what would be classed as defectives. The defects cover nearly everything in the way of human ailments. As a single instance, it is found that trachoma alone (a communicable disease) excludes from school opportunities over 1,000 children, not counting over 50,000 cases that have not been excluded. There were also found among these school children over 3,000 cases of diphtheria, mumps, measles and scarlet fever. Nearly 12,000 school children were suffering from malnutrition, and 408 are reported as anæmic victims. Of course, we cannot take it for granted that this ratio of defective children will hold for the whole United States. A multitude of the cases are for bad teeth. It probably will come nearer to place the average at one-third than at two-thirds. Even that ratio is a terrible one to consider, if we are looking for a healthy American stock, capable of healthy ideas and fit for citizenship. There is no good reason why school life should not tend toward wholesomeness rather than toward enfeeblement. The trouble in these cases is ignorance or poverty at home, and there are communities in which the children's school luncheon is a means of health.

Tchaykovsky's Trial

The trial of Mr. Nicholas Tchaykovsky, the Russian patriot, has been set for the last of February. Three petitions have been sent to the Russian Government on his behalf. That from this country, signed by many eminent people, was forwarded some weeks ago. That from France went the last day of January, with the signatures of about forty of the leading men of that country, headed by M. Anatole France. The English petition also went last month, bearing the signatures of half a dozen

lords, as many bishops and twenty-five members of Parliament. It reads:

"To His Excellency M. Stolypin, Premier.

SIR—We had the honor in 1908 to address your Excellency on behalf of Nicholas Tchaykovsky, who was at that time a prisoner in the Fortress of S. Peter and S. Paul. We received the news of his liberation on bail with the highest gratification.

"Now, hearing that his trial is approaching, we venture to remind your Excellency of the international interest in his fate, and to express the hope that his case will be tried, according to your Excellency's assurance, before an open and competent court, and in accordance with the common principles of all civilized countries."

As Madame Breshkowsky is to be tried at the same time, there is all the more reason for hoping for a fair and open trial, since the world at large has a deep interest in the fate of that noble old woman. Russia should know that many lands are watching how she will treat these two prisoners, whom so many people of many lands respect and honor.

Old Age Pensions

The report of the Massachusetts Commission against old age pensions, made after two years of investigation, puts the matter in a clear light, altho the conclusion is unexpected. The commission recommends that this sort of work be left to corporations, urging that they pension their own employees, and that States, cities and counties establish a retirement system for public employees. A scheme of compulsory State insurance is not approved, altho the commission thinks that the ultimate solution of the problem will be found in some scheme of obligatory State insurance. Considerations of economy and efficiency demand the establishment of municipal pension systems. It would establish a system of compulsory instruction in thrift in public schools. It approves the old age pensions instituted already by our railroads and many industrial corporations. Its study of the subject as developed in Europe is illuminative. It shows that there is a wide difference between the economic conditions of the aged population in Great Britain and in the United States. The provisions of the English scheme would debar three fourths of our population. That this ends the determination to provide, in some substantial way, for the helplessness of second childhood, we do not believe. Modern civilization has come to a sincere and fixt conviction that old age shall not be left uncared for, after it is unable to care for itself.

When Mr. Belvidere Brooks was made general manager of the entire Western Union Telegraph Company's system the other day, some one asked him by what secret he had been able in forty years to rise to that position from being a messenger boy of eleven in the telegraph office of an obscure Texas town. He replied that it might have been luck, for he could think of nothing else except this:

"The only thing I ever figured out as having been continually with me since the first day I became a messenger boy may be termed a constant responsibility to my employers, a knowledge that my time was theirs, and that their interests were my interests. That has been my one thought. Another factor which maybe has had an influence on my life is that I have always told the truth. It takes a mighty smart man to be a liar."

That is explanation enough—faithfulness and truthfulness plus brains. He had not been a messenger boy more than six months before he was ticking off the messages. The boy was father of the man.

Even Cairo can suppress a mob and save a lynching. It did it the other day when some hundreds of the "best citizens" stormed the jail and tried to seize and kill a negro who was charged with some minor offense. The sheriff fired over their heads when they refused to disperse, and then shot to hit, and a son of an ex-mayor was killed and several wounded. The mob took that hint and dispersel. That sheriff knew his duty.

Think of it—this is the year 1910, and only now has the great State of Pennsylvania begun to enforce a law which, during January and February, has taken thousands of breaker boys under fourteen from its coal mines, boys that were, many of them, not able to read. A number of breakers have had to shut down till they could get men to do the work, and special schools have had to be opened in Hazleton and elsewhere.

Insurance

What Becomes of the Families?

Some time ago a careful examination was made of the records in New York, Pennsylvania, Ohio and Rhode Island covering the estates of nearly 50,000 deceased persons. The result of this examination showed that less than 2,000 of the dead ones left individual estates, the value of which exceeded $5,000. The great majority were like butterflies that live brief lives, during which they flit from flower to flower, and in a moment they passed away and were forgotten. The most of these persons lived careless lives, tho there were some of them who were counted as successful. Certain of them were in business and had large transactions, but when their affairs were finally settled they had remaining less than $5,000. The average man is, it again appears, sadly lacking in thrift and foresight.

It would be humorous if the tragic element could be eliminated, but when the question obtrudes itself "What becomes of the families?" there is nothing funny about the 40,000 improvident ones. Think of it! only five men in every hundred conducted their affairs successfully enough or kept the money they had saved or made safely or had protected their families thru the medium of insurance so their dependents had at the last even so small an income as $5 per week or $250 per annum. If it be true that 90 per cent. or a percentage that approximates 90 per cent. of all business men fail in their enterprises, it is easy to understand the difficulty of building up a successful business. Only the few do it. Even when a man makes money it is uncommonly hard to keep it after making it. The avenues for getting rid of it are many and the streets leading toward the keeping of saved money until the end are few. Insurance fortunately is within the grasp of most men who will open their hands and take it, but so many keep their hands as clenched fists in this connection. It is time to think about this matter of insurance when all is going well, when the young man is rejoicing in his strength or whose viewpoint is that of a strong man who is about to run a race. If it is good political economy in time of peace to prepare for war it is far better for the average man to take out a policy of insurance even if it appears that he does not need it. Have you reasonably capitalized your earning power? Do you carry an amount of life insurance that will work and earn an income for your family against the certainty of your ultimate death or your physical and mental impairment and depreciation? Too few men take proper stock of themselves in this way. The investigations recently made confirm those previously made along the same line and sound a warning that may well be carefully considered by those who wish to make sure of what is to become of their families.

One of the unconsidered trifles that makes for the present high cost of living is the daily fire tax of $1,500,000 paid by Americans. The United States Geologican Survey gives these figures and their eloquence ought certainly to inspire every one of us to work toward fire prevention rather than against it. The man who hazards when he throws away his lighted match and knows not and cares not where it falls, as well as he who throws carelessly aside his burning cigar or cigaret, will please sit up and take notice.

During the consideration of the Federal corporation tax, when it was before Congress, unavailing efforts were made to obtain an exemption in favor of life insurance companies. There might easily have been some concessions of this kind since there is in some respects little if any difference between life insurance companies and savings banks. There should, of course, not be an unjust tax on either form of thrift.

Plans to make sure of a safe and sane Fourth of July have already been formulated in various parts of the country. The Independent has advocated something along this line for several years and earnestly hopes that those now actively moving in this matter will not forget all about it before the evening of July 3.

Financial

The Hocking Manipulation

MR. KEENE, the manager of the Columbus and Hocking Coal and Iron Company pools, testified on the 14th in bankruptcy proceedings relating to J. M. Fiske & Co., one of the firms that failed when the manipulated stock fell from 88 to 25 in a few hours. His testimony threw much light upon the operations by which the pool speculators had lifted from 22 to 91 the quoted price of a stock that for years had paid no dividend. On the 16th the Stock Exchange's governing committee made known its decision concerning the firm of Lathrop, Haskins & Co., which had organized the pools. Saying that the failure of the firm had been caused by "reckless and unbusinesslike dealing," it ruled that Mr. Haskins, the firm's board member (and president of the Hocking Company) could not be reinstated. This is practically equivalent to expulsion, altho Mr. Haskins can sell his seat. In a published statement he afterward said:

"The object of the pools was to accumulate and keep, not distribute, the stock, and at no time was either pool closed out or profits taken. I and my friends believed and still believe in the dividend-paying possibilities of the property."

But Mr. Keene, who was employed as manager, had testified that after the stock had been worked up to 60 he sold out the first pool, giving those who had invested in it a profit of $254,000. Being greedy, he added, they insisted upon starting another pool at once, against his advice. The price was then too high, he thought. He would have got it down to about 40 before taking hold for another lift. They did not agree with him. After the operations of the second pool had raised the price to the neighborhood of 90, the top-heavy speculative fabric toppled over.

His frank testimony, pointing so clearly to manipulation designed to draw profits from a misled public rather than to accumulation for investment, evidently had much weight with the Exchange authorities. But their decision does not deal directly and plainly with the evil to which public attention has been drawn by the Rock Island and Hocking incidents. What are their views about such manipulation? Do they think that it should be prevented? If so, have they in mind any preventive measures? We presume that there is still some action to be taken with respect to firms affected by the Hocking collapse, and that thus there will be offered to the Exchange authorities an opportunity for an expression of their opinion concerning an evil as to which the general public opinion is sharply defined.

....Estimates made by the Geological Survey of Brazil indicate that the known deposits of iron ore in that country exceed 2,000,000,000 tons.

....The Pennsylvania Railroad Company has ordered fifty electric locomotives for its tunnel service in New York. They will be the most powerful of their kind ever built, and are to be ready in July next.

....After his recent inspection of the United States Steel Corporation's property in the South, Judge Gary, chairman of the board, said: "The Steel Corporation can manufacture in Alabama, when its construction work now under way and contemplated is completed, steel and iron at a cost as low as in any place in the world." Since the Southern property was acquired about $6,500,000 has been expended for construction work, and $7,000,000 more for such work has been appropriated.

....Harvey Fisk & Sons offer $11,000,000 Hudson Companies (McAdoo Tunnel System) 6 per cent. secured convertible gold coupon notes, payable February 1, 1913, at par and accrued interest. These notes, a lien upon the system of tunnels under the Hudson River and associated railway property and real estate, are specifically secured by deposit, with the Guaranty Trust Company, of 150 per cent. of their face value in Hudson & Manhattan Railroad Company first mortgage 4½ per cent. bonds, exempt from taxes in this State. They are convertible at maturity or on any prior redemption date, at 100, into said bonds at 95 and accrued interest.

Survey of the World

Economy in the Government's Business

President Taft made an address on the character and life work of Washington before the New Jersey Chapter of the Society of the Cincinnati, in New York, on the 22d ult. The same evening he spoke briefly at the annual dinner of the Lieutenants of the New York police force. On the 23d he enjoyed an enthusiastic reception in Newark, N. J., where he spoke at the banquet of the Board of Trade, taking for his subject the revenues and expenditures of the Government. Introducing him, ex-Governor Murphy spoke of the attitude of the press. At the beginning of his address, the President said:

"Governor Murphy has said something about the newspapers. It is difficult, when a man is President and he has no other way of measuring public opinion but by the newspaper, especially when all the newspapers unite in hammering the Administration, in treating it with a hostile tone of contempt and a disdainful tone of patronizing friendship, to overcome the feeling that perhaps you'd better begin all over again. Such a welcome as I've had here tonight gives a little hope that perhaps the newspapers don't carry in their pockets all of public opinion; and that perhaps the American people are able to see thru something of hypercriticism, something of hysteria, and something of hypocrisy, and to have a real sympathy with the man that under a considerable responsibility is doing the best he can."

We had failed, he said, to adopt such a budget system as is found in every other civilized country, a system referring proposed expenditures and receipts to some single authority or tribunal which makes one side equal to the other. In Congress, revenues are provided by one committee, and expenditures ordered by others, sometimes without apparent reference to the available receipts. The Secretary of the Treasury, however, has in recent years been required to make a budget, with recommendations for revenue legislation. The President made a statement in detail as to the present condition of the Treasury and the prospect for the coming year, pointing out what might be the effect of large appropriations for rivers and harbors and new buildings, and showing why it was just that Panama Canal expenditures should be met by bond issues. A similar course should be taken with respect to great and costly projects for the improvement of inland waterways. He explained how the original estimates of the cost of the Panama Canal had been increased by the higher cost of labor and material, provision for greater width and larger locks, and other changes in the plans. Referring to the reduction of the annual estimates under his orders, he showed where the reduction had been made and that in some cases it meant only a postponement of needed improvements. Provision for two large battleships had been retained because we ought to increase our naval strength until the completion of the canal, in 1915. The canal would "so double the navy's efficiency" that expenditure for new construction could then be reduced. Speaking of the proposed appointment of a Congressional commission to reorganize the Departments and reduce the cost of administration, and of the assertion of Senator Aldrich that strict business methods could reduce it by $300,000,000 a year, he said he was confident that a president and fearless commission could make "a most material reduction":

"They will find opposition in Congress to every change recommended, because there is no branch or bureau so humble that it cannot secure its adherents and defenders within the legislative halls. But if, by the totals that it

shows, this commission shall justify its existence, it is probable that it can secure a majority sufficient to carry thru its proposed reforms."

As the Government had grown gradually, bureau had been added to bureau, and it had been impossible to avoid some duplication. The proposed commission would also seek to secure the utmost efficiency on the part of employees. It would propose methods to be used in the cases of superannuated public servants. He was convinced that these should be retired "on incomes sufficient to support them," and that this would promote economy. If the postal committees should not reach definite conclusions as to the question of postage on periodicals, this matter might well be left to the commission. The success of modern business had been due to the adoption of economies and the time had come for the introduction of such economies in the administration of the Government's business.

Pinchot Testifies Against Ballinger

In the Ballinger-Pinchot investigation, Mr. Pinchot, the dismissed Forester, appeared on the 26th ult. as a witness. Before testifying he read a preliminary statement. It was his desire, he said in this, to relate his experience with Mr. Ballinger, and to direct attention to three matters of principal importance. Concerning the first, which was the policy of protecting water-power sites against the attack of monopolists, he undertook to show that Ballinger had taken office with a determination to make short work of it, had reversed the policy so far as he had been allowed to do so, and had not intended to withdraw again the sites made open to entry. When the witness had said to the President that Ballinger was an enemy of the conservation policy, the latter had given to the President a false explanation of his action. As to the second matter (the Alaska coal claims), witness believed that Glavis had told the truth and was a faithful public servant. Glavis's facts proved that Ballinger was unfaithful. In a letter to Mr. Taft, November 4, witness had exprest his conviction that Ballinger was a dangerous enemy of conservation. When this letter was submitted to Ballinger, the latter replied in a statement shown by documentary evidence to have been false in three essential particulars. He had wilfully deceived the President. The third matter was the attitude of the Government, under existing laws and practice, toward conservation. He desired to show how difficult it was for faithful officers to protect the people's interest, and how easy, and often how inevitable, was a betrayal of them. The laws and practice should be amended. The evidence would show, he added, that the people's interests were not safe in Ballinger's hands; the committee's verdict should be in harmony with the general conviction that Ballinger had been unfaithful both to the public and to the President. In his following testimony, the witness asserted that Ballinger in 1907 had protested against the creation of a forest reserve including the Cunningham claims; that in reversing Garfield's policy he had restored lands without making fresh examination of them; and that the second withdrawals were made only after witness's conversation with Mr. Taft in April, 1909. Dispute arose as to the admission of this conversation, and a decision was deferred. In the letter dismissing Glavis, witness said, reference had been made to a Comptroller's decision requiring abrogation of an agreement between the two departments as to forest lands. He denied that there had been such a decision, the inference being that some one had misled the President.——Secretary Ballinger speaks of Pinchot's "mendacious aspersions," and says the witness seeks to deceive the public, as he tried to deceive Mr. Taft.——The testimony of W. W. Barr was to the effect that Glavis, after his removal, assisted him in locating claims to certain timber lands, using his knowledge of land questions in this project, which might have yielded him a profit of $10,000.

Alaska's Coal Wealth

Senator Beveridge has introduced bills withdrawing from entry all public coal lands in Alaska and providing that they may be leased for thirty years, each tract not to exceed 2,560 acres, on a royalty basis. This is not to interfere with the patenting of the surface for agricultural purposes. He made an interesting state-

ment as to the value of Alaska's coal deposits. This statement was based in part upon testimony recently given before the Senate Committee on Territories.—— There came before this committee voluntarily two representatives of the Guggenheim-Morgan syndicate, these being Stephen Birch, the syndicate's manager, and John N. Steele, its general counsel, a brother of one of the partners in J. P. Morgan & Co. Their avowed purpose was to show that the syndicate's holdings had been exaggerated in various publications. It was true, they said. that the syndicate had taken an option on the Cunningham coal claims, agreeing to pay $250,000 for a half interest if patents should be obtained. This was done before the legality of the claims had been questioned. The claims probably covered 50,000,000 tons of coal, which could be mined for a profit of $25,000,000. They were in a coal field which probably contained 500,000,000 tons, having a gross value of $900,000,000 and a net value of $200,000,000. The syndicate's holdings were enumerated. It had spent $10,000,000 on the Copper River Railroad and was about to spend $5,000,000 more. It had nearly half of the stock of the Northwestern Commercial Company, which owned steamships and salmon canneries. It was interested in other canneries and owned one copper mine. There were about twenty-five independent steamships, it was pointed out, and the syndicate had no coal interests except the Cunningham option. The $1,359 to which Glavis referred had been paid by the syndicate to Cunningham for the expenses of an expert examination of the coal lands. The syndicate wanted traffic for its railroad. It was now buying coal in British Columbia at $12 a ton and sending it to Alaska because no one was permitted to mine the coal lying by the side of its railroad tracks.——Commenting upon this, Senator Beveridge said he judged that $2,000,000,000 was not too high an estimate of the value of Alaska's coal deposits. The Matanuska field was worth as much ($900,000,000) as the Bering River field, of which the Cunningham claims were the richest part. He thought these two fields held $2,000,000,000 worth of coal. The Geological Survey reports showed that there were other fields, the area of all being 12,867 square miles, and estimated the coal contents to be more than 15,000,000,000 tons, which might be worth $15,000,000,000. Under the present laws, Alaska coal lands in the public domain may be obtained from the Government for only $10 an acre. (There are about 5,000 acres in the Cunningham claims, said to contain 50,000,000 tons.) Mr. Beveridge urged that his bills should be passed. The coal lands in Alaska had been withdrawn from entry and sale in 1906 by President Roosevelt and a bill confirming this withdrawal had been introduced in Congress, where no action upon it was taken.

The Strike in Philadelphia

There was great disorder in Philadelphia thruout last week, but some improvement was to be seen, beginning with the 24th, when the State's mounted police, or constabulary, arrived in the city. On the 21st, C. O. Pratt, national organizer of the union and leader of the railway men on strike, was arrested for inciting the people to riot. This was regarded by many as a blunder. At the hearing in court practically no support for the charge was shown, and the arrest made Pratt a popular hero. On the 22d, a holiday, mob rule prevailed. The Fencibles, a local organization of militia, were required to aid the police; but the rioters attacked them, took away their arms and rolled them in the dirt. They were rescued only by mounted police, who charged the mob. In this collision twelve persons were wounded by bullets. On the 23d it was decided that order could not be preserved by the police, altho more than 3,000 special officers had been added to the regular force of 3,500. A call was sent to the State troopers, and the Governor was asked to hold in readiness the entire National Guard of 10,000 men. On that day 33 rioters were indicted and several were sentenced, one to be imprisoned for six years and three for two years. The clergymen of the city proposed a plan of arbitration. It was regarded with favor by the strikers, but rejected by the company. After the arrival of the 185 troopers there was much less disorder. On the 25th, John J.

Murphy, the leader of all the unions in the city, was arrested and then released on bail. The newspapers had published his remark that if one striker should be shot by the troopers, there would be a carnival of riot and bloodshed, because there were men in the Kensington district who could shoot straight. Up to this time Pratt had opposed a general sympathetic strike, but he now began to predict that there would be one. He also asserted that the company had used torpedoes on the tracks to discredit the strikers, and for the same purpose had destroyed one corner of a car barn with dynamite. Altho unions representing about 30,000 men had voted for a general strike, there was no final decision until the 27th, when a meeting of the Central Federated Union was held. After a long debate, resolutions calling for a general strike were adopted, but with the provision that action should be deferred until Saturday, March 5. Time is thus to be given for the exercise of influence to persuade the company that a compromise should be made or a settlement reached by arbitration.——Owing to strike riots in South Bethlehem, at the works of the Bethlehem Steel Company, of which Charles M. Schwab is the leading officer, one hundred of the State troopers were sent to that place on the 26th. Their duty was to protect the men whom the company has employed in the strikers' places. Having been attacked by a mob they charged upon the rioters. Two men were shot, and one, Joseph Szambo, died of his wound. He was struck by a bullet intended for a striker who had hit a trooper in the face with a brick. This strike began on February 4, when the machinists quit work because of a disagreement about pay for extra work. It is said that the company has on hand contracts involving $40,000,000 worth of steel armor and other products for our Government and Argentina.

The Revolution in Nicaragua

The news reports about the war in Nicaragua are conflicting. Two stories are told concerning every battle. One comes from the Government and the other from the revolutionists. Each side claims a victory, and there is great rejoicing, both at Managua and at Bluefields. It is quite clear that there was much sharp fighting last week on the neck of land which lies between Lake Managua and Lake Nicaragua. This tract is now the scene of hostilities, and it is within a few miles of the capital. Last week's most important battle was at Tisma, which is near Tipitapa. Madriz says that the revolutionists were soundly whipped; Estrada asserts that Madriz's army was destroyed. There were reports that Madriz had fled westward from the capital to Leon; other reports said that he believed the revolutionists would soon give up the fight. There were some indications, however, that altho Chamorro, leading the advance guard of the revolutionists, had suffered a reverse, the capital was really almost surrounded by Estrada's forces. Americans have been prominent among the revolutionists. One of them, Capt. Godfrey Fowler, of Texas, a grandson of Senator Reagan (Postmaster-General of the Confederacy) and a soldier of the war in the Philippines, is said to have died of his wounds. Another, Captain Conrad, has been sent to a hospital in New Orleans. Madriz has issued a proclamation asserting his belief that the attitude of the United States is one of neutrality.—— Judge Charles E. Magoon, formerly Governor of Cuba, in an address before the Commercial Club at Boston, last week, said the policy of the United States with respect to the Latin-American countries should be "a combination of the big brother and the big stick." Men holding office in the turbulent Central American republics should realize that there was a power that would hold them responsible for maladministration. But this power should be exercised only as a last resort:

> "If the Monroe Doctrine means anything, it means, and always has meant, the dominancy of the United States in the Western Hemisphere; and if this dominancy is to be maintained, the United States must see to it that the Governments of this hemisphere discharge their duties to their citizens, and their international obligations, and keep pace with the progress of the world. No other course is open to us."

——Officers of the Guatemalan Government deny that the national debt of Guatemala has ben refunded by financiers in New York.——By order of Attorney-General Wickersham, an ap-

peal has been taken by the Government from the decision of Judge Hough, who dismissed the Panama libel suit against the New York *World* for lack of jurisdiction. This is the case in which the *World* is accused of having libeled Theodore Roosevelt, William H. Taft and others.

The British Crisis

The speech from the Throne at the opening of the new Parliament was the shortest ever delivered, but nevertheless affords abundant ground for discussion in its concluding sentences:

"Proposals will be laid before you with all convenient speed to define the relations between the houses of Parliament so as to secure the undivided authority of the House of Commons over finance and its predominance in legislation.

"These measures, in the opinion of my advisers, should provide that this house should be so constituted and empowered as to exercise impartially in regard to proposed legislation the functions of initiation of revision and, subject to proper safeguards, of delay."

The insertion of the clause "in the opinion of my advisers" is unprecedented, and was, it is surmised, insisted upon by the King in order that he should not be understood as personally approving of the attack on the House of Lords. The same sentence is also ambiguous in that the words "this House" refers grammatically to the House of Commons instead of the House of Lords, so if strictly construed it represents Premier Asquith as demanding the limitation of the powers of his own House. A plausible explanation of the blunder is that between the two sentences some definite proposals for the reform of the Upper House had been inserted, but had been later struck out, perhaps in conformity with the wishes of the sovereign. Mr. Balfour, as leader of the Opposition, spoke as follows concerning the proposals of the Government:

"When the budget receives the cold and chilly but numerically adequate support of this House it doubtless will become a law. I believe that the majority of the constituencies of Great Britain are prepared to support the budget, but it cannot be pretended that Ireland favors it. Ireland abstains from opposing the budget because it thinks that the interests of home rule override those of finance. If the budget were isolated from all other questions it would be rejected.

"If the Premier's home rule speech just before the election had been taken seriously in England as it was in Ireland all other questions would have been dwarfed. I have had 149 campaign speeches delivered by members of the Cabinet analyzed and in one only is there a voluntary reference to home rule.

"Not only the Lords themselves but all parties in the Commons desire that the Upper House be reformed. The Labor party wants to abolish it altogether. The English and the Scotch want the reform as an amendment to the Constitution under which we live; but the Nationalists wish it because they want to get out from under the Constitution altogether."

The Premier then indicated his legislative program somewhat vaguely as follows:

"Apart from matters of finance, the only question on which the Government has announced any legislative proposals is that concerning the relations of the two houses of Parliament. It is the intention to introduce nothing further till these contentions have been set at rest forever.

"Last year the Lords rejected the budget. It was a glaring breach of the unwritten conventions and of the Constitution. It was the climax of a series of acts which told more plainly than words that the Lords intended to override the authority of the popular chamber. The appeal of the Government to the country was to give them authority to end this state of things.

"I have said that we must have legislative safeguards, but some of my friends have said that I have talked about guarantees and the exercise of the royal prerogative. No one will deny that I am a man of my word. If I had said such a thing I would not be standing here now. I have received no such guarantees nor have I asked any such guarantees. I think that a responsible Minister so far as possible should keep the name of the sovereign and the prerogative of the crown outside of the domain of party politics.

"To ask in advance for blank authority or for an indefinite exercise of the royal prerogative in regard to a measure that had not been submitted to or approved by the House of Commons is a request that no constitutional statesman could make. The Government proposes to proceed in the first instance by resolutions which will be embodied afterward in a bill."

The statement of Mr. Asquith in regard to the legislative safeguards was attacked by John E. Redmond, leader of the Irish Party, who declared that he understood and the country understood that Premier Asquith had promised to ask for guarantees of the exercise of the royal prerogative, and he reiterated the declaration made in his Dublin speech that he would not allow the budget or any other legislation to get thru until these promised guarantees were not only asked but got from the sovereign. The

Nationalists must be assured that a bill limiting the veto power of the House of Lords will be passed in spite of the opposition of that House before they will consent to support the Government. The dissatisfaction of the Irish Party was shown a few days later, when, in a by-election in the constituency of St. Georges in the east end of London, made vacant by the ministerial appointment of the Liberal member recently elected, Mr. Redmond issued a manifesto telling the Irish voters that he could not ask them to support the Liberal candidate. Since the Liberal member representing that district was elected by only 400 majority, less than the number of Irish votes there, this may cause the loss of another seat to the Government. William O'Brien, leader of the independent Irish group, attacked Mr. Redmond savagely on account of his willingness to vote for the budget, declaring that home rule with the budget would be a curse instead of a blessing to Ireland. James Kier Hardie, leader of the Labor Party, protested against any attempted reform of the House of Lords. It should be abolished as a relic of feudalism, an insult and outrage upon democracy, but, as the Labor Party could not get their own way, they would accept the second best course and support the Government in getting rid of the veto. Winston Churchill, now Home Secretary, stated that the Government would stake its existence upon the passage of the veto bill. A resolution embodying this principle would be brought forward promptly, and if there were to be a crisis and deadlock, it could not come too soon. The budget was regarded by the ministry, he said, as second in importance only to that of the veto bill, and its defeat would be accepted as a mortal blow. Austen Chamberlain, in the discussion of the Speech from the Throne, made a plea for a fiscal system that should afford first a preference to home productions so as to give employment to the people, and, second, a preference to British productions over seas, to the end that the Empire might be more closely consolidated. In the debate in the House of Lords Lord Lansdowne stated in regard to the veto question:

"There is no disposition on our part to shirk the discussion. We admit that there is a House of Lords question. But we say to you that we do not want a sham, tawdry House. We are ready to co-operate in dealing with the question, but if our co-operation is rejected we will at the proper time consider proposals of our own."

Lord Rosebery announced his intention to introduce on March 14 a resolution to the effect "that this House resolve itself into a committee to consider the best means for reforming its organization so as to constitute a strong and efficient chamber."

French Affairs

The apprehensions of an epidemic following the subsidence of the flood in Paris have happily proved unfounded, probably because of the precautions taken to drain and disinfect the cellars. The number of deaths in the city last week were 1,054, less than normally, for the average for this season is 1,120. The official estimate places the amount of direct damage done by the flood at $14,600,000, of which $10,000,000 was the loss in Paris.——Two important judicial decisions were delivered this week on questions now being hotly discussed. On account of the letter issued by the Catholic bishops condemning the books and methods of instruction in the public schools, the Public School Teachers' Association, backed by the Government, brought suit against Cardinal Luçon, Archbishop of Reims, for signing the episcopal letter, claiming $1,000 damages. The civil tribunal decided in favor of the teachers and condemned the archbishop to pay $100 damages.——Professor Hervé, Socialist deputy and the most extreme of the anti-militarist agitators, has been found guilty by the Assize Court of inciting murder and defending crimes in his newspaper, *La Guerre Sociale,* and has been sentenced to four years' imprisonment and a fine of $200. He had savagely assailed the police of Paris on account of their efforts to break up the gangs of apaches or rowdies who are making the streets dangerous to peaceable citizens, and in particular had spoken in favor of the apache Liabœuf, who had killed a policeman and wounded others before he was hunted down. M. Hervé cited seventy witnesses to testify to the brutality of the police and quoted many utterances similar to his own by such

prominent men as Rochefort and Jaurès. ——An attempt at solving the vexed question of the rights of the unions of state employees has been made by the Minister of Public Works, who has asked the employees of the Division of Posts and Telegraphs to elect delegates to consult with him on matters connected with the service. Some of the unions are opposed to the plan, preferring an independent attitude with the militant policy, so the vote at the first election of delegates was not heavy. Only 48 per cent. of the agents and clerks voted, 32 per cent. of the sub-agents, 85 per cent. of the laborers, 60 per cent. of the wagoners, and 74 per cent. of the women employees.——The old age pension bill passed the Senate on February 13 and is now before the Chamber of Deputies for the consideration of the amendments of the Upper House. Since the bill has been in discussion in Parliament for over two years, it is probable that it will now be speedily passed in order that the Government may show part of its program practically accomplished before the coming elections. The bill provides for the pension at the age of sixty-five of all wage-earners of both sexes, except railway employees, miners, sailors who are on the reserve list of the navy, farmers and agricultural laborers. The pension fund is derived from three sources, the wage-earner, his employer and the Government.

The Flight of the Grand Lama

A startling change in Tibetan affairs has taken place on account of the arrival of the Chinese troops at Lhasa. The Dalai Lama has fled to British territory for protection and the Chinese Government has ordered his deposition. The series of events of which this is the climax began with the invasion of Tibet by a military mission under command of Col. Sir Francis Edward Younghusband in 1904. The Tibetans offered a feeble and futile resistance at several points, and when the Dalai Lama perceived that the British were determined to enter the sacred city he fled into the deserts of Mongolia. Here he wandered for four years, enjoying the hospitality of various monasteries, cities, tribes and courts in Northwestern China, being received everywhere with great honor and forwarded with great dispatch because the entertainment of the priests and servants, camels and horses, forming the long retinue of the incarnated Buddha, was a serious expense. In the fall of 1908 he arrived at Pekin, where he was received by the Emperor with the veneration due to his exalted rank, but was politely urged to return to Tibet. On December 25 his caravan reached Lhasa, but it was followed shortly by a force of Chinese troops for the purpose of enforcing the supremacy of China and frustrating any intentions the Lama may have had to declare his independence. The Chinese army was well armed and efficient, having been drilled by Japanese officers, and it had little difficulty in pushing its way thru the mountains to Tibet in spite of the resistance offered at several points by the tribesmen. According to the Tibetan version the Chinese have sacked the monasteries, desecrated the holy places and killed many of the priests. The Dalai Lama left Lhasa on February 12 and escaped to Darjiling thru Chumbi Valley, following the same route by which the first white men of this generation had invaded the Forbidden Land under Colonel Younghusband. The Chinese Government thereupon announced that the Dalai Lama had been deprived of all rank on account of his disobedience and rebellion. He is accused of being "an ungrateful, irreligious, obstreperous profligate who is tyrannical and so unacceptable to the Tibetans, and accordingly an unsuitable leader of the Lamas." The official Chinese version of the account is as follows:

"The Dalai Lama upon his arrival at Lhasa from Peking circulated, with the object of organizing a general revolt, these rumors: First, that China intended to exterminate Lamaism, and second, that British trade was injuring Tibet. The Dalai Lama then took measures to thwart this trade, whereupon China became alarmed and ordered 2,000 troops to go to Lhasa with the object of preserving the peace and affording protection. When the Dalai Lama learned of the action, the Pekin Government ordered the Chinese Resident to reason with the Dalai Lama, who refused to listen, and on the 12th secretly left Lhasa with his followers. The Resident searched ineffectively, whereupon China deposed the Dalai Lama, ordered the Tibetans to elect his successor, and issued a decree ordering the protection of Lamas and the strict observance of

the existing treaties with foreign powers concerning Tibet with the purpose of preserving the *status quo*."

Lord Morley, Secretary of State for India, explaining these events in the House of Lords, said that the Grand Lama would be invited to proceed to Calcutta and occupy Hastings House, where he would be treated with the courtesy and respect due a ruler of high spiritual authority and an object of veneration to many millions of his Majesty's subjects.

Foreign Notes

The American Industrial Exposition, which was expected to open in June, in Berlin, has met with much opposition from German manufacturers on the ground that it would promote the much-dreaded "American commercial invasion of Germany," since native products would be excluded from competition. In response to an inquiry on the attitude of the Government toward the enterprise, Herr Delbrück, Minister of the Interior, stated that the Government was giving it "neither financial nor moral support." It was later explained by the Ministry that the word "official" was intended to be used instead of "moral." This brings the statement nearer in accordance with the facts, for Baron von Brandenstein, president of the German executive committee of the exposition, was, on his visit to this country to solicit exhibits, accompanied by an attaché of the German embassy, and Prince Henry of Prussia has consented to become honorary patron in chief.——The Russian Budget Committee announced to the Duma that, instead of the anticipated deficit of $42,000,000, there is a surplus of $1,850,000, the first time in twenty-two years that a balance has been shown on this side of the ledger. Extensive appropriations will be made for education, railroads and local reforms, and the construction of a new navy will be begun. The naval plans call for the expenditure of $500,000,000 in the next ten years.——A plan for the development of an army for Australia in accordance with the defense act recently passed has been prepared by Lord Kitchener. He recommends the establishment of an army of a peace strength of 80,000, divided into a garrison force of 40,000 and a mobile force of 40,000, all to be enrolled, organized and equipped in the same way. The army will consist of 84 infantry battalions, 28 light horse regiments, 224 guns, 14 engineer companies, and departmental troops in proportion. This force will be provided from trained men of from nineteen to twenty-five years of age. Trained men of eighteen and nineteen years old and of twenty-five and twenty-six years old are to be called up in war time, and to raise the strength of the force to a total of 107,000.——Baron Sonnino, Premier of Italy, has presented to the Chamber of Deputies an extensive program of legislation which contains, besides the railroad and merchant marine policies we have before mentioned, the following projects: A bill for further facilitating the rebuilding and recovery of Messina, Reggio and other places which suffered from the earthquake; the institution of a new bank of labor and cooperation of the same type as those which exist in Germany, Hungary and elsewhere for the assistance of co-operative societies, small industries and small holders of land; a bill to encourage the erection of model dwellings and houses for the working classes; a reform in the laws of reafforestation, to increase their efficiency and to extend the area of new plantations and reclaimed land; a reform of the tariff, with more attention paid to the tariffs of other countries in the imposition of maximum and minimum duties; a bill for taking a general census and other statistics; reforms in the civil and commercial code of law; military and naval reforms, including among others a change from the present system to a fixed two years' service for all branches in the army; the reorganization of the whole scheme of local taxation; a reform in the law relating to communal hospitals; a bill for giving further provisions for elementary education, for its improvement, and for the payment of larger stipends to schoolmasters. This last will involve an expenditure of rather over $5,000,000 during the next three years, which will be provided for by an increase in the tax on cigaret tobacco and on the production of sugar.

The Cost of Living.—IV.

[This is the fourth article in our series on the increased cost of living. Three issues ago Prof. J. Pease Norton, of Yale, discussed the question from the currency standpoint; two weeks ago Prof. Simon N. Patten, of Pennsylvania, wrote of it in its relation to the home, and last week Mr. Byron W. Holt considered it in its relation to the tariff. We shall continue the series next week with an article by Prof. John B. Clark, of Columbia, and that will be followed by other articles equally authoritative. We shall close the discussion with a symposium of letters from our readers, a request for which is made in our editorial columns in this issue.—EDITOR.]

An Old-Fashioned Theory of Prices

BY FRANKLIN H. GIDDINGS, LL.D.

PROFESSOR OF SOCIOLOGY IN COLUMBIA UNIVERSITY.

IN the United States it is bad form to admit that the experience of the human race before 1776, or east of Passamaquoddy Bay since that date, might have steering value for the American people. To suggest that in things commercial we could learn from mankind at large is "raw" or eccentric, and as for teaching an imported political economy, it is to blaspheme against our home-grown gods.

Instructed in these things from my youth up, I cannot plead ignorance of the quality of my offense in putting forth what I am about to write. Yet I hope to be forgiven, because I shall not try to convince or to convert. I am going to recall certain views on the subject of prices in particular and of economic well-being in general that are associated with the names of those quaint old gentlemen, the Rev. Thomas Robert Malthus, David Ricardo and John Stuart Mill. They were Englishmen, than which no greater misfortune can be imagined in—let us say—Pennsylvania or Ohio. Moreover, they were worse than Englishmen in ordinary; they were "classical" economists, and nothing else so entirely impossible could be portrayed to—let us say—a Home Market Club. To be classical is to regard form, to observe limits, to build on foundations, to rear structures of substance or of thought that present recognizable similarities to the intellectual eye. In America we have as many systems of political economy as we have Congressmen. I shall not so trifle with our sacred mores as to ask the American reader to take any "classical" doctrine seriously. I propose to call attention to the insular views of the gentlemen named only in a reminiscent and innocent way, to indulge myself in an odd conceit, quite absurd, no doubt, if weighed pragmatically.

So, just for the pleasure of it, I play with certain suppositions. Let us suppose that those classical economists had seen prices rise 33 per cent. or more in thirteen years, and the per capita circulation of money increase in the same interval 63.15 per cent. Let us suppose, further, that they saw the population of the world multiplying, notwithstanding a diminishing birth rate in many countries, and the margin of virgin land, upon which population had been steadily advancing for a century, nearly all at last brought under cultivation. What explanation of the rising prices would they probably have offered?

From a somewhat careful reading of their apparently sincere writings—we must remember that not one of them had visited America—I gather that they would not have been satisfied to say: "We have obviously a case of relation between supply and demand. Money is more abundant; houses and victuals also, and other things exchanged for money, are more abundant, but not so much more. Don't you think it's all quite clear?" No; I am sure that they would have gone behind the returns. They would have looked into the causes acting on supply and demand. They would

have sought to know what conditions were determining the production of human beings; what the production of food to fill them withal, and what the supply of "good red gold." And when they had carefully examined the available facts, each, I am sure, would have been confirmed in the belief that a certain discovery made or conclusion formulated by himself was a true and abiding contribution to the knowledge desired.

Mr. Malthus would have reported that it still remained true, as he had remarked on a previous occasion, that population tended to increase faster than the means of subsistence. Mr. Ricardo, concurring, would have added that the fluctuations of market price about a central point, or norm, are insignificant by comparison with the norm itself or "normal price," and that this is determined by the productivity not of mines, farming lands, mills and instruments of production in general, but by the marginal productivity of the least productive mines, lands, mills, and so on, to which it had become profitable to resort. Mr. Mill, concurring so far with both Malthus and Ricardo, would have explained that resort to less and less productive mines or agricultural lands is made necessary by "diminishing returns," the law of which in brief is, that on any given piece of land of specified dimensions, in any given state of knowledge and the productive arts, the application of larger and larger "doses" of labor and capital will not call forth, beyond a certain point to be experimentally determined, proportionately greater returns of the same specified product.

Now I let my imagination play more freely. Let us continue to suppose. This time we will suppose that while our classical economists were preparing their report, an up-to-date American philosopher got ready a searching examination of their antiquated doctrines.

"What possible meaning," I can imagine him asking, "can we attach to the proposition that population tends to increase faster than subsistence? To be sure, Mr. Malthus qualifies by saying that preventive or positive checks keep population actually within the means of subsistence. But how does this help the matter? Subsistence is meat, and grain, and vegetables. Do not cattle and swine, wheat and Indian corn, potatoes and cabbages multiply as rapidly as human beings? Do they then tend to increase more rapidly than *their* means of subsistence? How far back would Mr. Malthus desire to stretch the explanatory elasticity of his alleged law? And what is he prepared to say about the facts, the actual facts? Theory aside, population is tending, as every statistician knows, toward self-extermination. In France more people die every year than are born. We are facing the gruesome phenomenon of 'race suicide.' No. Mr. Malthus, your explanations do not explain. Food multiplies faster than population. Enough said.

"As for you, Mr. Ricardo, you caught a glimmer of the truth, undoubtedly, but your thought was crude and incomplete. You should have been acquainted with the writings of Cournot, then you might have anticipated Jevons, Menger and Von Wieser. You would have seen that 'marginal utility' determines value and that values determine cost of production. The theory of consumption is the thing. We decide what we want. We adopt a 'standard of living.' This distributes demand. It equilibrates the marginal utilities. Thereby the pressure to produce marginal increments of this or the other particular commodity diminishes. Marginal production ceases to have significance. Your carefully constructed theory, Mr. Ricardo, turns out to be a nightmare. Forget it.

"As for you, Mr. Mill, you have been sufficiently answered along with Malthus and Ricardo. But in order that no half-loyal American may hereafter be deceived, it may be well to demolish you also, separately. It is natural enough that you should 'take stock' in a law of diminishing returns, because you have never really seen the world outside of England and the south of France. If you had been born on the prairies of America, you would have known that when land will no longer produce wheat it is in prime condition for Indian corn, and that when the corn crop plays out, sugar beets, marketed under a protective tariff, are better than a gold mine. You would have seen, too, what can be ac-

complished by invention. Think of our gang plows and self-binding harvesters! You would have seized the significance of irrigation, and have caught the prophecy of agricultural education. With a properly instructed population, abundant capital, and improvements, we expect, one of these days, to take sixty bushels of wheat to the acre from our most abandoned farms. There are no diminishing returns. Mr. Mill, you have been misled."

Once more I let my imagination play. I try to think what Malthus, Ricardo and Mill might have said in rejoinder. I offer no apology for thus making Mill a contemporary of his predecessors. When one is imagining and supposing, one may as well imagine and suppose enough for his purposes.

I think, then, that retort would have been concise, and might have run somewhat like this:

"You acknowledge, my scientific friend," Mr. Malthus would have said, "that what I really taught was, that in the absence of the preventive or the positive check, population tends to outrun the means of subsistence. You ask if this law holds true of animals and of plants, as of mankind, and remind me that they multiply more rapidly than human beings do. Quite so. But, since each species of plants and of animals is a food supply to other species, the actual increase of each is restricted, is it not, by the operation of the positive check? The actual increase, then, of all the species that are a food supply for man is necessarily slow. Consequently, since the reproductive possibilities of mankind are greater than the possible increase of a food supply, which is kept down by the positive check, mankind also must inevitably encounter the positive check of famine unless he resorts to the preventive check of prudence. Now, you tell me that birth rates are declining, that in the most civilized countries the race does not even tend to increase rapidly. Is this because reproductive power has failed? Plainly you do not think so, for you use the term 'race suicide.' This means, if it means anything, that the nations in question have resorted to the preventive check. Why have they resorted to it? Do you know of any reason except that experience has shown that if they did not resort to it, the 'struggle for existence,' as you call it, would become not easier but harder? Suppose you think about this a while, and then ask yourself if it isn't a bit extraordinary to argue against Malthusianism from the major premise that Malthusianism is true."

Ricardo, in his turn, I think, would have said: "If it is so simple a thing to make your standard of living whatever you please and by distributing your marginal consumption to relax the pressure to produce at any given point, pray why don't you do it, and be happy ever after? Why do you complain of rising prices? If ten dollars of capital and a day's work will bring you as good returns when you are producing corn, or wheat, or lumber, as when you are producing gold, why don't you curb your desire for gold, and so 'equilibrate' your consumption of all commodities that prices shall remain stable? Why have you crowded into the mining camps until you have increased the annual production of gold from $202,251,600 to an annual production of $412,532,900 eleven years later? Do you really know of any simpler explanation of your conduct than the assumption that when you began to increase the output of gold, ten dollars and a day's work in a gold mine would give you more purchasing power over commodities in general than ten dollars and a day's work on the farm, or the ranch, or in the lumber camp? And do you really believe that you will change your habits until prices have risen to the point where other things are as profitable as gold mining?"

Mr. Mill, finally, I think, would have said something like this: "I foolishly believed that I had stated the law of diminishing returns with all necessary precision. Permit me to try again. We assume that at the beginning and at the end of our experiment, we are dealing with the same piece of land, or the same mine, or the same mill, and that the area of the land in question, or of the mine workings in question, or the floor space of the mill in question, remains unchanged. We further assume that the product with which we are experimenting is the same product. We are not talking about what may happen if we

raise Indian corn instead of wheat, or make fur coats of cowskin instead of mink. Finally, we assume that we bring to bear the same amount and kind of knowledge, and the same skill, and that we use the same tools or inventions. We are not talking about what will happen when we substitute technical training for happy-go-lucky habits, or steam power for oxen, or electricity for steam. We are inquiring what will happen when we quantitatively change two factors only—labor and capital. So stating the problem, we affirm, as a result of experiment, that diminishing return is a fact. Now, you tell me that by substituting one product for another, by adopting new inventions, by resorting to technical training, you can increase your returns. Quite so. But pray tell me one thing more. Why do you resort to technical training, why to substitution of product for product, why to invention? Why, indeed, for any reason that the human mind can apprehend, until you have run up against diminishing returns?"

Such might have been the rejoinder, I conceive, that our eminent English gentlemen, the classical economists, might have made to their advanced and "original" western critic. And when they had so disposed of him, they would have been gracious enough, very likely, to sum up their reflections upon our problem of rising prices in some such fashion as this:

"For more than a hundred years the population of the western world continually increasing in numbers, notwithstanding all checks, whether positive or preventive, has been exploiting natural resources with unprecedented eagerness and wastefulness. It has spread over the vast continents of America and of Australia. It has cut the forests and exhausted the fertility of the soil. Now, there are no more virgin continents to skin. To maintain an increasing production of food and other necessaries, it is necessary now to resort to knowledge, skill, invention and economy. The whole world, in short, and not merely one small part of it, has arrived at diminishing returns. Human quality and ability remaining the same, the cost of production must increase. If the cost of production is to be lowered, human quality must be improved and ability must enormously be increased. Meantime, supplies of new gold of hitherto unimagined extent have been discovered and are being cheaply turned into the money reservoirs of the nations. Price is a ratio depending upon the quantitative relation of something called money—rate of circulation and the use of credit substitutes being taken into account—to the sum total of commodities. At present standard money of gold is produced under conditions of increasing return. The raw materials of other commodities are produced under conditions of diminishing return. So long as these conditions last, prices must continue to rise."

I have promised not to be very serious, so I will touch but lightly upon the remaining question whether if this imported explanation of rising prices happens, by some whim of the gods, to be true, diminishing returns are likely to be met by the improvement of human quality, the increase of ability, and the application of fresh stores of wisdom to the problem of controlling nature in the interest of man. Possibly Patrick Henry's way of judging the future is now as discredited as the orthodox political economy of the English writers. I must therefore not add to my offense by attaching too much importance to the mere historical record of American experimentation with fate. It does not hold out to us an entirely cheering promise. We took possession of a continent sparsely peopled by what we chose to think an inferior and savage race. By gunpowder and legislation we reduced the red men to negligible proportions. Then, having an opportunity such as no people had had since time began to create and to develop a homogeneous nation, we proceeded to import a race that we despised, and to enslave it. When consequent political and economic disaster precipitated the Civil War, we further displayed our intelligence by resorting to such financial devices as paper money, and a wholesale creation of economic privilege. Meanwhile, without pretense of foresight, we permitted the destruction of natural resources. To the extent of our ability we devastated our heritage. Natural resources that could not immediately be destroyed we turned over to the monopolist. Rather than build

substantially and protect our property as slow-minded Europeans protect theirs, we bear an annual loss by fire of $215,084,700. Decade after decade we collectively and severally writhe in the agonies of financial panic, but take no steps to reform our currency and our banking system in accordance with those European experiments that have shown how these disasters may be mitigated. We are sufficient unto ourselves. We know our own business. We manufacture our own political economy.

What the American people may one day be politically and intellectually, what we may do for justice or for art, no mortal can foretell; what we already are materially, we vaingloriously boast. Our economic achievement is writ large and is soon read. For three hundred years we have been a herd of wild asses in the wilderness. There have been other herds, in other lands, in all ages, but no other has accomplished an equal amount of damage in so short a time.

New York City.

Great American Universities.—XV.

BY EDWIN E. SLOSSON, Ph.D.

[This is the concluding article of a series on the present condition and future prospects of the larger universities of the United States, which has been running in The Independent for the past fourteen months. It will be followed in the near future by similar studies of great foreign universities, beginning with four articles by Charles F. Thwing, president of Western Reserve and author of "Education in the Far East," on the universities of Tokyo, Pekin, Cairo and Calcutta. In response to the inquiries of numerous readers we will add that the series on "Great American Universities" will be published in book form in the fall and that announcement of it will be made in due time in The Independent. —Editor.]

THIS article has been added to the series in order to make some comparisons, to draw some general conclusions, to remedy some omissions and to add some criticisms that ought not to fall upon a single institution. The comparisons, in so far as they can be made statistically, may be best presented in their simplest form, that is, in one dimension. Geometry is easier for all of us than arithmetic or language, for the human race has used this mode of thinking longest. The American universities have grown so rapidly in the last two decades that few people, not directly concerned, realize their size and present relative standing. In presenting the accompanying diagrams and statistics* I do not wish to be understood as giving them an exaggerated importance. The really important things are incommensurable and uncountable. Some one young man or woman among these units is better worth educating than a thousand others. But which is the one and what kind of training is best for him or her no man knows. When the psychologists become skilful enough to determine vocational ability by tests of reaction time and association of ideas, we may save money, time and metabolism of gray matter by confining higher education to the fittest. In the mean time it is best to throw out a wide net with a fine mesh.

Consequently we should not speak sneeringly of "mere numbers," and the size of a university is really a measure of one dimension of its influence. The age of a university is a factor not to be despised, as it sometimes is by the younger institutions. Age confers upon its graduates something of the honor, dignity and responsibility derived from the long line of illustrious predecessors. It gives to the institution prestige, stability and momentum, so it is able to ac-

*The figures used were received in most cases from the university authorities within the last month, but supplemented where necessary by reference to Professor Tombo's invaluable reports (*Science*, December 24, 1909, etc.), the Carnegie Foundation and the *World Almanac*. They are the latest and best I could obtain, but it is impossible to secure accuracy, for the systems of classification in use by different universities are so various as to be often incomparable. I should be pleased to be informed of any errors of fact detected in this or the preceding articles before their appearance in book form. The errors of judgment, tho doubtless more serious, are probably irremediable.

TOTAL NUMBER OF STUDENTS IN THESE UNIVERSITIES, 1909-10.

Columbia, 6,132.
Harvard, 5,558.
Chicago, 5,487.
Michigan, 5,259.
Pennsylvania, 5,033.
Cornell, 5,028.

complish easily and quietly things which in a newer university can only be done with much fuss and nervous strain. Size and age together give a large body of living alumni and this has a practical value to the university in securing students and benefactions, and to the student by giving him friendly aid wherever he may go. The alumni list is in a way the measure of the influence of the university in current affairs. Wealth is also power, in education as elsewhere, and is best estimated by annual income rather than by endowment or property.

Some idea of the relative importance of the leading universities as contributors to the various professions may be obtained by a study of "Who's Who in America." This handy volume was never designed to serve as a basis for the many statistical edifices that have been built upon it, but with all its faults and inadequacies it is our most convenient measure of a certain degree of prominence in certain lines. The volume for 1908-09 includes 16,395 names of living men. Considering only the four or five colleges which have furnished the most names in the chief branches of activity, the following results are obtained:*

Harvard has trained the largest number of distinguished lawyers, 208. Next

Cornell, 182.
California, 181.
Minnesota, 176.
Johns Hopkins, 390.
Chicago, 146.
Yale, 124.
Wisconsin, 48.
Stanford, 7.
Princeton, 0.

In medicine, the College of Physicians and Surgeons of Columbia stands at the head with 119 graduates, followed by Pennsylvania, 104; Harvard, 75; Yale, 35.

Of men prominent in research, Harvard is credited with 133; Columbia, 80; Yale, 50; Cornell and Johns Hopkins, 39 each.

In engineering, Rensselaer Polytechnic Institute stands first, 35; Cornell and the Massachusetts Institute of Technology are second with 25 graduates each; then Yale, 22; Harvard, 21.

This indicates the past rather than the present standing of the universities for most of those who are being "Who's Who'ed" now received their collegiate education more than twenty years ago.

Still further in the past are the sta-

tistics obtained from Appleton's "Cyclopedia of American Biography,"* published in 1888. Of the 15,142 names included in this work, about a third are college educated, and of these the following universities have contributed most: Harvard, 883; Yale, 713; Princeton, 319; Columbia, 198; Pennsylvania, 175; Cornell, 20; Michigan, 16.

A more exact study of a more limited field is made by Professor Cattell,† from which I quoted in the Harvard article. He found by ascertaining the universities in which the thousand most eminent men of science in America had pursued their graduate studies that Johns Hopkins had excelled chiefly in chemistry, physics, zoology and physiology; Harvard in zoology and botany; Columbia in zoology, botany and mathematics; Cornell in physics and botany, and Michigan in botany and pathology.

An analysis of the membership of the National Academy of Science throws light upon two interesting points, namely, which universities have contributed most to the education of the eminent American scientists of our day and which now have most of them enlisted in their service. Out of one hundred members, 27 received their collegiate training in Harvard, 18 in Yale, 4 in Michigan, 3 in Cornell and in Columbia, 2 in Princeton and in Pennsylvania and 1 in Wisconsin, in Johns Hopkins and in California. The rest were educated in other colleges or have not reported to "Who's Who" on this point. It is impossible to determine their present affiliations with a rigid classification, but it seems that Harvard has 20 of them as regular professors; Yale, 12; Johns Hopkins, 8;

Chicago and Columbia, 7 each; Pennsylvania and California, 4 each; Cornell, Princeton, Wisconsin and Michigan, 2 each, and Stanford, 1. Of the rest about 14 are to be counted as in the Government service at Washington.

Thru the passage last week by the Senate of a bill incorporating the National Institute of Arts and Letters we have a similar test to apply to the other half of the faculty. The list of distinguished men of letters, selected originally by the American Social Science Association, contains 115 names, not counting the artists and musicians. Of these, 27 had no college training. Of those who attended or graduated from the fourteen universities here considered, Harvard furnishes 34; Columbia, 10; Yale and Princeton, 6 each; Johns Hopkins, 4. and Wisconsin, Chicago and California, 1 each. (Honorary degrees are not included, but counting second degrees from another institution brings in a little duplication.) Many of the members of the Institute are lecturers in one or more universities, but 34 appear to be sufficiently identified with particular universities to be counted as part of their regular staff, and these are distributed as follows: Harvard, 9; Columbia, 8; Chicago, 3; Yale and Princeton, 2 each; Cornell, Johns Hopkins and Minnesota, 1 each.

If we consider the more select body, the Academy of Arts and Letters, elected from the membership of the Institute, the supremacy of Harvard becomes still more evident. Out of 31 in the literary group of the members of the Academy, 10 were educated at Harvard, 3 each at Yale and Princeton, 2 at Columbia and 1 each at Wisconsin and Chicago, while 5 had no collegiate education, and 1 each was graduated from Union, Amherst, Earlham, Williams, Washington and Lee and the Naval Academy.

THE MUSEUM OF HARVARD UNIVERSITY.

Of course it may be objected that the membership of these two Academies does not represent the highest scholarship of America. The same criticism has been directed at the French Academy for 275 years. Still it would be difficult for any one to draw up a list which would be more generally recognized as satisfactory, and if we had such a list the relative standing of the leading universities would not be materially altered.

It seems to me likely that a closer analysis of these figures would show that the representation of the different universities in the Academies is roughly proportional to the number of men they were graduating at the time when these academicians were being educated. If this is true, it indicates that men of exceptional natural ability are pretty evenly distributed thruout the undergraduate student body of the United States, in spite of the fact that certain families noted for their number of eminent men send their sons to Harvard, Yale or Princeton generation after generation, and also that these have the extraneous advantages of wealth and influence in their careers.

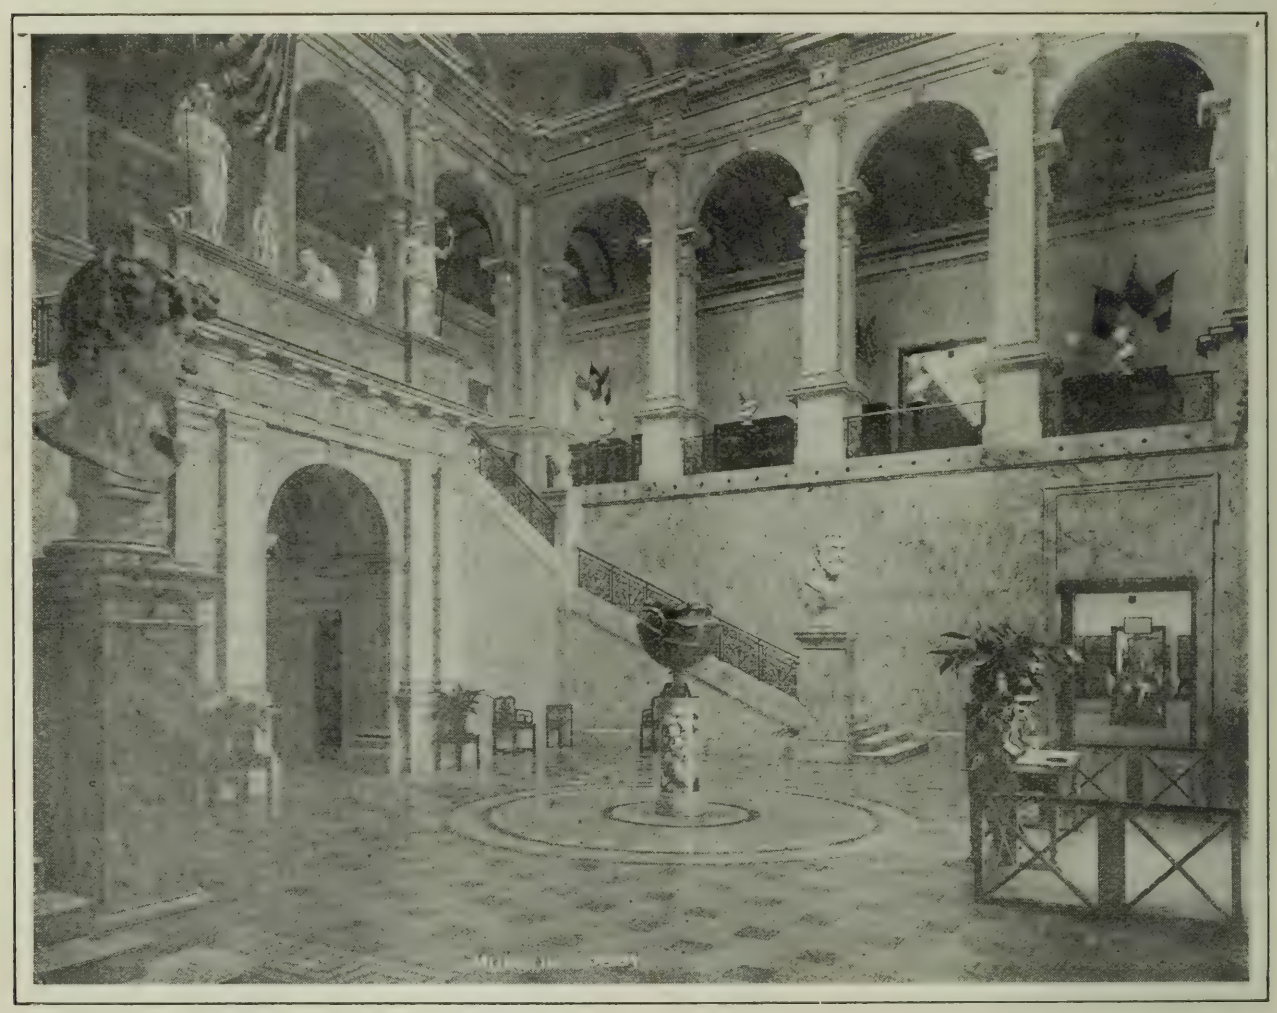
The difference between the universities in regard to their undergraduate work is greatly exaggerated, while the difference in their graduate work is insufficiently recognized.

The question "Which college for the boy?" is not of such importance as it is popularly supposed to be. All the universities here considered, and a host of others, provide substantially the same facilities for the cultural and ordinary vocational courses in at least the first two or three years. The ratio of good teachers to poor does not vary much the country thru. All the libraries have more books than the undergraduate can read. Anywhere he can learn more than he wants to. Everywhere he will be subjected to the same temptations. He will find in any of the large universities a sufficient number of associates of any desired moral, cultural or intellectual qualities. So far as social influences go it makes more difference which fraternity he joins than which university he attends. The reports of the Carnegie Foundation show that there are enormous differences in the average expenditure per student in the different universities, but I do not believe that there is any such difference between the quality of the instruction given or the opportunities afforded, or even any direct relation between the two, so far as undergraduate work is concerned.

On the other hand, too little discrimination is commonly shown in the selection of the institution for advanced work. The differences between the universities increase as one goes up the grades. In the field of research and specialized professional work the general reputation of a university is no safe guide. Yet too often the general reputation is the deciding factor. For example, a man from California may go to Harvard or Yale for his graduate course because of their high renown, yet it may happen that Chicago or Cornell has far superior facilities for the particular work he wishes to undertake. The undergraduate is often blamed for his propensity for electing professors instead of subjects. I am inclined to think he is not altogether wrong in this, but, at any rate, the graduate should elect a professor instead of a university. The graduate student, before he begins his dissertation work, should make diligent inquiry for the most able man in the country in his chosen field and then go after him wherever he may be found. Nothing would do more to raise the standard of the graduate schools everywhere than such a disposition on the part of research students. A new fledged doctor once suggested to me that this effect could be attained most simply by putting the name of professor under whom the research was carried on in place of the name of the university in the title. "For instance," he said, "Ph.D. (Pickering) or Ph.D. (Wilson) means much more than Ph.D. (Harvard) or Ph.D. (Columbia)."

The graduate's trend of thought and life work are largely determined by his research professor, the man who sets his course for his first voyage into the unknown. If the young man realized how much depended upon the personality and perspicacity of his pilot he would take more pains in the selection. As it is, he is apt to choose his research professor as carelessly and unpremeditatedly as he chooses a wife. One of the benefits that would result from a greater discrimination on the part of graduates would be to give the lesser universities a more even chance to do advanced work of the highest order and to retain their best men. If students would flock from all parts to a man of superior attainments wherever he might be, his honor in his own country would be enhanced and the importance of his work

better recognized. The drawing power of the great university is not so much a higher salary or a bigger laboratory as it is the chance to multiply one's efficiency by the aid of a devoted band of able young disciples.



At present the great universities are willing enough to promote migration, but not circulation. Yet we may look for a greater reciprocity to come from the increasing cooperation and comity now being developed thru the national associations of universities. As the requirements and courses become standardized there will be less reluctance to grant mutual credits. Then a student, even an undergraduate, could take a term or two in another institution of a different part of the country without loss of standing. The change from Eastern to Western, from Southern to Northern, perhaps to Canadian institutions, and vice versa, would be stimulating and liberalizing. Could not an American university make an arrangement with some German *gymnasium* by which an undergraduate student from this country could take a semester in Europe and return home without being punished for it. German professors come to us on a *Gastspiel* and we send ours to Berlin and Paris. Similar exchanges have been arranged for teachers in the public schools of the United States and Prussia.

Personally I am inclined to think that after a student has spent two years in one college the law of diminishing returns begins to apply and that he would be likely to grow faster if transplanted to another environment, but I find few agree with me on this point. Many, however, will agree that six, seven or eight years in a single institution is too long for the best results.

The attendance at the schools of law, medicine and engineering is given in the tables. But there are other professional schools not so commonly found in these universities which must here be mentioned. Three universities have divinity schools; Chicago with an attendance of 174, Yale with 108 and Harvard with 48. Besides these there are theological seminaries in close proximity to Princeton, Columbia and California, which, tho independent, are so intimately associated as to obviate the need of such a department. The leading schools of dentistry are Pennsylvania, 435; Michigan, 212; Minnesota, 196; Illinois, 105; Harvard, 86, and California, 57. Of pharmacy are Columbia, 290; Illinois, 173; Michigan, 93; Minnesota, 81, and California, 78. Of architecture, Pennsylvania, 407; Cornell, 139; Columbia, 128; Illinois, 103. Of agriculture, Illinois, 526; Cornell, 507; Wisconsin, 310; Minnesota, 278, and California, 171.

The influence of the different professional and graduate schools and the number and character of the men they have trained may be inferred from the various lists of prominent men which I have anyalyzed above. Doubtless the relative standing of the universities has changed somewhat since these men were educated, but I have no statistical and objective measure of it, and it would require more daring than I possess to venture to give their rank at present. And if it could be determined for today it might not hold good for tomorrow. It is so largely a matter of personality that the removal of a single man from one institution to another may upset the balance of power. In fact, if any university should by some unprecedented luck or foresight happen to get and hold half a dozen men of the highest ability as investigators and teachers on its faculty at one time, it would soon go ahead of all the rest, whatever the odds against it in the matter of location, income and plant. The field is open and the handicaps are not so great as they appear. We are assured by the president of one of our greatest universities that the superiority of the educated over the uneducated man consists in the power to discern genuine worth and exceptional ability in other men. This possession of any such superior discernment is not, however, always obvious in presidents, trustees and other educational authorities For example, Mr. Carnegie, who had not the advantage of college training, ascribes his industrial success to having been able to pick out for his lieutenants young men of unusual talents and enterprise. He founded the Carnegie Institution for the purpose of doing in science what he had done in the steel business, that is, to discover the exceptional man wherever he might be and

set him at the work for which he was peculiarly fitted. But the Carnegie Institution, under the exclusive control of college men, has practically abandoned the search for diamonds in the rough and mute inglorious Darwins buried in country colleges, and is devoting its revenues chiefly to the support of a few permanent establishments for systematic research. I do not say that this is not a more profitable way of promoting science than the endowment of individual gen-

ENTRANCE OF THE MUSEUM OF LELAND STANFORD UNIVERSITY.

ius, but it is a very different thing. The patron we have always with us, but the form of the patronage changes. Formerly the duke or king gave his stipend to a certain person whom he knew and thought would make him a good poet, playwright, painter, engineer, alchemist or astrologer. In spite of the capriciousness and tyranny of the patron and the sycophancy of the retainer, the system did produce some great names. Nowadays we put faith in institutions rather than in individuals, and our modern Medici subsidize sciences instead of men of science.

The scores of different degrees granted by our universities have mostly lost their significance, those that ever had any, but fortunately the most important of them, the doctorate of philosophy, has a fairly well defined meaning in any particular field. Between different departments of the same university, however, there is apt to be wide variation in its requirements. In the sciences, for example, it stands for creative ability, for the power to produce whatever one has been studying about. It must be admitted that not all the doctors in science give any convincing evidence of such ability after they get away from their alma mater, but while there they are supposed to have done some original work. In the literary departments there is not even a pretense of any such standard. The candidate for Ph.D. in literature is not expected to produce a book, only to learn about it or about something more or

less remotely connected with it, such as the printer or the printer's blunders, or the author, or the author's house or his wife or his manservant or his maidservant or his ox or his ass or anything that is the author's. He is not required to discover something hitherto unknown, but merely to dig up something that had been forgotten. He is not even expected to discover a new author. He simply explains why some celebrated author was worth discovering and how he came to be discovered in spite of the opposition of the academic circles of his day. If one of these candidates would apply his talents and training to the exploration of an unknown field, say the reading of the thousand volumes of new poetry published in 1909, to pick out all the verses that show originality and genius, he would do us all a service and demonstrate the possession of a certain degree of critical insight and esthetic taste. This would correspond in science to work in taxonomy such as going over the herbarium specimens of a particular genus or family in search of a new species, a humble but creditable branch of botanical research which, if successful, might be deemed worthy of being rewarded with a Ph.D. The origination and propagation of a new species by cross-fertilization would, however, be regarded as more completely satisfying the requirements of the degree. At any rate, the doctor in botany knows a flower when he sees it. But I am acquainted with some doctors in literature who not only could not write a good poem, but do not know what poetry is, have no idea what poetry is for and would not be able to detect it in an unlabeled package.

It is not probable that any reputable department of chemistry would grant its doctorate to a man who presented a dissertation on "The Family, Friends and Formative Influences of Amadeo Avogadro, Conte di Quadregna," however long and arduous a research this might have involved. No, the chemist has to imitate Avogadro to the best of his ability, not study about him. He must discover a new law, work out a puzzling reaction or make a lot of new compounds, not find them, but invent them. It is the same in applied science and the fine arts. For an advanced degree in engineering a man must, for instance, be able to construct a bridge, one that will not fall down a-building. The school of architecture will not certify to the competency of a student until he can design a Carnegie library or a triumphal arch. The doctor in music must compose an original symphony or something of the kind.

It seems to me that it would be only fair to require of every candidate for Ph.D. in English literature the writing of a successful novel, a volume of good essays, a poem of distinct merit, an acceptable play or some contribution to belles-lettres that will meet with the approval of the judicious if not of the public. Even the requirement that the candidate should have a ghost story accepted by *The Black Cat* or a feature page by a Sunday newspaper, would serve to weed out a considerable portion of that teeming department. That is, if literature is a science it should require original contributions to knowledge like the other sciences. If it is an art it should require craftmanship like the other arts. If it partakes of the character of both, it should meet both requirements instead of dodging both by keeping in between. I do not mean to say that the dissertations now presented in literature are necessarily valueless, tho it seems to me they often belong more properly to other departments, such as history, sociology or pure philology. The subject on which a friend of mine worked for some years in one of these universities, "The Use of Sense Adjectives in the Minor Poets of the South," belongs, I should say, in psychology, if anywhere.

Now, this lowering of the standard would not matter so much in any other department. If, for example, the departments of astronomy should cease to require original research, in the sense that this is understood in the other sciences, it would not have much effect upon the university as a whole. The intrinsic difficulty of the subject would prevent its being sought by the leisure class and even if professors of astronomy should in the future not have the zeal for discovery now so characteristic of

them it would not seriously impair the faculty and student body. But all the students go thru the English department and there they are apt to come under the influence of men who have other ideals than most of their colleagues, who are not doing, and are often not capable of doing, original work, who are not making literature of the day as other men in the faculty are making the philosophy, the politics, the art and the science of the day. They are critical rather than creative. Their ideal is impeccability rather than originality.

This, I think, is partly accountable for the decline of the literary society and the literary magazine in colleges. It is remarkable that at a time when new magazines by the hundred are appearing, and books in every department of literature are sold in unprecedented editions, the literary activity of college students seems to be declining. I doubt if there is a literary magazine in any of our universities which could be called prosperous or popular, as they were a generation ago. In some of the universities, in spite of the increase in size and wealth, the literary monthly has ceased to exist or appears only fitfully, always in distress for want of contributions. Looking over the files, as I have in many cases, I do not find that there has been any noticeable improvement in the literary quality of the contributions to these magazines in the last twenty years, notwithstanding the greater attention now paid to training in English.

Good work of its kind is being done by the students on their dailies and humorous periodicals. Apart from this the only form of literary activity that seems to have attraction for the college student of today is playwriting. If the great American drama does not appear within the next decade it will not be for lack of ambition and earnest effort. Usually there are one or two of the English professors who interest themselves in the student dramatics and journalism, but for the most part it is spontaneous and independent. So, too, the musical department rarely has anything to do with the training of the glee clubs or the art department with the photography and sketching of the annuals.

The degree of doctor of philosophy is imperiled by its popularity. Its financial value is too great. College and even high-school authorities are disposed to ignore the application of any candidate not having this appendage. They insist that all their teachers shall be doctors, oblivious of the fact that all doctors are not teachers. We have got far away from the original meaning of the title. If those trustees and presidents who regard a Ph.D. as indispensable would take the trouble to go thru the catalogs of Harvard, Columbia and Yale they would be surprised to find how many names there are, some of the highest renown, which are not followed by these magic letters; in a few cases not even by a modest A.B. or B.S. But since Ph.D. is regarded as a necessary teaching degree it will be sought with persistency by those who have no other qualifications for it. And persistency here, as elsewhere, is apt to attain its object. After a while the professors get tired of seeing a man hanging around the seminar or laboratory and will give him a degree to get rid of him.

The most effective check on the tendency to lower the degree is the printing of the dissertations. This ought to be done in all cases and promptly. If delayed, as it often is, for months or years, some other graduate is likely to put down a prospect hole on the same lead and lose his labor thru the prior claim. If not deemed worth printing, it may be questioned whether it is worth accepting. By printing it other people will have a chance to form an opinion as to whether it was worth accepting. The requirement of having it in type before the degree is conferred would work little hardship were it not for the insistence upon the bodily presence of the candidate, for no other apparent purpose than to grace the triumphal procession of the president on Commencement Day. Otherwise the candidate could complete his research, take his final examination and go home or to his new field of labor, assured that his diploma would follow by registered mail whenever his dissertation was published. Under such circumstances its publication would not be unduly delayed or indefinitely postponed, as it often is at present.

But the doctors we are turning out

now are not so apt to be deficient in the knowledge of their specialties as they are in that general culture and broad-mindedness that are properly regarded as belonging to "a gentleman and a scholar." The making of doctors is looked upon too much as a departmental, even as a personal, affair. If the major professor is satisfied with him nobody else feels inclined to interpose very emphatically. This would be all right if the doctor bore the name of the professor as part of his title, but he does not. He stands as the representative of his alma mater in his community and if he is not a man in whom the university can take pride it is because the university as a whole has refused to assume the responsibility for him.

To correct this, I suggest that a preliminary examination be given after the candidate has been working a year or so in the graduate school, about the time when he begins to settle down on his specific research. Some of the universities are now requiring an examination at this point if for nothing more than to ascertain if he has a reading knowledge of French and German, but I have in mind something more thoro and extensive, a long and informal conference attended by representatives of all the principal departments, to test the candidate's personal fitness for the honor, his range of ideas and his command over them. If the professor of political economy and the professor of philosophy find that the candidate for Ph. D. in botany cannot converse intelligently with them on their own ground, they should exercise their veto power. If, on the other hand, they find that they cannot converse intelligently with him on botanical subjects they should resign and go into the insurance business. Nowadays, when the civil service examiners expect mail carriers to know the distance from the earth to the sun, and policemen the capital of Sweden, it is not too much to require of doctors—and of professors—a corresponding extent of information. The university authorities may believe that they are certifying only to a man's knowledge of "The Intracellular Enzymes of Penicillium Camemberti," but the outside world interprets the degree differently, and in five years the specialist in moldy cheese may be arbitrating a strike or teaching pragmatism. We have to allow for the fact that the American system of interchangeable parts is held to apply also to social machinery.

It such a preliminary examination were held the final one could be confined to two or three related departments, as now. I have attended the oral examinations of doctors whenever I happened to be in a university during the season, and it was interesting to see the variety of ways of conducting them, even in the same institution. Some are very ceremonious; some quite the reverse. The board of examiners varies in number from three to twenty-five. Sometimes the candidate's research work is the main subject of inquiry; sometimes it is not mentioned. In some departments outside specialists are called in to assist in the examination; in others all persons except the committee are excluded. Prospective candidates may be encouraged or may be forbidden to attend. Personally I am in favor of a greater publicity. If professors and advanced students from the same and especially from other departments would attend freely it would be of great educational value to them and would not materially increase the embarrassment of the candidate. I suggest also that it might be advisable to make it a rule to invite the attendance of a representative of the same department of some other university to take part in the oral examination and vote on the candidate's qualifications. This, even more than the publication of the dissertation, would tend to keep up the standard. Of course, there is the danger, in greater publicity, that the examination would become a mere ceremony, as the disputation became in Germany, and the candidate would merely be put thru his paces by his trainer to the admiration of his friends and the wonder of the public.

In the preceding pages of this series I have told some of the things that I found out in my tour of the universities. It may be of interest to refer to some of the things that I failed to find out. Two queries in particular that I had on my list on starting out proved to be absurdly impossible. I wanted to find out what the college students of today were read-

ing and thinking about; what were their unofficial favorites among authors, and what sort of philosophy they were working out for their own guidance thru life. I was disappointed in the quest because I had overlooked the fact that the years which had passed since my graduation, few and short as they seemed to me, had put me outside the barrier which conceals the workings of the adolescent mind.

The query as to the undergraduate taste in reading was suggested by a stray aphorism which I happened upon, that "what the college student is reading today all the world will be reading in ten years." As a preliminary test of its validity, I applied it to my own experience, and it seemed to have some truth in it. Harking back to my school days I recollected that the authors we were reading in our rooms at night were Browning, Ibsen, Kipling, Whitman and Omar Khayyam. We were not agreed in our admirations, but each of us was crazy about one or more of these authors and zealously proselyted among such of his friends as he esteemed worthy of being initiated into the cult. By the end of a decade, however, it was, even in Kansas, no longer a distinction, but rather the mark of a bourgeois mind, to express a fervent admiration for Browning, Ibsen and the rest. The lights we had followed from afar had become fixed stars, by which all the world was oriented.

Now, I thought, I will get an advance tip on the coming rage by ascertaining what new authors, unappreciated by me, have been sighted by the keener eyes of youth. But I was disappointed. The class book questionaires on literary preferences give no help, for in them "Three Weeks" and "The Vicar of Wakefield" are likely to be tied for first place. The librarians and professors of English whom I consulted generally asserted that the college boys read nothing but the required books and talked nothing but athletics. The news stand men told me that the *Saturday Evening Post* and the *Ladies' Home Journal* were most popular. In the week at my disposal I could not get into the confidence of the students enough to form any reliable conclusion as to the prevailing literary taste. Still, I managed to get access to one or more coteries of genuine book lovers in each institution, and from them made out the following list of favorite authors: Kipling (but they can't have him; he belongs to us by right of discovery), Stevenson, O. Henry, H. G. Wells, Jack London, Shaw, Chesterton, Churchill, George Ade, Richard Harding Davis, W. J. Locke, F. Hopkinson Smith and Frank Norris. From this one would judge that the college students of today keep to the list of best sellers and do not go nosing for truffles, as we used to. They may have their esoteric literary cults, as formerly, but I was not able to discover them. The only marked deviation from the popular taste of the day was the extravagant—no, I will not call it extravagant, for I agree with it—but the unusual admiration exprest for the author of "The Octopus." Whenever I got a group of students to talking books, some one was likely to burst out with "If Frank Norris had only lived!" which was the signal for a chorus of eulogy.

My other query, as to what the students were thinking, was started by Chesterton's remark:

> "There are some people—and I am one of them—who think that the most practical and important thing about a man is still his view of the universe. We think that for a landlady considering a lodger, it is important to know his income, but still more important to know his philosophy. We think that for a general about to fight an enemy, it is important to know the enemy's numbers, but still more important to know the enemy's philosophy."

In my time and environment (to be specific, 1887-90, University of Kansas) theological speculation, pure and simple, had lost the zest it had for a previous generation, but the controversy over evolution had not quite died down, and the rise of sociology and experimental psychology was starting new questions in religion, ethics and politics. Spencer, Mill, Huxley, Hartmann and Bellamy were our heroes or antipathies, to be fought over with that whole-hearted enthusiasm which is characteristic of college students—or used to be. Has hero worship gone out of fashion? If not, what are the magic names that the boys of today grow red-faced and choked up over? To what gods not in the official pantheon do they burn

ARCHITECT'S PLANS FOR THE SOUTHERN FACADE OF THE UNIVERSITY OF CHICAGO.
The Harper Memorial Library in the middle, flanked by the buildings for History and Philosophy on one side and for Classics and Modern Languages on the other.

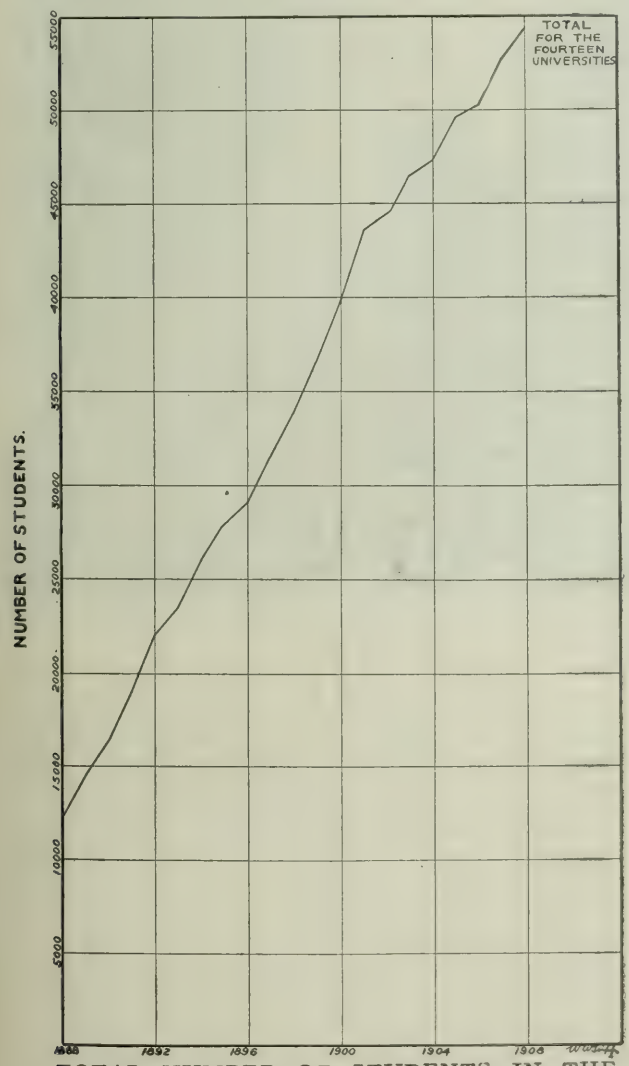
incense in secret? Which of the world's riddles do they scrap about in their rooms and on the steps? Has the spirit of partisanship been dissolved in a tepid ocean of universal toleration? What new messiah do they discern, or what false prophet is leading them astray? I could not find out. I mentioned the name of Nietzsche. No reaction; at which I breathed a sigh of relief. I tried pragmatism, mysticism, spiritualism, anarchism, new thought, Haeckel, Eucken, Maeterlinck, anything, anybody, that I suspected might catch the fancy of the rising generation, but I could not strike a live wire. Eugenics? They had not heard of it. I inquired about socialism. A bored look came into their faces. "We had that last term," they replied. Perhaps here lies the explanation of their indifference. The instructors may be so quick to seize upon every new thing that the students cannot get ahead of them, and when a subject gets into the curriculum it ceases to have an emotional interest. All the questions the students might ask are answered authoritatively in advance. All their wants are prevised. "The wonders of science" is a meaningless term to this generation. Biology is no more of a revelation to them than bookkeeping. Research is a business like any other, and the philosophic and humanistic aspects of their science do not interest them. So it seems to me, but I have no right to express an opinion, for I realize that I did not succeed in finding out what the college student of today is reading and thinking. A smooth-faced detective entering Freshman and working up might get at it.

Among the omissions are two conspicuous tendencies in American university life to which I have merely referred in the preceding articles; that is, the growth of ritualism and of athleticism.

The first I have not discussed at length as I should have liked to because I felt that the ritualistic movement might be trivial and certainly is irresistible. All the churches, even those which were established as a protest against liturgy, have succumbed to it. Fashionable society is extending its imperious rites over a larger circle. The universities merely obeyed the dictates of the *Zeitgeist* in taking it up. It is a spontaneous and popular impulse. Often it is the students themselves who force the caps and gowns upon a reluctant faculty. It was earliest and strongest felt in the exclusively masculine colleges of the East, so it cannot be ascribed to the feminization of university life. There is no serious opposition to it anywhere. Some of the scientific and technological men in some places do not like it, but they conform, not deeming it worth making a fuss about. I am, therefore, forced to conclude that my repugnance is mere personal prejudice, due to three centuries of inbred Puritanism. Whenever I attend commencement exercises I take care to select a seat that is screwed down, lest, as the academic procession appears, I should be seized with that divine frenzy which inspired good old Jenny Geddes in St. Giles' Church to throw the stool that purged Scotland of prelacy forever.

"Some praise the fair Queen Mary, and some the good Queen Bess,
And some the wise Aspasia, beloved of Pericles;
But o'er all the world's brave women, there's one that bears the rule,
The valiant Jenny Geddes, that flung the three-legged stool.
With a row-dow—at them now!
Jenny, fling the stool!"

But this was written years ago, and Professor Blaikie is dead long since, and I rarely find a man who shares my feeling in this matter. There is no consolation to be derived from the saying, "One with God is a majority," for when one finds himself quite alone he begins to be afraid that God himself has gone over to the majority. So it is with self-distrust and pure despair that I dismiss the subject after recording my personal opinion that a dozen mortarboards on the campus are more of a menace to democracy than a million-dollar endowment from a trust magnate. For no man can tell what is going to be done with his money after he has let it slip out of his own hand, but a widespread spirit of exclusiveness and arrogance, such as finds expression in ceremonies and costumes, cannot be eradicated.



On the other point, opposition to intercollegiate athletics, I am happy to be able to use the word "we," instead of "I." We are in a minority, but it is not a hopeless minority. University presidents, with few exceptions, express approval of intercollegiate contests, alumni give them enthusiastic support, students vent their displeasure upon any who presume to question their value, and the outside world encourages and applauds, but in every university there is a considerable, and I believe, an increasing number of the instructing staff who are profoundly dissatisfied with the athletic conditions of today, tho they are not always free to express their opinions on the subject. I was appealed to more often than on any other matter to expose the practices of neighboring institutions, their illicit players, their brutality and foul play, their venality and extravagance. But when I went on to the next university I learned that the one I had just left was really the worst in the country in these respects. This was confusing, so I had to throw away my copious notes and confine myself to a few general conclusions. These are, that athletic contests do not promote friendly feelings and mutual respect between the colleges, but quite the contrary; that they attract an undesirable set of students; that they lower the standards of honor and honesty; that they promote dissipation, gambling and extravagance; that they corrupt faculties and officials; that they cultivate the mob mind; that they divert the attention of the students from their proper work and pervert the aims of education.

The amount of physical exercise obtained at an intercollegiate contest is inconsiderable. A little pushing with the elbows in entering and leaving the ground, some exertion of the lungs in yelling and a test of endurance of the transverse compression of the larger muscles of the lower limbs—that is all the exercise gained by the thousands of persons who assist—in the French sense of the word—at one of these contests; hardly enough physical benefit to compensate for the cases of pneumonia contracted thru exposure to inclement weather. That twenty-two young men on the gridiron are over-exercising does not compensate for the fact that five or ten thousand are under-exercising on the grandstand. What happens to the men on the team does not matter so much, because they are comparatively few. I object to football on Puritanic grounds, not because it gives pain to the players, but because it gives pleasure to the spectators. There is only one new rule needed to reform football and only one that will do it; that is, the abolition of the grandstand. Let the students play football as much as they like and stop when they get tired, according to any rules or none. If there is nobody watching them they will not injure themselves much and others not at all. The evil of a prize fight lies not in the fight, but in the prize.

The real value of an athletic contest may be represented by a fraction whose numerator is the number of players and whose denominator is the number of watchers, present or absent. As the latter number increases the game degenerates into a sport, the sport into a spectacle, and the spectacle into a gambling device. For every man who takes part in an athletic contest personally there are a hundred who take part by proxy, and a thousand *in absentia*. To the multitude watching the game from a distance the numbers appearing on the bulletin board, the ticker or in the papers might as well be produced by a roulette wheel. This, in fact, may be expected as the next step in the evolution of the game.

As the fox hunters have dispensed with the fox, and the produce exchange with produce, and the policy shops with the lottery wheel, so the football of the future may be conducted without players. This will save some thirty lives a year and a great deal of misspent energy, and would afford just as good an opportunity for the display of college loyalty thru the staking of desires or currency.

An athletic contest between two colleges indicates nothing whatever as to their relative standing in physical culture. If Harvard beats Yale in rowing it does not prove that the average physique of the Harvard students is superior to those of the Yale students. If there could be devised a contest to show this, say a tug of war with every student hold of the rope, or, better, a comparison of gymnasium records showing the strength, symmetry, endurance and health of the entire student body, then

TOTAL NUMBER OF STUDENTS IN THE FOURTEEN UNIVERSITIES, 1888-1908.

the spirit of emulation might be productive of improvement in their physical condition. As it is now, those who need exercise least get the most of it.

In my fourteen weeks' course in American universities I had the unusual experience of attending more than a hundred class exercises in different subjects conducted by as many different instructors. It was an interesting experience, and valuable. If I had had it before I would not have spoiled so many roomsful of students in learning how to teach—and how not to. Coming back to the classroom after having left it for five years, and so viewing it from the standpoint of an outsider while retaining a sympathetic comprehension of the difficulties of a teacher, I was struck by the waste of time and energy in the ordinary collegiate instruction. The scholarship of the profession in all its grades is doubtless higher than it ever was. There is no lack of industry, devotion and enthusiasm on the part of the teachers, but the educational results are not commensurate with the opportunities afforded and the efforts expended. There is too much "lost motion" somewhere in the process. It would be well if the teachers did not know quite so much, if they knew how to tell what they did know better. It is a principle of hydraulics that the flow of water depends on the character of the outlet and the head, and not at all on the amount of water in the tank. In many cases it has seemed to me that the instructor has come into the room without the slightest idea of how he is to present his subject. He rambles on in a more or less interesting and instructive manner, but without any apparent regard to the effect on his audience or the economy of their attention. The methods of instruction are the same as those used in the universities of the thirteenth century. There is no general appreciation of the fact that the printing press has been invented since then, also the camera, the typewriter and the mimeograph; and that for this eye-minded generation there are many more effective methods of conveying an idea than the spoken word. "The power of the spoken word," about which we hear so much nowadays, depends unfortunately upon

who speaks it. Born orators are few in our faculties and trained orators are fewer. Many lecturers do not even take pains to speak distinctly enough so they can be heard in their small classrooms without strained attention. Many introduce matter which cannot be conveyed thru the ear. I have heard long columns of figures read off to a class, tables of boiling points and the like; also descriptions of complicated apparatus and machinery, details of analytical processes, useful for inspiration and demonstration, but not for information. Facts and figures that the lecturer cannot keep in his own head for fifty minutes are not likely to get into the heads of the students.

The scientific professor has an advantage over his colleagues in being able to use experimental illustrations, but he does not always make the most of his advantage. This is due to the general adoption of the self-denying ordinance, "Use the simplest experiment that will

THE CAMPUS OF CORNELL UNIVERSITY.

dimensions of ancient buildings, lists of names and dates, references to readings, sometimes read in such a hurried and indistinct manner that they could not be taken down, sometimes slowly and laboriously written out on the blackboard. Such data, wherever necessary, should be given to the students in printed or typewritten syllabi, and the university authorities should see that such facilities are freely provided for their instructors and utilized by them. The lecture is illustrate the point." If simplicity means lack of complexity, this is a good rule, but if it is interpreted as "the most modest and inconspicuous experiment that will illustrate the point," it is false pedagogy. We have gone too far in the avoidance of grandstand plays, forgetting that college students are human beings, and as such are imprest by bigness and noise. I believe that the spectacular experiment can be used with advantage in our large lecture rooms, even tho it

seems like a return to the much contemned "Wonders of Science" epoch. Pouring a jar of carbon dioxide down on a dozen candles undeniably makes more of an impression than pouring it on one candle, and the game is worth the candles. A professor of chemistry was once commiserating the professor of mathematics on the fewness of his students, and the latter, resenting the implication that popularity was a proof of good teaching, replied: "The trouble with mathematics is that nothing ever happens. If, when an equation is solved, it would blow up or give off a bad odor, I would get as many students as you."

I have heard of a professor of English in one of our universities who evidently felt that his department was under the same disadvantage as mathematics. Finding that his scientific colleagues were getting appropriations of astonishing liberality for illustrative apparatus, he put in his annual report a request for $5,000 for an aviary. When the president asked him to explain, he said that it was impossible for him to teach poetry properly unless he had an aviary connected with his classroom. "Then," he said, "when the class is reading Shelley's 'Skylark,' I reach my long-handled net into the cage, catch a lark and hold it up to them. And when we are studying 'The Rime of the Ancient Mariner,' my assistant will be stationed in the gallery with a crossbow to shoot a real, live albatross on the platform, thus giving the students opportunities for observation that doubtless Coleridge himself never had."

The literary faculty has borrowed and misapplied so many of the methods of scientific research and instruction that it is impossible to say that we may not come to this yet. At any rate, the project shows a commendable enterprise and appreciation of the desirability of stimulating the interest of the students by bringing them into closer contact with reality If the lectures could be made more inspiring and stimulating they could be made fewer and shorter. A flash of lightning makes a more lasting impression than a 16 c. p. incandescent running all night. But the students have not sufficient resistance to stand shocks of lightning for eighteen hours a week, nor could the instructor keep up the necessary voltage. There are few really eloquent and inspiring speakers in the universities, not enough to go around, and they are often poor drillmasters and inefficient administrative officers. Their gift could be utilized to the best advantage by having them address large classes once or twice a week and in several different institutions during the year. Then the ordinary and stationary instructors could devote themselves to working with the students at close quarters. That is, should not there be recognized in university work the distinction of function which, in some form or other, has always been made in the ecclesiastical work, the distinction between prophet and priest, revivalist and pastor?

As it is, the professors give too many lectures and the students listen to too many. Or pretend to; really they do not listen, however attentive and orderly they may be. The bell rings and a troop of tired-looking boys, followed perhaps by a larger number of meek-eyed girls, file into the classroom, sit down, remove the expressions from their faces, open their notebooks on the broad chair arms, and receive. It is about as inspiring an audience as a roomful of phonographs holding up their brass trumpets. They reproduce the lecture in recitations like the phonograph, mechanically and faithfully, but with the tempo and timbre so changed that the speaker would like to disown his remarks if he could. The instructor tries to provoke them into a semblance of life by extravagant and absurd statements, by insults, by dazzling paradoxes, by extraneous jokes. No use; they just take it down. If he says that "William the Norman conquered England in 1066," or "William the German conquered England in 1920," it is all the same to them. They take it down. The secret is that they have, without knowing anything about physiological psychology, devised an automatic cut-off which goes into operation as they open their notebooks and short-circuits the train of thought from the ear directly to the hand, without its having to pass thru the pineal gland or wherever the soul may be at the time residing and holding court.

One of the unfortunate results of the lecture system is that the professors get so used to talking that they cannot stop. Faculty, departmental and council meetings are apt to be unduly extended, and in the end the wisdom of the whole body is not equal to the sum of its parts. On account of their ineffectiveness as a branch of administrative machinery, the tendency is to curtail their power and throw more responsibility upon the president, who is, like the Speaker of the House of Representatives, forced to become an autocrat. According to my experience and observation, the deliberative bodies of universities, small and large, have substantially the same method of procedure, and I suggest that if the following rules were framed and hung on the wall of the faculty room, it would save time now wasted in discussing the proper order:

ORDER OF BUSINESS AT FACULTY MEETINGS.

1. Present motion.
2. Pass it.
3. Discuss it.
4. Reconsider it.
5. Amend it.
6. Amend the amendment.
7. Discuss it.
8. Move to lay on the table.
9. Discuss it.
10. Refer to a committee with power to act.
11. Discuss it.
12. Adjourn.
13. Discuss it.

In these articles I have preferred to discuss the wider movements and tendencies of the universities, both good and bad, in connection with the particular institutions in which they happened to be conspicuous, rather than reserve them for the end. This has, I am aware, placed an exaggerated emphasis on certain features in each case and given to my criticisms an unfair incidence. But when the novelist describes the nose of one of his characters, the teeth of another, and the hair of a third, he expects the reader's imagination will credit these personages with the other customary features of normal size and function. I ask a similar indulgence. When I do not have occasion to mention, say, the department of French, the Y. M. C. A. or the gymnasium in any case, it is to be assumed that they are present and doing their proper work. If the reader wishes a complete and authoritative description of a university, with each department given its due space, he should read the catalog instead of these articles.

After all, these universities are very much alike; more alike, doubtless, than they claim to be; more alike, probably, than they should be. For a wider field could be covered if the different universities were more specialized and diversified in their professional and graduate schools. The American university tends to a specific type, very different from that of England, Germany or France. This type has now been authoritatively defined for us by the National Association of State Universities at its thirteenth annual meeting.* The "standard American university" must require for entrance to its college department a high school course of four years or its equivalent; it must give in its college of arts and sciences two years of general or liberal work, followed by two years of more specialized work of university character; it must have adequate facilities in at least five departments for three years of graduate work leading to the Ph.D. degree; it must have at least one professional school, such as law, medicine or engineering, requiring for entrance two years of college work. It will be seen that this is an ideal rather than an average. A strict construction of the detailed specifications would come near ruling out some of the fourteen which I have selected as the greatest of American universities, particularly in regard to the collegiate requirement for the professional schools.

Such differences as exist in the character of these universities arise more from their history and environment than from any difference in their aims. Thus Harvard and Yale are in common parlance coupled together and set in a class by themselves, chiefly because they have, for more than two centuries, been the chief contributors to the intellectual life of the nation. Notwithstanding their present inequality in numbers, they are alike in many respects, such as the eminence of their faculties, the high quality of their graduate work, and the size and importance of their colleges of liberal

*For full details of the requirements see the Report of the U. S. Commissioner of Education, 1909, page 89.

arts. A marked distinction between them has now been made by the action of Harvard in placing all its professional schools above the college, while at Yale they remain as rivals of the college. The Johns Hopkins University, while rivaling Yale and Harvard in research work, is in the most decided contrast to them in that it is a young institution and that its undergraduate department is relatively insignificant. It has only one professional school, the medical, but that is of the highest rank. Princeton and Stanford may be conveniently classed together, notwithstanding their difference in age and the distance between them. Both are comparatively small institutions, chiefly undergraduate, admirable in architecture, and being situated in the country, they have a distinctive form of student life. But Stanford is as predominantly scientific as Princeton is classical. Princeton, like Yale, is now much concerned over the question of how to develop the graduate and professional training demanded by modern conditions without destroying the unity of the college, which has been its chief pride. The State universities of Michigan and Illinois are also located in small places; the former the oldest and the largest of the State institutions, possessing very popular law and medical schools; the latter now rapidly developing on university lines, with its strength mainly in engineering and agriculture. The State University of Wisconsin has been distinguished by its successful efforts to be of service to the Government and the people of the State, and the University of Minnesota, in a similar environment and in close proximity to the capital, seems likely to develop in the same way. California and Cornell, tho about as far apart as they could be, have some points in common. Both have strong agricultural and engineering departments and both attract many students from Asia and South America. Columbia, Pennsylvania and Chicago universities, being located in large cities, have similar fields, but while Chicago recently came into

CALIFORNIA HALL.
The first of the new buildings of the University of California.

being full grown, the others have developed slowly thru a long process of accretion, and their life is intricately involved with that of the city. All three pay special attention to the needs of teachers, Columbia and Chicago by means of independent professional schools of high grade. Columbia is at present advancing most rapidly and is likely soon to outstrip all the other universities, both in the number of students taking regular work and of other persons receiving instruction in special studies.

In devoting so much attention as I have to the novel and spectacular features of these universities I have not done justice to the faithful work done in the more ordinary and more essential departments. Notwithstanding that the average professor receives relatively less remuneration and less honor from the community than in past generations, there never were more competent and earnest men engaged in university work. And when we consider how many of them have turned aside from opportunities to make money because they preferred teaching and research, it is hard for them to be sneered at for incompetency because some of the men they have trained are getting bigger salaries than they. Our universities are "under fire" just now from many quarters, but more often because they are in advance of the age than behind it. They are more efficient in their methods and more ready to meet and even anticipate the needs of the community than ever before. On the whole they fully justify the liberal support they are receiving in all parts of this country.

It was necessary for me to limit my study to a few universities, and I have chosen the more prominent ones because they have the most points of interest and present some novel problems. But it should be understood that there are scores of other institutions in the United States that do just as good work in collegiate education and often in advanced and specialized studies as those here mentioned. I can find no words that more exactly express my conclusions than those used by James Bryce in his "American Commonwealth":

"If I may venture to state the impression which the American Universities have made upon me, I will say that while of all the institutions of the country they are those of which the American speaks most modestly, and indeed, deprecatingly, they are those which seem to be at this moment making the swiftest progress, and to have the brightest promise for the future. They are supplying exactly those things which European cities have hitherto found lacking to America; and they are contributing to her political as well as to her contemplative life elements of inestimable worth."

A March Idyl

BY E. P. POWELL

Author of "The Country Home," Etc.

IT is bedtime for country folk, and every one in the house has quietly slipped away into his or her own room. There is nothing quite like the uttermost peace of these bed hours. You have to listen sharply to detect any report from the outside world, and I only know by half instinct that my two collies have taken their stations, each at a corner of the house, for night guardianship. They have scraped together pine leaves enough for comfortable couches, and somehow they will manage to make this world wonderfully safe for their helpless masters and friends.

I am sitting before my fireplace, enough disrobed to feel the heat soothingly and dreamily pulling me to sleep. Little flamelets are playing on the outside of the front stick, and big rollicking flames are shooting up the chimney, snapping their fingers at me as they dash up and out. There is all the time a concert of pleasant sounds, and a deal of harmony; sounds joyous and companionable, but constantly varying. There is lots of history in this decomposing of the sticks of a two-hundred-year-old pine. They do not seem to be sad about it; just moving on into other compositions and other obligations. What could we have done but for this easy combustion of oxygen and carbon, and this heat as a mode of motion business?

This world, after all, was not made, dear folk, just for you and me. Everything is going ahead. Out of doors the pines are making way for the oranges, and the little native persimmons are full of the grafts of huge Japanese sorts; so we are all of us on the road of betterment. My back-stick has gone to ashes, my front-stick has broken in two, and I am nodding. Sweet day! Good night!

At the North the first of March is just at the jointure of winter and spring; here it is almost summer. Perhaps you have already heard one bluebird, 'way up in the clear thin blue of Massachusetts, or New York, singing his way northward. A robin also may have whistled somewhere among your maples, but the hegira of birds homeward has not yet started. They are gathering, however, all about us. Robins are everywhere, sitting on every stump, clipping thru the woods with a startled cry, and all of them seeming to have a concert of action. In the bayheads they are so numerous that they constitute almost a solid flock. It will not be many nights before, just at sunset, they start in innumerable companies northward. They will fly all night, drop down into some Carolina or Virginia orchard for breakfast, and then on again. I do not think they will reach you this year before the middle of March.

A mocking bird waked me last night, calling out of the big pines and gurgling a bit of joy; for the night, altho cool, was glorious. I heard frogs in the little meadow by the lake, playing mandolin and concertina. They are great athletes, these Florida frogs, and you should see a lot of them put their forefingers together and their hind legs out behind, for a spring into a little pond that the lake made some day when it was high. Their music of a February evening is not at all bad—very vibrant, and just as independent as if they could fly up into the tops of the trees, to tell their loves and joys.

Toward morning, and all thru the groves and orange orchards, rose that strange accompaniment of civilization, the good morning of chanticleer. It is strangely cheering, altho the melody is not always tuneful. I take it that it is only our own good morning, in poultry language. I wish you well! says chanticleer. You may smile at my simplicity, but there are few things I like better than to hear hen-talk. If you will take pains to talk with them in their own

nicely modulated language, you will find that it is a very capable speech. But when break of day really comes (that is at half-past five down here, March 1st), the first call that you will hear will be that of the mourning dove. Beautiful creatures! They spend their days I do not know where, but at night they flock to a grove of young pines or orange trees and sleep in company. Their mourning call is at first rather sad, but I have come to love it for its simplicity. They are falling a prey to the destructive fury of the man with the gun; the man who has no other pleasure but to kill something. A minister down here, "resting," as he calls it, has put in most of his time in shooting these defenseless creatures. Elder Cole, who does some of my plowing, says, "Dere ain't no use trying to calculate on de kind of piety dat comes with these wanderin' tourists."

Bobwhite calls next, and after the first of March he leads his family right to my door. How he finds out so quickly or instinctively that the shooting season is over I do not know; but he does understand it, and while before he was hid in his coverts, he now is as bold as the robins. Birds are beginning to mate, and the wonderful tinkle, tinkle, of the red-winged blackbirds (a sort of Swiss bellringer) comes out of the pines. These are the only birds that I know of that sing in chorus. It is a marvelous performance.

The water turtles have begun to come up out of the lake, to lay their eggs in the sand. Queer, clumsy fellow, carrying his house with him, he waddles across your lawn, or you come upon him in your garden, round a loquat bush. Jerking his head into his shell he defies you. Togo and Hector poke him over, and then stand back for a study and consultation. They are puzzled, for really, what can a dog do about it. He cannot bite thru those shells. Evidently it is a case for a museum; and dogs do have museums. The leather-backs or snapping turtles are different, for they are aggressive, and the dogs will soon learn something new, if within their reach. Hanging on, these wretches become worse than a tin kettle, or a bunch of firecrackers tied on by a city Arab. Gopher turtles are of the same type, only they live in the sand, eat our vegetables, are good for soups, and are as interesting as they are troublesome.

A real grievance, without much compensation, is the pocket gopher — a ground squirrel, with pockets in his cheeks, with which he brings up dirt from his burrows. In a single night one of these fellows will throw up a dozen mounds, each as big as a half bushel. Sit still, and you may be able to see one coming up with his pouches full of sand, and heaving it outside. When the heap is done he carefully closes the hole, carrying his tunneling in another direction. Yesterday, with a trap, we caught a white one—as great a novelty as a white elephant in Africa.

As for alligators, they are getting so scarce that we are proud to have one in our lake. They are harmless creatures as we know them, altho I should not care to bathe in a lagoon full of such saurians. Our "'gator," as the black fellows call them, is now buried in the mud, and will not be up before the end of the month. I have seen one mosquito this winter, but the fireflies are plentiful. There are no malarious conditions here for mosquitoes to multiply and make dangerous.

Most intelligent of domesticated animals, says Professor Shaler, is the hog. Half the history of Florida, for the last thirty years, has been a battle for human rights against this animal. He could roam our streets, root up our gardens, and there was positively no defense under the law. If I were a poet I would sing a pean over his departure—for the Legislature has at last recognized at least our equality. Last fall, as I was entering the State, an old sow with several pigs came to the steps of the car at Palatka, evidently desiring to mount the steps. The colored porter took a broom and cried: "Shoo there, you black beast! This ain't your car nohow." Evidently, if advancing civilization has outlawed the pig, it owed her free passage into the Everglades and in the negro car. At all events, the razorback is a thing of the past.

Today we have 'possum for dinner; queer fellow, with a snout like a pig and a bark like a dog. He will allow no pet-

ting, and has the meanest eyes I have ever seen in any animal. We have had him in a long box, eating oranges and sweet potatoes, and trying to civilize him —in vain. He shows his teeth at once, and is evidently of a low stage of animal evolution, morally as well as structurally. Rolled in sweet potatoes and a plenty of bacon he makes a roast that becomes historic. This fellow was a Christmas present, and is the only specimen I have seen since coming to Florida.

The boycott does not affect us to any appreciable degree, because the vegetable kingdom around us is so marvelously fecund. There is not a butcher shop within twenty miles, and fresh meat comes into town only once a week. We live mostly on eggs, sweet potatoes and oranges, with a plenty of cows' milk and Gladys's bread, both wheat bread and corn bread. I will tell you more about that bread some other day, for of all treasures that this world holds, nothing is better than a good cook in the family. There is considerable instinct and heredity in it, altho the schools can do something.

It is curious how soon one gets to care little about the fleshpots and the beefsteaks—if he can have for breakfast a big grapefruit only for picking it up (two if you prefer); then a dinner led off with oranges eaten in the orchard, followed by baked sweet potatoes and boiled eggs and a mulberry pudding. *Mem.*—Always pare your orange in the orchard with a sharp knife, and eat it as you would an apple. *Mem.* —Mulberry pie is Southern for blackberry pie, and they are equally good. After a dinner of this sort, take your siesta on a broad veranda in a hammock, and you will be ready for work by two o'clock, thermometer at 85, and the sun just on a slant thru the pine tops. Fish? To be sure! The ocean is close by, and the Gulf a trifle closer; then the St. Johns River is thick with bass and catfish, just at your elbow. Some of our little lakes are full of bream and trout; and as for Lake Lucy, we publish nothing. Oysters are easily got, and they are almost as good as those on the Virginia banks.

We have signs up at every corner of all fields, forbidding shooting. We desire to make this a bird paradise, a home where our feathered allies can be as safe as we are ourselves, and as happy. This would come about much faster but for the occasional tourist, who comes South to regain his health by destroying everything that he can hit, even our robins and bobwhites. I do not know of anything more thoroly disagreeable than one of these homeless, wandering, aimless fellows called sportsmen.

The slow but steady approach of civilization is fascinating. Five years ago we followed trails thru the pine woods, but now long lines of fences, with barbed wire, of course, show us the way and keep us in. My colored plowman says: "For sure, suh, I like best to drive under the trees, and in the shade; but you Northerners mighty uncomfortable 'thout straight roads, and fences on both sides of you." This winter the rural telephone reaches us, and I can give orders two miles to a grocer. An automobile load came in yesterday, from Orlando; itself an innovation, but bringing me a greater, that is, the best of all modern innovations, a woman preacher; a liberal, of course, full of verve and nerve and life. I remember the shingle of the first American female doctor. I knew well Susan B. Anthony, and Mrs. Stanton, and Mrs. Livermore; but these were not quite ordained of men—only of God. I have yet to find one of them who smokes, or in any other way forgets that example is better than precept. The automobile took fairly well to our sandy roads, but fortunately our hills are not very high.

Wonderful stuff this sand, and sometimes a little provoking; but we are building cottages with concrete just now, and we do it with the sand that we dig out for cellars. I own sand enough to build a small city. Florida can spare all her pine and oak and yet go on making beautiful homes. Splendid concrete blocks of a rich stone color can be turned out in any number, at ten cents apiece. We must learn to build our own houses, and build them fireproof. The future American, like the early American, will build his own house, make his own shoes, and raise nearly all of his own food.

Everybody and everything is at work

here; there is no longer any discount on labor in the sunny South. I do not see anywhere a sign of the lazy worm, or its consequences. Winter brings no let-up, as it does at the North. Deciduous leaves fall in November, and pine needles are always shifting more or less, but there are wood violets in blossom in January, and the bees skip very few honey-making days. While you are at zero we hunt eggs in the grass. We are quite content to make our own ice, while Nature makes our oranges. Nor do I see that summer heat is either depressing or debilitating. There are simply more showers, and one has to be sharp about it to get his haying and his harvesting done; it is what we call in the North catching weather, all thru June, July and August; but the people are good natured about it.

So you see that the Fourth Commandment is easily kept down here, at least so far as the first half of it is concerned. There is enough to do to fill up the six days; as for the seventh day, possibly working is as good as the preaching—and quite as safe. It is a good thing that the Bible orders work before rest. What right has any one to a full day off out of every seven unless he has put in his best efforts for the six? My colored plowman says: "It's mighty easy keepin' Sunday for some folks. Any lazy lubber can do that part of the commandment; but six days to deserve the Sabbath rest, that's another thing. What Sunday good for, when you haven't earned it? Cain't fool the Lawd calling that religion, no how."

February shows the last of our woodland fires. A curious state of affairs, when the people deliberately burn up everything that God and Nature has made for them thru the whole year; then go and buy commercial fertilizer to try and make up the deficit. These fires are kindled mostly on Sunday, and some of them will sweep over hundreds of acres in a very short time. Pine trees do not often catch fire, unless they have been tapped, and these are hoed about. If a tree is kindled it is a torch eighty feet high, and a fearful sight. It is in this way that our folk down here burn the raw material for their soils, and they wonder that we are so blind as to fence in our acres and surround them with fire lines. Our pines are being tapped to death, so that the Northern blizzards cannot be hindered from sweeping over the State, while the accumulation of soil is prevented by this fool habit of annual firing. However, a change is coming about very rapidly and very surely.

Peaches are in blossom, and for that matter, some varieties have been in blossom since New Year's. A few of these will get frosted possibly, but May is peach month. Mulberries are also in blossom, and they will ripen before the end of March. It is a wonderful fruit, as big as your finger, and the trees are so full that whole flocks of blue jays, mocking birds, cardinal birds, and we humans all together cannot exhaust them. Hens greedily eat all that fall, and I have yet to find a single creature that scorns the mulberry. It is the most wholesome fruit, and so juicy that in mulberry month the black stains are everywhere.

Roses blossom all winter generously, and even this extraordinary winter of 1909-10 has not quite prevented the great golden buds of Marechal Neil. Camelia japonica buds are just opening, and cannas are getting a good ready, after a very short rest. And you should see my judas trees, a mass of lilac bloom. Note, too, that the bushes, such as hawthorns, hang their limbs, instead of holding them erect, as in the North. In this soil those shrubs are surest of survival that droop their limbs to shade their roots. Sand conducts heat rapidly, and if not shaded at noonday, the fine rootlets are likely to get scorched. We mulch everything heavily, especially our Northern fruits and shrubs.

I have told you already about my preacher at the plow. His wit is artesian and his spirit is reasonably cosmopolitan. "Some people's religion, suh, like a lightnin' rod set up over their haids to keep them from gettin' hit. Guess the good Lawd fin' some way of fetchin' them when he get ready."

The negro is surely a fine asset in this country, and he will be appreciated at his real worth before long. The blunder has been in expecting of him traits that do not belong to his race, and in failing to appreciate the qualities that he really possesses. My elder says: "Well, suh,

you caint naturally make of a black man a Anglo-Saxon, suh, no more than you can make a white man into an African. Let 'em alone, to be their own saives, and they will do a heap better." The trouble down here has been the white folks imitate the black too much, and they expect the black man to imitate the white.

The Cracker is a man with a lot of suppressed power. He has never been brought up to the modern ways of doing and thinking, but he is proving himself adaptable. Think of a race, or a breed, or a class, if you chose to call it, coming on as late as into the fore part of the twentieth century without railroad or telegraph or telephone, with eighteenth century schools, and newspapers, and preaching. The best farmers that I know in Florida are Crackers. They are fresh-gaited, while too many Northerners have become fagged and jaded with fast driving and fast living before they get here. I mean that the children of the Puritans have had a whole continent to conquer, while slavery hemmed in these Southern whites and smothered their activity. It will not do for those who have failed in Northern enterprises to come down here and expect to surpass. If worn out and unable to adjust themselves to conditions at home, they will surely fail here. The Cracker is immensely inquisitive, and that enables him to pick up new notions easily. It was good stock to start with, and it will do its work yet. He buys new tools, likes machinery, is good at detail, and there is no question about there being in him the elements of progressive civilization.

We are already under full headway with 1910. Potatoes are six inches high, melons are planted, cars full of celery are moving northward, and we can get half our living out of our gardens, and the rest out of the orchard. Orange trees are blossoming, and the perfume blends with pine, to fill the air. Bees are happy and birds are laughing their delight. The fringes of half a dozen blizzards just brushed us during the winter, but they have done no permanent damage. The trees are uninjured, only the ground is covered all over the State with oranges picked off and flung down as worthless. They are unfit to ship, but the loss will not be felt seriously, as the market was already badly overloaded. Good always comes out of ill, and we are content. With a climate always genial; with a sky that almost always smiles; out of the reach of grippe and zero, we are content to accept a boat ride on the lake in the place of a sleigh ride over the hills of central New York.

SORRENTO, FLA.

The Eve of the Deluge

BY FREDERICK E. PIERCE

THE sun set clear and red;
Birds trilled on bough;
"God is a myth," men said,
As men do now.
Beneath the Eternal's frown
Loud reveled king and clown;
Blood flowed in field and town,
None questioned how.

The dripping chaplet tied
The harlot's brow;
Grave statesmen planned and lied,
Secure as now.
As eyes of tigers gleam
Who racked with hunger dream,
Shone the great ocean stream
Round cape and prow.

Night came; no face was pale,
No prayer, no vow;
God stood behind the veil
As He does now.
Strange tints the heaven tinged
Like light from doors unhinged;
And the wild panther cringed,
And bird on bough.

Bards harped in halls impure,
Slaves forged the plow;
Earth dreamed she should endure
As long as now.
Next morning swam the whale
O'er throne and altar-rail.
'Twas an old Hebrew tale,
But read it, thou.

WEST HAVEN, CONN.

PORTRAIT OF SIR WALTER SCOTT.

Painted by Sir William Beechey (1753-1839). From the Thomas Lowndes Collection, Essex County, England. The picture was painted and signed in 1823. Now on exhibition in this country for the first time at the Ehrich Galleries, Fifth avenue, New York City.

Men We Are Watching

BY A WASHINGTON JOURNALIST

Frank Harris Hitchcock, Postmaster-General.

ILLUMINATING his genial eyes with that irrefragable smile, President Taft turned them upon his big, blond Postmaster-General and said to the rest of us: "I'm studying; trying to learn a little about politics." The Postmaster-General blinked under his bushy eyebrows, spread his broad shoulders, stood very straight — which makes a particularly tall man of him — and "hemmed" quietly.

It was not a startling confession, for no one has doubted who stood as the President's political mentor—tho some there be who wish that we might have an out-and-out Department of Politics, the portfolio to fall as a recognized perquisite to the successful Presidential campaign manager, relieving the newly elected head of the nation from the present necessity of disposing of him in the Postmaster-Generalship; and in a way, without the slightest disrespect to Mr. Hitchcock, relieving the Post Office Department from duty as a political machine, while filling a long felt want by giving it instead a man of practical business ability equal to its gigantic proportions and able to devote that ability to the necessities and possibilities of this largest single business institution on the earth, covering more ground, employing more men, and handling close upon four thousand million dollars a year. Parenthetically, it seems a pity, to some, that this colossal business enterprise, in the interests and for the interests of the people, at present run at an average daily loss of about $50,000, where millions upon millions could be saved by wise management, while increasing instead of curtailing the service—it seems a pity that its chief importance should be its capacity as the great political machine of the nation; with business efficiency and economy secondary considerations, to be taken up at odd moments, superficially touched along immaterial lines which will endanger no political situations, then laid aside again to run on at the same old—only increasing—deficit. But so it is, and Frank Harris Hitchcock, born in Amherst, Ohio, forty-three years ago, son of a clergyman, from early boyhood brought up in Newton, close upon the skirts of Boston, Mass., graduate of Harvard University, a lawyer by admission to the bar, triumphant manager of the Taft campaign, is the Postmaster-General whom we watch with peculiar interest in the pres-

FRANK H. HITCHCOCK,
Postmaster-General.

ent complicated conditions, as the political tutor of the ever-smiling President.

No one doubts that Mr. Hitchcock is amply able to do most anything reasonably falling to the lot of man to do. But few are they who can do most *everything,* and do it all at once and do it well. Mr. Hitchcock is making great efforts to accomplish impossibilities, and possibly making some mistakes. He is working hard—so hard that some Congressmen, when more interested in the Post Office than politics, have com-

plained that he could not even find a moment, days in and out, to discuss Post Office affairs with them. He works early and late, and with seven-leagued boots he flies about the country, oiling the wheels of the machine. He had good preparation for his peculiar position, for he was under the tutelage of Cortelyou the Silent—George B. Cortelyou. He was one of Cortelyou's own; and to be one of Cortelyou's is to be one admirably adapted to the position for which Cortelyou prepared him. Hitchcock was under Cortelyou in the Department of Commerce and Labor. He was assistant secretary of the Republican National Committee, under Cortelyou, thru the great Roosevelt campaign. He was First Assistant Postmaster-General, under Cortelyou, when the war was over. He was an apt student under an able tutor, and some things which even Cortelyou did not teach him Hitchcock has taught himself. Then followed the Taft campaign with Hitchcock at the head of it: so that now he is Postmaster-General, and tutor to the President.

Hitchcock is of the silent school—silent as Cortelyou, almost. He follows the old lines of "machine politics," with steam-roller attachments of his own device, and firm convictions that it should be made as uncomfortable as possible for those whose fingers get caught near the cogs.

Hitchcock is a fine specimen of a man—tall and strong, a college athlete, boxing champion of Harvard '91—quick to see and act if some advantage can be gained; but slow, even to timidity, about starting things, if there is nothing doing. He is thoroly attractive, good company and a bachelor. His very light hair, light eyes and smooth-shaved face, in spite of his size and bushy eyebrows, give him a boyish appearance, strongly indorsing an apparent innocence and diffidence which frequently prove confounding to his antagonists.

Victor Murdock, Member of Congress.

Another blond, well up before the public eye at the present, is Victor Murdock—the one and only Victor Murdock, of the insurgent brigade, and incidentally of Kansas. Murdock says that Speaker Cannon has not spoken to him

CONGRESSMAN VICTOR MURDOCK,
Of Kansas.

for years. Albeit, that may be the Speaker's loss. At any rate, Murdock has hosts of friends who find pleasure in speaking to him and in joining him in his morning walk to the Capitol, as he lopes down the avenue, as much a part of a cigar as is the Speaker, his face always wreathed in smiles, always ready with a cordial Kansas greeting and a hearty handclasp for friend or foe. Murdock is not afraid of any one, nor half so black as he is painted by those who would hang him as a King Insurgent—nor half so red-headed, either, for that matter. He is simply one who cannot easily be bought, borrowed or kidnapped, which renders him unattractive to the opposition. His face is full of mischief—his eyes fairly scintillate with it—and half of the trouble into which at sundry times Murdock has plunged Uncle Joe and his cohorts is really the outgrowth of this spirit of mischief, aiding and abetting the deepest convictions which have controlled his political career, convictions that The Rules and the auto-

cratic power of the Speaker are a combination which ought not to be. If these convictions, with the courage of them, mean insurgency, then Victor Murdock has been an insurgent since before he ever came to Congress. And no one knows him but knows as well that he will remain an insurgent to the end—whether it be in a victorious brigade or holding the field stark alone. One could as easily imagine Victor Murdock with black hair as to imagine him a "regular," while the Rules and Committee on Rules remain. He is on the firing line "for keeps," and has plenty of friends who are ready to cheer his efforts whether they agree with him or not, he is so magnificently sincere about it. And behind it all, Victor Murdock is a right good fellow, quite capable of solving his own problems without following established solutions, and of standing by his conclusions, without fear or favor.

It is not all smoke with him, for in the course of his Congressional career Murdock has accomplished some important reforms which will forever stand to his credit. Among them, the one which always comes first to mind is his discovery of what he kindly called "an error in bookkeeping." He was a member of the House Committee on Post Offices and Post Roads when he unearthed the fact that the railroads, as mail carriers, were getting the best of the Post Office Department and of the people to the extent of about five million dollars a year. The legal method of arriving at the daily average weight is to weigh the mails every day for a week, at fixed periods, and when no mails were carried on Sunday the result of the six days' carrying was divided up by six for the average. When mails began moving on Sunday, the weights were taken for seven days, but the same old divisor, six, was still in use, when Murdock came to Congress. Simple as the proposition seems, there were "complications"—the same kind of complications which today result in millions of dollars' loss to the people thru the Post Office Department — which forced Murdock into the fight of his life before he could get the system set right. His efforts in this direction, at least, resulted in a saving to the people of over five million dollars a year.

Murdock is a tall man, solid and strong, with tight curling hair, a genial face and a voice which can be heard above a tornado—whether it ever succeeds in "catching the Speaker's eye" or not. He is thirty-nine years old, a pure and unadulterated product of Kansas. At ten he was learning the printer's trade, during vacations. At fifteen he was a reporter. At nineteen he married —on nine dollars a week—securing for himself, by the way, a lovely and loyal wife, with the addition, today, of two charming daughters. At twenty-three he became managing editor of the *Wichita Daily Eagle,* and at thirty-two he came to Congress. But his heart is still in his profession. He says he constantly looks forward to the turn of things which shall take him back again to the editorial desk.

Edward Dana Durand, Director of the Census.

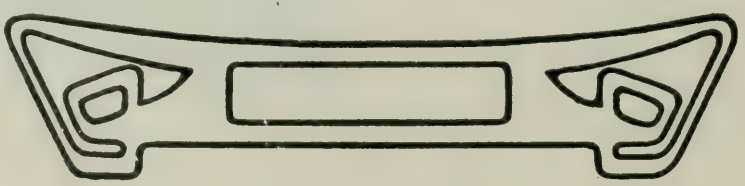
Taking the census is a different matter today from what it was when the constitutional duty of taking it every ten years was imposed. In 1610, the total

E. DANA DURAND,
Director of the Census.

white population of the original area of the United States was 210 people. In 1800 there were close upon five millions. In 1900 there were seventy-six millions. It is fairly assumed that this census of 1910 will give us a good margin over ninety millions of people. Machinery must be made rapidly to keep pace with such staggering development, but the machinery has been rapidly developing.

Since the last census the permanent Census Bureau has been established, with a dozen or more heads of departments and some six or seven hundred regular employees, doing many kinds of statistical work along the lines of the census while preparing to cope more scientifically, swiftly and accurately, as well as in a much broader way than ever before, with all which is to be included in the herculean task of taking the census in 1910.

The entire enumeration must be finished within two weeks from the start, in all towns which at the last census had a population of five thousand or over, and within four weeks in all other areas. During that busy season over seventy-five thousand men will be at work. Then the reports of this army of census takers must be compiled, reduced and classified by the Census Bureau.



The cost of taking the last census was about $13,000,000, and by a fair estimate from the past, the present census would cost the country not far from nineteen millions. Whatever reduction there may be will stand to the credit of an established Census Bureau and to the efficiency of the new Director, Edward Dana Durand; but the simple reduction in expense is far from all that it is hoped will result.

Efficiency, rapidity, accuracy, are Mr. Durand's watchwords, and, besides, he plans securing a much wider range of statistical detail, which will prove of great importance, beyond the gratification of our inherent passion for bigness, by affording data for the solution of many problems essential to intelligent national progress.

The man at the head of this work is a most important factor to its success, and in Mr. Durand it is easily obvious that the right man for Director has been secured; while a glance at his record convinces one that better preparation could hardly be imagined. He is only thirty-nine; a product of Michigan for the first eleven years of his life, then of South Dakota, on the very frontier, where his father "staked a claim." After graduating from Oberlin College he took a post-graduate course in political science, economics and statistics, in the Cornell University, where he received the degree of Ph. D. in 1896. He has been assistant professor of political economy and finance in the Stanford University, secretary of the United States Industrial Commission, and instructor in economics at the Harvard University. He served in the Census Office and as Deputy Commissioner in the Bureau of Corporations before his appointment as Director of the Census. In the mean time he has done considerable valuable literary work along the same lines.

In education, experience and inclination Mr. Durand is particularly well equipped for this work. He is not a large man, but is well built for endurance, and every action is expressive of the energy and zeal which have placed him among the foremost statisticians in the world. He has a fine forehead for the necessary machinery, and eyes that are peculiarly suggestive of ability to look well into the depth of things. He is thoroly unassuming, quiet, cordial and democratic—the kind of a man one remembers and is always glad to have met. He is deliberate in speech and action—one who looks before he leaps and lands where he intends to. He is one of those who will be well watched thru the coming year by a nation eager for results, and also one who is quite likely to make good.

WASHINGTON, D. C.

Literature

The Gospel of Matthew

In view of the current International Sunday School Lessons two new commentaries on the Gospel of Matthew are timely and helpful contributions to the elucidation of a book which Renan called "the most important book of Christianity." The critical work on the New Testament is only beginning to yield its proper fruitage, and these new books, accepting critical results, help to fill the somewhat barren gap between scholarly investigations and the pious homiletical helps written in a spirit hostile to literary and historical treatment. When Mr. W. C. Allen's "St. Matthew," in the International Critical Commentary, was published, many regretted that the writer should have limited his work so largely to the scientific and literary sides of his subject, discussing only occasionally historical and religious questions. So far as he went Mr. Allen did a thoro and fundamental work, and now Dr. Plummer, the general editor of the International series, has written a "sequel" to Allen's commentary[1] "to supply, if possible, some of the elements which he has passed by, or has treated very briefly." This purpose has largely determined the method and scope of the present book. On the critical work of Mr. Allen Dr. Plummer builds his historical and theological interpretations. The book is marked by thoro scholarship and vigorous expression, but dogmatic motives often warp the historical judgment and bias the answers given to questions raised. The polemical and apologetic tone is continually in evidence, and at times Dr. Plummer seems bent on showing his readers how they may accept the results of literary criticism and still believe implicitly in the historicity and religious authority of the Gospel. Nevertheless, the book will be of great service and marks a noteworthy conservative advance in its unreserved acceptance of critical conclusions in regard to the Synoptic problem and in its fearless tho faulty application of the historical and literary method. The discussion of the relation of Matthew to the "Testaments of the Twelve Patriarchs" is a valuable addition to the Introduction and opens a fruitful field of investigation.

Considering the limitations imposed by the series of "Hand-Books for Bible Classes," Mr. Anderson's work[2] deserves high praise, and may be unhesitatingly commended as the best book of its size on the subject. The writer is scholarly, sane and openminded, with a crisp incisive style and a keen insight into the purpose and thought of the Gospel. A careful selection of significant and valuable material and a fresh, attractive form have resulted in a commentary not "tedious to read."

Both commentaries regard the Gospel as a compilation made from various sources, principally Mark and the Logia of St. Matthew, and date the completed work from about 75 A. D.

Lincoln and His Contemporaries

Mr. Clark E. Carr, in his *Life of Senator Douglas*[1], makes out a better case for his hero than the casual reader would imagine could be made. Certainly he ignores or minimizes a good deal of what is known as political "trimming" on Douglas's part; but his account of Douglas's attitude after the election of Lincoln is a strong and convincing presentation. Douglas hoped to avert war, and he strove desperately to effect some compromise. The Congressional compromise offered by the Republican majority during the winter of 1860-61 was in great measure due to him. But when the South refused all overtures and be-

[1] Stephen A. Douglas. His Life, Public Services. Speeches and Patriotism. *By Clark E. Carr.* Chicago: A. C. McClurg & Co. $2.

gan preparations for war, he took an unflinching stand in favor of the Union. When Sumter was fired upon, he called upon Lincoln and immediately afterward dictated in the office of the Associated Press his historic telegram calling upon every friend of his thruout the country to aid and support the President. No single act could have done so much to unite the North. It is said of Southern Illinois, which had given Douglas 20,000 majority over Lincoln, that it furnished to the Union army proportionately more men than any other region in the United States.

Mr. Putnam's volume[2] is a reverential tribute to Lincoln as a leader. There is a good deal of personal reminiscence, for Mr. Putnam was a soldier. Exceptionally valuable is the reproduction of the Cooper Union speech of February 27, 1860, with the notes supplied by Cephas Brainerd and Charles C. Nott, when the speech was printed as a pamphlet. The book contains, however, several more or less questionable statements. The references to breech-loading rifles (p. 146) leaves out of consideration Wilder's famous brigade and its Spencer rifles. The assertion (p. 137) that the troops attacking Missionary Ridge "were under the direct command of General Sherman" is a woful error. Sherman had nothing to do with Missionary Ridge. Thomas was in immediate command, and Grant was present and gave the first order to charge the lower rifle pits. The account of the test question put to Douglas by Lincoln (pp. 32-34), tho it follows an old and hallowed tradition, has been shown by Mr. Carr to rest on a mistake. Lincoln at Freeport did certainly ask the question of Douglas regarding the power of the people in a Territory to exclude slavery. But Douglas's reply was not new nor unexpected, nor in answering did he fall into a trap set for him. The reply was, as he said at the time, what "Mr. Lincoln has heard me answer a hundred times from every stump in Illinois." Douglas's general attitude did indeed assure his election as Senator and his defeat as President; but the importance of the Freeport declaration has been magnified out of all proportion.

The eloquent addresses of Judge Speer[3] are prefaced with an introduction by Dr. Charles Ray Palmer. The Lincoln address is a graceful and touching tribute of a Southerner to the moral greatness of the martyred President. "In vain may the search be made thru the reports of all the speeches, and thru all the writings and correspondence of Mr. Lincoln, to find one syllable of depreciation or unkindness toward Southern men."

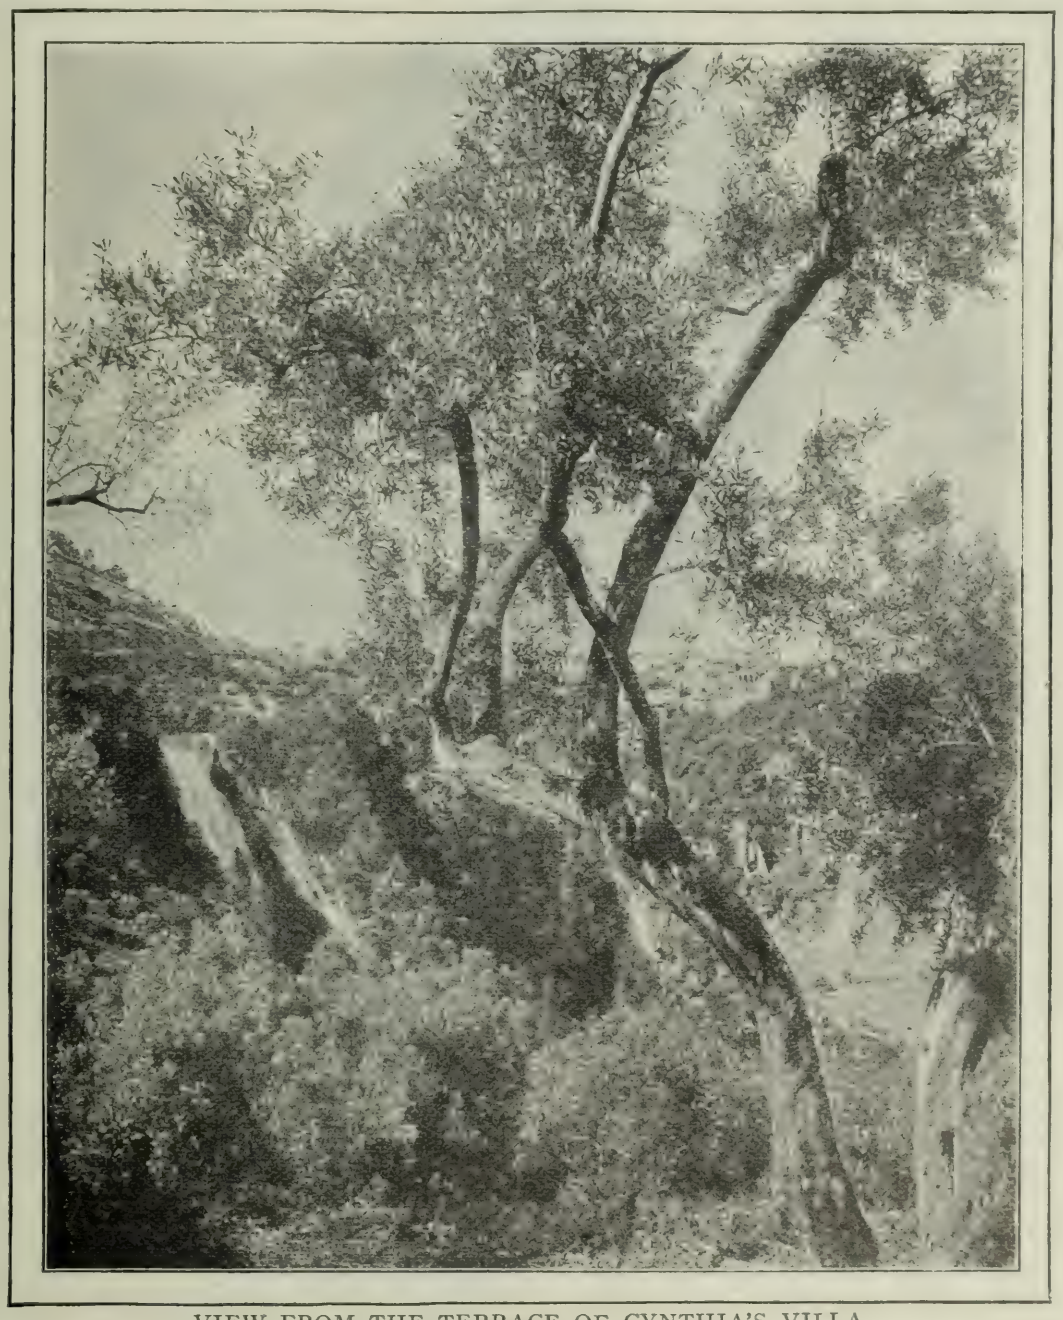
Mr. Hill's little book[4] is a reprint of the articles published in the New York *Times* in February, 1909. These articles were written for school children; but they are of that sterling worth which makes them profitable reading for every one.

Mr. Gilder considered Lincoln[5] in two aspects—as a leader of men and as a master of noble expression. "Because he was determined to be understood, because he was honest, because he had a warm and true heart, because he had read good books eagerly and not coldly, and because there was in him a native taste, as well as a strain of imagination, and an inborn sense of the beautiful in English prose,—its proper flow and rhythm,—he achieved a singularly clear and forcible style, which took color from his own noble character, and became a thing individual and distinguished." Since the appearance of Alonzo Rothschild's excellent volume, there has been little left for others to say of Lincoln as a master of men, but Mr. Gilder expressed his own estimate admirably. Mrs. Jenning's book[6] is a rather formless tribute, interspersed with anecdotes and excerpts from Lincoln's writings and speeches.

The Man of Destiny[7] is by confession a novel, and the hero, Samuel Burton, is none other than Ulysses S. Grant. We

[2] ABRAHAM LINCOLN. The People's Leader in the Struggle for National Existence. *By George Haven Putnam.* New York: G. P. Putnam's Sons. $1.25.

[3] LINCOLN, LEE, GRANT AND OTHER BIOGRAPHICAL ADDRESSES. *By Emory Speer.* New York: The Neale Publishing Company. $2.



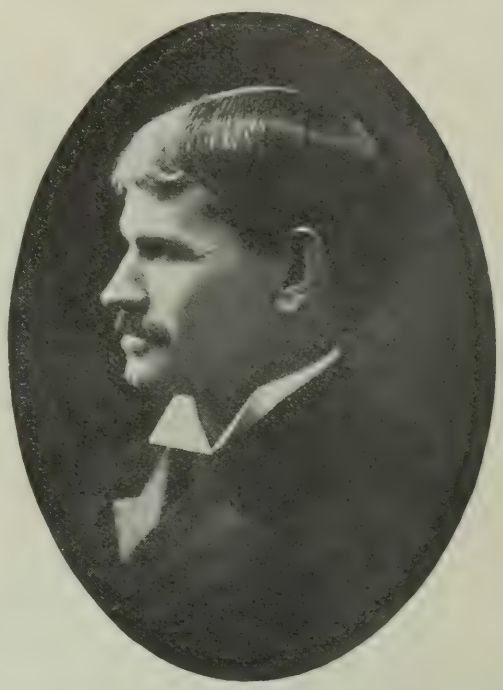
[4] LINCOLN'S LEGACY OF INSPIRATION. *By Frederick Trevor Hill.* New York: Frederick A. Stokes Company. 50 cents.

[5] LINCOLN THE LEADER, AND LINCOLN'S GENIUS FOR EXPRESSION. *By Richard Watson Gilder.* New York: Houghton Mifflin Company. $1.

[6] ABRAHAM LINCOLN, THE GREATEST AMERICAN. *By Janet Jennings.* Madison, Wis.: Cantwell Printing Co.

[7] THE MAN OF DESTINY. *By Thomas Gold Frost.* New York: The Gramercy Publishing Co. $1.50.

do not think that fiction can be tied to history in just this way. One may invent all sorts of minor characters and connect them as he wills with historic personages. But it is rather preposterous to weave fantastic romance .about the careers of men the details of whose lives are known to everybody. Grant as the ardent wooer, the voluble letter writer and the baffled lover who again meets his long-lost sweetheart after the triumph of Appomattox, fails to convince. The author provides an ingenuous prefatory explanation of his aim in so mingling history and fiction, and he hopes thereby to forestall "well-intentioned criticism." But perhaps he would prefer criticism to silence.



VIEW FROM THE TERRACE OF CYNTHIA'S VILLA.
From Lanciani's "Wanderings in the Roman Campagna." (Houghton-Mifflin Co.)

Wanderings in the Roman Campagna. By Rodolfo Lanciani. .Profusely illustrated. 8vo, pp. xiii-378. Boston: Houghton-Mifflin Co. $5 net; postage, 35 cents.

For those who do not know Italy we may explain that the Campagna is that fascinating, swampy, mosquito-infected region about Rome, thirty miles wide and forty long, which has slain its millions with fever, and which is now being recovered to settlement by the modern ways of destroying the anopheles. It was a healthy region once, but about 200

B. C. became deadly until in the better Roman times by cultivation and drainage it became a home for villas owned by the wealthy citizens. Here Cicero and Virgil and Mæcenas had their winter homes, and all this region has been studied faithfully by Signor Lanciani, who is the first archeological authority and has the gift of making archeology and history interesting. In reading his pages we seem to live again in the times with Horace or Hadrian or Gregory the Great, while the illustrations give one the scenes we all wish we had visited. We learn how the old priests contrived their oracular responses, where and how wonderful statues were found, where the old poets lived, how Cicero gathered his treasures of art, and what was the salon which Cynthia, the mistress of the poet Propertius, held at her villa at Sant' Antonio. This very attractive volume belongs to a series of books of travel issued by the publishers, who have in this volume given a worthy setting to the admirable text.

BISHOP E. H. HUGHES,
Author of "Teaching of Citizenship."

Tremendous Trifles. By Gilbert K. Chesterton. New York: Dodd, Mead & Co. $1.20.

The title of this collection of sketches might well apply to all of Mr. Chesterton's books, as to his upside-down genius trifles are the only important things and important things are only trifles, to be played and juggled with as a conjurer tosses balls. *Tremendous Trifles* does not belie its name—it is made up of everyday incidents that have suffered a sea-change. "The world will never starve for want of wonders; but only for want of wonder." That open-eyed and child-hearted wonder Chesterton supplies and it is only just to say that his method of finding the interesting in the common requires a finer art and a more original and inventive genius than to discover the unusual and the extraordinary and to exploit them in order to regain the primal zest. All of the tremendous trifles in the book are entertaining, but we confess to a partiality for "The Dragon's Grandmother," a whimsical defense of fairy tales; "The Twelve Men," a dissertation on jury duty, and "The Diabolist," which is pure Chestertonian and unlike anybody else in the world.

The Teaching of Citizenship. By Edwin Holt Hughes. Boston and Chicago: W. A. Wilde & Co. $1.25.

This little volume by the ex-president of De Pauw University and now one of the brilliant young bishops of the Methodist Episcopal Church, is neither an oration, sermon or essay, but all three in one. It is a straightforward plea for patriotism and good citizenship, and tho somewhat platitudinous, as must necessarily be the case with a book intended primarily for the young citizen, it will doubtless prove of value to many teachers in impressing upon the minds of their pupils the elementary principles of patriotism, justice, democracy, order and respect for law.

A Lady of the Old Régime. By Ernest F. Henderson. New York: The Macmillan Company. $2.50.

There is no end to these lives of French ladies of rank, for the gossipy French memoirs and letters supply no end of material. They are always interesting, too, and as important to a knowledge of the past as details of battles and the texts of treaties. *The Lady of the Old Regime* is Madame the wife of Monsieur, who may be further identified as Philippe de France, Duc de Orleans, brother of Louis XIV, a perfumed and stilted gentleman, decidedly uncomfortable to live with, if we may take a wife's word for that. Mr. Henderson weaves in very skilfully the necessary biograph-

ical and historical threads with Madame's own lively comments on the life of the court where extravagance and filth, splendor and discomfort were so strangely commingled.

Canada: The Empire of the North. By Agnes C. Laut. New York: Ginn & Co. $1.75.

In a style happily suited to her subject, Miss Laut narrates the romantic and adventurous happenings which make up the history of Canada. She is at her best, of course, in the earlier periods; no one can picture to the reader as can she the explorers and *voyageurs,* the La Salles and Radissons. She carries the history down to the beginnings of Confederation, in 1867. A trans-Laurentian account of the Canadian part of the Revolutionary War and of the War of 1812, with its battles of the Thames, of Lake Erie and of Lundy's Lane, cannot hope to be wholly satisfactory to the American reader. But Miss Laut has done this work with fairness and understanding. The book itself is narrative history; the introduction is a pean to the future of Canada. The nation is pictured as one of unlimited possibilities, just now at the threshold of its career of greatness and glory. The book is copiously illustrated.

COUNT FRONTENAC.
From a statue at Quebec. From Laut's "Canada." (Ginn & Co.)

Masterman and Son. By W. J. Dawson. New York: Fleming H. Revell Company. $1.50.

This is the story of a London architect, who had the misfortune to rise in the world by illegitimate business methods and the doubtful good fortune of having a son with a sprouting conscience. This conscience grows to such proportions that the two separate and do not unite again until the father is in the midst of his disgrace. The young man returns and plays a dutiful rôle to the Master Man until the end. The narrative element in the book fails to conceal the fact that it is nothing more than a graphic sermon, that would have been more effective if it had not been burdened with details which, whatever may have been their purpose, do not dramatize the problems of the story or the people who discuss the problems.

Poems. By William Whitman Bailey. 16mo, pp. 185. Providence, R. I.: Preston & Rounds Company.

There is no reason why a professor of botany, such as the author, who holds the chair at Brown University, should not be a writer of rimes. Indeed, we imagine he might properly put "Poetry" in "Who's Who?" as his chief recreation, for the search of the flora of Rhode Island may well give him all the physical exercise needed. This volume is nearly half devoted to pæans of Nature, many of them of single flowers, and nearly another half to college and Greek letter society occasional verse. The poems are rather pleasing and familiar than inspired, and will chiefly seek a local or personal clientele. We like best those that are suggested by the bloodroot, anemone, lady's slipper and other flowers.

Literary Notes

....In view of Secretary Knox's circular to the Powers suggesting that they invest the Prize Court with the functions of a court of arbitral justice, a pamphlet just issued from the press of the American Peace Society, 31 Beacon street, Boston, Mass., by James L. Tryon, entitled *The Proposed High Court of Nations,* is most timely.

....The 505 pages of Volume VI of the *New Schaff-Herzog Encyclopedia of Religious Knowledge* includes the subjects from "Innocents" to "Liudger," or half thru the series. While based on German scholarship, and many articles written by German scholars, very competent American scholars are on the editorial board and we see their work constantly appearing. The tone is conservative, but not stiffly so. (Funk & Wagnalls Co. $5 per vol.)

....The first volume has appeared (in German) of C. F. Lehmann-Haupt's *Armenia, Past and Present,* covering archeological investigations from the Caucasus to the Tigris and Ligranocerta. Important discoveries were made. American readers will note with pleasure the interest taken in the American mission at Urumiah, and the assistance there given him. The present condition of the Armenians receives particular attention. (B. Behr, Berlin Zehlendorf).

....Miss Esther Singleton, whose "Guide to the Opera" has attained to a considerable popularity, has now issued, thru Dodd, Mead & Co. ($1.50 net), a supplementary volume called *A Guide to Modern Opera,* in which she tells the stories of those newer operas which have gained international audiences in recent years, from Smetana's "Bartered Bride," produced at Prague in 1866, but performed in America for the first time in 1909, to Richard Strauss's "Electra," produced at Dresden last January, and recently heard on this side of the water. The plots of some twenty-six operas are narrated with sufficient detail, but without any distinction of style or much grace of manner. Those operagoers who have the earlier volume, of course, will want this second hasty book for hurried readers.

....Ten quaint and picturesque tales of feudal fighting men of "long, long ago," make up a delightful little book called *Warriors of Old Japan and Other Stories,* by Yei Theodora Ozaki, author of "The Japanese Fairy Book" (Houghton Mifflin Company, $1.25). Mme. Ozaki, daughter of a Japanese father and an English mother and now the wife of the Mayor of Tokyo, a few years ago served as amanuensis to the late Marion Crawford, who first suggested to her that she write and publish the stories of old Nippon with which she used to delight his family circle. She has performed the work of adaptation with rare skill, clothing the sometimes rather bald outlines of the original material in good idiomatic English and at the same time imbuing it with the right admixture of local color and exotic flavor. Her book has value for the student of folklore as well as charm for the lover of things Japanese.

Pebbles

JONES—"That young man who plays the cornet is ill."

Green.—"Do you think he will recover?"

Jones.—"I am afraid not. The doctor who is attending him lives next door."—*Tid Bits.*

THREE months after facing the parson together they were seated at the tea table.

"Do you love me still?" queried the young wife, after the manner of her kind.

"Of course, I love you still," he answered. "Now, keep quiet while I read the paper."—*Chicago News.*

"So you are writing stories," said the friend.

"Not exactly," answered the cynical littérateur; "I am merely furnishing a certain amount of text to keep the illustrations from running into one another."—*Washington Star.*

SPRING LAMBS.

I remember, I remember,
The house where I was shorn;
The hallowed place where little lambs
Come peeping in at morn;
The playful bears and friendly bulls
Who wisely counseled me,
And where I bought at 88—
And sold at 23.

STILL TIME.—A long-haired man walking along the street met a little boy, who asked him the time.

"Ten minutes to nine," said the man.

"Well," said the boy, "at nine o'clock get your hair cut." And he took to his heels and ran, the aggrieved one after him.

Turning the corner, the man ran into a policeman, nearly knocking him over.

"What's up?" said the policeman.

The man, very much out of breath, said: "You see that young urchin running along there? He asked me the time, and I told him 'Ten minutes to nine,' and he said, 'At nine o'clock get your hair cut.'"

"Well," said the policeman, "what are you running for? You've got eight minutes yet.—*Hapgood's Opportunities.*

OF Whistler, the famous American painter, an artist said at the Grolier Club in New York, according to the *New York Times:*

"I knew and admired Whistler in the early days of my career in Paris. He lived luxuriously; I lived in a garret. Tho he liked me none the less for that, he did not permit any false delicacy to keep him from joking me about my poorhouse ways.

"One day, in a very shabby suit, I was strolling in the Boulevard des Italiens when some one hailed me from the rear. I turned and saw Whistler hastening toward me in his tall hat and his lemon colored gloves, waving his long black cane."

"'Ah, said I, rather flattered, 'so you recogized me from behind, did you, master?'

"'Yes,' said Whistler, laughing maliciously, 'I spied you thru a hole in your coat.'"

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $3.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

The Cost of Living

WE ask our readers to give us in brief letters something which we may add to our series of contributed articles about the high cost of living and the causes of it. In these articles, of which there are more to come, college professors, legislators, tariff experts and others are showing the course of prices during the last few years and pointing out by what, in their judgment, that course has been affected and determined. It seems to us that light would be thrown upon the subject by statements of personal experience, expressions of individual opinion, comments and the like from persons so intelligent and thoughtful as our readers are.

We want to know how the question in its practical aspects looks from their points of view, what they have learned about it, what possible solutions of the problems they have thought of, what are the causes as to which they have personal knowledge. It is a question about which the average householder, housewife, father, mother, clergyman, teacher, workman, business man or philanthropist must think. We want you to give us some of the fruits of this thinking in letters which should not contain more than 350 words. We should like to have them shorter, for then we could print more of them. Those which we are unable to use we cannot return to the writers. All that are sent in answer to this invitation should be in our office on or before March 24.

National Economy

WITH respect to a reduction of national expenditures, the President can show for himself something more substantial than mere expression of opinion, for it was under his direction that the estimates sent to Congress by the members of the Cabinet were so cut down that they were less by $43,000,000 than the appropriations made least year. But the appropriation bills already passed show that Congress is not inclined to follow this example. So far as reduction of annual expenses depends upon the action of Congress with respect to appropriations, little can reasonably be expected so long as the present distribution of authority and functions in Congress remains unchanged. But reform in Congressional methods, probably in the direction of the balancing of income and outgo by means of a budget, would undoubtedly be recommended by a competent commission, which would also so reorganize the executive departments, and so promote the efficiency of employees that a great reduction of the permanent annual cost of administration would be effected. Senator Aldrich has said that a commission could make an annual saving of $100,000,000, and that a reduction of even $300,000,000 could be caused by a thoro application of the most successful methods used in private business.

It appears, therefore, that he would expect much more from a business dictator with a free hand than from a commission. This is so because he had in mind a commission composed of members of Congress. The resolution reported by him provided for a commission three members of which (one-third) should be appointed by the President. The other members were to be Senators or Representatives. But after the discussion which the resolution ex-

cited, he gave notice that the provision for the appointment of three would be withdrawn. That is to say, the commission would be composed exclusively of Senators and Representatives.

The work of such a commission would not be ideally satisfactory, because of the attitude of Congress toward appropriations and expenditures, and the influence exerted in Congress, as Mr. Taft said in his speech at Newark, by bureaus that might be in danger if a reform policy should be rigorously enforced. A commission created for the very important work which the President and Mr. Aldrich have in mind should not be composed exclusively of members of the Senate or the House. There should be in it experts of national prominence who are not connected with Congress. We might almost say that such men should be a majority. But Congress is jealous of its prerogative and authority, and it might not regard with favor the recommendations of a commission not directly representing itself. In the past, reports of such commissions have not been treated with distinguished consideration. To accomplish anything, therefore, it may be expedient to place the work in the hands of a Congressional commission. It must be remembered that the enforcement of any reforms that a commission might recommend would depend upon the action of Congress.

We are not saying that a Congressional commission could not be made that would be competent, with the aid of such experts as any commission would employ, or that the average member of Congress is constitutionally and unalterably opposed to economy in expenditure and administration. But we have in mind the desire of the average member to procure for his district or State its share, or a little more than its share, of the appropriated money, his approval of methods and committee arrangements which facilitate a somewhat free distribution of benefits, and his objection to a reduction of the number of his friends or constituents who may be employed in duplicated bureaus or unnecessary offices. His attitude toward these questions is not necessarily inconsistent with complete integrity and a fair allowance of enlightened public spirit, but it makes an atmosphere in which projects of cold-blooded reform and strict economy do not thrive; and the work of a Government Business Commission created in such an atmosphere and made of such material must leave something to be desired.

Why the Senators Cheered

It was utterly against the sacred rules and the sacred customs that within the staid and dignified walls of the Senate Chamber Senators of the United States should interrupt with applause an address by one of their number. Such an occurrence had not been known for years. And yet when Senator James Gordon, whom they hardly knew, the *ad interim* member of a month, appointed for a vacancy by the Governor of Mississippi, made his first and his valedictory speech, the Senators came flocking in from the committee rooms, put aside the letters they were writing and the law books they were reading, and listened—and cheered! How could they so forget themselves? Why was not the Vice-President's gavel lifted?

Only in part because the Senators were in good humor over the news that Mr. Vardaman had been defeated as Senator from Mississippi, and that a reasonable and progressive man had been chosen. That was something to be happy over. The Senate has had the man with the pitchfork from South Carolina, whose personal, frank likableness atones in part for his truculency; and it has had, and has not learned to like, the bull-roarer from Arkansas, and it could not well stand another representative who must make up by bluster for his lack of Confederate military service. The Senate was in a happy mood.

Partly because it liked the gentlemanly ways of the old soldier Colonel or General James Gordon, who had fought his best at the bidding of his State in the Civil War, had taken the oath, and was thru with the fighting and glad to be a loyal lover of his country. He was an old man who looked forward, not backward; who believes the country has a future that will be better than its past; who does not fret and grieve and scold

the cruel fates, but hopes and believes the best. He is the kind of a man that grows young as he grows old; would give a fair chance to every man; and that kind of a man is very welcome from Mississippi. It is good to have such a man in the Senate for a month, and it is good to know that there is another such man, a younger man, to fill out the term.

But that was not all. There was something unusual and peculiar about Colonel or General James Gordon. It was his beautiful simplicity and his affectionate good will for everybody, which made his valedictory seem as if an Apostle John had dropped down into the wrangles and rivalries of the Senate and was spreading out a benediction over them all. How simple was the story of his five-year-old childhood, when he spun the teetotum till it would fall on one of the "virtues"; and when it rested on the picture of the Capitol his mother told him he should be a Senator there when he was a man. How delightfully he told how he was born to be a millionaire, but got rid of the encumbrance as a gentleman should; how he thinks well of Mr. Rockefeller, but is sorry for him, and would be glad to have his pipe line run thru his land. Then he turned to Senator Heyburn, who did not want General Lee's statue in the Capitol, and said:

"I am an old Confederate and you, perhaps, an old Union veteran. We disagreed. You are the victor. But we each still think our own generals good people. That is all that there is to it, tho we have with us yet some blabmouthed fellows who ain't worth cussing.

"We were conquered and took the oath of allegiance. I can raise my hand and say that I have never violated that oath, and I never saw an old Confederate who had violated it. There is no North or South. I stand here in my fathers' house, and I am proud to be in it. As for our generals, you may as well try to storm the hights of heaven and pluck the diadem from Jehovah's crown as to take away from either of them any of the glory of the records of the two men who stood under the tree at Appomattox and brought the war to a close.

"I will stand before the statue of General Grant and you before General Lee. And I will take off my hat and yell for Grant, and I think you will admit that Lee was a pretty good fellow. As for General Grant, I love him, I love everybody; I am a happy man. But I am old, and, tho my hair is still on, it is a-falling; I leave here before it drops out. I shall be succeeded by a legal genius, Mr. Leroy Percy."

Is it strange they cheered? Even hardened and impenitent millionaire Senators love all-embracing good nature and good will when they see it in other folks. They admire it when it appears a rarity or even an oddity. Senator Heyburn came up and shook hands. Senator Depew declared the address unique in the literature of the Senate and exprest the universal regret at his departure. Whether the notorious Senator from Arkansas shook hands the reporters did not tell; perhaps he thought the retiring Senator's language reflected too hardly on him. The old saying, "Except ye become as little children," sometimes has public verification.

An American Justinian Needed

THE condition of American law vitally concerns every citizen. While those untrained in law cannot probe the mysteries which confuse the administration of our judicial system, the general public sadly realizes the tedious machinery which paralyzes that speedy justice which is essential to the life of a free people. One of our most prominent financiers recently declared: "The greatest risk in business is the legal risk."

The *Green Bag,* a leading law magazine, in its February issue, draws the curtain aside and presents a graphic picture of the chaotic condition of our jurisprudence. It sets forth with merciless logic the confusion which results from a Federal Congress and forty-six State legislatures adding to and changing, without system or co-ordination, our inherited common law judicature. This confusion is worse confounded by as many State and national supreme courts, establishing by their precedents tens and hundreds of thousands of precedents, printed as authorities, and cited by the bar and the courts as binding precedents, but which have never been adequately analyzed or organized so as to present a complete system of principles. Yet lawyers must examine and marshal them as best they can in the presentation of causes, altho they well know that "a precedent can be found for almost any proposition of law, no matter how erroneous." Little wonder is it that liti-

gation is tedious, uncertain, unsatisfactory and expensive.

This is the fundamental cause for most of the criticism of our courts. Lord Bacon said truly: "A country in which the laws are indefinite and uncertain is in iron servitude." Jurists well know the condition stated by Justice Day, of the United States Supreme Court:

"The confusing mass of precedents which now embody what may be called the American Common Law renders it often impossible for counsel to give legal advice competent to guide their clients in doing what the law sanctions and approves and refraining from disobeying the law, which, if litigation follows, they are presumed to know."

The confidence of the people in the general integrity of our courts is not at all impaired; but they have lost their faith that a just decision will surely be reached in every case. If such are the conditions now, what will they be when, in a century, our population will be counted by hundreds of millions, and legal decisions numberless?

George W. Kirchwey, dean of the Columbia University Law School; James DeWitt Andrews, long the chairman of The American Bar Association's Committee on Classification of the Law, and Lucien Hugh Alexander, of the Philadelphia bar, present in the current *Green Bag* a plan for the solution of this problem from the pen of the latter. After analyzing the conditions and showing how the problem has baffled the profession for more than a century, the plan is unfolded. It provides for organizing the best brain power of our bench and bar for the preparation of a complete, philosophical and adequately co-ordinated statement of the American *corpus juris,* by which is meant the entire body of our law, national and State. The plan includes the organizing of a board of editors, composed of seven of the men best qualified to engage in such an undertaking. They are to be supreme in every editorial matter. Then it is proposed to form a board of collaborators of about twenty of the ablest law professors, who are specialists in their particular subjects, each of whom would write a part of the work. In addition to this, an advisory council and board of criticism are urged, the former to embrace some twenty-five of the strongest men on the bench and at the bar, who would be unable to devote their time to the actual preparation of the text, and the board of criticism to consist of a group of one to two hundred lawyers especially qualified to criticise particular parts of the work when submitted in manuscript.

As is said by Chief Justice Clark, of North Carolina, the project is *a proposal "to do for this country what Justinian did for Rome and Napoleon for Western Europe."* He adds:

"It is for many reasons a far greater work and more difficult. Of its value and of its necessity, there can be no two opinions. Fame and fortune will wait upon those who shall confer such a boon upon the present and future millions of our country."

To secure talent of the high character proposed—and none other should be employed upon the work—will require the payment of adequate compensation, sufficient to induce such men to devote their time to it. The proponents of the plan estimate the cost at upward of one million dollars. They make clear that the project cannot be carried thru solely as a commercial venture, and an appeal is made for the establishment of a million-dollar foundation for the advancement of jurisprudence. With such a foundation, it is believed the ablest talent could be secured, and that the entire body of principles controlling the administration of our law could be exhibited in approximately twenty volumes of a thousand pages each, not as a code nor an encyclopedia, but in the form of a well-balanced and proportioned body of legal principles.

It is apparent that this work, when published, would be a necessary part of the equipment of every judge and practising lawyer. "It would be," as the late James C. Carter declared, "the one indispensable tool of his art." Such a statement of principles would be cheap at any price, yet the point is made that a sale of but five thousand sets at the usual price per volume for law books would restore the foundation and make it available for the maintenance of a skilled and permanent staff for the improvement of the law.

The plans have been submitted to a

large group of the ablest lawyers in this and other lands, and have been enthusiastically approved. Among those endorsing the project are Justices Brewer, Day and Moody, of the Supreme Court of the United States; Judge Dillon, the Nestor of the American bar; John G. Milburn, Senator Root, Alton B. Parker, Governor Hughes, Joseph H. Choate; Ambassador Bryce and Sir Frederick Pollock, of Great Britain; William B. Hornblower, Senator Manderson, Attorney-General Wickersham, Secretary of War Dickinson, Solicitor-General Bowers, United States Circuit Court Judges Gray, Dallas and Grosscup; the deans of the Harvard, Columbia, Cornell, Yale and other law schools, and many chief justices of the different States. It is doubtful if such a galaxy of professional opinion has ever before been exprest upon one subject and with so much enthusiasm.

The success of the project is contingent upon the establishment of the suggested foundation for the advancement of jurisprudence. Here is an opportunity which should satisfy the highest kind of altruism. Greater service can hardly be rendered to our nation or civilization.

The Human God of the Monkey People

Once upon a time a young monkey of India, dissatisfied with the marriage options afforded by his native land, wandered across the snowy rampart of the Himalayas to the northward, and there fell in love with the daughter of a demon. It might have been expected from what little we know of heredity that the offspring of such a union would not turn out well. But here the eugenist would miss his guess. This was one of the matches which are made in heaven. It had, in fact, been instigated by no less a personage than the Compassionate Spirit of the Mountains. He was, or is, a Bodisat, a sort of super-Buddha; one of those rare beings who having worked his way up thru a long series of incarnations until the gates of Nirvana were open before him, refuses to enter and returns to earth again that he may help his fellow men to attain salvation, thereby postponing his own entrance into a state of blessed nonentity for ten thousand years.

The monkey father and demon mother had abandoned their six children, and they grew up in a garden where they lived on fruit. Then the Compassionate Spirit of the Mountains came to their rescue and broke the bonds of their evil inheritance and their ignorance by bestowing upon them the five grains. The effect of this change from a frugivorous to a granivorous diet was miraculous. Their tails began to grow shorter, their hair to disappear. They learned how to talk, and, as the ability to gossip developed, they found it necessary to make themselves garments of leaves.

From this it will be seen that the theosophists were right in saying that the wisest men in the world live in Tibet. If Darwin had only been content to sit at the feet of the lamas he could have learned about the descent of man without having to work for thirty years over cirripeds and pigeons.

But the Compassionate Spirit of the Mountains was not satisfied to start his favorite Tibetans on the path of civilization, he has ruled over them since 1641 in the form of the Dalai Lama, being perpetually reincarnated as a newborn babe as often as he died. This was often, for the death rate of these Grand Lamas has been something appalling. What is more remarkable they have generally died at the age of eighteen, that is, as they attained their majority. It must have been very disappointing to the Regents, after having brought up the boy to manhood and just as they were about to throw off the cares of state upon his young shoulders, to lose him and have to search the country over for his divinely appointed successor. All the male infants born in Tibet shortly after the time of the death of a Dalai Lama were examined by the priests for the secret marks distinguishing the incarnate Buddha. If, as has been usually the case, many such qualified candidates were discovered, they were reduced to three by the conclave of leading lamas meeting at Lhassa, and then, in the presence of the Chinese Resident or Amban, the three names were put into a golden urn

and the Regent drew from it with a pair of golden tongs the name of the lucky child. The other two were given a consolation prize of 500 pieces of silver. Probably when they grew to be men they thought themselves the lucky ones in having escaped the golden tongs.

But for a time the young Dalai Lama leads a happy life, if happiness comes from being envied and worshiped. The letters he receives are addressed:

"To the pure toe-nails of His Holiness, the Victor of Death, the Grantor of every Wish, the Omniscient, the All-Seeing Peerless One, the Protector, Friend and Patron of the Angels and all living things."

He has the satisfaction of knowing that the clippings of his hair and nails and the threads of his cast-off clothing are sold in the markets from Sikkim to Sze-chuen, and that 4,000,000 people say their prayers to him. More than that, the wind and the waters adore him, for with a more than Yankee ingenuity the Tibetans keep their prayers going day and night by means of waterwheels and windmills. Everywhere is heard or seen the magic formula:

Om ma-ni pad-me Hung
"Hail! Jewel in the Lotus-Flower!"

the "Jewel in the Lotus-Flower" being the Compassionate Spirit of the Mountains who, in the form of a young man, resides in the Red Palace of the Forbidden City of Lhassa.

Or, rather, did reside, for now he is a fugitive, lost in the passes of the Himalayas, chased by Chinese soldiers, and seeking a shelter among the British who were the first foreigners to invade his sacred land. The vicissitudes of his short career are hardly to be matched in any tale of men or gods. His father was a poor woodchopper who, when his son's name was drawn from the golden urn thru the favor of fortune, Providence, or the Amban, became a duke of the Celestial Kingdom, was decorated with the button and peacock feathers of a mandarin of next to the highest rank and given a palace, as befits the Father of a "Living God." So the "Eloquent, Noble-Minded T'ub-dän" became the Dalai Lama which, being interpreted, means the "Lama Whose Rule is Wide as the Sea." His birthday was in 1876. His death day was in 1894, but he did not die. Strange to say it was the Regent who died at that time. The young Dalai Lama thus made good one of his titles, "Victor of Death."

He not only refused to die according to precedent but took the Great Red Seal in his own hands. It was history repeating itself; the revolt of a *Roi Fainéant* against his Mayor of the Palace, the rise of a Mikado above the Shogun. The Government at Pekin issued a peremptory edict demanding that the Dalai Lama relinquish the temporal power he had seized, but the Amban who represented the Chinese Government at Lhasa was induced by a heavy bribe not to interfere. China was in no condition at this time to enforce its titular sovereignty over Tibet, for Japan had seized Korea and invaded Manchuria.

The young Dalai Lama, in taking advantage of this opportunity to throw off the allegiance of the Chinese Emperor on the East, had the choice of seeking the protection of his powerful neighbors on the North and the South, Russia and Great Britain. Under the influence of a Buriat or Russian Buddhist he chose Russia and sought an alliance with the Great White Czar. That the Russians should thus take possession of the Roof of the World whence they could look down on India was intolerable to the English, but they bided their time, meanwhile getting good maps of the Forbidden Land by means of Buddhist pilgrims who recorded their paces instead of their prayers on their beads. But that is another story told by one Kipling, and entitled "Kim."

The time came to use these maps in 1904 when Russia was engaged in war with Japan. Colonel Younghusband, with a small force of British and Indian troops, crossed the Great Wall of India, and marched to Lhasa. The Dalai Lama fled, the Amban pronounced him suspended from his office and for five years he has been wandering in the deserts of Mongolia and the western provinces of China, an honored and unwelcomed guest. His visit to Pekin gave him little satisfaction and he returned to his capital on Christmas Day followed by a Chinese army. Again he fled from the Sacred City but this time to the southward seeking British instead of Russian protection.

An edict of the boy Emperor of China says he is the worst Dalai Lama that ever lived, declares him deposed and orders the Amban to dip the tongs into the urn at once.

But according to Tibetan tradition the Spirit of Compassion promised only thirteen transmigrations for their benefit and this fugitive is the thirteenth Dalai Lama. Their divine protector seems to have deserted them at this crisis, perhaps in disgust at the small progress they have made under his reign of 268 years, perhaps in despair of saving Tibet from the three great nations, China, Russia and Great Britain, which come into conflict at this point.

Naval Madness

It was announced in Sunday's papers that the Administration plans to make the United States the first naval power in the world. In the Monday papers Secretary of the Navy Meyer is quoted as saying that he has been "slightly misunderstood":

> "The published reports of my intention to have this nation outstrip Great Britain, for instance, in aggregate naval strength . . . are rather overdrawn. I want the United States to have the biggest battleships afloat, however, even if she does not lead in world supremacy on the seas."

Accordingly, it is proposed to have Congress authorize the building of two world-record-breaking 27,000-ton battleships, to cost approximately $18,000,000 apiece, to say nothing of the usual number of auxiliary craft, etc.

Those who urge this policy are bound to tell us what reasons they have to suppose we shall ever have to fight England, Japan, France or Germany. Manifestly a small navy is sufficient for all the other Powers. In the olden times a navy was frankly built to fight the enemy; now we have progressed so far that a navy is only justified to "keep the peace." Therefore, who is going to break the peace, the aforementioned great world Powers or ourselves? Let the Administration tell the country.

The New York Peace Society has just issued a significant pamphlet in which it is shown, among other things, that the cost of one battleship would establish fifty manual training schools, teaching the rudiments of a trade to 75,000 people a year, or would buy the White Mountain Forest Reserve, containing 250,000 acres; or would build a macadam road between New York and Chicago; or would build and equip forty eight-story Y. M. C. A. buildings, etc.; while the cost of the two new super-Dreadnoughts that Secretary Meyer wants would be sufficient to dredge the proposed 6-foot channel in the Mississippi River from St. Paul to New Orleans; or would practically wipe out tuberculosis from New York City.

Let Congress study these figures and then read Senator Charles Sumner's essay on what constitutes "The True Grandeur of Nations."

If Congress will do nothing the American people must act. In these United States, whose geographical isolation is a better protection from enemies without than fifty navies, the people will not be fooled much longer in going along the path whose destination is national bankruptcy, simply for the sake of Navy Leagues, ordnance manufacturers and every incipient "Fighting Bob" who hopes some day to lead another American Armada on its gastronomic voyage around the world. Besides, this mad scramble to beat Europe completely ignores The Hague and the other peaceful agencies already in existence for the settlement of international difficulties.

The End of the Opium Curse

The great curse of China is opium. The great curse of the United States is alcohol. Each country is trying to abolish its curse, each in its own way. The Chinese Government is centralized, and orders come down from the throne, and are executed by the viceroys and governors of the provinces. The American Government is distributed between forty-six States and two Territories, each working independently, and power goes up from the people. The Chinese method seems to be working as well as ours, for the reform has been moving with great strides during these last two or three years. It is that kind of a moral reform which is more important than the change of a dynasty.

For seventy years of captivity and servitude Chinese reform has been under the chains of a treaty with Great Brit-

ain, under which opium from India must be admitted into Chinese ports. Chinese statesmen now ask and pray for deliverance. They have made wonderful advance in suppressing the use of opium and the cultivation of the poppy in their own country, and they ask Great Britain to limit the production of the drug in India; but India likes its profit and objects. India sends 46,000 chests of opium, concentrated poison and death, into China. All China's foreign supply of opium is produced in India, except some 1,200 chests of Turkish and Persian opium, imported under the British flag. China now asks India to reduce its production of opium by an amount to correspond with its own suppression of the culture of the poppy. And China looks forward to the time when it will be able to forbid the importation of the drug by the termination of the treaty.

It is with extraordinary and immense energy that China is trying to conquer the evil. It takes three methods. The first is to close the dens in which opium is smoked. In one city 7,000 dens have been closed; in other cities from 2,000 to 3,000, and in others 1,000 have been shut up. In 100,000 market towns the dens and divans have been supprest. Altogether between one and two million places for the smoking of opium have been removed. These figures are simply stupendous, but they are vouched for by the last report of the Anti-Opium League of China.

The second method proposed and enforced is the stopping of the cultivation of the poppy. This rule applies to every province in the Empire. This is a tremendous economical attempt, and necessitates the destruction of much property. It is like what would be the confiscation of all the breweries and distilleries in this country. Is this country equal to such a moral self-sacrifice? Thru entire sections of China the people have been reduced to temporary poverty, until they may be able to substitute the growth of cereals for that of the poppy. Out of eighteen provinces eleven report the growth of the poppy entirely or nearly stopped, and the others are moving forward. But there is the great British opium farm at Hong-Kong, which makes a profit of $600,000 a year.

The third method is the requirement of all officials to abandon the pipe. This applies to more than a thousand officials in each province. Some mandarins long addicted to the habit have lost their lives in the attempt to give it up. Such was the case with the late Governor of Kiang-su, who after the Boxer uprising so satisfactorily settled the affair of the burning of the Paotingfu missionaries. For the relief of the humbler victims of the habit hospitals have been established for the cure of the opium disease.

As an example of the earnestness of this reform one can take the province of Chihli, in which Peking is situated. There measures of suppression are being carried out with vigor. The cultivation of the poppy is prohibited, and the prohibition of the trade in opium has been enforced thru the village head men. The number of opium shops has been reduced, often only one left in a single city. Both shops and smokers have to be licensed, and official refuges are established in cities and medicines are supplied gratuitously to those who are forced to reform. There is a Chinese anti-opium bureau in Chihli, which pours out torrents of circulars against the drug. The provincial authorities are asked to fill in blank forms, giving the names and situation of these refuges, whether public or private, with names of donors and character of the prescriptions. Another form requires the names of opium-smoking officials, of those who have reformed, and of suspects. Officials of high rank are required to guarantee lower officials.

Thus old, backward China gives its challenge to the world. It demands of the Indian Christian Government that it come up to the moral standard of Confucianism. It sends another challenge to America to do as much to suppress our great evil as it is doing to destroy that under which China has suffered so long and so fearfully. Can we meet the challenge?

Senator Allds Resigns

Without regard to his innocence or guilt, it is fair to say, it was only decent that Senator Allds should resign his position as leader of the New York State Senate while under trial for brib-

ery. He claims to be innocent, but thus far the evidence against him is direct and supported, while the defense amounts to nothing more than that the State boss directed the bill to be suppressed in committee. But he had a kindred reason for wishing it, for there had been a big subscription to the campaign fund, and Senator Platt knew, and he said so on oath a few years ago—that a big subscription meant protection by the party in power against undesired legislation. When the boss extorts money for the campaign fund, why should not the bosslets follow the example for the benefit of their own private fortunes? So far from the letters of Senator Platt being evidence in favor of Mr. Allds, they are quite consistent with his guilt. This paltry thousand-dollar bribery, so sensational in its exposure, is of importance not on its own account, but because it indicates what was the wide corruption, and suggests what the far richer corporations did. Particularly it begins to call attention to bribery by campaign contributions. A most important reform would be one that would diminish the expenditures for carrying on campaigns.

Academic Liberty Restrained

One feature of the far-famed "academic liberty" of the German universities does certainly not consist in this, that the faculties have their wishes realized in regard to the filling of vacancies in the teaching corps. Recently the Cultus Ministerium of Prussia has made the theological faculty of Berlin feel that the Government authorities will appoint such professors as it pleases. Disregarding entirely the three proposals of the faculty for a successor to Professor Kleinert several months ago, the Cultus Minister appointed Dr. Mahler, of Frankfurt-a/M., from the ranks of the practical clergy, to the most important chair of practical theology in the country; and now, altho the faculty wanted Troeltsch, of Heidelburg, or Bosfet, of Göttingen, for the long vacated chair of Professor Pfleiderer, the Government coolly ignored all German candidates and selected a privatdocent of the University of Copenhagen, Dr. Eward Lehmann, for this important place. There is a great deal of heartburning in academic circles of Germany at present over the tyrannical way in which the Government is interfering with the wishes of the university senates and faculties.

A Railroad's Model Farms

THE INDEPENDENT has already suggested that it would be a good thing for the railroads, especially the larger carriers, to establish model farms, teaching the people how to grow the largest crops at the least possible cost. It is, of course, from one standpoint, a selfish affair of the roads, but such a movement will be of inestimable benefit to the people at large. We are glad to note that the New York Central has already taken up with the idea, and will at once establish three farm stations, in three different sections of the country that its main line goes thru. President Brown tells us that "prosperous farming means increased traffic," and for that reason the New York Central and the farmer can co-operate. It simply means that "it is good business for the railroad to do all it can to bring farm products up to their maximum." If the railroad, by moderate expense and thought, can make farming conditions radically better, he thinks it is plainly the interest of the railroad to do so. We shall watch these evolutions of agricultural education with intense interest. It seems at this date to be one of the most promising movements on foot. It is promised that nothing faddish will be undertaken, but that experiments will be tried for the improvement of the soil, improvement of stock, and the prevention of waste. A new sort of railroad superintendent seems to have arisen, and a more generous, public-spirited management of our great highways is in the air. We see no reason why these great corporations may not come into full alliance with the people, by a volition of their own.

The Norsemen in Vinland

We shall have to give up our faith that the Norsemen, some centuries before Christopher Columbus, visited this country and landed on Martha's

Vineyard or somewhere on the coast of Massachusetts. Professor Horsford even found remains of their rude fortifications at the very locality where they were supposed to have made a temporary settlement. Professor Fernald, of the Harvard Herbarium, has completely demolished all the claims of Maine or Massachusetts in a very interesting article in *Rhodora,* which he promises to develop into a volume. The evidence for their presence there has rested in the fact that they were said to have found grapes, wild wheat (meaning wild rice) and maple trees. Professor Fernald shows that the "grape" (*vinber*) was no grape at all, but the cowberry, *Vaccinium Vitis-Idæa;* the "wheat" was the strand-wheat, *Elymus arenarius,* used in great quantities as a grain in Iceland; and the "maple" was the white birch. The two first would not have been found on the coast of Massachusetts, but all three are found in great abundance on the coast of Labrador. The evidence for these identifications is found in a careful study of the use of the Norse words by the older writers and their present use. Thus passes an old myth from this country to become veritable history north of the St. Lawrence River.

Index versus Index

Recently the bishops of France issued a sort of index of prohibited books upon which were listed a lot of textbooks in use in the public schools of France. Now the University of Paris has published a counter index, by which are banned twenty-one books; in fact, a few more than the Monseigneurs condemned. Greek has met Greek. The university has often hitherto banned and anathematized, but this function seemed to have vanished into innocuous desuetude till the hierarchy took action. Strictly speaking, the condemnation by the bishops cannot be called an index, as Rome for some centuries has reserved the index to its own congregation, so called. But that of the university is an index, nevertheless. An old medieval claim is now resuscitated, whether wisely or no time alone will show. A curious issue is now on the carpet. Several professors of the university have sued certain bishops for damages, but have not sued the hierarchy as a whole. Now the clerical authors, whom the university has put upon its index, if they sue, must sue the university itself. The whole incident illustrates a trait of the French character, ready to carry out conclusions to their last resort. Give and take, overlook and put aside, play little part. The result will be that the school system of France will be the pivot around which will be waged a bitter fight. It is well to note that the term "free schools," familiar in the United States, is applied to the clerical schools in France, while the state schools are known as "public," "municipal" or "communal" schools.

The opposition of labor organizations to any extended training that would possibly bring about a larger amount of competition in the trades was supposed to be a fixt policy, but a wiser counsel seems to have prevailed, and the conviction of all classes that we must thrive together or lapse together is prevailing. The American Federation of Labor has endorsed industrial training under State auspices, and has placed itself strictly in accordance with the desires and aims of the State educational departments. It has now gone farther and petitioned the United States Bureau of Labor to undertake an exhaustive study of the conditions and the outlook of industrial education in the United States. The department at Washington has responded promptly, and announced its desire to secure some radical changes, favoring a better training of our young people along the lines of hand work. Secretary Nagel, of the Department of Commerce and Labor, in response to a delegation consisting of Samuel Gompers, John Mitchell, James O'Connell and Frank Morrison, has authorized a special inquiry. Industrializing the educational system of the country is something sure to take place; indeed, is already under strong headway. The outlook is thoroly hopeful when the leaders of the labor organizations voluntarily undertake to harmonize with the Government in pushing the matter forward.

Here is a setback for coeducation. Baden, in educational matters probably the most progressive among the German states, eight years ago introduced coeducation in seventy-five of the secondary schools as an experiment. Now it has been abolished in all but nine of these schools. In explanation of this fact the Cultus Ministerium declares that the chief trouble has been caused by the flirting and courting of the two sexes; that instead of the girls making the boys more gentlemanly, the boys had rather made the girls rude; that the superior diligence of ambition of the girls had only in rare cases spurred on the boys to better work, and had not infrequently led to in inferiority in their work and to indifference. The great majority of secondary school teachers in Baden have concluded that the experiment has been a failure. It will be remembered that the gymnasium in Pforzheim, in Baden, was the first full secondary school in Germany that admitted girls on the same footing with the boys.

The general use of the swift and silent automobile requires for the protection of those who walk the stationing of a policeman to direct traffic at the crossing of the more frequented streets of our cities. But this is not enough. Governor Hughes's recommendation is wise, that all who drive them should be examined and carry a license, and that any one who seeks to escape after an accident should be severely punished. It would be well also to require every chauffeur to carry his photograph with his license, and on conviction of an offense should annul the license or require the offense endorsed on it for future reference. The speed limits alone are not sufficient.

The Chicago *Tribune's* poll of all the Republican papers of twenty-six States from Ohio to the Pacific, shows that they are overwhelmingly against the Aldrich tariff, by a vote of 2,686 to 812. Only one State favors it, Missouri, by 84 to 78. Equally the papers of every State without exception, even his own, and his own district, are against Speaker Cannon's re-election. The total is 2,653 to 546. And a small majority want Roosevelt for next President rather than Taft. There is no question where the Central and Western States stand on political issues. The star of empire has moved westward, and the East will have to follow.

We regret to see that the Missouri State University proposes to provide a course of instruction in writing poetry. We fear it will tend to send us more very respectable poems. We do not mind the poor ones, sent with a loose stamp that drops and gets lost, and of which the editor has to read but two lines, but the fairly good ones that have to be read thru before being declined "with regret." It is a wonder to us that our subscription list grows so fast when hundreds and even thousands of our readers have to be disappointed in their poetical ambition. It is to their credit that they show no ill-will, and that hope springs eternal in their breasts.

The great Oxford-Cambridge boat race, which is a famous social event, had to come this year in what is called Holy Week, or be dispensed with entirely, which would never do. Those in charge tried to save religious conventions, however, by giving up the usual dinner and declining all official invitations to places of public entertainment. If the objection is a valid religious one it ought to prevent the race altogether; if it is only a show of religion it goes too far.

Do you keep your INDEPENDENTS? That is wise. The file will be referred to, and old numbers will furnish good reading for your family. But if you do not keep them, then make them useful. Send them to some one who cannot afford to subscribe; or, perhaps better, send them to some mission, such as the Army and Navy Y. M. C. A., 124 East Twenty-eighth street, and the Government will transport them free to army and navy stations.

A committee has reported unanimously a bill to exclude Japanese laborers. But why Japanese more than Italians or Russians? We ought to seek the most friendly relations with Japan, and we could do it safely, even from the point of view of the San Francisco Sand Lots, now that the Japanese Government is so anxious to direct emigration to Formosa and Korea.

Financial

Stock Manipulation

PURSUING its inquiry concerning the collapse of the pools in the stock of the Columbus and Hocking Coal and Iron Company, the governing committee of the New York Stock Exchange has now punished another firm, J. M. Fiske & Co., by excluding its Exchange member, Clifford M. Washburn. This firm—like Lathrop, Haskins & Co., whose Exchange member, Mr. Haskins, was recently excluded—was made bankrupt by the failure of the Hocking manipulation. In this latest instance, as in the one preceding it, the reason given by the Exchange authorities is that the failure of the firm "was caused by reckless and unbusinesslike dealing." This relates, as we understand it, to operations held to be in excess of the firm's supporting power, rather than to manipulation of quoted values by means of pool agreements and under the direction of an expert manager of pool undertakings.

There is still lacking an expression of the opinion of the Exchange authorities concerning such manipulation as these firms were engaged in during the greater part of last year. Such operations should be denounced and prohibited. The Hocking inquiry should not be closed without an emphatic utterance and a plain ruling from the Exchange authorities on this subject.

....Henry S. Redmond, a prominent banker of this city, died at the age of forty-four years on the 25th ult. on a houseboat at Miami, Fla. He had gone South to recover his health, which was impaired by disease of the heart. When he was nineteen years old he entered the banking house of Morton, Bliss & Co. Seven years later, with Henry S. Kerr and Gilbert Plympton, he founded the firm of Redmond, Kerr & Co., which, upon the death of Mr. Kerr in 1904, became Redmond & Co. This has justly been regarded as one of the most conservative and trustworthy banking houses in New York. Mr. Redmond was a director of many prominent corporations, among them the Equitable, Fifth Avenue and Fidelity Trust companies and the Federal and Atlas Insurance companies. He was a member of many clubs and had been an enthusiastic yachtsman. A few years ago his yacht "Ailsa" took part in the transatlantic race for the German Emperor's Cup. In his business he had been identified with the reorganization of several railroads.

....Hampden E. Tener, who for more than three years has been a director of the Irving Savings Institution, was recently elected president. Mr. Tener came from Pittsburgh to New York nine years ago, and is a director of the Fidelity Trust Company and the Montclair Trust Company. The Irving Savings Institution has a surplus of $842,684, deposits of $19,836,291, and total assets of $20,678,975.

....Owing to the requirements of the new corporation income tax law, many small corporations are dissolving and assuming the form of a partnership. An attorney in Paterson, N. J., said last week that he was preparing dissolution papers for twenty-two corporations in that city.

....Exports of automobiles from this country last year amounted to nearly $9,000,000, and imports were about $4,000,000.

Old Colony Trust Company

THE recent merger of the City Trust Company with the Old Colony Trust Company, both well known Boston institutions, makes the Old Colony Trust Company not only the largest trust company in New England, but one of the largest and strongest in the country, and the merger makes the capital and surplus in excess of $13,000,000. The original capital and surplus of the Old Colony Trust Company twenty years ago, when it was established, was $1,500,000, and its deposits in December of 1890 were $2,000,000, and its average deposits for the year previous to the recent merger were $40,250,000. The deposits since the

merger aggregate nearly $70,000,000. The growth of the Old Colony in its twenty years' history has been remarkable. Under the reorganization T. Jefferson Coolidge, Jr., becomes chairman of the Executive Committee; Gordon Abbott, chairman of the Board of Directors; Francis R. Hart, vice-president of the Board of Directors, and Philip Stockton, president of the company. Mr. Stockton was president of the City Trust Company, which institution was organ-

NEW BUILDING OF THE OLD COLONY TRUST COMPANY,
Court street, Boston.

ized in 1900. The building which the Old Colony Trust Company has recently erected in Boston stands on historic ground. On the same site Benjamin Franklin conducted a printing office, and in a room over the printing office Adams, Hancock, Otis, Quincy and others, members of "The Long Room Club," were accustomed to gather before the Revolution to mature plans for resistance against England.

....Cuba is now exporting dressed beef to New York. Four weekly shipments have been made, and the beef is easily marketed at a profit, despite the tariff duty of about 1¼ cents a pound.

....It is estimated by the Department of Agriculture that the annual lumber cut of the United States is now about 40,000,000,000 feet, having a mill value of not less than $700,000,000.

....The International Banking Corporation, whose main office is in New York, announced recently the opening of a branch bank at Hankow, China. This is the eighteenth of its branches, the others being at Peking, Shanghai, Canton and Hong Kong (in China); in Japan, British India, the Philippines, and South America.

....According to a report prepared by W. N. White, a recognized authority on this subject, there are now in the United States 201,794,642 apple trees and 17,716,184 pear trees, of fruit-bearing age. Missouri heads the list of apple-growing States, with 20,040,399, and California has the greatest number of pear trees, 2,512,890. New York stands second, for both of these fruits.

Insurance

Life Insurance for the Rich

MANY a man, when solicited by a life insurance agent to take out a policy, says to the agent: "My dear sir, why should I take out a policy? I am well to do, even rich, and I have my investments carefully placed and my family are well provided for. Why, then, should I insure?" If the agent is wise he will point out the instability of earthly things and how easily riches take unto themselves wings and fly away. He will show the prospect something of the beneficence of life insurance and what it is intended to accomplish in the world, and something of what it signifies as a protection. Insurance is not intended for the poor man alone, but also for the rich, and an application of the insurance principle has been made to partnerships and even to employees, the loss of whose services may inflict serious loss. Life is always uncertain and it is for the prudent man to guard as carefully as he may against its uncertainty. Life insurance points the way and provides an anchor to windward. One of the daily papers recently printed an article with the caption 'Loses Fortune; Ends Life." The tragic story as printed, was as follows:

"Mrs. Sarah S. Phillips, widow of the piano and organ manufacturer, ended her life by inhaling gas in her boarding house, at No. 109 West Seventy-seventh street. The fortune she inherited had dwindled away, and in her last days Mrs. Phillips had made a living by designing women's waists.

"The loss of wealth caused Mrs. Phillips to suffer from a nervous disorder, and she had been an invalid for more than a year. She died in a rented room amid surroundings in sharp contrast with those she had been accustomed to during the time when fortune smiled.

"Several years ago Mrs. Phillips and her daughter, who is now here, went to Baltimore. It was in that city she began to labor as a designer. Because of her physical condition, Mrs. Phillips returned to New York a year ago."

It would have been very easy for Mr. Phillips in his days of prosperity to have carried a continuous instalment policy in favor of his wife, which would have meant a yearly or a monthly income for her until the day of her death—an income which was so secured to her that she could not have wasted or lost it, and which creditors could not have touched. But Mr. Phillips did not do this, and so his wife passed from luxury to poverty and finally died. Mrs. Phillips herself could have purchased a life annuity if she had known about it, but life insurance so often remains so vague to so many people that no advantage was taken of the possibilities of annuities by her, and so she came to an unnatural end because insurance was neglected in some of its pertinent forms. If the lessons taught by the death of Mrs. Phillips could be brought home to every man, woman and child in this great country of ours, in spite of the sadness of her death she would not have died in vain.

ALMOST everybody is sick now and then and stays at home from business a day or more. Few of the sick ones think much about it, but when it is understood that calculations show that all of the wage-earners of this country, considered together, lose about 200,000,000 days each year, the matter takes on greater importance and means a lot more than at first appears.

AT a meeting of the directors of the Continental Insurance Company, held last week, a stock dividend of 100 per cent. was formally approved, which increases the outstanding stock from $1,000,000 to $2,000,000. This increase in capital will be effected by the transfer of a million dollars from the company's surplus account to capital account, which will bring the company's issued capital up to the full amount authorized in its charter. The Continental Insurance Company has been in business for fifty-seven years, during which time it has accumulated a net surplus amounting to $13,000,000, and has at the present time total resources of $22,332,787. The increase in capital is subject to a ratification of the stockholders, which will be sought at a special meeting, to be held on March 18.

The Independent

VOL. LXVIII NEW YORK, THURSDAY, MARCH 10, 1910. No. 3197

Survey of the World

Postal Savings Banks

The postal savings bank bill, first of the Administration's measures to reach a vote at the present session, was passed in the Senate on the 5th. There had been a sharp debate, the Republican insurgents' attitude being one of opposition or hostile criticism. They were led by Mr. Cummins and Mr. Dolliver, and as a rule they opposed the provisions which would permit investment of the deposits in the outstanding $730,000,000 of 2 per cent. bonds, now mainly held by national banks as a basis for circulating notes. Mr. Dolliver asserted that such investment (which is favored by the President) was designed to relieve the banks and clear the way for the establishment of a central bank of issue. Mr. Root argued very earnestly in support of investment in Government securities, holding that otherwise the bill would be unconstitutional, and saying that if there should be no such investment the solvency of the Treasury itself would be menaced in time of panic, because the Government would be liable for $500,000,000 or more of deposits, for which it would have to look to the local banks, which might not be able to pay either the Government or the depositors. The contest at the end was over certain amendments. Mr. Smoot's, supported by the regular Republicans, empowered the President to withdraw the deposited funds from local banks, for investment in Government securities, in time of war or when such action is demanded for the country's welfare and the national credit. Mr. Cummins's, granting this power only in time of war, was lost by a vote of 18 to 40. Mr. Borah's, restricting such investment to securities yielding at least 2¼ per cent., was adopted, 49 to 11. Then the Smoot amendment was accepted, 46 to 24, and the bill was passed, 50 to 22, all the Republicans and one Democrat (Mr. Chamberlain, of Oregon) voting for it. The Borah restriction prevents investment in the $730,000,000 of 2 per cent. bonds. It is said that there will be an attempt to eliminate it in conference. The bill, as passed, authorizes money order post offices to accept deposits of $1 or more, but not more than $100 in one month from one person, or more than $500 in all. The Government pays 2 per cent. interest. The money is to be deposited in local banks or trust companies (which must pay 2¼ per cent.) and is to remain there unless withdrawn by the President for investment in Government securities, which must yield at least 2¼ per cent. Supervision and control are given to the Postmaster-General, the Attorney-General, and the Secretary of the Treasury, as trustees.

General Strike in Philadelphia

After a general sympathetic strike had been ordered, on the 27th ult., in Philadelphia, to begin on Saturday last, efforts were made by clergymen, merchants and bankers to induce the directors of the street railway company to accept arbitration. They refused to do this. The three men representing the city in the board were the most uncompromising opponents of the proposition. One of them is Mayor Reyburn. They argued that by arbitration no permanent settlement of the controversy could be made, because the strikers

had broken one agreement and would probably respond to any call for a sympathetic strike. When the company was asked to join the union in an appeal to the courts for arbitration, it declined to deal with the union, but offered to take back a majority of the strikers and then to recognize a grievance committee, in which the strikers and the men who had remained in their places should have equal representation. This was rejected by the strikers. It was then decided that the general strike should begin at midnight Friday. At that hour the musicians in hotel and café orchestras stopped work, together with the cab drivers and chauffeurs. On Saturday the unions claimed that 70,000 workmen were out; the city authorities asserted that not more than 30,000 had obeyed the order. A projected mass meeting in Independence Square was prevented by order of the police authorities, but the strikers were permitted to march thru the square and to parade in neighboring streets. On Sunday the union's Committee of Ten predicted that 150,000 employees would soon quit work. Sympathetic strikes were promised in Chicago, San Francisco and Newark, N. J. Owing mainly to the influence of Mayor Reyburn, the city councils ignored petitions asking for resolutions in favor of arbitration. Many merchants were boycotted for selling goods to persons known to be on the side of the railroad company. In the latter part of the week there was much disorder. Among those mortally injured by bricks or bullets were four men (one of them a policeman) and a young woman. To the doubled police force 1,000 men were added, and the militia regiments thruout the State were held in readiness to answer a call for help. It was reported on the 7th that the authorities had decided to arrest several of the union leaders for conspiracy.

The Allds Investigation

Jotham P. Allds, leader of the Republican majority in the New York Senate, and formerly Republican leader in the House, has been testifying at Albany in the investigation concerning Senator Conger's charge that he demanded a bribe for suppressing a bill disliked by certain bridge companies, and that $1,000 was paid to him in Conger's presence by one Hiram G. Moe, acting as agent of Conger's bridge company and other similar companies, which had raised a fund to be used in this way. Senator Allds denied emphatically that he had received the $1,000 or had ever taken a bribe designed to affect legislation. He had never seen Moe, he said, and not one of the conversations as to which Conger testified had taken place. His bank accounts were produced. He gave an account of all his property, the value of it being about $25,000, and it was shown that he lived in a simple and inexpensive manner. One Daniels, clerk of the prominent committee of which Allds was chairman when, as Conger alleged, the bribe money was paid, testified that he was in company with Allds on the day in question for several hours, covering the time specified by Conger, and that neither Conger nor Moe had any communication with Allds or was present. Daniels's remembrance of many minute details in the history of that day, nine years ago, was regarded as quite remarkable, in view of his inability to recall similar details for other days of the same month. It was shown by letters written by United States Senator Thomas C. Platt, then Republican boss of the State, that the latter asked the late Speaker Nixon (also accused by Conger) to suppress the bill in question because it would injure a bridge company in the town where he then lived. On the 6th inst., three days after this testimony was taken, Mr. Platt died at his home in New York City, in his seventy-seventh year. For some time his health had been much impaired.

Mr. Pinchot's Testimony

In the Ballinger-Pinchot investigation, last week, Mr. Pinchot, under cross-examination, said his charge that Secretary Ballinger had given to the President a statement absolutely false in three essential particulars was based, not upon Mr. Ballinger's personal statement, but upon a letter written by Judge Ronald (formerly the Secretary's partner) to Dr. Lyman Abbott. This letter, which seemed to be supported by Ballinger's notes on the pages of a magazine, Bal-

linger had attached, as an exhibit, to the statement sent to the President in his own defense. This was in November last, and the witness admitted that in the preceding September Ballinger had sent to the President a correct statement as to the three matters in question. These related to Agent Jones's report on the Cunningham coal claims, to the efficacy of Glavis's protest against the clear-listing of these claims, and to Ballinger's argument before a House committee for legislation that would have favored them. Witness had urged Glavis to lay his statement before the President and had given him a letter of introduction. He had told Secretary Wilson, on January 3, that Senator Dolliver had asked him for a letter to be read in the Senate. The Secretary had offered no objection, and had said there would be no trouble about the President's executive order. He believed he had the Secretary's consent. At this point Secretary Wilson became a witness, denying that he had given consent. That could not have been, he added, for in the letter Pinchot had presumed to review the President's action and had assumed his (the Secretary's) authority. There had been a conversation about sending a letter to Senator Dolliver, but he had no idea that such a letter as the one which Pinchot wrote was to be sent. He supposed it was to deal only with departmental affairs. He would not have approved any letter dealing with the President's action concerning Glavis. There were some contradictions in the Secretary's testimony. Again taking the stand, Pinchot was subjected to a long and wearisome cross-examination, which drew out nothing of importance. He admitted that he had made erroneous assertions, or mistakes, in a letter to the President. He knew little personally, or at first hand, in support of his charges against Ballinger, but relied mainly upon the official record and upon knowledge acquired by other persons, some of whom will testify hereafter. He had urged President Roosevelt to veto certain power site bills. To the question whether he had written the veto messages he gave no answer. He read a long letter sent to him in September by the President, inclosing a copy of the letter to Ballinger which caused the dismissal of Glavis. Addressing the witness as "My dear Gifford," the President urged him not to make Glavis's cause his own, saying that he was not familiar with the entire record. Witness, he thought, had been unjust to Ballinger. Expressing his confidence in Pinchot and his desire to support his conservation policy, he spoke of the immense value of the Forester's work, and said he should consider it one of the greatest losses of his administration if Pinchot should leave the service. He hoped his action in the Glavis case would not cause Pinchot to take such a step.

Nicaragua's Revolutionists Beaten

After withholding the facts from the public for several days, the revolutionists' leader at Bluefields admitted on the 3d that his army had almost been destroyed and that those who had escaped were making their way eastward from the battlefields between Lake Nicaragua and Lake Managua. Many falsehoods about the westward movement had been told by the revolutionist authorities at Bluefields, and the dispatches from the capital showed that the Madriz Government did not know how great and decisive its victory was. It now appears that at Tisma, on the 22d ult., General Chamorro lost 800 men, killed or wounded, that others deserted, and that he led only sixty cavalrymen back to join General Mena. The combined forces, amounting to about 1,000 soldiers, then fled eastward, pursued by General Vasquez, who captured 280 of the fugitives on the first day of their retreat. At the end of last week Estrada was striving to assemble troops enough to defend Rama and Bluefields. He formally asked the United States, on the 4th, to mediate or to intervene in some way, his purpose being, if our Government should refuse, to organize a separate republic in the eastern half of Nicaragua and to carry on guerrilla warfare. There was no uprising of the people in Western Nicaragua to welcome and assist the insurgent army. There would have been such an uprising if Zelaya had still been President, but it

appears that Madriz, his successor, is generally regarded with approval in that part of the country.——President Obaldia, of Panama, died on the 1st of heart disease. His father had been President of Colombia, and he himself had served as Minister at Washington. Vice-President Mendoza succeeds him.

The Islands

At a memorial meeting of Spanish War veterans and others, recently held in New York, a resolution was passed urging Congress to pass Mr. Sulzer's bill, which provides for the removal of the hulk of the "Maine" from the harbor of Havana. Joseph H. Choate, who presided, said the presence of the wreck in the harbor was creditable neither to the American people nor to their Government.——President Gomez, of Cuba, has signed a bill granting amnesty to the three editors recently imprisoned for libelling him, and they have been set at liberty. One of them is General Estenoz, editor of *Prevision* and leader of the independent negro party.——The Cuban sugar crop breaks all records and amounts to about 1,700,000 tons.——One Sanchez, a resident of Porto Rico, bought in 1878 the office of Procurador of the Courts, and the transaction was approved by the King of Spain. Upon taking possession of the island, our Government abolished the office. Whereupon Sanchez sued for $50,000 damages. The Supreme Court at Washington has now decided that he was entitled to recover nothing, his interest in the office having terminated with the end of Spanish rule. ——The recent sale of 55,000 acres of land in one of the Philippine estates acquired from the friars, to a person said to represent the Havemeyer sugar interests, is to be the subject of an investigation, and the legality of the transaction will be tested by persons who question the soundness of Attorney-General Wickersham's opinion that friars' lands are exempt from the law which provides that not more than 2,500 acres of public land in the islands shall be sold to one person or corporation. The Government paid $285,000 for the land in question, and sold it for $367,000, or just enough to cover cost, interest and expenses of administration. The complainants fear, it is said, that a large part of the 400,000 acres of friars' land will be acquired by sugar monopolists.

Immigration from Japan

The House Committee on Immigration and Naturalization, at Washington, has reported favorably a bill prepared by Representative Hayes, of California, a prominent member of the Exclusion League, providing for the further restriction of immigration by excluding "persons who, under the provisions of the Revised Statutes, are ineligible to become citizens of the United States, unless they are merchants, students, teachers, or travelers for curiosity or pleasure." According to the present interpretation of the statutes, such restrictions would exclude Japanese.——Following the advice of the Labor Council of San Francisco, the Cooks' Union in that city has declared that all restaurants there which employ Orientals are "unfair" to organized labor.——One of the speakers at a meeting of the Republican Club in New York, on the 5th, was Jacob H. Schiff, the well known banker. The topic for discussion was race prejudice. A part of his address was as follows:

"I hope I may be a false prophet. But I am sorry to say I believe a mighty war is coming. I say this as a friend to Japan. I helped to finance Japan during the recent war, and Japan's victory is the dangerous thing. I was greatly mortified a few weeks ago to learn that Japan had joined hands with Russia—Russia, the enemy of all mankind. Russia and Japan have only one purpose in this union. They want to keep China in a state of vassalage. And 'perfidious Albion,' which professes to be the enlightened friend of all mankind, is a party to this compact. This understanding between Russia, Japan and England will constitute, during the next few decades, the world's greatest menace. If we don't show just the right statesmanship to defeat the purpose of Japan and Russia, we Americans shall be drawn into Eastern affairs in a very disagreeable manner."

The Dilemma of the Liberals

Premier Asquith has protected the Government from interference for a brief period by promising to bring up the two vexed questions of the reform of the House of Lords and the passing of the budget after the Easter vacation. Until March 24 the Government business is to have precedence at every session.

In the passage of the necessary resolutions the Government secured majorities of over ninety, being supported by the Labor faction, while the Irish refused to vote. The Ministry being unwilling to pass those parts of the budget that would be accepted by the Opposition and the House of Lords, such as the income tax, resort must be had to a series of loans and the suspension of the sinking fund. The necessary authorization for these temporary expedients were passed by the House of Commons without opposition. The Government estimates for the naval expenditure of 1910 and 1911 involve a gross increase of $25,000,000; the army estimates call for an appropriation of $138,800,000, which is an increase of $1,625,000 over last year. The Liberals throw the blame for the disordered condition of the finances upon the Opposition because of the rejection of the budget bill, and the Unionists retort that the Government could secure the necessary funds at any time by dropping the obnoxious features of the budget. Premier Asquith refuses to disclose his plans for the House of Lords, but states that the Government will introduce resolutions excluding the House of Lords altogether from the domain of finance and declaring that in regard to other legislation the power of veto be limited so as to secure the dominance of the House of Commons during the lifetime of a single Parliament. In the following year measures for the reform of the reorganization of the House of Lords upon a democratic and elective basis will be introduced Whether the House of Lords agrees to the resolutions or not, the Prime Minister states:

"The Government will regard the placing with all possible promptitude upon the statute books of a provision which will set free this House from the veto of the House of Lords, not only as the first condition of the legislative dignity and utility of the House of Commons, but as our own primary and paramount duty.

"In the prosecution of that task we shall adopt all such measures within the limits of the Constitution as seem to us proper and adequate, and upon its successful accomplishment are at stake not only our fortunes, but our existence as a government."

It is surmised that the project of the Government will involve the reduction of the House of Lords to a small number of elected members, and that whenever the two chambers come into a conflict the question would be decided by a general session.——Mr. Balfour, leader of the Opposition, asserted that the House of Lords had never shown itself more capable of fulfilling one of the important duties of a second chamber than now, and that it never contained more men of experience, knowledge of affairs and public spirit. He would look with great dismay on any change in that House comparable with that which had befallen representative assemblies in France and the United States. They must also have men in the second chamber who are not immediately amenable, as the House of Commons is, to the passing passion of the moment and the electoral machine.

"It is not that the House of Lords lacks efficiency. It is that in the present condition of public opinion it lacks strength. I do not want a better second chamber. I want a stronger one, and I know of no better source from which that strength can be obtained than the source from which the House of Commons derives its power, namely, the feeling that there is some direct, formal connection between public opinion and the chamber."

——Lord Rosebery, who now occupies a position independent of party lines, will bring forward on March 14 a plan for the reconstruction of the House of Lords, probably by introducing a large proportion of members elected for long terms. He believes that the House of Lords should take the lead in its own reform and not wait for the action of the Commons. Lord Rosebery's witty remarks on the result of the election may be quoted:

"This election is unique, so far as my experience goes, in being an absolute disappointment to every party engaged in it. My noble friends behind me, I do not doubt, counted, with the guileless enthusiasm of their natures, on obtaining a majority over the Government. The Government, engaged in great financial measures beloved of the masses, and also engaged in a vast constitutional contest from which they could hardly be restrained by any counsels of moderation, also reckoned on preserving the unlimited confidence of the country. The Government were also disappointed. The Irish party, always solid, always homogeneous, were also disappointed, and finds itself no doubt still an Irish party, but with a small collection within its bosom of what I believe in savage warfare is called friendly natives who are, I fancy, about as friendly to the general body of the party as a friendly lawsuit usually is to those who are engaged in it. The Labor party also finds its numbers

considerably reduced. Therefore, we may say that no party in the State has any reason to congratulate itself on the result of this election except in so far as it has been rendered more compact by its results."

——In the elections of March 5 for the London County Council the Progressives gained the ground which they lost three years ago to the Moderates. The new London County Council now consists of 58 Municipal Reformers, 56 Progressives and 3 Laborites, the Progressives having a net gain of 21.

Franchise Riots in Germany

The demonstrations of the Socialists against the Government for its refusal to grant equality of voting power to all male voters in Prussia resulted in further conflicts with the police in Berlin. The police were determined to prevent any open air meetings, but they were outwitted by the Socialist leaders, who, taking their stand upon the common right of all persons to make use of the streets and parks, suggested that every one interested in the franchise question should take a walk in Treptow Park on Sunday afternoon, a few miles from the center of the city. The chief of police occupied the ground with the bulk of the force at his disposal, bringing in a number of the gendarmes from the country. Several thousand persons made their way to Treptow Park in the morning, where they were met with a triple line of police, on foot and horseback, barring all the approaches. As the park occupies a space of 230 acres and is unfenced, it was impossible to keep the people out. Many got in by going across the River Spree in boats, but when this leak was discovered the police organized a navy of motorboats and repelled the invaders. Later in the day, however, it turned out that the assemblage at Treptow Park was a mere feint and that the real demonstration was going on in the Tiergarten at the end of Unter den Linden. Here some 30,000 demonstrators had mingled with the usual Sunday crowds and were shouting for suffrage reform and singing the workingmen's Marseillaise without the possibility of interference by the police. Some speeches were made along Unter den Linden, and from the steps of the Reichstag, and the statue of Bismarck was cheered as author of German suffrage. No serious disorder occurred until the "strollers" in Treptow Park undertook to march to the Tiergarten, when they were suddenly attacked with swords and revolvers by a company of provincial gendarmes. Five persons were severely wounded and hundreds were injured. Demonstrations held in other German cities on the same day were mostly peaceable.——Three of the Radical groups of the Reichstag have united under the name of the "Progressive Party," and agreed upon a program which includes the admission of woman to all of the political and civil rights of man, such as the franchise, participation in the state insurance, and industrial equality. The Progressives will generally co-operate with the Liberals.——The naval estimates came in for criticism by several members of the Reichstag on the ground of being too lavish and tending to promote international discord. Herr Snedekum, a Socialist member, declared that such a navy could not be justified by the trade of the small number of German colonies. It was natural therefore that Great Britain should regard the German navy as directed against her and this produced a rivalry between the two nations in naval armament. In reply Chancellor von Bethmann-Hollweg said:

"Our relations with Great Britain are clear and open to the view of all. That we are building a fleet not for aggressive purposes, but solely because we are convinced that we need effective sea power for the protection of our coast and commerce has so often been insisted upon that I do not wish to repeat what has already been established.

"However, by the terms of our navy law the whole world knows to what extent and in what space of time we are going to build ships. Nothing is done in secret or in a fashion that might be hostile to another Power or that would threaten such a Power or that could give rise to even a suspicion of such hostility of menace, and finally just as manifest is our desire, frankly and sincerely, to cultivate friendly relations with Great Britain.

"Our foreign policy, not only in regard to Great Britain, but in regard to all Powers, is directed solely to the free expansion of the economic and social forces of Germany. I see no reason why this should disturb our friendly relations with a country so closely connected with us commercially and socially as is Great Britain. No Power on earth can eliminate or suppress the free competition of other nations."

——The somewhat clumsy disavowal by

Herr Delbrück, Imperial Secretary of the Interior, that the Government was favoring the American exhibition of commercial products in Berlin, has probably put a stop to the enterprise. The American committee, of which Herman A. Metz, former Comptroller of the City of New York, is chairman, proposed to postpone the exposition until 1911 and to admit German goods. This change, however, is resented by the Berlin directorate and as a result of the affair commercial amity between the two nations is more likely to be disturbed than promoted.

The Manchurian Railroads

Russia has not only rejected the American plan proposed by Secretary Knox for a railroad traversing Manchuria from Chin-chow to Aigun, but has submitted to the Chinese Foreign Board a counter proposal for a railroad running northwest from Pekin thru Mongolia instead of northeast thru Manchuria. The line proposed by the Russian Government follows the general direction of the Chinese post road, running somewhat to the westward of the old caravan route. Starting from Pekin it passes thru the Great Wall of China to Kalgan, thence northwest thru the Gobi Desert to Urga, then northward to the Russian frontier at Kiakhta, where it will be connected by a Russian line with the Trans-Siberian Railroad at Lake Baikal. This, according to the Russians, would be more desirable as opening up a newer region to commerce than another line across Manchuria. It is not probable, however, that the American and British financiers interested in promoting the Manchurian Railroad will regard with favor the route thru the deserts of Mongolia. Russia in her note to China alleges that in 1899 China promised that she would not construct any railways north of Pekin without first consulting the Russian Government and employing Russian capital. This agreement Russia is willing to annul in case her proposal for the extension of the Kalgan road to Baikal is accepted. China in her reply expresses the opinion that the agreement with Russia was abrogated when Russia failed to protect China from Japan, but wishes to take time for the full consideration of the new proposal.

The Flight of the Dalai Lama

The Dalai Lama, who left Lhasa February 17, on the arrival of the Chinese troops, reached Darjiling on March 1, where he was received with clamorous rejoicing by the crowds of men, women and children there assembled to obtain the blessing of the incarnated Buddha. A procession of Buddhist priests and a military escort conducted him into the town, where he was lodged in the Druid Hotel, in the top floor, of course, since it is incompatible with his dignity to have any one above him. The British, however, have little reason to regard him with favor, since it was owing to his vacillating policy that the expedition under Colonel Younghusband in 1904 was obliged to resort to arms and yet failed of accomplishing anything justifying the expenditure. He at first refused to negotiate with the British in regard to the frontier markets, then incited the Tibetans to attack the expedition, and finally, as it approached his capital, fled to Urga, leaving as regent the head of the yellow-capped sect of the Buddhists, Ti Rimpoche, the "Precious Enthroned One" and "Glorious Sun of Learning." It was he who signed the treaty presented by Colonel Younghusband, and he has again been appointed regent by the Chinese Amban or Resident, now that the Grand Lama has fled to India. The country is greatly disturbed and the small number of Chinese troops at the service of the Amban may have difficulty in maintaining order. Neither Great Britain nor Russia is able to take advantage of the situation as they might have done a few years ago, for they have agreed to keep their hands off of Tibet. Mr. Montagu, Parliamentary Secretary to the Prime Minister, stated in the House of Commons in answer to a question that the policy of the British Government would be to observe strictly its treaty obligations and to require other countries interested in Tibet to do likewise. The Russian Minister at Pekin has notified the Board of Foreign Affairs that Russia could not without concern regard the deposition of the Dalai Lama, who is the spiritual head of so many Russian Buddhists. The board replied that the administration of Tibet and the Buddhist religion would not be affected by the action.

The Foundations of International Justice*

BY HAYNE DAVIS

[In view of the forthcoming Pan-American Conference this summer and the proposal of Secretary Knox to the Powers that the International Prize Court be recognized as competent to perform the functions of the Court of Arbitral Justice, the following highly significant article by Mr. Davis is especially timely. We comment upon it at length in our editorial pages. Mr. Davis, as our readers will remember, has written much for THE INDEPENDENT on the history and philosophy of the Peace Movement.—EDITOR.]

EXISTING governments without exception have one and the same object—justice. That is their *raison d'etre*. For accomplishing this object within their respective domains, as between their own citizens and the "stranger in the land," they all have these three agencies, however different in form, a legislative, a judicial and an executive agency. The executive in every case is an armed man, a host of armed men, the number being determined by the power of those upon whom the will of the nation is to be executed.

The recognized sovereign nations, forty-six in number, have not yet instituted for affairs common to all the agencies of justice, employed by each of them locally. Why not? Simply because the time had not come. But the time for this is at hand, and therefore due consideration of the proper form for the agencies of international justice is timely, indeed is a patriotic duty.

Before a safe system of international justice could be properly instituted our union of States had to be formed and perfected in the fires of revolution and of civil war, so as to test to the uttermost the institutions of justice, upon which this nation and its constituent States are founded.

Before our Union was formed all the world was submerged under a sea of political error and oppression. The right to rule was claimed and exercised by a few persons, thru alleged divine appointment; and governments operated by hereditary rulers were united with religious societies established by law. The will of the past was thus imposed upon the people of today thru these two erroneous theories and their resultant oppressive practices. Under this system the very agencies of justice became instruments of torture. The establishment of a worldwide system of government under these oppressive and false theories would have necessitated and in due time caused an explosion before whose horrors our Revolution and the French Revolution would have paled into insignificance.

Let us examine a few of the steps that had to be taken by the citizens to protect themselves against the wrongs perpetrated by God's so called representatives.

The Magna Charta of England was merely a written promise forced from the then ruler of England to respect *thereafter* the rights of the people that had been *previously* recognized and provided for in the proper conduct of the government.

It is common knowledge that rulers in Europe until modern times were accustomed to imprison people and leave them there uncondemned, even untried. To meet this evil the right to be brought before a judge *immediately* after arrest by order of the executive department of government was made secure, but not without a mighty effort. Dragging people to distant places for trial was another means of injustice on the part of those entrusted with the administration of justice; so was judging by interested or prejudiced persons. To prevent these things the right of trial where you are and by persons chosen from among your peers, who are disinterested and impartial, had to be placed in the corner-stone of the governmental structure in order to prevent injustice on the part of those entrusted with the administration of justice.

The exercise of these rights has evolved an intricate system of choosing jurors, in which each party can object to some proposed jurors without giving

*Copyright, 1910, by Hayne Davis.

any reason, and to any number for clearly defined causes, such as relation to one of the parties, preconceived opinions on the case to be tried, etc.

The free and orderly life of every citizen of every country now enjoying the English or American system of law and government is dependent at this moment upon heroic efforts made for securing these rights in England prior to our war of revolution. Notwithstanding the success of these endeavors, the claim of hereditary right to rule had to be broken, and the union between Church and State had to be dissolved before a safe system of international justice could be devised and put into operation. Revolution was necessary to accomplish this; first in North America, whereby Church and State were separated and every governmental office made elective or appointive, for a term of years, or, at longest, for life; then in France, where heredity rule was overthrown, but after nearly a century of struggle; and then in South America, which won its freedom from the pretensions of so called "divine right" rulers; but, like France, this great continent, where ten republics are now to be found, must still work out the separation of Church and State.

Tho this is true, the consequences of our Revolution have already spread far enough to bring us to the time when a safe worldwide system of justice can be established, founded upon the true principles, and therefore capable of accomplishing the ends of justice in the affairs of nations and their respective peoples.

During the century when our nation and also others were determining on a national scale, issues which had to be settled preliminarily, before international justice could be systematized, the various nations were taking the first steps in this great work. Since the United States came into being more than 100 disputes between nations have been settled by resort to arbitration in the strict sense of the word and as many more by decision of joint high commissions and other peaceable means. If all these cases had come before one court, its sessions would necessarily have been continuous during the past century, but each case was entirely separate, the arbitrators in one having no relation to the arbitrators in the others.

The proposal for systematizing these spasmodic but substantial efforts at international justice thru arbitration is popularly supposed* to have come from the Emperor of Russia, who, in 1897, invited the Powers represented by diplomats at St. Petersburg to meet in conference at The Hague. This invitation has been described and generally accepted as a proposal for disarmament or limitation of armaments. This was only one of the subjects suggested in the original rescript proposing the conference, and, in fact, Russia appeared at the conference with a proposal for obligatory arbitration that was too advanced for even the United States to accept at that time. Without going into details of proposals that were defeated at that conference it will suffice to glance at its one great achievement: The Permanent Tribunal of International Arbitration, which now exists as the embryonic Court of International Justice, and has already decided several cases of some importance. This tribunal was designed to be composed of "not more than four" persons appointed by each of the twenty-six governments represented at the first Hague conference. The privilege of appointing members of this tribunal was accorded to the Powers not represented at the first conference by an act of the second.

Prior to the second conference (1907) only four republics were represented on this tribunal, France, Mexico, Switzerland and the United States. Nearly all the American republics are now represented. As constituted today nineteen republics and twenty-two monarchies are represented. When all the forty-six sovereign nations shall have exercised their right to appoint members, republics and monarchies will be equally represented, there being at this hour twenty-three sovereign republics and twenty-three sovereign monarchies. All the republics except two, France and Switzerland, are located in America. All but one (Para-

*In fact, the first official and effective act of any nation in this direction was taken by the United States in 1888, when by act of our Congress all American nations were invited to assemble in conference at Washington for establishing peace and arbitration, and for encouraging reciprocal commercial relations. This conference took place in 1889 and from it issued the existing Union of American Republics whose Congress meets periodically.

guay) of the South American republics have appointed representatives on this tribunal, and all of these, except Peru, have the full quota of four judges.

The three island republics (Cuba, Hayti and San Domingo) are fully represented, and so is Guatemala. Nicaragua has appointed two of her quota. Costa Rica, Honduras, Panama and Paraguay are unrepresented.

As it stands today this tribunal is composed of 139 persons, only twenty-five of the forty-six governments having appointed the full quota of four judges. There would be 184 members if every nation had availed itself of the privilege of appointing an equal number of judges.

Of those who now constitute this tribunal, fifty have held cabinet positions in their own country, twenty-seven have represented their government at foreign capitals, nineteen are judges in their own country, and twenty-five are professors of law.

The following are represented by judges: Austria-Hungary, Cuba, Chile, Dominican Republic, Germany, Great Britain, Italy, Luxembourg, Holland, Portugal, Romania, Salvador, Servia, Sweden, United States, Venezuela. England, Rumania, Sweden, Venezuela and the United States are each represented by two judges. The present chief justices of both Canada and the United States are among the judges on this tribunal.

As to the jurisdiction of this tribunal; it has *no jurisdiction,* that is, it has no right to try and determine any question, it cannot summon any nation to appear before it to have its action judged in *any matter whatever.* This tribunal can act *only* when the Powers concerned in a controversy *mutually* agree to submit the matter for its decision.

To understand this it is merely necessary to suppose that you cannot go to court and have a summons issued to compel the appearance of any person who, in your opinion, has done you a wrong, but that you must go to the person, a heavily armed and proud man, and secure his consent to go with you to the courts, instead of knocking you down for your audacity in accusing him of violating your rights.

Jurisdiction, however limited, for an international tribunal in whatever form, seems to me the next, the great step in establishing international justice. Beyond question this will come in time thru the very operation of the clumsy jurisdictionless tribunal which now exists.

Notwithstanding the existence and the actual working of this tribunal of international arbitration, the United States placed the emphasis of its efforts at the second Hague conference upon the constitution of a court of arbitral justice composed of a small number of judges—fifteen—holding office for a long period of time—twelve years.

This idea was put forward first by the United States and was so heartily received by England and Germany that the formal proposal was made jointly by these three great Powers, and was approved in principle by the other so called great Powers, Austria-Hungary, France, Italy, Russia and Japan.

According to this plan the sovereign nations were divided into five classes. The first class was composed of the eight Powers named above, each of which was to be represented on the court all the time. Spain, with only twenty million people and about half a million square miles, counting its colonies, was put in the second class, whose representative would sit ten years during the term of twelve. China, with over four million square miles and about half a billion people, and Brazil, with over three million square miles and over twenty million people, were reduced to third-class Powers, whose representatives would sit only four years in twelve; and in the same class were placed Greece, with its twenty-five thousand square miles and three million people, and Denmark, with about the same population, but only fifteen thousand square miles. Sixteen American republics were placed in the lowest class, their representatives being entitled to sit only one year in twelve. Five of these republics have each about the same population as Greece, and two of these five are larger than Austria-Hungary, France and Germany put together.

This proposal contemplates the possession of a *permanent* majority of the international judges by the eight so called great Powers of *today,* possessing about half the people of the world, counting all

of Great Britain's and Russia's disfranchised hundreds of millions. The seven vacant seats left, after accommodating these great governments, all monarchies save two (France and the United States), were to be occupied in succession for one or more years by the representatives of the other thirty-eight sovereign nations, containing half the absolute population of the earth.

If the voting population were taken as the criterion the majority of the judges would have represented a minority of the voters, and only one-sixth of the sovereign Powers. Two republics would have been represented all the time. The combined terms of the representatives of the other twenty-one republics would have amounted to thirty-six years, thus giving three more republican judges all the time, tho the person actually sitting would have changed frequently. A court of fifteen judges, the twenty-three monarchies being represented by ten judges, the twenty-three republics by five judges! That sounds more like an Old World than a New World proposal. Considering "the unconscious bias" which manifests itself thru even the best judges, and considering the political character of most questions, this seems a rather strange proposal, especially in view of the fact that the one great political fact of the past century was decline of monarchy and ascendency of republicanism.

Indeed, the United States abandoned this plan for the choice of judges on account of the opposition it encountered, and proposed that the fifteen judges be elected by the forty-six sovereign nations, each nation having one vote. This proposition was rejected by all the Powers accorded a place of first importance on the international bench except France. The two great republics very naturally consented to the election of international judges. The six great monarchies as naturally refused to accept this plan. It was hardly to be supposed that governments would trust *foreign* countries to *elect* judges for passing upon their international affairs when they are afraid to trust their own people to elect the chief officers of state at home. The making and the rejection of this proposal was valuable, however, for it disclosed the actual situation.

A proposal was made by Brazil, which would doubtless have received the consideration its merits deserved but for the fact that all the great Powers were standing for the scheme submitted by joint action of the United States, England and Germany. The essentials of this proposal were:

That the international court be composed of one judge appointed and paid by each Power (forty-six in all);

That this court be divided into three sections, alphabetically, according to the roll of Powers as used at the Hague conference;

That each section occupy the bench one-third of the term for which the judges were appointed;

That the judges belonging to each section must reside within twenty-four hours of The Hague while their section is entitled to sit in due course;

That any country having a case to submit could call for a special court instead of the section then sitting, this special court to be constituted by selection from the whole court, each interested Power choosing alternately one person till the required and agreed number are found.

There was a formal proposal by Russia and an informal indication of preference by France, both of which are worthy of study in an extended investigation, but only of mention in this connection.

Russia's proposal contemplated the assembling at The Hague once a year of the members of the existing tribunal, for election of three of their number as a court for the ensuing year and "to exchange their ideas regarding the progress of international arbitration in general," etc. This involved the performance by this assembly of the functions that pertain to a *deliberative* body. Coming from Russia, where legislative, judicial and executive departments of government are not separated as in the United States and other republics, this was tantamount to proposing a permanent international conference. M. Bourgeois, the first delegate of France, contemplated with joy the day when a real court of international justice would arise, alongside of the existing tribunal of arbitration, perhaps and *preferably within that tribunal itself*, for settlement of truly judicial questions, while

the existing tribunal would remain available for questions of a political character.

In passing from these interesting proposals made and more or less strenuously advocated by their responsible authors a glance may well be taken at the Supreme Court of the United States, which served to inspire the authors of the American Anglo-German proposition, before proceeding to a discussion of the proper basis for an international court of justice. This Supreme Court of the United States did not come into existence until there was an elected Chief Executive of the United States to nominate the judges and a United States Senate to confirm the same, each State, however small, having an equal voice in the Senate and an equitable voice in the election of the President. Until a permanent international congress is created, neither of these agencies for selecting judges can be called into action internationally. Under the operation of this plan for choosing Supreme Court judges, two of the original thirteen States have never been represented on that court, and only twenty-three of the forty-six States have been represented. Three States have been represented by two judges at once, Virginia, Ohio and Massachusetts. This is true of Massachusetts today, Moody having been added by Roosevelt, tho Holmes was already on the bench. New York has been represented almost continuously—115 out of the 120 years of the court's existence. Would Rhode Island and Delaware have agreed to this as a bold-faced proposition at the convention of 1787? No. But they did agree to a principle of selection which seemed to recognize their sovereign rights and which has produced these results in actual operation.

Further efforts to form and develop an international judiciary should certainly include a careful scrutiny of the character and history of the Supreme Court of the United States and its predecessor —the *system* for constituting a court when demanded by any of the States in the Union between 1776 and 1789. Due consideration should also be given to the constitutional guarantees of individual rights and of State rights which lie at the basis of the English system of government and of the union of our States. In an article of this kind there is space for little more than reference to the salient points.

There are striking similarities and also differences in the existing tribunal of international arbitration at The Hague and the system in operation here, under the Articles of Confederation, for settlement of questions between any of our States.

The tribunal of arbitration contains four persons from each country, appointed by each country. The court under the confederation contained primarily three persons from each State, appointed by the Congress, in which each State had an equal voice.

The members of the international tribunal are appointed without respect to any existing controversy. The members of the Confederate Court were appointed only when demanded by one of the States concerned in an existing dispute. The nations are free to agree upon other persons to try any question or to use the tribunal. So were the States.

In case the tribunal is used the nations concerned select two members each and these choose the chief justice.

In case the Confederate Court was called into action, the States in dispute struck alternately from the list of persons appointed by Congress until only thirteen remained. Seven or nine, as fixed by act of Congress, were then chosen by lot.

The great difference is this: The States were bound by the most solemn obligation:

1. To respect each other's territory and sovereignty.

2. To settle all disputes *inter sese* by decision of the Confederate Court of Arbitration chosen by the States in interest.

3. To wage war in concert against every foreign foe of any State in the confederation.

4. To fix in conference the armed force to be maintained by each State.

The nations, on the other hand, have not agreed to respect each other's territory or sovereignty or to arbitrate any clearly defined classes of questions, or to wage war in common, or to limit by agreement the relative armed power of each.

Yet the United States Government proposed the creation of a court more like the Supreme Court of the United States in character, tho not in authority, than like the Confederate Court of our Revolutionary and formative period, during which every State was recognized absolutely as the equal of every other one.

This proves that our Government is ready to go to any length in its endeavors to institute a system of international justice. The question, therefore, is not to influence the national will in that direction, but to find out the way in which this will can become effective and conducive to the ends of justice. The organization of an American court of international justice, to supplement the congress of the union of American republics, seems to be the line of least resistance.

Some of the chief difficulties encountered at The Hague in the endeavor to create an international judiciary do not appear to stand in the way of establishing a court of justice for the Union of American Republics.

First, the governments are all of one kind, republics.

Second, they are all committed by implication, if not expressly, to respect each other's territory; whereas the history of Europe is the history of national aggression. South American nations made common cause against their European hereditary rulers, and thus by concerted action won their independence. In the face of this record of mutual services in the cause of liberty and national sovereignty, how can they deliberately execute designs upon each other's territory or trespass upon the free exercise of the rights of sovereignty therein? They can do so only by being untrue to their character and past conduct. To keep from doing these things European nations must change the habit of centuries. In the case of the United States the implied obligation to respect the territory and sovereignty of the other American republics is even stronger. When their dearly bought independence of Spain was threatened by a concert of all European Powers, the United States risked its own existence by declaring, in the Monroe Doctrine, that it would resist any attempt to resubjugate any American nation whose independence this Government had recognized. Under what pretense, then, could the United States ever deprive an American nation of its territory or the undisturbed exercise of sovereign rights therein without blotting this luminous page of national history with the blackest infamy?

Third, there is already a union of American governments whose Congress meets periodically, and is able to act, as the United States Senate does, in confirming judges nominated by the executives of the various governments, in the absence of a single international executive.

Fourth. Even if it be found impractical to constitute an American court of international justice having fewer judges than there are governments concerned, a court composed of twenty-one judges (one from each American republic) would not present the insurmountable objections thought to exist against a court composed of forty-six judges.

In the light of the foregoing facts let us see what would be desirable and at the same time practical in the way of an American court of international justice to supplement the Congress of the Union of American Republics.

First. There seems to be no good reason why any *American* government should hesitate to lay as the foundations of such a court explicit guarantees to respect the undisputed territory and the sovereignty in said territory of all the others. Land that is in dispute, of course, would have to be dealt with separately.

Such guarantees are at the basis of our system of justice, both for protection of the citizen from encroachment by State authorities and of the State from encroachment by national authorities. As these guarantees are already an *implied* obligation as between all American Republics, it seems practical and it is a duty that they be made an express obligation and in this form constitute the foundation of the American system of international justice. These vital and fundamental rights being guaranteed, it would seem practical to agree that all questions growing out of international commerce be settled by the American court of international justice, in accordance with principles of law evolved thru

the operation of the Congress of the Union of American Republics.

It has been found that constitutional guarantees similar to these were absolutely necessary for the protection of the citizens in the best regulated governments, and that even these guarantees were insufficient in striking instances to prevent injustice and encroachment on the part of those entrusted with the administration of the government. In view of this, what prospect is there of rearing a stable and safe international system of justice upon any foundation except that of clearly defined and guaranteed national rights? Today the elected judges and representatives of our own people cannot be trusted to respect our rights without proper constitutional guarantees. How, then, can it be supposed that other governments, or judges appointed by them, can be trusted to do so?

What national rights deserve to be guaranteed as the foundation for international justice? Certainly the national domain and the undisturbed exercise therein of all the rights of sovereignty are two foundation stones for this structure, corresponding as they do to the individual rights of life and liberty, possession of your own body and freedom in its legitimate activities.

The guaranteeing of these two vital national rights would remove the greatest difficulty thus far encountered in defining a jurisdiction for proposed or existing international courts. Most large countries positively refuse to bind themselves to arbitrate questions affecting their vital rights or their honor. They refuse also to say what questions affect their vital rights or their honor. Consequently they cannot define any area of jurisdiction for courts of arbitration. Defining these two vital rights and placing in the corner-stone of the structure of justice clear and sufficient guarantees to respect these rights opens the way for safely granting jurisdiction to international courts to try and determine all other questions, or at least all questions growing out of commerce between the countries participating in the guarantees and represented in the judicial union.

Let us suppose, therefore, that mutual guarantees to respect the territory and sovereignty therein of all American republics is to be the foundation of the structure, and that the court will be granted jurisdiction to try and determine all questions growing out of commerce between the various countries represented in this American union. How shall the judges be chosen?

Already most of the American republics have appointed their representatives on the tribunal of international arbitration, and it may be assumed that all the others will soon do so. The representatives already appointed are of the highest reputation in their respective countries. Three have been presidents of their nation, one a vice-president. Fourteen have served in the cabinet, nine of them as Ministers of Foreign Affairs. Thirteen have represented their country abroad, four in the Senate, five as judges, etc.

It seems practical in various ways to convert some or even all of these persons into an efficient American judiciary. I suggest some of these in the order of their desirability.

I. Let the Pan-American Congress confirm the appointments made by American republics to the permanent Tribunal of Arbitration. This will ensure confidence of countries other than the one originally making the appointments.

The four judges appointed by each country and confirmed by the others could constitute an International District Court for the nation they represent. They could have jurisdiction over cases between citizens of their country and other countries, with right of appeal to Circuit Courts constituted as follows. Each of these District Courts would appoint* a Chief Justice who would be a Judge of the Circuit Court in which his district was located. There would be five or six circuits.

A Northern Circuit, composed of the United States, Mexico, Canada (admitted because of her size and power over commerce between Canada and all the other countries), also Cuba and Panama (because of their relation to the United States).

A Central Circuit, composed of Costa
